Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, Madras and Bombay three years later. The affiliating type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis; it did much, through the agency of its Colleges to develop backward places; it accelerated the conversion of Indians to a zeal for western education; and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators; they did not deal directly with the training of men, but with the examination of candidates; they were not concerned with learning, except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses; their teachers were denied that freedom which teachers should enjoy and their students were encouraged not to value training for its own sake but as a means for obtaining marketable qualifications. In certain important respects the recommendations in the despatch were not followed. The Directors did not intend that university tests, as such, should become the sole tests qualifying for public posts; they also recommended the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions; they recommended the establishment of university chairs for advanced study. They were aware of the dangers of a too literary course of instruction; they hoped that the system of education would rouse the people of India to develop the vast resources of their country.

The encouragement of the grant-in-aid system was advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions.

The Reforms of 1902-4.

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904. The main object of the Act was to tighten up control, on the part of Government over the universities, and on the part of the universities over the schools and colleges. The Government retained the power of cancelling any appointment and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction. The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments, subject to Government sanction, for these objects, but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined, so that universities were precluded from any connection with institutions lying outside those boundaries. Neither the Commission nor the Government discussed the fundamental problems of university organisation, but dealt only with the immediate difficulties of the Indian system.

Recent Developments.

Government of India Resolutions on Indian Educational Policy.—The Indian Universities Act of 1904 was followed by two important resolutions of the Government of India on Indian Educational Policy—one in 1904 and the other in 1913. The resolution of 1904 was comprehensive in character and reviewed the state of education in all its departments. The following passage from it summarises the intentions of Government:—"The progressive devolution of primary, secondary and collegiate education upon private enterprise and the continuous withdrawal of Government from competition therewith was recommended by the Education Commission in 1883 and the advice has generally been acted upon. But while accepting this policy, the Government of India at the same time recognise the extreme importance of the principle that in each branch of education Government should maintain a limited number of institutions, both as models for private enterprise to follow and in order to uphold a high standard of education. In withdrawing from direct management it is further essential that Government should retain a general control, by means of efficient inspection, over all public educational institutions." The comprehensive instructions contained in this resolution were followed in the next few years by the assignment to the provinces of large Imperial grants, mainly for University, technical and elementary education. The resolution of 1913 advocated, *inter alia*, the establishment of additional but smaller Universities of the teaching type; it reaffirmed the policy of reliance on private effort in secondary education; it recommended an increase in the salaries of teachers and an improvement in the amounts of grants-in-aid; and it insisted on proper attention being paid to the formation of character in the education given to scholars of all grades. It further discussed the desirability of imparting manual instruction and instruction in hygiene; the necessity for medical inspection; the provision of facilities for research; the need for the staffing of the girls' schools by women teachers and the expansion of facilities for the training of teachers. The policy outlined in 1913 materially accelerated progress in the provinces, but the educational developments foreshadowed were in many cases delayed owing to the effects of the Great War.

The Reforms Act.—The Reforms Act of 1919 altered the conditions of educational administration in India. Education became a provincial 'transferred' subject in the Governors' provinces under the charge of a Minister, but the education of Europeans was made a provincial 'reserved' subject, *i.e.*, it was not within the charge of the Minister of Education. The introduction of provincial autonomy under the Government of India Act, 1935, brought education in these provinces under the full control of their Ministers of Education. Broadly speaking, an educational policy for India as a whole no longer exists, but in order that Provinces may co-ordinate educational activities and follow a uniform policy of development, the Central Advisory Board of Education was reconstituted in 1935. This Board in which all the provincial governments are represented meets annually to discuss all matters of education, and devise an all-India educational policy. Its function is, however, purely advisory.

At the time of handing over the administration of education to the provinces, the Government of India retained under their immediate control all education in the Centrally Administered Areas. They still deal with matters relating to Universities like Aligarh, Benares and Delhi. The Government of India are also in charge of the institutions maintained by the Governor-General in Council for the benefit of members of His Majesty's Forces or of other public servants or of the children of such members or servants. The Chiefs' Colleges are now the concern of the Crown Representative.

Administration.—The subject "Education" is entirely under popular control in all the eleven major provinces. At present ministries are functioning in all the provinces and the subject is under the control of a Minister responsible to the Provincial Legislative Assembly, of which he himself is an elected member. Certain forms of technical education are under the technical departments concerned and come within the purview of the Minister in charge of those departments. The Director of Public Instruction is the permanent head of the Department of Education and acts as expert adviser to the Education Minister or Adviser in charge of Education. He controls the inspecting staff and the teaching staff of Government institutions and is generally responsible to the provincial government for the administration of education. The authority of Government in controlling the system of public instruction, is in part shared with and in part delegated to Universities as regards higher education and to local bodies as regards elementary and education through mother-tongue. The Central Provinces have a High School Board and Madras has an S.S.L.C. Board for control over secondary education, while Bengal (for Dacca area only) and the United Provinces (for the whole province except the areas under the jurisdiction of Benares Hindu and Aligarh Muslim Universities) have Intermediate and Secondary Education Boards which control high school and intermediate education in the areas under their control. Delhi has a Board of Higher Secondary Education. The Rajputana (including Ajmer-Merwara), Central India and Gwalior High School and Intermediate Board has jurisdiction over schools and Intermediate Colleges in Ajmer-Merwara and Central India besides such institutions in Rajputana and certain other states. Institutions under private management are controlled by Government and by local bodies by "recognition" and by the payment of grants-in-aid, with the assistance of the inspecting staffs employed by Government and by local bodies.

Post-War Educational Development Problem.—The publication of the report of the Central Advisory Board of Education, Post-War Educational Development in India, and acceptance generally of the principles and objects of

that report by the Government of India, which is subject to the limitation of finance, make a land mark on the history of education in India. Until the recommendations contained in the report for all round educational development and re-organisation are fully implemented, this report will remain a 'watchword' in the field of education for many years to come.

Action taken by the Government of India on the Report of the Central Advisory Board of Education.

(*i*) The Board had recommended that a strong Education Department would be required at the centre and in this connection the scope and functions of the Central Advisory Board of Education should be enlarged.

The Government of India constituted a separate Department of Education with effect from the 1st September, 1945, consisting of several technical officers, besides Secretariat Officers. Besides, there are at present two Education Liaison Officers for India in U.S.A. and two Assistant Educational Advisers attached to the office of the High Commissioner for India, London, in connection with the welfare of Indian students abroad.

The Department deals with education in the Centrally Administered Areas, Central Universities, Universities Grants Committee, Central Advisory Board of Education, Bureau of Education, Technical Education, Government Scholarships for technical training abroad, welfare of students overseas, Scientific Liaison Officers, Cultural Co-operation, and further education of demobilised personnel.

(*ii*) The Central Advisory Board of Education had recommended that an Indian University Grants Committee should be constituted for the purposes and with the terms of reference set out in their report.

In accordance with this recommendation, the Government of India constituted such a Committee consisting of four members, with Sir Mirza Ismail as Chairman of the Committee. This Committee is to act in the first instance in a consultative and advisory capacity only with regard to the three Central Universities. It may also consider application from others if and when received.

At their first session held in January, 1946, the Grants Committee considered schemes of development from the Aligarh Muslim University, the Benares Hindu University, and the Delhi University. They also considered some research schemes of all-India importance from a few provincial universities. It is hoped that the three Central Universities will be able to undertake important development programmes within the current year through financial assistance from the Government of India.

(*iii*) The Central Advisory Board of Education had recommended that all technical education beyond school stage other than that given in the technological departments of universities should be placed under a Central Controlling Body (to be called All-India Council for Technical Education) having representatives of all the interests concerned.

In pursuance of this recommendation, the Government of India set up an All-India Council for Technical Education with Mr. N. R. Sarkar as its Chairman.

The Council's immediate task is (*a*) to survey the entire field of technical education, (*b*) to consider immediate projects already under the consideration of the various Departments of the Government of India, and (*c*) to conduct preliminary investigation with a view to securing co-operation in an All-India scheme for Technical Education.

An *ad hoc* Committee, called the Higher Technological Education Committee has also been set up under the Chairmanship of Mr. N. R. Sarkar to advise on the provision of facilities for technical education in India on the lines of the Massachusetts Institute of Technology.

With a view to providing further facilities for technical education, the following schemes are being undertaken :—

(*i*) Development of the Delhi Polytechnic with the object of :

(*a*) making complete arrangements for All-India Diploma Courses in Textiles, Art and Architecture, short period courses for Social Welfare Workers and Telephone Inspectors.

(*b*) effecting all round improvements which include provision of fully equipped workshops and laboratories, and new buildings with a view to making the Polytechnic a Super Technical Institute or the Technological Faculty of the Delhi University.

(*ii*) Establishment of a High Voltage Laboratory at the Indian Institute of Science, Bangalore, to provide specialised and technical training to meet the demand of trained men for various power projects under contemplation.

Central Bureau of Education in India.

This Bureau was reconstituted and strengthened in 1945. It is engaged in collecting up-to-date information on educational progress in India and abroad, and in analysing and indexing the information collected with a view to meeting educational enquiries. It maintains a library of current literature on education.

Overseas Information Bureau.

This Bureau has been set up by the Government of India in the Department of Education with a view to supplying with necessary information the Students Advisory Bureaux set up by the Universities or Provincial Governments, as it was felt that each provincial Bureau may find it difficult to have its own full complement of reference literature. This Bureau expects shortly to start issuing monthly bulletins and handbooks giving information regarding universities and other institutions abroad. It is also hoped to revise and bring up-to-date the last edition of the Handbook for Indian Students published by the High Commissioner for India in London and to bring out in a suitable form a similar handbook for the students desiring to go to the United States of America or Europe for Higher Studies.

Pending the formation or reorganisation of the Students Advisory Bureaux the Department of Education of the Central Government has undertaken to receive directly from students enquiries or requests for assistance in regard to their admission to an institution abroad.

Government of India Overseas Scholarships.

In view of the urgent need to train highly qualified personnel as soon as possible for the various plans of development, the Government of India have decided to continue during 1946 their schemes of sending students overseas at Government expense, which was initiated in 1945. During the first year, students were selected for study in technical and agricultural subjects only, but during the current year the scope is being extended to cover other important subjects as Education, which are also connected with plans of development. It has been decided to award about 600 overseas Scholarships during 1946: 347 allotted to Provincial Governments and the remaining 253 to be awarded by the Central Government in 40 subjects suggested by the various Departments.

The selection of candidates for 253 Central Scholarships has been entrusted to a special Committee appointed by the Hon'ble Member for Education, with Sir Maurice Gwyer, Vice-Chancellor of Delhi University as its Chairman.

Though no fixed quota of Central Government Scholarships has been reserved for 'War Service Candidates', it has been decided to give the fullest consideration to the applications of such candidates possessing suitable qualifications.

Government of India Scholarships to Schedule Caste Candidates.

In 1914, the Government of India had sanctioned a grant of Rs. 3 lakhs per annum for a period of 5-year with effect from 1944-45, for scholarships meant for students belonging to the Scheduled Castes in British India pursuing courses of study beyond the Matriculation stage in Scientific and Technological subjects in India and in foreign countries.

For the year 1945-46, the following awards have been sanctioned:—

A. Scholarships tenable in India.

(*i*) 202 fresh awards, including 20 for girls.

(*ii*) In addition to (*i*) above, 75 scholarships out of 114 sanctioned during 1944-45 have been extended for the year 1945-46, in order to enable students to complete their approved courses of study.

B. Scholarships tenable outside India.

In 1944-45, no such scholarships were allowed, but in 1945-46, 22 awards (including 2 for girls) have been made.

During 1944-45, the awards were spread over eight main subjects and courses of study, *viz.*, F.Sc., B.Sc., M.Sc., Medicine, Agriculture, Engineering, Technology and Teaching, but for the year 1945-46, the scope of the subjects has been extended mostly for the benefit of girl students, and new courses of study like Domestic Science, F.A. and B.A. have been included.

ACTION BY PROVINCIAL GOVERNMENT

The Provincial Governments were asked by the Government of India to prepare their educational development plans on the basis of General principles enunciated in the report of the Central Advisory Board of Education on Post-War Education Development subject to such adjustments as may be possible in the light of local requirements. The Central Government offered their hand of co-operation in the form of large-scale financial aid provided the schemes prepared by the provinces were in general accord with All-India Development policy.

All the Provincial Governments prepared and submitted to the Government of India Five-Year Development Plans in general conformity with the recommendations of the Board. The deviations from the Board's scheme in regard to such aspects as scales of pay, training of teachers, curriculum will as far as possible be removed in consultation with provincial Governments.

In November 1945, the Government of India had suggested to the Provincial Governments that it was desirable to embark forthwith on schemes selected out of the five-year plans with the special object of counteracting deflation and unemployment. It was stressed that it was essential to keep in view the fact that for the success of planned development it was necessary in the beginning to undertake those schemes which provide employment, and which are of economic importance to the country and which will increase income. In regard to social service as educational expansion, only preparatory schemes like training of teachers, building programme and those providing employment to ex-service personnel were to be given high priority. The Provincial Governments furnished to the Central Government generally before December, 1945, a list of such schemes with necessary details for their scrutiny and approval before the Central Government sanctioned their grants-in-aid. This phase is now almost over. The Provincial Governments are on the road to progress with schemes which have received sanction.

The other schemes included in the five-year development programme are at present under examination by the Government of India mainly with a view to seeing whether there is a proper balance between the various stages of education, whether adequate provision for girls education, and whether the interests of educationally backward communities have been properly safeguarded. The Provincial Governments, it is hoped, will undoubtedly modify such schemes as are necessary in the light of observations from the Government of India, and the agreed upon grants-in-aid will be sanctioned to enable the Provincial Governments to commence their five-year programme in right earnest.

Main Features of the Scheme.

The outstanding feature of the Provincial Development schemes is that the scales of pay of teachers will be appreciably raised, so as to secure for them a 'living wage'. For example, the teachers who get in certain provinces a salary from Rs. 8 to 15 will henceforth get at least Rs. 20, if not Rs. 25, and matriculate trained

teachers will invariably be placed in the scale of pay recommended by the Central Advisory Board of Education, *viz.*, Rs.30-1-35-3 (biennially) 50 p.m. *plus* house rent and other allowances recommended. Even these salaries are not adequate, but they certainly effect some improvement on the existing lamentable 'plight' of the teachers. Free and compulsory basic education for boys and girls of the age-group 6-11 will be introduced forthwith, and it will be extended to the 11-14 group. On the University education side, there will be general improvement in the scales of pay of teachers, increased facilities for scientific education and for research work. Technical and Adult Education will also receive their due share.

Basic Junior Education.

In Assam, there are about 7,333 primary schools for boys and 1,140 for girls with a total enrolment of 328,194. This number is quite inadequate to tackle 12 lakhs children of the age-group 6-11. To fill up the gap the Provincial Government have proposed to establish 800 two-teacher and 250 one-teacher Junior Basic Schools in the first quinquennial period. The number of teachers to be employed in each school is subject to variation, as no single-teacher school is expected to be established.

Bengal.—This province has 33,572 primary schools for boys and 5,990 for girls with 2,788,196 children receiving instruction in them. The total number of children of the age-group 6-11 is approximately 77 lakhs.

It is proposed, with the availability of trained teachers, to start 450 junior basic schools in the fifth year, at the rate of 30 in each area. These schools will have two classes and two teachers. In year 6, each of these schools will be provided with one more class and teacher, and 750 other two-class schools will be opened. It is expected that by year 11 compulsion will be introduced in the whole of a sub-division in each division, and in another ten years throughout the province.

Bihar.—This province has 19,112 primary schools for boys and 2,101 for girls, with a total of 855,472 children enrolled in them and 46 children of the age-group 6-11. Undoubtedly therefore, the problem of universal literacy is a formidable one for this province.

As it will take a long time to have a full complement of trained staff on basic principles required for establishing schools for all the school-going children of the province, it is proposed to make provision for the education of one-fourth of the school-going children in the first instance.

It is reported that the Provincial Government have prepared a bill for introducing compulsory education in a small compact area where the scheme of basic education is in operation as an experimental measure.

Bombay.—There are 16,758 primary schools for boys and 1,768 for girls, 1,564,195 children are under instruction in them. This province has only about 26·5 lakhs children of the age-group 6-11, and has therefore a less arduous a task to face.

It is proposed to open schools in 650 villages in the concentrated areas with a population of 400 and over, having no schools at present. These schools will be under private bodies, who will receive adequate grant-in-aid from Government.

The Provincial Government have, however, under consideration a scheme to take over control of vernacular education from local bodies and to be able to provide all the school-less villages with schools and to bring all the school-going children under instruction.

Central Provinces and Berar.—This province with school-going population (age-group 6-11) of 51 lakhs children has only 4,505 primary schools for boys and 503 for girls in which only 366,777 children were enrolled. Even taking into account about 58 thousand children studying in primary classes attached to middle and high schools, the fact remains that the province has yet to bring 27 lakhs children under instruction.

To make up the leeway, the Provincial Government propose to establish 950 Junior Basic schools in the first quinquennial period, besides introducing compulsion in 3 tehsils and 2 towns which may necessitate the establishment of about 600 schools. It is expected that this programme of opening more schools will be continued in the subsequent quinquennium, until the requisite number of schools has been opened.

Madras has 31,849 primary schools for boys and 4,186 for girls with a total of 3,027,458 children enrolled in them, whereas school-going population (age-group 6-11) is about 63 lakhs.

The Provincial Government have framed proposals for providing compulsory free education for both boys and girls throughout the province upto standard VIII, in a period of 20 years. In the course of first five years, about 13 lakhs children will be brought under instruction. It is, however, hoped that the Provincial Government may take special measures to reduce this period as much as is possible.

N. W. F. Province has only 733 primary schools for boys and 168 for girls. 55,673 children out of the possible 3·8 lakhs were enrolled in these schools. This province has therefore to face a very big problem, but proposals are under way to establish a network of schools all over the province, so as to bring education within reach of all classes of population.

In Orissa, there are altogether 6,638 primary schools for boys, and 225 for girls with 240,284 children studying in them. In this province, the total population of school-going children is 11 lakhs, which shows that the number of primary schools will have to be increased four-fold in order to enrol all the presumable children of the age-group 6-11.

It is proposed to introduce compulsory primary education in municipalities in the second year of the first five-year programme with the result that about 24,000 additional children will be brought under instruction every year. In addition, 500 primary schools will be started in villages in jungle and partially excluded areas.

The Punjab, with a population of 36 lakhs children of age-group 6-11, has 6,230 primary schools for boys, and 2,270 for girls with a total of 568,020 children enrolled in them. In this province, more than anywhere else, high and middle schools have also primary classes attached to them. About 4 lakhs children were enrolled in those classes. Altogether therefore, 26 lakhs children are not receiving any kind of education.

This province accordingly proposes to expand compulsory education by opening 600 primary schools every year commencing from the 3rd year of the five-year plan.

The available facilities in **Sind** for about 6 lakhs children of school-going age (6-11) are very meagre. It has only 2,235 primary schools for boys, and 384 for girls, and only 1,85,384 children enrolled in them.

Free and compulsory primary education will be introduced for children in 6 talukas during the 3rd year when requisite number of trained teachers will be available. It is expected that at the end of the fifth year, 720 villages will be provided with schools.

In the **United Provinces,** also, the problem of universal compulsory primary education is one confronted with difficulties. Out of 70 lakhs children of school-going age (6-11) in the province, only 1,319,837 children are enrolled in 19,205 primary schools (17,710 for boys and 1,495 for girls), and like the Punjab 114,350 children were reading in the primary classes attached to high and middle schools.

To bridge the gap, it is proposed to open Junior Basic Schools in 12 selected districts under the scheme for Compulsory Primary Education so as to bring all the children of the age-group 6-11 under instruction. It is expected that in about three years' time all the 'possible' children will be attending some school.

In addition to the above schools, it is proposed to open a primary Basic School in each village which has supplied more than 15 recruits and in which a Primary School does not already exist. Under this scheme about 200 schools will be opened in the whole province within a period of two years.

A recent report shows that the Provincial Government contemplates to move much quicker than envisaged in their development plan, and to make primary education compulsory in the whole province in three years' time.

Existing position with regard to Compulsory Primary Education.
The table below explains the position.

Province	Age-group.	No. of areas under compulsion.	
		No. of towns and cities	No. of villages in rural areas.
Bengal	6-10	1	.....
Bihar	6-10	17	1
Bombay	6-11	20 (e)	410 (f)
C. P. & Berar	6-11, 7-12	33	1,031
Madras	(a) 6-12 (b) 6-13 (c) 5-10 (d) 6-11	26 (g)	102 (h)

(*a*) Non-Muslims only.
(*b*) Muslim boys.
(*c*) Non-Muslim girls.
(*d*) Muslim girls.
(*e*) includes 9 towns and cities where introduced to both boys and girls. } Compulsion only.
(*f*) includes 211 villages where compulsion for both boys and girls has been introduced.
(*g*) includes 7 towns cities where compulsion has been introduced for both boys and girls.
(*h*) includes 2 villages where compulsion has been introduced for both boys and girls.
(*m*) in one Municipal area.
(*n*) in one Union Board area.

Pre-Primary Education.—At present the facilities available for this kind of education are negligible; there are a few schools scattered here and there in Bengal. In some provinces, pre-primary classes for children of the age-group 4-5 are attached to primary schools.

The Central Advisory Board of Education had recommended an adequate provision of pre-primary instruction in the form of Nursery schools or classes for children of the age-range three to six years. In the Provincial Government five-year development schemes, the proposed provision in this direction is meagre, and in some cases even non-existent.

Assam proposes to establish 30 pre-primary schools during the quinquennial period; Bengal 10 schools and 40 classes, C.P. 5, N.W.F. Province proposes to help private bodies to start such schools through an annual grant-in-aid of Rs. 5,000, while Punjab will have 15, each having 50 children in two classes.

Middle School Education.—At present there are two types of middle schools; (*i*) Middle English Schools, with 1 to 8 classes generally; English is taught as a compulsory subject in the middle stage; and these schools are feeders for high school education. (*ii*) Middle Vernacular Schools or Indian Middle Schools, where the teaching is in the mother tongue, English is not taught as a compulsory subject, and education in these schools has a rural bias, and is of a practical nature. The teachers for primary schools are generally selected from the output of these schools, who receive a 2-year course of training in a Normal, or an elementary training school.

Statistics of these schools are given in the table below:—

Province.		Middle English Schools.		Middle Vernacular Schools.		No. of pupils in middle stage.
		No.	Enrolment.	No.	Enrolment.

N.B.—The figures relate to the year 1944-45.

The Central Advisory Board of Education had recommended the abolition of distinction between the two types of middle schools. According to the recommendations of the Board, there will be only two types of schools: Basic Schools, which split into Junior (1—V classes), and Senior (1—VIII or VI—VIII classes) Basic Schools, and High Schools (VI—XI classes). English is not to find a place in the curriculum of the Junior Basic (Primary) school under any circumstances, nor will it ordinarily be introduced as a school subject in the Senior Basic stage. The Board, however, had recognised that in certain areas there might be a strong public demand for it, and they therefore had felt it advisable to leave the matter to the discretion of the Provincial Education Departments. Previously, a committee of the Board under the Chairmanship of Mr. B. G. Kher, Prime Minister, Government of Bombay, had recommended that English should not be introduced as an optional subject in Basic Schools. The modification made by the Board leaves the present system of middle vernacular education intact.

Though the Board has not recommended it and in fact indirectly they are against it, the output of the Senior Basic Schools will, in the majority of cases, be the potential teachers of Junior Basic Schools, for the minimum scale of pay recommended by the Board for a Matriculate two-year trained teacher is low, in comparison to what a matriculate with two-year further education will get in a Government office. The Provincial Governments and authorities of schools, however are at liberty to pay higher salaries than those recommended by the Board, and if their finances permit, they will no doubt like to raise them. At present, however, the prospects are gloomy, as it is reported that some of the Provinces, are finding it difficult even to adopt the minimum scales for teachers possessing the minimum qualifications laid down by the Board. Apart from this consideration, those children completing their education in senior basic schools who do not join any technical institute must be provided with some suitable work. If they are given two to three years' further education in a training institution, they will be fully equipped to become teachers to teach Junior basic classes

It is reported that some provincial Governments have proposed the conversion of existing middle schools into Senior Basic Schools; and establishment of some new Senior Basic Schools, while others have no such proposals, at least for the first 5-year period.

In Assam about 200 Senior Basic Schools, of which 50 will be in the excluded areas, will be established in the first quinquennium; in Bihar 40 Government Middle English Schools with 8 classes, to be raised to the status of high schools later. Also the Provincial Government contemplates to give additional recurring and non-recurring grants to non-Government middle schools in order to enable them to improve the pay and qualifications of the teachers and their buildings. In Central Provinces 66 Indian Middle Schools are expected to be opened, which will be of Senior Basic type, while 27 Indian-English Middle Schools for girls will be raised to high school standard. The North-West Frontier Province, it is said, will provide for the establishment of 159 new Senior Basic Schools for boys and 96 for girls, and for the conversion of existing middle schools into Senior Basic Schools. Orissa aims at the establishment of 25 Middle English Schools for boys, and 20 for girls, and at the improvement of the existing schools, both for boys and girls, by providing additional teachers, vocational classes, buildings, play-grounds and equipment. In the Punjab, the system of basic education does not appear to have been accepted, and there is no proposal for the establishment of Senior Basic Schools. However, 300 lower middle schools for boys (1—VI classes) and 180 primary schools for girls are to be raised to the Middle standard; optional English classes to be attached to all the new Vernacular Middle Schools. Necessary improvements will be effected in the form of increase in pay, and certain other amenities. Like the Punjab, Sind too does not seem to be in favour of Middle Schools being termed Senior Basic Schools, but the Provincial Government propose to open 8 Residential Rural Middle Schools with agricultural and vocational bias, and to open 2 middle schools for girls, to be raised to high schools in due course. The question of taking over all the non-Government middle schools by Government is also said to be under consideration. After having been brought under Government control, they will be raised to high schools, though gradually. In the United Provinces, 3 new Anglo-Vernacular Middle Schools for boys and 2 for girls will be started, and vocational training classes will be started in Vernacular Middle Schools.

Middle English Schools as such do not fit into the framework recommended by the Board, but the Provincial Governments, it is hoped, will convert them into high schools of new type, and primary classes attached to them will be detached into separate units. If this is not done, the new educational framework will give way to the existing one.

High School Education.—The existing high school education system flows into three streams. In certain provinces high schools have primary, middle and high classes; in some middle and high classes, while in certain cases, notably the North-West Frontier Province, the Punjab and the United Provinces, high classes are also attached to the Intermediate classes constituting 'Intermediate Colleges'. Again in some provinces a high school stage consists of two classes IX—X (Punhab, N.-W.F.P. and United Provinces); in some three (IX, X & XI)—C.P., Madras and Orissa; while in some four classes. Against this unhomogeneous and non-uniform system, the Central Advisory Board of Education has recommended that high schools should be treated as distinct units differing in outlook and objective from the ordinary Senior Basic (Middle) schools, and that in future the High School Course should cover six years from about the age of eleven. Primary Departments, even if housed in the same premises as high schools should be regarded as entirely distinct units and organised separately.

In the re-organised system of education, high schools will be of two main types—(i) the Academic High Schools, and (ii) the Technical

High Schools. The former are required to impart instruction in arts and pure Sciences, while the latter to provide training in the applied sciences, and in industrial and commercial subjects. In both types of schools, the course in the junior department, *i.e.*, middle stage, will be very much the same, with a common core of the 'humanities' throughout. There will be no differentiation between boys and girls high schools except that in the latter class of schools, Domestic Science will be added to the courses of study.

The statistics of present day high schools is given in the table below :—

Province.		No. of high schools.	Enrolment	No. of pupils in high school stage
Assam	M	176	44,133	19,063
	F	27	6,093	2,154

	F	613	185,457	59,380

N.B.—The figures relate to the year 1944-45.

In Assam, the lot of the existing high schools will be improved through adequate grants-in-aid to non-Government schools, and improvement of their buildings and equipment. Also vocational bias will be given to these schools by the introduction of certain technical subjects.

On the technical side, it is proposed to open 10 technical High Schools, and to convert 2 Technical Schools into Technical High Schools.

In Bengal, it is proposed to improve 50 high schools in the matter of staff, buildings, hostels, playgrounds and equipment, and gradually to convert them to new type of schools. Of these, ten schools will be provided with technical sections also. In the non-Government schools selected for improvement, the salaries of all teachers, if qualified, are expected to be raised approximately to the scales in Government schools. Also grants-in-aid to existing secondary schools will be increased to afford them financial stability and to enable them to improve their standards and activities.

In Bihar, 15 high schools for girls will be added, and the existing high schools will be provided with additional grants so that they may be able to improve the scales of pay of teachers, their buildings, and also be able to start science classes where they do not already exist.

In Bombay, on the technical side, 4 Agricultural high schools and 2 Technical High Schools will be opened. It is also possible that the present popular Government may consider the desirability of expanding the academic side of secondary education in order to meet the needs of the province for matriculate teachers.

In the Central Provinces, a large number of new high schools (22 for boys and 23 for girls) are contemplated, in addition to the conversion of 28 Indian English Middle Schools for girls into high schools. It is also proposed to establish 21 Technical High Schools. Besides, adequate grants will be made available to the existing high schools.

North-West Frontier Province has provisionally planned to establish 35 high schools for boys, 28 for girls, and 6 Technical High Schools for boys and 6 for girls. It is expected that with this additional provision needs of the province in regard to high school education will be adequately met

Orissa has proposed to effect the following expansion programme in regard to high school education.

30 additional high schools for boys, 10 for girls, 2 Technical high schools, and improvement of the existing high schools by the provision of the teaching of science, Manual training, and physical education.

The Punjab Government has planned to start at least 15 Government high schools during the first period, and to effect all-round improvements in the existing high schools, for which purpose adequate additional grants will be provided.

The expansion programme proposed by Sind appears to be most modest unless further expansion programme is undertaken. In the sphere of secondary education, it is proposed to start 2 middle schools for girls which will be gradually raised to high schools. Also the Government contemplates to take over under their control all non-Government middle schools in order to increase their efficiency and to add high school sections to them.

In the United Provinces, the demand for the expansion of girls' education is very keen, and to meet it the Government has proposed to open during the first 5 years period 20 high schools in the municipalities where no such school already exists. This programme will however continue till 70 new schools have been altogether established. An important feature of these schools is that, as recommended by the Board, subjects like General Science, Arts, Crafts and Music will be included in the curriculum. All the aided high schools will be given suitable additional grants-in-aid so that they may be able to improve the conditions of members of their staff and raise their standards.

University Education.—Though the Central Advisory Board of Education has recommended as an essential and urgent reform the introduction of a three-year degree course in place of the existing two-years one with the consequence that the one year of the intermediate stage will be added to the University course, and the other to the high school course, this change has not so far been effected in any province except Delhi. It appears that other Universities will fall in step with Delhi only if this experiment proves successful.

The Board had estimated that under the national system of education now proposed, roughly 11 lakhs out of an estimated total of over 33 lakhs of pupils in the Senior department of high schools, will be leaving school every year. They believed that at least one in fifteen of those the high school leaving would be able to reach the level of attainments required for and to be prepared to embark on a university course. In the year 1944-45, 52,938 boys and 6,324 girls were in the 1st year of the collegiate stage, showing that there is yet a great room for the expansion of the university education, the need for which will be accentuated when the high school education system has sufficiently developed, as recommended by the Board.

The table below shows the existing provision (year 1944-45) in this behalf:

Province.		INTERMEDIATE COLLEGES. No. of Inst.	DEGREE COLLEGES. No. of Inst.	No. of students in inter. stage.	No. of students in degree & higher classes.	No. of passes in Matriculation & Equivalent Examinations.	No. of passes in B.A. & B.Sc. (Pass & Hons.) Examinations.

In their educational development programme, some of the Provincial Governments have made provision for the expansion of University education according to their requirements and needs. Special stress is being laid on scientific and research education. Schemes in this behalf have not yet been finalised and published.

Technical, Commercial and Art Education.

The existing provision in this respect is meagre; in certain provinces proper facilities do not exist for medical education, in some for Engineering, or for Agricultural education while in others for all types of higher Technical Education. The position is summed up in the statistical statement below:—

Province.	Agricultural Colleges.		Commercial Colleges.		Engineering Colleges.		Law Colleges.		Medical Colleges.

The expansion of technical and professional side of education has engaged the attention of provincial Governments. The indications are that they will give this side a proper place in their educational development programme.

Training of Teachers.—The available facilities in this respect are meagre in some provinces while in others they are quite abundant. The tables below tell their own tales:

Province.	Training Colleges.			Training Schools.

* *N.B.*—The figures include undergraduates as well.

The Central Advisory Board of Education were of the opinion that the fundamental requirement of any comprehensive development in the educational system is the provision of an adequate establishment of teachers and of the necessary institutions for training them. They therefore recommended that as the existing institutions were barely sufficient to meet wastage among existing teachers, new training schools and colleges (including University Education Deptts.) must be provided to supply the additional teachers, which will be required for the development of educational facilities at all stages of education, and to train the existing untrained teachers. The minimum qualification of a teacher for a Junior Basic School which has been prescribed by the Board is the possession of a Matriculation examination certificate or its equivalent followed by a two or three years course of professional training, and for a high school teacher, the possession of a degree followed by one year training. The minimum scale recommended for a matriculate trained teacher is Rs. 30-1-35-3 (biennially)-50, in a senior basic (middle) school Rs. 40-2-80, and for a graduate trained teacher Rs. 70-5-150 p m.

It has been recommended that the teachers of village schools should have free houses; where this is not possible, 10 per cent. should be added to their salaries. Further the scale of matriculate trained teacher, may be increased to 50 per cent. to meet the needs of areas where the cost of living or other factors necessitate a more generous scale. In the case of non-graduate and graduate trained teachers, 10% house allowance in normal rural areas, possible increase upto 50 per cent. to meet higher cost of living or other special circumstances, *plus* 6¼ per cent. *contributory provident fund.*

The present output of matriculates is too small to meet the needs of basic schools. Moreover, the scale of pay recommended for a matriculate trained teacher is small compared to what a matriculate with two years further education may expect to get in a Government Office. Eight years continuous education in a basic school imparted in an Indian language—a mother tongue—is sufficient to make a scholar reach the present matriculation standard except English. Two to three years further education in a training institution given to these students will equip them to become suitable teachers for junior basic classes. In order to accelerate the rate of progress of education, and to be able to open a school in all villages having sufficient children of school-going age for a school within the shortest possible time, it is necessary that the best products of senior basic schools are encouraged to become teachers, alongside of willing matriculates. A senior basic school product who has received training for two to three years should be given at least the minimum scale recommended by the Central Advisory Board of Education with all the allowances, recommended by them, while for a matriculate trained teacher, whether he teaches junior basic classes or senior basic classes, the scale of pay should be higher. It is suggested that the minimum should not be less than Rs. 40 in a rural area, and Rs. 60 in an urban area, while the maximum in the former case may be Rs. 80, and in the latter Rs. 100. This will ensure adequate living wage, and will attract suitable candidates, for teaching profession. 'Education' is the noblest type of social service, and it should be possible to find money for giving teachers their due. Some educationists hold the view that in order to find teachers 'overnight' for nation-wide programme of mass education, 'conscription' should be introduced so that all matriculates and graduates may do some teaching before they embark upon their further education. As it is a danger to employ 'unwilling' persons as teachers, this suggestion is not worth implementing. Conscription may be helpful for adult education but for basic education it will have disastrous effects.

CENTRAL ADVISORY BOARD OF EDUCATION IN INDIA

The twelfth meeting of the Central Advisory Board of Education in India was held at Mysore in January 1946. At this meeting, many questions of educational importance were discussed. A short account of these is given below.

(1) **Religious Education.**—The reconstituted Committee appointed to examine the desirability and practicability of providing religious instruction in educational institutions had expressed views widely divergent from those of the Committee originally constituted. The members of the Board were also not unanimous in their views on the issues involved. While some members felt that the teaching of religion should be restricted exclusively to broad moral and ethical principles, others held that the denominational teaching constituted the essence of religious instruction and must be provided for in schools if the spiritual needs of children as well as the wishes of their parents are to be satisfied.

It was however agreed that there are formal religious truths which are of the nature of information, and can be added to a scholar's stock of knowledge through instruction. There are other religious truths, which are equally if not more important and cannot be inculcated through academic machinery but can only be imbibed through inspiration and example. Apart from this, the members could not agree as to the desirability or feasibility of providing for a common and agreed syllabus of religious instruction. In view of the many insuperable difficulties, it was held that the state concerned, though it must be to ensure a sound spiritual basis of education for all children cannot take on itself the full responsibility for fostering the teaching of formularies distinctive of particular denominations. Accordingly the Board resolved that while fundamental importance of spiritual and moral instruction in the building of character is duly recognised, the provision for such teaching, except where it can be provided in the normal course of secular instruction, should be

the responsibility of the Home and the Community to which the pupil belongs.

(2) Report of the Committee on conditions of service (other than remuneration) of teachers.—The report of this Committee was adopted by the Board with minor amendments and it was decided to forward it to the Provincial and State Governments for necessary action.

The main recommendations made by the Committee are :

(*i*) Selection Committees should be established for the appointment of teachers in all types of schools on the lines recommended. Teachers of all grades when confirmed in their appointments should be placed on a Provincial cadre.

(*ii*) The period of probation should normally be one year, and should not exceed two years under any circumstances.

(*iii*) Teachers should be appointed on a written contract basis.

(*iv*) Teachers should become entitled to 15 days' sick leave on full pay for every 6 months' service and should be allowed to accumulate it up to a maximum of 12 months.

Women teachers may avail themselves of three months' leave in the way of maternity benefit upto a maximum of one year in addition to the usual sick leave.

(*v*) The size of a class should not exceed 40 students.

(*vi*) Every teacher should be required to be on the premises of the school for 32 hours per week, out of which not more than 24 hours should be occupied by teaching, the remaining devoted to extra-mural or other school activities not entailing actual teaching.

(*vii*) Schools should be open for not less than 200 days or 400 session a year, each session consisting of 2½ hours approximately. A working day will consist of only two sessions.

(*viii*) Teachers should obtain permission from the Head Teachers to undertake private tuition and a register will be kept in this connection.

(*ix*) Teachers should be given study leave on full pay.

(*x*) Teachers should undergo compulsory medical examination before appointment and subsequently when required.

(*xi*) The normal age of retirement should be fixed at 55, to be extended upto 60 when desirable.

(3) Report of the Committee on the methods of selecting for higher Stages of Education.—The report of this Committee was also adopted by the Board with certain amendments, and it was decided to forward it to Provincial Governments, for necessary action.

The main recommendations made by this Committee are the following :—

(*i*) So long as the supply of places in institutions of higher education is less than the demand, as it is likely to be for many years to come, the principle of selection will have to be applied in some form or other.

(*ii*) The first selection of pupils for admission into the different types of high schools should be made at the end of the Junior Basic (Primary) stage, *i.e.*, at about the age of 11 *plus*.

(*iii*) A further selection stage at the age of 14 *plus* with a view to transferring to suitable high schools those pupils who have developed at a comparatively late stage and those who for some reason or other were missed at 21 *plus*. Such pupils will require special tuition in some subjects on transfer to the High School.

(*iv*) The current methods of selection *i.e.*, the written examination, coupled with a personal interview by local Inspectors in some cases, are inadequate, considered in the light of recent investigations and Indian education conditions.

(*v*) The general method of selection for high schools should be as suggested.

(*vi*) The school record should give relevant and definite information, capable of being recorded in a convenient manner. The standardisation and improvement may require careful and systematic examination by a competent organisation. But the form should include the following essential items of information :

(*i*) Attainment of subjects, which will furnish evidence of further educational promise.

(*ii*) Intelligence Quotient.

(*iii*) Personal qualities as a guide to the type of higher education best suited to the pupil.

(*vii*) Head teacher should be specially trained to use measures designed for this purpose.

(*viii*) A considerable headway has to be made up, before intelligence tests standardised in this country can altogether replace the "common examination".

(*ix*) It is important to have an assessment of the personal qualities of each selected candidate from the Head Teacher.

(*x*) In considering the marks which each pupil receives, due allowance has to be made for variations from school to school.

(*xi*) A suitable "age allowance" is recommended for the younger children.

(*xii*) The educational authorities should investigate the possibilities of applying modern technique of selection for admission into institutions. Aptitude and attainment tests could be profitably utilized in this connection.

(*xiii*) The Committee consider that the Employment Selection Bureau established under the Home Department provides the suitable foundation on which an adequate organisation can be built for conducting research in selective methods and standardising tests of various types. This "Central Bureau" should be set up at an early date.

(*xiv*) The Central Bureau should afford sufficient scope for research and training of personnel with a view to meeting the requirements of provincial and other education authorities.

(*xv*) Until equal educational opportunities are made available to all in the selective process, special provision will have to be made to ensure the admission of a reasonable number of children from educationally backward communities and the selection should be confined, in filling such special places only to backward minority communities. The standard of admission should however be relaxed only to the extent consistent with maintaining the minimum standard required for high schools.

(*xvi*) Facilities for vocational guidance should be provided, on the lines suggested by the Committee.

(4) Teaching of Russian, Chinese and other Modern languages.—The question of the introduction of Russian, Chinese and other modern languages at the high school stage was another subject of importance discussed by the Board. It was agreed that the teaching of these languages at the high school stage was impracticable, but they should be taught in universities. The Board recommended that the Government of India should establish a Central School on the model of the School of Oriental Studies in London for the study of the more important foreign languages, and circumstances permitting, Government may also promote the establishment of departments for the study of these languages in Indian Universities by making suitable grants.

(5) United Nations Educational, Scientific and Cultural Organisation.—The Government of India had appointed a delegation consisting of Sir John Sargent, Rajkumari Amrit Kaur, Dr. Zakir Husain, Dr. Amarnatha Jha, Mr. K. G. Saiyidain and Dr. T. Quayle to attend the United Nations Conference held in London in November, 1945 for the purpose of considering the establishment of a permanent Educational, Scientific and Cultural Organisation. It was reported to the Board that Rajkumari Amrit Kaur was elected Vice-President of the Conference and her speech was extremely well received. The Conference was split up into five Commissions. Dr. Jha was appointed a member of Commission —I—Title, Preamble, Purposes and Principal Functions of the Organisation: Dr. Zakir Husain of Commission II—General structure of the Organisation: Mr. Saiyidain of Commission III—The Executive Board and the secretariat, Rajkumari Amrit Kaur and Dr. Quayle of Commission IV—Relations with the Social and Economic Council and with other inter-national organisations, and the question of the seat of the organisation: and Sir John Sargent of Commission V—Interim (or Preparatory) Commission.

It was explained to the Board that the reports of the Commission were discussed and adopted with minor amendments at the final plenary session of the Conference, and are set out in the Final Act. The delegation from India was unanimous that it is well worth while for the Government of India to ratify the conclusions reached at the conference and to give their full support to the United Nations Educational, Scientific and Cultural Organisation, since India stands to gain very much from association with progressive educational countries and may derive great practical assistance from the machinery of co-operation which it will be one of the objects of the permanent organisation to establish.

The Board decided, after hearing the account, to request their Chairman to set up a Committee to go into the question of forming a National Education Commission for India.

(6) Secondary Schools Examination Council.—The Board considered the desirability of a Secondary Schools Examination Council with a view to bringing examinations upto a common standard, and decided to appoint a Committee to examine the ways and means of establishing such a body and its constitutions and to report.

(7) Physical Education an Examination Subject in High Schools.—The Board sympathised with the objective that the schools should take all possible care for the promotion of the physical welfare of children in their care, but they were unable to go so far as to say that 'Physical fitness' should be included as an examination subject, as it was felt that the object of physical education would be defeated if the suggestion was accepted. The Board also expressed the opinion that no useful purpose will be served by setting up an expert Committee on Physical Education, as they would first like to see what provision had been made in regard to the health of the school child in the first five-year programme of educational development.

(8) Next Meeting of the Central Advisory Board of Education.—The Government of Bombay invited the Board to hold their next session in Bombay, and the Board accepted it with gratitude.

Inter-University Board of India.—The last meeting of the Board—the 21st one—was held at Colombo (Ceylon) in December 1945 under the chairmanship of Dr. Amaranatha Jha, the Vice-Chancellor of Allahabad University. As usual, questions of great importance relating to university education were discussed.

In respect of M.A., M.Sc., B.A. (Hons.), B.Sc. (Hons.) and other examinations of similar standard, the Board recommended that two independent examiners should conduct the examination so as to ensure a uniform system of examination in these courses of study by all universities.

The Board had a proposal before it that for students taking up Hindi as a subject of study in the university courses, Urdu should be made compulsory, and *vice versa*. The Board could not go so far as this, but recommended that "the Board considers it desirable that a candidate offering an Honours or Postgraduate course in Hindi or Urdu should have a knowledge of the other language".

With regard to the question of Indian languages as the medium of instruction in Collegiate stage, the Board recommended that (*i*) it was for the Central and Provincial Governments and States to subsidise the production of books of university standard in the different Indian languages, (*ii*) for the universities to select certain areas and institutions where the medium of instruction should be an Indian language and where special grants should be made for the employment of qualified teachers and the upkeep of such colleges, (*iii*) in the case of such languages as are common to more than one university there should be Inter-University and Inter-Governmental co-operation in the production of suitable text-books.

The Board further expressed the opinion that in order to encourage such universities that employ the Indian languages as media of instruction, it would be desirable that, other things being equal, the alumni of these institutions should receive special preference in the matter of employment, particularly in the Education Department and such other Departments where proficiency in the Indian languages is likely to prove an added qualification.

At present the degrees conferred by the Universities are not awarded on the basis of uniform length of courses of study, and the Inter-University Board therefore considered this question, in order to secure a reasonable degree of uniformity regarding the nomenclature used by different universities for their higher degrees. They decided the following:

Faculty of Arts and Science.—B.A. & B.Sc. degrees be conferred after two years of study subsequent to the Intermediate or Four years after the present S.S.L.S. or Matric.

That B.A. (Hons.) & B.Sc. (Hons.) degrees be conferred in the respective faculties after three years of study subsequent to the Intermediate or five years after Matric.

That the M.A. or M.Sc. degrees be conferred after two years of Post-Graduate study after B.A. or B.Sc. or one year after Honours.

Faculty of Law.—That the first degree in Law be called the LL.B. and it be awarded after two years of study subsequent to graduation in any faculty or four years of study after Intermediate.

That the next higher degree be called the LL.M. and it be conferred after two years of study subsequent to LL.B.

That the LL.D. be conferred on a thesis submitted by an LL.M. not less than two years after obtaining that degree.

Faculty of Commerce.—The nomenclature of the degrees in this faculty be B.Com. and M.Com., the bachelor's degree being awarded after two years study subsequent to the Intermediate and the M. Com.—two years after the B.Com.

Faculty of Agriculture.—The nomenclature of this degree be B.Sc. (Ag.) and the period of study be three years subsequent to the Intermediate Science.

The M.Sc. (Ag.) may be obtained two years subsequent to B.Sc. (Ag.).

Faculty of Medicine.—The committee notes that there is uniformity in regard to nomenclature *viz.*, M.B., B.S. and duration of course, it being a five years professional course at present.

Faculty of Technology and Engineering.—The nomenclature of the degrees be B.Sc. (Tech.) and B.E. and that as regards duration, etc., the report of the special committee be awaited.

Faculty of Education.—That there be two degrees, (1) B.T. which should be taken one year after the degree in faculties of Arts and Science and (2) the M.Ed. which should be taken two years after B.T.

Research Degrees.—There should be (1) Ph. D. This should be awarded in all faculties except law. It should be three years after the Master's degree in the faculties of Arts and Science, Education and Commerce, two years of which should be study under supervision. (2) D. Litt. and D. Sc. in the faculties of Arts and Science (including professional degrees in the respective Sciences). These should be the highest degrees awarded for research in the respective faculties and should be restricted to those who have taken the Ph.D. two years prior to submitting the thesis for respective degrees.

Another very important proposition considered by the Board was that "the University Grants Committee should include all Indian Universities and the Central Government should specially finance the research schemes." They decided that if under the scheme of educational development, the Central Government undertakes to make grants to Universities, a Central Grants Committee might be appointed and its functions should be (1) to assess and distribute grants from public funds to the universities, (2) to examine and advise upon all schemes for major developments, (3) to visit the Universities, once in five years and make recommendations, if any, to them. It should consist of men of academic eminence and experience of University administration in India and will work, where necessary, through provincial and regional sub-committees; but any kind of control or inspection is not consistent with the dignity and autonomy of the Universities, while the advice and co-operation of the Central Grants Committee will always be welcomed by the Universities.

THE NATIONAL PLANNING COMMITTEE.

The report of the Sub-Committee of the National Planning Committee, outlining a national system of Technical Education and Scientific Research in India, has recently been published. The report states that the system in the Wardha scheme of a child learning a craft by the end of the school career to start a vocational life, is spiritually harmful to the child, as the vocation becomes the principal object of education. This gives a narrow and shallow knowledge of the subjects taught.

STATE TO RUN SCHOOLS.

While accepting the syllabus for the primary schools under the Wardha scheme as satisfactory, the committee suggests that algebra should be taught side by side with arithmetic, and British units of length, area, volume, weight and currency may be avoided and India units substituted.

The report is not in favour of what is known as the exchange motion under the Wardha scheme, according to which current expenditure of the school is expected to be met by the sale of the goods produced in the technical section by the students. The report emphasizes that these schools should be a direct burden on the State.

COMPULSORY FREE EDUCATION.

Primary education covering a period of seven years, according to the report, should be free and compulsory for all children and may be co-educational, the medium of instruction being the mother tongue.

After the primary course of seven years, secondary schools of general arts and sciences of three or four years' course should be established, and these three or four years should prepare students for admission to the university or higher technical or professional courses. Secondary schools, admission to which is not to be compulsory, should provide the study of Western languages, preferably English, the medium of instruction remaining the mother tongue.

A regular sifting of students is to be made after completion of the primary school course. Only those intellectually fitted will enter the secondary schools and the rest will enter what are called "continuation schools" for training in arts and crafts and industries such as drawing, artistic designs, general economics, civics, accounts and physical culture and gymnastics.

NATIONALIZATION OF INDUSTRIES.

The Committee emphasizes the need for India to be self-sufficient and so suggests the nationalization of industries. In such an event the educational problems would be simplified. The report lays special stress on technical and industrial training of young people so that in case of rapid industrialization of the country, adequate supply of technical hands for the maintenance of industries may be found.

The second stage in technical and professional education will begin after the completion of the secondary school course and will be of the university standard.

From the secondary schools students will enter either the university for arts and science courses of engineering or technological institutions or medical college and other professional lines.

After university education, which will take up about four years, there will be provision for post graduate and research work.

INTER-PROVINCIAL BOARD FOR ANGLO-INDIAN & EUROPEAN EDUCATION.

The Inter-Provincial Board for Anglo-Indian and European Education was created as a result of the recommendations of a special Committee on the Education of the Anglo-Indian and Domiciled European Community in India (popularly known as the Irwin Committee) appointed by the Third Round Table Conference. The Board consists of (*a*) Provincial Ministers of Education or their deputies; (*b*) an equal number of persons nominated by provincial Governors, in consultation with Ministers of Education and the Community, in order to represent Anglo-Indian schools; and (*c*) two nominees of the Government of India in order to represent the interests of the Community in Centrally Administered Areas. The main function of the Board is to ensure uniformity of educational standards and co-ordination of Anglo-Indian and European education throughout India by making recommendations to provincial Governments on matters of common interest.

The Board elects its own Chairman from amongst its members and appoints its own Secretary. At the moment, Mr. W. C. Wordsworth, C.I.E., M.A., M.L.A. (Bengal), Assistant Editor "The Statesman", is the Chairman, and Mr. H. W. M. Sadleir, M.A., the Secretary. The latter is at present in England on five months' leave and Mr Keith Percy is officiating for him.

By far the most important matter which has engaged the attention of the Board during the last two years is the post-war development of Anglo-Indian education along proper lines. At their meeting held in 1945, the Board decided to set up a small representative Commission to survey the present position and future needs of Anglo-Indian education.

After carrying out a preliminary survey of the present position of Anglo-Indian education by means of a questionnaire, the Commission made an extensive tour from September 26 to December 19, 1945, of almost all the important centres of Anglo-Indian education to gain a first hand knowledge of prevailing conditions. It also heard witnesses at all the centres it visited. The Commission has submitted its report which is now being printed. The report will be placed before the Board for consideration at its meeting which it is proposed to call sometime in November.

The Secretary and staff of the Board continued to render valuable help to the University of Cambridge Local Examinations Syndicate in the conduct of their examinations in India. With rare exceptions, all the European schools in India take the Cambridge Examinations, and it is generally recognized that, but for the great help rendered by the Board's office, it would have been extremely difficult, if not impossible, for the Syndicate to have held their examinations in India during the war and the consequent dislocation in the work of the schools.

The Board from its very inception has been greatly concerned with the poor standard of the teaching of Indian languages in European schools and continued its efforts to bring about an improvement in this direction. With this end in view, the Board has also arranged for special texts in Urdu and Hindi, the two Indian languages which are taken by a very large majority of Anglo-Indian schools, to be written to suit the peculiar needs of Anglo-Indian children.

The Board has also made certain important recommendations to improve the conditions of service of teachers in European schools, and has issued certain notes for the guidance of teachers.

EDUCATION IN THE INDIAN ARMY.

Before the war the Indian Army had a system of education whereby all soldiers received instruction as an integral part of their training. Their school knowledge, if any, was revised and extended. Illiterate recruits were taught to read and write in Roman Urdu and further graded instruction was given upto roughly the Matriculation standard.

The outbreak of war and the consequent expansion of the army brought in large numbers of recruits, many of them illiterate, of different races, and speaking different languages. These had to be educated in a short time up to the standards required for the ranks they might hold and the parts they would have to play in a complicated mechanised army. And they had to be considered not merely as units of a machine but as individuals and prospective civilians of a developing state.

The deal with the problems that arose, the Army Educational Corps on whom the responsibility for their educational training devolved was expanded—largely by the intake of Indian Officers. And the educational training of the men was divided into two parts—normal and wartime.

Normal education is a development of the pre-war system, simplified and intensified. Wartime education, in spite of its title, dealt with war and peace. Its object was to acquaint the soldier with all aspects of the war and of the allies' war efforts; to let him see the cause for which he was fighting, and furthermore that it was a just cause. At the same time it kept before him the problems that would of necessity come with the peace. The technique adopted was that of the discussion group, within the unit, led by the platoon Comdr., under supervision of an officer of the unit.

The unit discussions and associated activities are based on handbooks and periodical pamphlets issued by the Directorate of Army Education at General Headquarters (India).

On cessation of hostilities, an elaborate educational plan was put into operation by the Army—THE RELEASE PERIOD EDUCATION SCHEME (INDIAN TROOPS)—The object of the scheme is to use the time between the cessation of hostilities and the date fixed for the soldier's release from service to prepare him for return to civil life as a better, more useful citizen educationally, more capable of obtaining a better position in civil life. The scheme not only constitutes a powerful drive against illiteracy, but also includes graded instruction from the literacy stage in a man's own vernacular to the Matriculation stage in English in as much as the I.A. SPECIAL certificate of Education, the highest certificate obtainable in the I.A. is now recognised by most universities in India as equivalent to their Matriculation standard. The scheme also provides for intensive instruction in the principles of citizenship and rural and urban development.

INDIAN SCHOOL OF MINES.

The Government of India maintain the Indian School of Mines at Duanbad for high grade instructions in Mining Engineering and Geology. There are 3-year Certificate courses in Coal Mining, Metal Mining and Geology and 4-year Diploma Courses in Mining Engineering and Geology. The Diploma course in Mining Engineering is open only to coal mining students. In addition to the actual teaching period, students will have to obtain practical experience at collieries for at least 8 months prior to starting classes. The Diploma (A.I.S.M.) is granted and certain statutory privileges are enjoyed by Diploma holders in respect of the examinations of the Department of Mines for the Coal Mine Managers' Certificates of Competency. The Secretary for Mines, Great Britain, has approved the School in respect of its Diploma of Associateship in Mining Engineering under Section (6b) of the British Coal Mines Act, 1911. A holder of the Certificate or Diploma of the School is hereby entitled to claim exemption from part of the period of practical mining experience normally required from applicants for first or second class certificates of competency prescribed by the Act. The Diploma has also been recognised by the University of London for the purpose of its B.Sc. degree in Engineering (Mining).

THE DOON SCHOOL.

This School which is established in the Chand Bagh and Skinner's Estates at Dehra Dun owes its origin to the initiative and enthusiasm of the late Mr. S. R. Das. The aim of the school is to develop in an atmosphere of Indian culture and social environment the best features of English Public Schools. The school opened in September 1935 with 70 boys; there are now four houses and the number of boys in the school is 300. Mr A. E. Foot continues to be the Headmaster. He is assisted by 21 masters. The school prepares the boys for the Senior Cambridge Examination (Cambridge School Certificates) and for the Intermediate of the Board of High School and Intermediate Examinations of the United Provinces. Some boys take the Cambridge Higher School Certificate. Thereafter the boys can get admission into the Commissioned ranks of the Indian armed Services Medical and Engineering Colleges or Indian and Foreign Universities. The school is open to all boys without distinction of caste, creed, or social position and aims at providing a thorough general education from 11-13 to 18 years. Particular emphasis is laid on games, extra curricular activities and the management of school affairs is as far as possible by the boys themselves. The annual inclusive fee is Rs. 1,800. Places are allotted strictly according to the priority of application. At present names are likely to be at least SIX years on the waiting list. The Board of Governors of the Society, which maintains the school includes Sir Joseph Bhore, Sir Akbar Hydari, Mr. Kasturbhai Lalbhai, Dr. Zakir Hussain, Dr. John Matthai, R. B. Chuttan Lal and Sir Maurice Gwyer. His Excellency the Viceroy is the President.

THE INDIAN PUBLIC SCHOOLS' CONFERENCE.

The conference was founded in 1939. It is composed of the heads of certain institutions which set out to give an all-round training of the character, emotions and body as well as of the mind, under conditions somewhat similar to those of the best Public Schools in England. All of the present member—schools are mainly boarding schools, though several of them admit day-boys also: but there is nothing in the rules of the Conference to exclude a Day School. Many of the schools started life as Chiefs' Colleges, but they have now bound themselves to abolish social exclusiveness as a qualification for entrance and all social privileges and distinctions within their walls

Members of the Conference meet yearly in rotation normally at one another's schools and discuss matters of common interest. They have, for example, given considerable thought to the Cambridge Certificate Examinations in India and have helped the Syndicate with their advice. They have inaugurated schemes for exchange of masters among themselves and for possible exchanges with English schools: some of them hope to offer a two-year post-matric course of Administrative Training to those training to manage landed property efficiently: and they have now offered their services provided their standards are in no way prejudiced, for experiment and for other help in the National System of Education envisaged by the Central Advisory Board.

The general views of the Conference on education can be found in their Pamphlet "The Indian Public School" (O.U.P.). Membership is at present confined to the following schools.—

The Doon School, Dehra Dun: The Daly College, Indore: The Scindia School, Gwalior: The Rajkumar College, Rajpur: The Rajkumar College, Rajkot: The Shivaji Military School, Poona: St. Xavier's School, Patna: The Sadul School, Bikaner.

It is expected that a number of other schools will soon fulfil the necessary conditions and will wish to join. Copies of the Objects, Rules and Conditions of member-ship of the Conference can be obtained from the Hony. Secretary at present the Principal, Scindia School, Gwalior. The present Chairman is Mr. A. E. Foot, M.A., Headmaster, The Doon School Dehra Dun.

The comparative statement below shows the state of women's education during 1942-43 :—

	No. of Institutions.		Enrolment.		Total No. of girls and women under instruction.	
	1941-42.	1942-43.	1941-42.	1942-43.	1941-42.	1942-43.
Recognized Institutions—						
Arts & Science Colleges	47	50	5,159	5,081	11,778	11,958

(a) Includes both District Board and Municipal Funds.

BOY SCOUTS.

The Boy Scouts movement initiated in England by the late Lord Baden-Powell (the Chief Scout), has spread widely in India, both among Europeans and Indians. The Viceroy is Chief Scout for India and the heads of Provinces and States are Chief Scouts in their own areas. The aim of the Association is to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance—inculcating loyalty and thoughtfulness for others—and teaching them services useful to the public and handicrafts useful to themselves. The Association is now directly affiliated with the Boy Scouts International Bureau.

INDIAN HEADQUARTERS.

Chief Scout for India.—H. E. Field-Marshal the Rt. Hon'ble Viscount Wavell of Cyrnecia and Winchester, P.C., G.C.B., G.M.S.I., G.M.I.E., C.M.G., M.C.

Chief Commissioner.—The Right Hon'ble Sir Tej Bahadur Sapru, P.C., K.C.S.I., M.A., LL.D., D.C.L., D.Litt.

Deputy Chief Commissioner for India :—The Hon'ble Mr. Justice Vivian Bose, B.A., LL.B. (Cantab), Bar-at-Law.

Honorary Treasurer.—F. B. Blomfield, F.R.I.B.A.

General Secretary for India.—Hon. Lieut. Rao Bahadur G. T. J. Thaddaeus, B.A., D.C.C., A.K.L., R.I.N.V.R.

Office Superintendent:—S. H. A. Jaffri, B.Com.

Headquarters Council for India.—

President.—The Chief Scout for India.

Chairman—The Chief Commissioner (ex-officio).

Secretary.—The General Secretary (ex-officio).

Members.—

G. A. Small, I.E.S., M.A., D.C.C., AK.L., Assam.

Rai Bahadur U. N. Ghosh, Bengal.

A. S. Khan, C.I.E., I.E.S., Bihar.

The Hon'ble Mr. Justice Vivian Bose, Barrister-at-Law, C. P.

F. B. Blomfield, F.R.I.B.A., Delhi.

Khan Bahadur Shah Alam Khan, M.A., LL.B., P.E.S. (N.W.F.P.)

The Hon'ble Chief Justice Sir Iqbal Ahmad, Kt., U.P.

W. H. F. Armstrong, C.I.E., M.A., I.E.S. (Punjal).

P. Kuttikrishna Menon, B.A., L.T., D.C.C., AK.L. (Cochin).

Rao Bahadur K. P. Naidu, Dewas (Senior).

Lt. Commander S. D. Pande, M.Sc., R.I.N.V.R., Jaipur.

Rajkumar Bikram Bahadur Singh, Khairagarh.

Sardar D. K. Sen, M.A., B.C.L., Barrister-at-Law, Patiala.

P. Siva Shanker, B.A., LL.B. (Mysore State).

M. A. McCanliss, M.A. (Rajputana).

M. N. Zutshi, B.A. (Sirohi).

*Last year's figures.
**Figures not received.

The Co-operative Movement.

Rural Poverty.—The outstanding feature of Indian rural economy that is bound to arrest the attention of any observer is the appalling poverty of the rural population. The various estimates, official and non-official, that have been made of the income per head of population in India at various times leave the matter absolutely in no doubt. The Central Banking Enquiry Committee estimates that the average income of an agriculturist in British India does not work out at a higher figure than Rs. 42 a year. The vast magnitude of this evil will be better realised when we take into account the predominance of the agricultural population in India. In 1891, 61 per cent. of the total population of the country lived on agriculture; this percentage rose to 66 in 1901 and to 73 per cent. in 1921; in 1931 the percentage fell to 67 and in 1941 a little further lower. The poverty of the agriculturist may be due to a variety of causes, but it would appear that agriculture has in a large measure ceased to be an industry worked for profit; the cultivator labours not for a net return but for subsistence. The extent of an **average holding**, which works out at about 6 acres, for an agricultural family of 5 persons is too inadequate to maintain it in ordinary comfort even with the low standard of living which is so characteristic of India's rural population. Moreover, Indian cultivation is in a large measure exposed to the vicissitudes of seasons and the VAGARIES OF THE MONSOON. In every 5 years there is but one good year, one bad year and three indifferent years. These unfavourable conditions might be mitigated to some extent by a well conceived policy of **irrigation** by the State; but so far, of the total cultivated area in the country, about 16 per cent. only has irrigation facilities from rivers, tanks or wells while the remaining 84 per cent. depends merely on rainfall. Thus the frequency of failure of crops, owing to drought and floods, frost and pests, coupled with the low vitality and high mortality of the live-stock, render the economic position of the cultivator worse still. The inadequacy of the **subsidiary occupations** to supplement the slender income from agriculture contributes further to his extreme economic weakness. He has sufficient spare time on his hands to devote himself to subsidiary occupations but he has been exposed to the full blast of competition of forces from the rest of the world and many of the industries on which he relied in the past have suffered largely from, or been wiped out by the competition of machine-made articles. He is now being drawn steadily into the sphere of influence of markets both national and international and he has neither the organisation nor the credit facilities to help him as in countries like the United States of America and Canada and several European countries. Though the recent rise in the prices of agricultural products has benefited him, his position remains essentially weak. In addition to these numerous difficulties, the Indian agriculturist has another serious handicap in this that he is largely illiterate. The percentage of literacy in India is still very low being only 13 per cent. and any progress in agriculture is well nigh impossible without the background of general education. All these factors lead to the most outstanding feature of Indian rural economy—the chronic and almost hopeless INDEBTEDNESS of the cultivator.

Rural Indebtedness.—The Central Banking Enquiry Committee has estimated that the total rural indebtedness in India is about Rs.900 crores. Though indebtedness of the agricultural population has continued from oldtimes, it is acknowledged that it has risen considerably during the last century and more especially during the last 50 years. This colossal burden of debt is the root problem which has got to be faced in any attempt towards the economic regeneration of the masses. A peculiar feature of this indebtedness is that the debt which remains unpaid during the lifetime of the cultivator who contracted it passes on as a burden to his heirs, so that many agriculturists start their career with a heavy burden of ancestral debt which they in their turn pass on with some further increase to their successors. Ignorance and improvidence extravagance and conservatism have further been held forth as the reasons for the continued growth of this heavy load. A marriage festival in the family tempts him to launch out into extravagance while funeral feasts prove no less costly. All these factors—the uneconomic nature of the agricultural industry, chronic and heavy indebtedness and illiteracy form a thoroughly depressive background of Indian rural economy.

Genesis of the Movement.—It is no wonder, under the circumstances detailed above to find that the Indian agriculturist has constant recourse to borrowing and that too not only for any land improvement that he may contemplate but for his current agricultural needs as also for periodical unproductive purposes such as weddings and funeral feasts. The absence of any banking organisation in the country-side has driven him into the arms of the **sowcar** or the mahajan who, while proving a very accommodating person, has exercised a grip on him from which it has been found almost impossible to extricate him. The usurious rates of interest charged, coupled with various devices which increase still further the actual rate of interest, and the numerous services which the sowcar performs as a retail tradesman and the buyer of his produce, make him the dominant force in the village, reducing the agriculturist to the position of a serf, toiling for generation after generation, without ever hoping for a release from his clutches, getting bare subsistence as a reward for all the trouble that he might take and therefore becoming listless, fatalistic and absolutely unprogressive. In 1883 the Land Improvements Loans Act was passed and this was followed in the next year by the Agriculturists Loan Act enabling Government to advance loans repayable by easy instalments and at low rates of interest for improvements and also for current agricultural needs. In 1892 Sir Frederick Nicholson submitted a report to the Madras Government

n the possibility of introducing land and agri-ultural banks and the discussion thus initiated y him was continued by Mr. Dupernex of the . P., in his "Peoples Banks for Northern ndia". The caste system of the Hindus and he ideas of common brotherhood among the oslems were evidences of the peoples' natural ptitude for co-operation and the *nidhis* of outhern India furnished a practical proof of is aptitude. The Government of India in 901 appointed a committee to consider the uestion of the establishment of agricultural anks in India and the report of this committee sulted in the passing of the Co-operative Credit ocieties' Act of 1904. The co-operative move-ent was thus launched in India on the 25th arch, 1904. The Act aimed at encouraging rift, self-help and co-operation amongst griculturists, artisans and persons of limited eans and the societies that were to be started ere intended to be small simple credit societies r small and simple folks with simple needs nd requiring small sums only. Knowledge f and confidence in their fellow members which re the keynote of success were ensured by roviding that a society should consist of persons esiding in the same town or village or group f villages and should be members of the same ribe, class or caste. In order to provide facil-ies in urban areas for the small man, urban ocieties were also permitted. The Act intro-uced the principle of unlimited liability for ural societies. The local Governments were mpowered to appoint special officers called egistrars of Co-operative Societies, whose duty would be to register societies formed under he Act, to get the accounts of such societies udited by a member of their staff and in eneral to see that the societies worked well he seed thus sown has grown to-day in the ourse of 40 years into a fine tree with twigs nd branches, spread out in many directions. espite of several weaknesses in the co-operative ovement in India to-day, it is beyond dispute hat the movement has been a powerful instru-ent towards the awakening of the country-side nd has led to a steady improvement in various irections of the life of the Indian cultivator. oreover, the use of the vote, the elective ystem, self-help, self-reliance, compromises ives and takes, work on an organised plan anding of angularities are great items in the aining up of a citizen and the co-operative ocieties have been great schools for political nd civic education. Since the launching of he movement in 1904, there have been amend-ents of the co-operative law and committees nd commissions of enquiry to remedy defects nd to suggest further lines of action.

Growth of Co-operation.—In the first few ears of the movement the number of societies rew up very slowly but the growth was consi-erably accelerated from 1910 and the average umber of societies from 1910 to 1915 was about 2,000. The pace of growth still further quick-ned and now there are 1,26,305 agricultural ocieties and 18,819 non-agricultural ones. Table 1 shows the distribution of these ocieties by provinces. It will appear from the able that progress in different parts of India as not been uniform. Bengal, the Punjab, he United Provinces, and Madras have the argest Number of Societies—while the other major provinces like Bombay, Bihar, the Central Provinces and Assam show distinctly smaller figures. The Punjab with 26,810 societies stands first in the number of societies (92·4) per one lakh inhabitants, while Bengal which has a larger number of societies than the Punjab stands second in that respect with 67·5. The progress in smaller areas, like Coorg and Ajmer-Merwara, must be regarded as very satisfactory in view of their small population, since the number of societies per one lakh inhabitants works out in their case at 160·0 and 127·6 respectively. It is satisfactory to note that the co-operative movement has spread not only among the British Indian Provinces but also in Indian States and compared to the total population, Kashmir, Gwalior and Indore lead in this matter though the premier States of Mysore, Baroda and Hyderabad have also made considerable progress. Even more instructive are the figures in Table 2. The total **number of members** of primary societies stands on the 30th of June 1943 at 69 lakhs. Taking the normal family at a little under 5, it is clear, therefore, that about 3¼ crores of the people of India are being served by this movement. There is no single movement in the country fraught with such tremendous possibilities for the uplift of masses as the co-operative movement and there is no single movement with such a large percentage of the population affected by it. Though the Punjab leads in the number of members of societies, 37·0 per one thousand inhabitants, Bombay comes next with 33·8, while Madras, Bengal and Sind rank thereafter. This shows that the size of societies varies in different Provinces and that Bombay, while having a smaller number of societies, has a larger average of membership per society as compared with the other Provinces of British India. Of the smaller areas, Coorg takes a leading place with 128·4 members per one thousand inhabitants, while Travancore has an average of 28·8. Membership is a much better test in many respects of progress than the number of societies and from this point of view, the progress in the Punjab, Bombay, Coorg, Travancore and Ajmer-Merwara must be regarded as distinctly satisfactory. There is, however, a third aspect also of the growth of the movement. Merely the number of societies, or the membership in the societies is not an index of the work that is being done and of the benefits which are being conferred by the movement on the population affected. The societies are predominantly credit organisations or rather small banking institutions and the part that they play can be better appreciated from their **working capital** than from merely the number of members. In this direction the marvellous progress so far achieved by the movement should also be noted. From about Rs. 68 lakhs, which was the average up to 1910, the working capital has advanced very rapidly and stands to-day at more than Rs 1.21 crores. It is pleasing to note from Table 3 that this large sum has been derived mostly from non-Government sources. The share capital, reserve fund and deposits from members together contribute about Rs. 48 crores and this is really owned capital or the members, own money. The provincial or central banks and other societies contribute a little less—31 crores while the non-members or the outside public contribute about 34 crores. This latter

item shows to a remarkable extent the growth of public confidence in co-operative institutions and speaks well in general of the management of the societies and the very useful purpose they serve in the banking organisation of the country. The distribution of the working capital by Provinces and States gives us a further insight into the progress made in this direction by the co-operative movement in different parts of India. Bombay and Sind lead in this respect with 164 and 124 annas per head of population respectively. The Punjab is a close third with 101. Madras and Bengal fall behind with 90 and 55 respectively. Among the smaller areas, Coorg comes out first with 196 annas per head of population while Ajmer-Merwara comes second with 167. Of the Indian States, Indore takes the first place with 85, while Mysore, Baroda and Cochin follow with 66, 71, and 58 respectively. Bombay stands an easy first in the matter of deposits from members which amount to over four crores out of a total working capital of 22 crores and this is one of the best tests of the success of a co-operative society. It is obvious from a glance at the figures in the tables that there has been very rapid progress in the number of societies, in their membership and in the working capital of these societies. The Punjab, generally speaking, leads in many respects with Bombay coming close behind. The smaller areas and the Indian States have also achieved considerable progress though the movement there started comparatively later. The agricultural societies predominate in all the Provinces and States while non-agricultural, that is, urban societies show a much slower development. While there is much room for satisfaction at the phenomenal growth of the movement in rural and urban areas, it must be admitted, however, that merely the figures of the number, membership and working capital are not enough to base conclusions upon. But before we proceed further, we must now explain the chief component parts of the structure, as it has now been built up, of the co-operative movement in the country.

Financial Structure of the Movement.—Apart from the comparatively few co-operative societies at present working in India for non-credit purposes, it must be recognised that whether in urban or rural areas, a co-operative society largely means a small bank or a credit institution for providing financial accommodation to its members on a co-operative basis. Of these credit institutions, by far the greater proportion is rural. The rural credit society has, for its main purpose, the financing of the agriculturist and as such it needs funds. The original idea of co-operative credit lies in making available to the needy the surplus of the well-to-do brethren through the medium of the society but in Indian villages, the well-to-do and the needy rather form distinct groups, the former playing or trying to play the sowcar. Thus instead of comprising more or less all sections of the population of the village, the society is very largely made up of the needy section. Even otherwise the slender savings of the well-to-do would not be enough to meet the wants of the needy and each village society is not, therefore, able to be self-sufficient, making available the deposits of its well-to-do members as loans for the needy ones. The heavy of unproductive debt of the average In farmer his habit of investing his savings, if in lands and ornaments, and his illite and consequent lack of the banking h soon made it apparent that the rural c societies could not be expected to raise required funds in deposits either from mem or locally. The question of funds for the wor of a rural Co-operative Society thus becom vital question indeed. Central banks *therefore* been brought into existence the district headquarters in order to money from towns and make them avail to the primary rural societies. Follow up the idea further, it has been found ne sary to have a provincial bank at the provin headquarters to serve as a balancing centre the central banks and to make available la funds for the primary societies through central banking institutions. The finan structure of the co-operative movement is t largely composed of three parts—(*i*) the Agri tural Credit Society, (*ii*) the Central Financ Agencies, and (*iii*) the Provincial Banks. Ob ously one more part in the structure se possible and desirable, namely, an Apex India Co-operative Bank. So far, howe such an All-India Bank has not been star and the provincial banks have been content v an All-India Provincial Co-operative Ban Association.

Agricultural Credit Societies.—The cess of these societies is closely related their very peculiar constitutions In an ordi joint stock company, a member is liable to the extent of the value of his share hol and his liability is therefore limited ; but in case of agricultural credit societies, the liab is unlimited, that is to say, members are jo and severally liable to the creditors of the soc for the full amount of the debts incurred b Such a liability would never be acceptabl any person, unless he was imbued with broader vision of brotherhood between mem and unless he himself had an active voic the management of the society and had a r or less full knowledge of the character antecedents of his fellow members. Co-op tive credit is the capitalisation of character unlimited liability is the great instrumen secure the admission into a society as mem of these persons only, who by their char and antecedents deserve to be taken into brotherhood which imposes such an oblig as unlimited liability on all, so that they e swim or sink together. To secure suc therefore, the proper selection of membe of the utmost importance ; and it has unfortunate that in India this has been in practice as well kept in as it should have been, in the eager desi promote the formation of more and yet societies.

Credit is a blessing only if turned to produ account ; if used up for unproductive pur it is a curse. It would enrich the pro but it would only impoverish the cons It is capable of fruitful employment b intelligent but it leads the illiterate and ignorant towards perdition. The Indian ag turist needs money for productive pur

as his current agricultural needs, land
rovement, purchase of stock and imple-
ts, natures and seeds as also for unproduc-
purposes, such as repayment of old debts,
dings and funerals. He thus requires
it not only as a producer but also as a
-umer—a producer who hardly makes profits
his industry and a consumer who has no
savings to enable him to tide over a bad
od, but who is a perpetual borrower ready
live for to-day and letting to-morrow
care of itself. He is besides ignorant and
erate and though sufficiently conversant with
routine of his industry, hardly awake to
need or scope for improvements in his
hods. In such circumstances, it is
erative for the management of the rural
perative society very carefully to scrutinise
loan applications and examine the purpose
which loans have been asked and to see
fully that the loan when sanctioned is used
the specific purpose. And yet, it is in this
ect that there is considerable scope for
rovement.

he funds of an agricultural credit society
raised from entrance fees, share capital
osits or loans from non-members, loans
n the central or provincial banks, loans from
ernment and the reserve fund. The income
n entrance fees and share capital is small
pared with the financial requirements of
members. The large sources from which
is are derived are deposits and loans. The
ime of deposits which a society is able to
ire on terms offered by it is an index of the
sure of the public confidence it has inspired
the soundness and the stability of its financial
ition. The ideal placed before these societies
he development of members' deposits to the
nt of making the society financially self-
icient. These deposits by members further
e the purpose of stimulating thrift and
ing habit among them, and are, therefore,
nently desirable. Attempts are every-
re made to encourage them, but the response
been small, except in the province of Bombay,
re they form one fifth of the total working
ital. Loans from central banks therefore
nish the bulk of the working capital of these
icultural credit societies at present.

ow dividends and voluntary services result-
in low cost of management have made it
sible to divert a substantial proportion of
profits of these societies to reserve funds,
thereby provide against unforeseen losses,
debts and losses on the realisation of certain
ts such as by investment depreciation.
general practice in regard to the use of
reserve fund in the business of the
ieties is that it is used as ordinary working
ital.

The funds collected by the agricultural
ieties in India at present are by no means
gligible. They aggregate to about 31 crores
rupees. Their financial position as on the
th of June 1943 stood thus:—

	In thousands of rupees.
Share capital	4,45,24
Reserve and other Funds ..	8,82,36
Deposits	2,84,89
Loans	12,95,98
Total Working Capital ..	29,08,47

The figures show that these tiny agricultural societies in India work with about Rs. 16 crores of their own capital (including members' deposits in this head) as against their outside borrowed capital of about Rs. 13 crores. The owned capital was thus about 55·2 per cent. of their total working capital, and this proportion is rising steadily as years pass by.

Central Financing Agencies.—The formation of banks in urban areas on co-operative principles, with the sole object of raising funds for advances to societies having been found necessary to place the financial structure of the movement on a sound basis, the Co-operative Act of 1904 was amended in 1912 and the Co-operative Societies Act II of that year provided for the registration of central banks with the sole object of financing societies. Soon thereafter the number of central financing agencies grew rapidly all over the country, especially in the Punjab, Bengal and the United Provinces. The function of these central societies was not only to supply the required capital to the primary societies but also to make the surplus resources of some societies available for other societies suffering from a deficiency of funds and to provide proper guidance and inspection over them. On the 30th June 1943 the number of central banks was 589.

There are four main sources from which a central bank derives its working capital which stood in 1942-43 at 32·8 crores: (*a*) Share capital, (*b*) Reserve, (*c*) Deposits, (*d*) Loans.

The paid up share capital and reserves of central banks constitute the owned resources of these banks as distinguished from borrowed resources and provide the guarantee fund against which additional funds are raised by them in the shape of deposits or loans. It is usual to prescribe a suitable proportion between the owned and borrowed resources of central banks in each province. The most usual proportion observed in practice between the borrowed and owned resources in all parts of the country is 1 to 8. Deposits from members and non-members constitute the bulk of the borrowed capital of central banks. The total amount of deposits held by central banks in the year 1942-43 from individuals and other sources amounted to Rs. 16·7 crores and from primary societies to Rs. 5 crores. Deposits in central banks are mainly of two kinds, *viz.*, savings and fixed. Current deposits are not universal but confined only to selected central banks in selected areas. The principle usually observed by these banks is not to grant loans to societies for periods longer than those for which deposits are available and where loans for long periods are advanced, the periods of deposits are also comparatively long. In addition to funds obtained by deposits, central banks raise loans either from outside banks, from other central banks, from the local provincial bank or from Government. The total amount of loans held by the central banks in 1942-43 from outside banks, from other co-operative banks and from the provincial banks was Rs. 3·1 crores and from Government Rs. 66 lakhs. Central Banks do not directly borrow loans from Government; the central banks of Indian States, excepting Mysore and Baroda and Cochin do to a greater or less extent hold loans from Government, while in Gwalior, loans from

Government constitute the most important item of the total working capital. Borrowings from outside banks are generally confined to accommodation obtained from the Imperial Bank of India against Government Securities or Promissory Notes executed by societies in favour of the central bank and endorsed by the latter in favour of the Imperial Bank. This accommodation is, however, limited and advances from other joint stock banks are also now rare. The main source of loans is, therefore, the provincial bank, and where a provincial bank exists, the central banks are generally prohibited from having any direct dealings with either the Imperial Bank or any other joint stock bank or with one another. This rule is, however, not rigidly observed in the Punjab and Madras. Several central banks in the country, due to their long standing, now possess sufficient resources to be independent of any outside financial assistance but they all continue credit arrangements mainly with the provincial bank on which they rely for emergencies.

In the initial stages, several central banks developed from ordinary urban societies which granted advances to individual shareholders. A few of such central banks have continued the practice and the amount advanced by central banks to individual members during the year 1942-43 was Rs. 3 crores chiefly in Bombay, the Punjab and Madras. This practice, however, is gradually being abandoned as the chief function of a central bank is to finance societies and to serve as their balancing centre. The total advances made by central banks to societies at the end of the year 1942-43 amounted to over Rs. 18.0 crores.

After meeting management expenses the profits of central banks are distributed as allocations to reserves and dividends to shareholders. The combined net profits of the 589 central banks of the country during the year 1942-43 amounted to Rs. 45 lakhs on the total working capital of Rs. 33 crores; the rate of dividend paid varied from 3 to 6 per cent. in different parts of the country but the most usual rate paid was 4 per cent. per annum.

Provincial Co-operative Banks.—In India, at present, all the major Provinces except the United Provinces have apex banks functioning in them. There are apex institutions in two of the Indian States, Mysore and Hyderabad, though in the others also there are institutions corresponding to the apex bank or functioning as such. There are 10 such institutions in all out of which 8 are in British India and two in the Indian States. The constitutions of these institutions vary considerably; but the functions of all these institutions are more or less the same, namely, the co-ordination of the work of the central banks and provincialisation of finance in them. It is found that in a large majority of the apex banks the constitution is a mixed one, that is, both in the general body of the banks as well as in the directorate, there are individual shareholders as well as representatives of co-operative societies and central banks.

All apex banks both in British India and in the Indian States depend for their working capital largely on deposits from the affiliated co-operative societies as also from the public. It is, therefore, thought necessary to insis upon the maintenance of fluid resources on certain scale and in some Provinces the Goverr ment of the Province has prescribed definit rules with regard to the maintenance of flui resources. The period for which deposits ar accepted determines the maximum period fc which they can lend out these borrowed fund to their clients, and in every Province the ape bank has fixed for itself a maximum term beyond which no loans are, in genera sanctioned to the borrowing client. Th following figures will clearly show the positio and transactions of the apex banks in 1942-43:-

Provincial Banks, 1942-43.

Total ..	5,64,09

While accepting deposits from co-operati banks and the general public, most of the ap banks have also dealings in current accou with the latter. The Punjab bank does n encourage such accounts with individual nc members, as it does not wish to enter in competition with central banks. Apex ban also generally carry on ordinary banking bu ness, such as collecting hundis and dividen from companies and collecting the pay a pensions of public servants. The provinc banks of Bombay, Madras and the Punjab ha floated long-term debentures. The Bomb bank has so far issued debentures of the val of Rs. 9·8 lakhs and these debentures are rec nised as a trustee security. The bank at Mad has floated debentures of the value of 2·18 lak on the security of a floating charge of the gene assets of the bank, while the Punjab bank i issued debentures of the value of 5 lakhs. In every banking institution, these banks a are frequently troubled with surpluses a deficits, though at different times in the differe institutions. There is therefore interlendi of surplus funds between these apex bank and during the period of shortage of fun deposits are accepted from surplusing banl

some of them call for special season deposits wing favourable rates of interest to tide the period of shortage. The All-India rincial Co-operative Banks' Association ples the member banks to ascertain which tem are surplusing in the period and by espondence to arrange for inter-provincial owings.

verdues.—Among the most important tests he success or otherwise of a co-operative it society is undoubtedly the promptness payment of loans by members and it is in respect that one has to recognise that in a the societies have not attained any very t measure of success. On the 30th June , the overdue loans in agricultural societies amounted to Rs. 9,08,72,260 as compared with Rs. 10,01,80,460 the year before; the working capital of the agricultural societies was Rs. 29,08,46,901; the loans due by individuals were Rs. 19,97,93,596. The overdue loans were therefore 31 per cent. of the working capital and 45 per cent. of the total loans due by individuals. The position is, however, rendered more serious when one realises that the figures are considerably obscured by book entries and extensions of the date of repayment and in some cases, by the farmers' borrowing from the *sowcar* to pay the society's dues and that the percentages represent merely an average for all-India. The following table shows the position by different provinces on the 30th June 1943.

Overdue Loans in Agricultural Societies, 1942-43

ie position since June 1933 has grown more us, since the fall of prices of agricultural uce and the world crisis and trade dep- on reduced the repaying capacity of agricultural borrower considerably and ased the terrible load of overdue loans in credit societies. This continued growth verdue loans is an ominous portent and cts very badly on the soundness of the co-operative structure. The loans having been based on the basis of the assets of members, the ultimate solvency of the societies is beyond dispute; but severe pressure on members and the consequent wholesale liquidation of societies would react very seriously both politically and economically. The causes that have led to this phenomenon, which menaces the entire existence of the co-operative movement, are chiefly to be

found in not basing the loans sanctioned on the repaying capacity of the borrowing member in sanctioning loans for unproductive though perhaps necessary social or domestic purposes or for the redemption of old debts and generally in the uneconomic nature of the agricultural industry. The loose scrutiny of the purposes stated in the loan applications and the absence of a careful watch on the way the loan is spent by the members, which must be the case where almost every member is a borrower or a surety to other borrowers and where the societies are composed almost wholly of the needy section of the village, the well-to-do standing aloof, the remissness in exerting pressure and in taking action against the defaulter, even when he is wilfully defaulting, add considerably to the growth of this menace of excessive overdues. The central financing agencies are more concerned with the assets that in the last resort are the security for their lendings and, with more funds than they could use, are more eager even than the Registrar himself for organising new credit societies.

The position has been eased considerably by the recent rise in the prices of agricultural produce under war conditions; but temporary relief is no solution and care will have to be taken so that the earning capacity of the agriculturist is increased by linking up credit with co-operative marketing and by the development of subsidiary industries or secondary occupations for him in his leisure.

Land Mortgage Banks.—The loans advanced by co-operative societies to their members and by the central financing agencies to their constituent societies are, from the very nature of the source from which they derive the bulk of their finance, for short or intermediate terms only. By concentrating upon the growth and multiplication of rural credit societies and thus upon facilities for short and intermediate term loans, the co-operative movement did not provide for the redemption of old debts or for increasing the earnings of agriculturists which alone would prevent any further increase in their debts and pave the way for the paying off of the old ones. It does not seem to have been adequately realised that the removal or the lightening of the heavy load of indebtedness does not depend so much upon the easy terms on which co-operative finance can be made available, as upon the ascertainment of the amount of individual indebtedness to the *sowcar*, upon so fully financing the agriculturists that they could be prevented from resorting to the *sowcar* any more, and above all on making agriculture an industry sufficiently paying to leave a little saving after all legitimate current expenditure on agriculture and the household has been met, so that this saving could be applied to the liquidation of old debts. The mistaken notion associated with the start of the movement that co-operative credit could serve this purpose and which has clung more or less till now as evidenced by permitting this purpose to be regarded as a legitimate purpose for loans is largely responsible for increasing the load yet further. Short or intermediate term loans can, if judiciously employed, prevent any further increase in the burden, though even that in the present state of uneconomic agriculture seems scarcely possible; but it cannot leave any adequate marg of saving which could be employed to rede past follies or misfortune. The *sowcar*, it often forgotten, is the village retailer as also t purchaser of the villagers' produce and what cannot recover from the borrower by way interest or the part payment of the princi of the loans, he can more than make good on t threshing floor or in his shop. The co-operat movement by concentration on the credit s has attacked him on one front only, so that t risks of non-payment are saddled on the soci while the profits of the merchant and the re shop-keeper are still enjoyed by the *sowc* the attack ought to have been on all fron However, under the circumstances, the clarifi tion of the situation of indebtedness is m desirable as a preliminary towards tackling important questions of the redemption of debts. The Indian Central Banking Enqu Committee has wisely emphasised the need fo vigorous policy of debt conciliation on a vol tary basis and for exploring the possibility undertaking legislation to secure, if need be, settlement of debts on a compulsory basis. simple Rural Insolvency Act as recommend by the Royal Commission on Agriculture endorsed by the Central Banking Commit would also be an important step towards libe ting those who have already given up all t assets, from the incubus of ancestral and debts, so that at least they and their heirs co start with a clean slate. In any case, the n for long term loans to the agriculturists land improvement and for the redemption old debts seems obvious, and it has now b recognised that the time has come for the pr sion of this facility by the starting of l mortgage banks.

There are three main types of such ban The strictly co-operative type is an associat of borrowers who raise credit by the issue mortgage bonds bearing interest and m payable to bearer. The commercial t works for profit and declares divide The third type—the quasi co-operative—h mixed membership of borrowers and n borrowers, operating over fairly large areas formed with share capital and on a limi liability basis. The banks organised so fa India are, in a sense, of the co-operative t though strictly speaking they belong to quasi co-operative variety, admitting as t do to the membership a few non-borrow individuals for attracting initial capital as as business talent, organising capacity efficient management.

At present there are 10 co-operative l mortgage banks in the Punjab. Two of t operate over whole districts, the rest con their operations to a single tehsil. Bom has 17 land mortgage societies and a Provin Land Mortgage Bank, which have successfully carrying on their business. Be has 10, Assam has 4, while Madras has primary land mortgage banks and a cen land mortgage bank. It is too early pronounce on the success or others of these few banks. Among the objects which these banks advance loans are the rede tion of old debts, improvement of land method of cultivation and the purchase of l

ocial cases. The Central Banking Com- e think, however, that for a long time to the resources of these institutions will be ly required for enabling the cultivator to m his land and his house from mortgage o pay off his old debts. One feels, however, mely doubtful whether the emphasis should s laid on the intensive and extensive develop- of agriculture, since as pointed out above, s agriculture becomes a paying industry, the aption is impracticable and illusory. The of the funds of these banks will have to be i by debentures and for these purposes there have to be in the Provinces central land gage banks as in Madras and in Bombay. rnment will have also to render assistance ese institutions for the success of the ture issue, and its guaranteeing the st as in the Punjab ought to meet asonable needs, though in special cases would not be much harm in the Govern- purchasing debentures of a certain . While mutual knowledge of and ol over one another among members is the ent feature in the case of the unlimited ity credit society, the insistence in the of a land mortgage bank with limited ity is on the capacity and business habits e directorate, in order to ensure sound tion of security, careful investigation of , correct assessment of borrower's credit repaying capacity and on the efficient gement of affairs. The recent rise in the of agricultural lands has tempted the ulturist to sell off one or more of the plots lds and pay off a large part of his debts e *sowcar* and to the Land Mortgage Bank the price realised, so that the business e land mortgage banks has been decreasing derably. This factor with the low yield vestments has been causing some anxieties

e operations of the **Land Mortgage Banks and ties** in India during 1942-43 were as under:—

opaganda, Education and Training.— e initial stages of the movement, it fell on Registrar to carry on propaganda and ise co-operative societies. For this purpose ssistance of non-official honorary workers mperative and in the various Provinces nd of such workers was brought into exist- who as honorary organisers of the district lukas actively co-operated with the officials arrying on propaganda, organising new ties as a result thereof and looking after ocieties so started in some measure. With rapid growth of co-operative societies, ver, it was felt that for the further propa- n of the movement it was desirable to carry ork by co-operators themselves in a more organised manner and for that purpose co-operative institutes were started in the various Provinces. In some Provinces, like Bombay, these institutions are mixed institutions with a membership of individual sympathisers and workers and of co-operative societies. In others, like Madras and the United Provinces, individuals were not admitted as members and the institutions became provincial unions of co-operative societies. In some Provinces, like Bihar and Orissa, they became federations of co-operative societies, while in others, like Bengal and Assam, they are known as co-operative organisation societies. Whatever the exact form assumed by these provincial institutions, their functions were more or less the same in all Provinces, comprising propaganda and the focussing of co-operative opinion on the various problems that confronted the movement from time to time. They have come to be regarded in an ever increasing measure as the third arm of the movement, the Registrar and his staff representing the administrative side performing more or less the functions assigned to them under the statute, the provincial bank with the central banks and banking unions representing the financial side and as such concerned more with the financing of the movement and the institutes, unions, federations or organisation societies representing the propagandist side and as such concerned more with educating popular opinion and representing co-operators' views to the authorities. A few years back, the All-India Co-operative Institutes' Association was established, with a view to co-ordinate the activities of the provincial institutes, to formulate non-official co-operative opinion on important co-operative problems from time to time and to encourage the growth of co-operative literature.

It was soon perceived that one of the serious handicaps to the successful working of co-operative societies was the ignorance of the members and the absence of trained men as office-bearers of societies. Illiteracy of the rural population, however, has been found too big a problem for these institutes and they have, therefore, attempted only to spread knowledge of co-operation and co-operative principles to the members of societies and to train up the office-bearers in various ways. Education has thus developed into an important function of these institutes. In Bombay, the Institute has created a special education board which maintains co-operative schools at different centres and conducts periodically training classes suitable for different types of workers and employees of co-operative societies. In the Punjab, however, co-operative education has been organised by the Co-operative Department, though the Punjab Co-operative Union renders active assistance therein. In Bihar and Orissa a permanent Co-operative Training Institute had been established at Sabour in the Bhagalpur Division which is controlled by a governing body which includes the Registrar, and a few representatives of the Co-operative Federation. The Training Institute has now been transferred to Pusa. Madras has organised 6 training institutes. In the United Provinces, Bengal and the Central Provinces, arrangements for co-operative training and education have not yet been properly made, though there also it is the Department assisted by the provincial union which organises

the training classes. The need for proper co-operative training and education has been felt in an increasing degree in recent years and the Central Banking Enquiry Committee has recommended very strongly the establishment of provincial co-operative colleges and an All-India Co-operative College for the higher training of more important officials in the Department, banks or societies. No action apparently has been taken till now on these recommendations, but there is no doubt whatever that any serious attempt at improvement of the co-operative societies in the country must include a proper organisation of co-operative education not only for the office-bearers of societies or the managers and inspectors of central and provincial banks but also for the inspectors, auditors and assistant registrars of the co-operative departments. The Government of India have for the last few years placed at the disposal of each of the Provincial Governments about one lakh of rupees which were being devoted to a better organisation of Co-operative training and education for the staff of the co-operative departments as also of other institutions.

In some Provinces, like the Punjab and Bihar and Orissa, the provincial union or federation has been actively associated in discharging the Registrar's statutory function of the audit of societies and the Second All-India Co-operative Institutes' Conference held at Hyderabad (Deccan) in 1931 also expressed an opinion that the Registrar's statutory obligation in this matter could be discharged by a system of licensing and that audit should be a function entrusted to the provincial unions or federations. If this idea of a uniform system of audit through the provincial unions be accepted, it will naturally follow that they will also have to assume the responsibility for supervision of the co-operative societies. The departmental audit or inspection by the central banks cannot dispense with the need of careful supervision, which to be effective must be from within and the provincial federation or union is obviously the best agency for this friendly and efficient supervision. The combination of the functions of audit and of supervision as suggested by the All-India Conference and endorsed by the Central Banking Enquiry Committee would mean improved efficiency in the working of the movement while de-officialising it considerably and giving it the popular touch it lacks. In recent years, however, the need for tightening official control on the Co-operative Societies has been felt and supervision, audit and training have been taken up by the Provincial Co-operative Departments more and more and the Provincial Co-operative Institutes and Unions have not been functioning as actively or profitably as the well ordered development of such a popular movement as the Co-operative Movement would require. The sixth All-India Co-operative Conference held at Lucknow in April 1940 stresses the need for strengthening of these Institutes and of progressive de officialisation of the Co-operative Movement.

Non-Credit Agricultural Co-operation.—For some years past increasing attention has been directed on other forms of co-operation for the benefit of the rural population. Credit is but one of the needs of the cultivator; its organisation through co-operation touches but the fringe of the problem; and different provinces have been experimenting upon the application of co-operative organisation to meet his different non-credit needs. The problems of irrigation, consolidation of holdings, improved sanitation, fencing, cattle insurance, dairying and supply of agricultural requisites and above all the marketing of agricultural produce have been therefore engaging the attention of co-operators and societies for these purposes have been established here and there and have been working with varying success. In a land of ignorant and illiterate agriculturists, it would appear wiser to adopt the rule of one village, one society but the complexities of the non-credit forms of co-operation have induced the authorities to avoid the multi-purpose or general society and to favour the single purpose society, and we have the curious spectacle of an agriculturist being viewed as one person with a bundle of needs, each one of which it is proposed to meet separately. A single society trying to meet all the needs of the agriculturist would attack the sowcar on all fronts and would become a live force in the village which would tend to promote the ideal embodied in the famous phrase Better living, better farming and better business. However, co-operative opinion in India is fast coming to accept the wisdom of this and discard the theory of almost water-tight compartments. The agricultural non-credit societies in India on the 30th June 1943 were 15,399 distributed as under:—

Non-Credit Agricultural Societies, 1942-43.

Of these the most important are the marketing societies particularly for the sale of cotton in Bombay, and the consolidation holdings and better living societies in the Punjab.

Marketing Societies.—Marketing of Agricultural produce is the real crux of the whole question of rural prosperity and betterment and as group marketing is always more effective than individual marketing especially in India where the individual producer is illiterate and constitutes a small unit, co-operative marketing has been accepted now as one of the most desirable ideals to work for. It is only the complexity of the working of co-operative sale societies, the difficulty of providing for marketing finance, the lack of expert knowledge on the part of co-operative officials and the lack of godown and storage facilities that have prevented the rapid multiplication of sale societies and their efficient working. It is really in the development of this form of co-operative effort that ultimate success must be sought for in India, for credit alone could never bring comfort. Where it has been tried with success, the results have been extremely satisfactory to the members. The tremendous headway made in European countries like Denmark and in the United States of America in co-operative marketing organisation and the successful examples of the cotton sale societies in Bombay should arrest attention and invite concentration on the co-operative organisation of agricultural marketing. The jute and paddy sale societies of Bengal have not met with success, it is true; but the cotton grower in Gujarat and the Bombay Karnatak has reaped considerable benefit from the cotton sale societies. Absence of fraud in weighment, adequate and high prices, insurance of the produce against risks of fire, prompt payment of sale proceeds, financial accommodation till the produce is sold, information of daily price fluctuations in the Bombay market, supply of gunnies and genuine and certified seed, bonus and a dividend are no small gains to the agriculturist, who was otherwise at the mercy of the *adatya* or worse still of his village sowcar. The cotton sale societies of Surat have recently combined in a federation which has taken over the co-operative ginning factory already started by the members. A few societies for the sale of other articles have also been organised in Bombay, such as jaggery, tobacco, chillies, paddy, onions and arecanut. Bengal has several jute sale societies with a Jute Wholesale at Calcutta and several paddy sale societies with a sale depot in Calcutta. The Punjab has several commission shops which provide storage facilities so that the grower could wait for better prices, but which sell to local merchants yet, rather than to the merchants at the port. Madras has a number of sale societies, but their transactions are small and they have not yet made much progress. The United Provinces have organised the sale of Sugarcane very effectively through Sugarcane Societies and the Marketing Union. Recently provincial co-operative marketing societies have been started with government encouragement and assistance in Madras and Bombay, the results of the working of which will be watched with great interest by co-operators all over the country. Both these Societies have been rendering useful service to the country by undertaking on behalf of Government work in connection with food distribution and rationing.

Consolidation of Holdings.—The law of primogeniture, by which the eldest son alone succeeds to the property of his ancestor and which is in force in some European countries does not obtain in India. Each heir is given a proportionate share of each item of the inherited property and not a share of the whole, equivalent to his portion. The result is that successive generations descending from a common ancestor inherit not only smaller and smaller shares of his land but inherit that land broken up into smaller and smaller plots. This continuous partition of each field amongst heirs leads to fragmentation, which is accentuated by the expansion of cultivation, irregularly over the waste, by purchase and sales, by the extinction of families in default of direct heirs and the division of their property amongst a large number of distant relatives, and by the break up of the joint family system and the custom of cultivation in common.

The disadvantages of fragmentation are obvious. A part of land is wasted owing to fragmentation being so excessive as to prevent any agricultural operations, and another part is lost in boundaries. Fragmentation involves endless waste of time, money and effort; it restrains the cultivator from attempting improvement, it prevents him from adopting scientific methods of cultivation; it discourages him from carrying out intensive cultivation; it enforces uniformity of cropping, and especially restricts the growing of fodder crops in the period during which cattle are usually sent out to graze on the fields. The economic loss due to this system can be easily imagined, and the only solution is consolidation of holdings. This most difficult, important and interesting experiment originated in the Punjab in the year 1920. The procedure adopted in establishing a Co-operative Consolidation of Holdings Society is to call together all persons directly interested in land in a given village, persuade them to accept the by-laws whereby a majority in a general meeting might approve a method of repartition, and then carry out actual adjustment of fields and holdings in such a manner that no single individual might have any grievance. As the result of patient work which has now extended over 20 years, some very striking results have been achieved and the movement for consolidation in the Punjab has assumed the dimensions of an important agricultural reform. It is steadily gaining in popularity, and, as more staff is trained and the people become better educated to the advantages of the system, the figures for the area consolidated are mounting up year by year. This work began in 1920-21 and in 10 years since then, 263,462 acres were consolidated by the end of July 1930, out of the whole cultivable area of about 30 millions, at an average cost of Rs. 2-5 per acre.

In the Central Provinces some success in consolidation has been achieved in the Chattisgarh Division where scattered holdings are particularly common and it is not rare to see 10 acres broken into 40 plots. The Local Government found it desirable to resort to legislation and passed the Central Provinces Consolidation

of Holdings Act in 1928. Any two or more permanent holders in a village holding together not less than a certain minimum prescribed area of land, may apply for the consolidation of their holdings, but the outstanding feature of the Act is that it gives power to a proportion, not less than one-half of the permanent right-holders, holding not less than two-thirds of the occupied area in a village, to agree to the preparation of a scheme of consolidation, which scheme, when confirmed, becomes binding on all the permanent right-holders in the village and their successors in interest.

In Bombay a Bill was introduced in the Legislative Council in 1928 to deal with certain features of the problem. When this Bill was introduced a good deal of opposition was created and it had to be ultimately dropped. The problem is however again actively engaging the attention of the Government.

There are 11 societies for consolidation of holdings in the United Provinces, and 11 in the Baroda State based on the Punjab model.

Rural Reconstruction.—One of the main reasons why the achievements of the co-operative movement fall so short of the expectations of the promoters and workers lies in the extreme backwardness of the rural population and it is not too much to state that the ultimate success or otherwise of the co-operative movement lies bound up with general rural development and progress. So long as agriculturists remain steeped in illiteracy and ignorance, are heavily and almost hopelessly indebted, have a fatalistic and listless outlook on life and have an extremely low standard of living, carrying on agriculture with simple tools and implements in more or less a primitive fashion, no great approach to the ideals and the goal of the co-operative and all other rural movements is possible. The co-operative movement itself is indeed a great experiment in rural reconstruction aiming to protect the agriculturist from exploitation of the usurer, the middleman—dalal and the merchant; but concentration on the credit side of the movement with but half-hearted attempts for the co-operative organisation of supply and marketing, a growing multiplicity of institutions for various purposes and above all the neglect of the educational, sanitary, medical and social sides of village life explain very clearly why the achievements of the movement during the last 40 years have fallen far short of its objective. Rural reconstruction has, however, of late years claimed an increasing amount of attention; but so far attempts on a mass scale have not been made; what has been done has been individual effort—the efforts of individuals fired by the impulse of social service and moved by enthusiasm to utilise their opportunities to the best advantage by contributing to the welfare of the humble village folk. The best known of such centres is at Gurgaon in the Punjab. The work done there covers education, sanitation, medical relief, improvement of agriculture, female education and maternity welfare.

In the Central Provinces and Berar the local Government carried on similar work from November 1929. The later part of 1923 saw a considerable impetus imported to the cause of rural reconstruction in India. 'His Excellency Sir Frederick Sykes,' the then Governor of Bombay, concentrated on village uplift and carried on an intensive propaganda in that behalf which has led to the formulation of a scheme whereby the work is being carried on earnestly by District Committees under the guidance of the District Collectors, the work being co-ordinated by Divisional officers. The Punjab has appointed Brayne of Gurgaon fame as Commissioner for Rural Reconstruction and Bengal has made a similar appointment, and it appears that all Provincial Governments are devoting considerable thought to this very important work.

Better Living Societies.—The Punjab has been responsible for introducing this very desirable type of co-operative society to promote better living among its members. There are more than 300 such societies in that province and they have been doing quite important work in their own way. The societies do not collect any levy from their members, except the small entrance fee and they lay down a programme of work and make rules for carrying it out from year to year, violation of which is punishable with fine under the by-laws. Though these societies in the first instance have for their object the curtailment of ruinous expenditure on marriages and other social occasions, they have also helped in various other matters; so that apart from saving to their members thousands of rupees each year, they are contributing to the general village uplift in some measure. Some of these societies have levelled and paved and swept the village lands, some have promoted sanitation, some have induced the villagers to improve ventilation in their houses, some have repaired and roofed the village drinking well, some have arranged that all manure should be pitted, some have discouraged expenditure on jewellery, and some have stopped waste on farms. Thus in a variety of ways these societies generally have been great factors in the improvement of conditions in the life of the village. It is earnestly hoped that such better living societies will be started in large numbers in the various provinces of India or better still that the co-operative credit societies would take upon themselves the function performed by these societies and that the term better living be given as wide a connotation as possible so that the co-operative movement would be doing good to itself and the nation by carrying on the general work of village uplift, as well as its own economic objective of strengthening the position of the agriculturist.

Urban Credit Societies.—While the chief objective of the co-operative movement was from the first to do service to the rural population, it must be remembered that the Act of 1904 permitted two classes of societies,—rural and urban, recognising thus the suitability of the co-operative method for solving the problems of urban population also. At present there are in all 18,802 non-agricultural societies with a membership of 22,45,783. Of these, 7,093 are credit societies, the rest being societies for other purposes.

An important class of the urban population is that of the merchants and traders, and though the joint-stock banking system that has so far developed in India is quite well suited in many respects for them, from the point of view of the small trader, it is co-operative banking that is obviously wanted. The importance of **People's Co-operative Bank** promoted for the benefit of urban people without any distinction of caste or creed is, therefore, very great, for the finance of small merchants, artisans and craftsmen for the stimulation of trade and industries in and around district and taluka towns. The principal business of these banks is short-term credit and in this respect they resemble the ordinary commercial banks. In the absence of any industrial co-operative bank, it is also for the peoples' bank to finance small industrialists and help the development of cottage industries, which still play a very considerable part in the industrial economy of India. Another very important function which falls to peoples' banks is the financing of the marketing of the produce of the land from the field to the port or to the principal market centres and thus assist in the development of the internal trade of the country. It is only, however, in the Bombay and Bengal Presidencies that we meet with some good institutions functioning as peoples' banks. In Madras there are 1,170 non-agricultural credit societies but most of these are not real peoples' banks. The Punjab has 1,083 unlimited liability societies and only 227 with limited liability. Even here we hardly find any development of real peoples' banks. In Bengal the limited liability urban credit societies number 582 and though these societies seem to have won public confidence the more important of them are salary earners' credit societies. Some of the divisions especially the Chittagong divisions have several big concerns, however, working on sound lines. The question of starting Peoples' Banks in Bihar and Orissa has not yet been seriously taken in hand. In the Bombay Presidency, institutions with a working capital of Rs. 20,000 and more are classed as urban banks. Since 1922 co-operators in this Presidency have been very keen on having a full-fledged peoples' bank in every taluka town, for it has been realised that with the proper development of urban co-operative banking, there is no doubt that the various units will come into touch with one another and that mutual settlement of terms and co-ordinated and harmonious work will greatly assist the development of inland trading agencies. Peoples' banks are a repository of peoples' savings, a nucleus for co-operative activity and an institution giving facilities for internal remittance and it is quite necessary therefore that their share capital must be pretty large. In the Bombay Province on the 30th June 1940 there were 181 urban banks most of which are fairly successful. The total membership was 210,460, the working capital was Rs. 5,07,51,125 and the reserve fund amounted to Rs. 59,25,640. It can be said without exaggeration that the development of urban banking has been a distinct contribution of Bombay to the co-operative movement in India and other provinces might well follow Bombay's example in this direction. Urban Banking has now been found so successful that deofficialisation and relaxation of the Departmental control will probably first be introduced with regard to them, supervision and guidance being made available to them from their own federations.

An important variant of the urban co-operative society is the **Thrift Society**. The system adopted is to collect regular savings every month for a continuous period of two to four years, invest the collected amount to the best advantage and pay back to the subscriber his amount at the end of the term with interest. In many societies, loans are advanced also but not exceeding a certain fixed proportion, usually ⅔ of the deposits. The Punjab has more than 1,000 such societies and the bulk of the members are school masters. There are over 125 thrift societies for women only having a member-ship of more than 2,000. Madras has also more than 100 thrift societies and Bombay has a few also. Recently however, **Life Insurance Societies** have been started in Bombay, Bengal and Madras. The Bombay society was started in July 1930 largely through the efforts of Dewan Bahadur H. L. Kaji and for a few months worked as a provident society only, issuing policies of Rs.150 to Rs 500 and that too without medical examination, the idea being to bring life insurance within easy reach of the small man in the village as in the town. It has no share capital and works on a mutual basis. It has now, however, widened its scope and has been writing policies for larger amounts under its ordinary branch. It has by now written a business of over two crores. The Bengal society has had to seek amalgamation with a joint stock insurance company, while the Madras society - the South India Co-operative Insurance Society started vigorously as a full fledged life insurance society with share capital and comparatively low rates of premia, and has already written a large business of over Rs.3½ crores.

Review.—The Co-operative Societies Act of 1904 had limitations which were soon recognised and at a conference of the Registrars, a bill was drawn up which became the **Co-operative Societies Act of 1912.** This Act remedied the defects of its predecessor, authorized the registration of societies for purposes other than credit, substituted a scientific classification based on the nature of the liability for the arbitrary one into rural and urban and legalised the registration of Unions and Central Banks.

In 1914 the Government of India reviewed the situation in a comprehensive resolution and recommended a change in the policy regarding the grant of loans to members, so that they might lend money for domestic purposes as well as for agricultural ones in order that the members might confine their dealings with the Co-operative Societies and be weaned from the sowcars. In 1914, the **Maclagan Committee** on Co-operation was appointed and its report in 1915 led to the reorganisation and overhauling of the whole administration of co-operation. Punctual repayment of loans was insisted upon, and all those societies that failed to live up to the ideal of co-operation were sought to be eliminated. From this time onwards the share of co-operators in the movement assumed increasing importance and it came to be realised that for the success of the movement, deofficializing of the same was necessary. The Government of India Act of 1 91

made co-operation a provincial transferred subject and the local Governments were left free to adapt the 1912 Act to their own requirements.

The steady growth of the Central Financing Agencies relieved the Registrars partly of the need for attending to this very important matter in the development of co-operation; but propaganda still remained the function of the Registrar and his staff, paid or honorary, and it was perceived that non-official institutions should be established to take over this function from official hands. Accordingly **Co-operative Institutes** were started in various Provinces, in some cases as unitary societies reaching down to the village through their branches in the divisions and the district, in other cases as a federation or union more or less complete of the primary societies. The part these non-official bodies began to play henceforth became increasingly important, some adding to the primary function of propaganda, others such as co-operative education, supervision over societies and even audit.

The steady progress of the movement—sometimes even too rapid—for nearly 20 years, however, was found hardly to lessen the colossal burden of the indebtedness of the ryot, for co-operative credit necessarily confined itself to short-term loans. It was in the Punjab that the first *Co-operative Land Mortgage Bank* was started at Jhang in 1920. Soon after other provinces also followed suit.

While the movement was developing at a rapid pace it was found that financially the situation was worsening. Defaults in repayment were becoming increasingly common and **Co-operative Committees of Enquiry** were instituted in various Provinces. The Central Provinces thought it necessary to have such a committee in 1922, while Bihar and Orissa followed with a similar committee in 1923. A few years after, the Oakden Committee made similar inquiries for the U. P., the Townsend Committee for Madras and the Calvert Committee for Burma. These Committees have carefully analysed the position in their respective provinces and have made recommendations for the consolidation and rectification of the co-operative credit organisation and the extension of the non-credit side of agricultural co-operation. The powers conferred upon the Local Government by the Act of 1919 to modify the Act of 1912 have been exercised by almost all Provinces, except the Punjab and the U.P. Bombay passed the Co-**Operative Societies Act of 1925** making the object of the movement still wider than that of its predecessor and its preamble refers to "better living, better business and better methods of production" as the aim of the movement. The chief features of the Bombay Act of 1925 are the adoption of a scientific system of classification of societies, the improvement of the procedure for liquidation of cancelled societies, the extension of summary powers of recovery to the awards of arbitrators and the provision of penalties against specified offences. The Burma Act came into force in 1927 and the Madras act in July 1932. Bengal, Bihar and Orissa have also now passed similar Co-operative Acts of their own. The progress of the movement in forms other than credit has not been very remarkable and credit societies still predominate, especially the Agricultural Credit Societies.

The **non-credit movement** has had naturally more obstacles to overcome than the credit but the former is slowly gathering force in the shape of sale societies for cotton in Karnatak, Gujarat and Khandesh, cattle insurance societies in Burma and irrigation societies in Bengal and the Southern Division of the Bombay Presidency. Perhaps the most remarkable instance of the non credit movement in India is to be found in the Punjab where consolidation of holdings has been successfully attempted through co-operation. In the non-agricultural non-credit sphere, a still smaller headway has been made. There are a number of housing societies especially in Bombay, Madras and Mysore, and artisans societies and unskilled labour societies in Madras. It may be noted that on the agricultural side co-operative farming has hardly been touched and on the non-credit side the consumers' movement has made but meagre progress. It is true that the extraordinary circumstances created by the War have led to the problem of food Distribution and systems of rationing and to the consequent formation of a large number of consumers' store societies. But it is very doubtful how far these Societies will continue their work when normal times return, unless they amalgamate into larger units and function more as general stores than as food and groceries stores.

In 1926, the *Royal Commission on Agriculture* was appointed and co-operation formed only a part—though an important one—of its extensive enquiry. Since then, in consequence of the appointment of the provincial committees under the *Indian Central Banking Inquiry Committee* the co-operative movement in the different provinces has been further surveyed. But the provincial committees, for obvious reasons, confined their inquiries to banking in relation to agriculture, small industries and trade. Thus only those aspects of the co-operative movement which have an intimate bearing on the credit needs of the population and the development of banking facilities have been examined.

A few years back, the Government of Bombay appointed a small committee to inquire into the co-operative movement and to suggest how effective action could be taken to improve, extend and strengthen the movement. The report has been submitted and the one welcome feature of the suggestions is the adoption of the multiple society as the primary unit in villages suggested by us for years and advocated strongly by the Agricultural Credit Department of the Reserve Bank of India.

The growing difficulties of the Co-operative Movement throughout India in times of unprecedented depression led the Government of India to hold an All-India Co-operative Conference at New Delhi on the 20th January 1934. In December 1936 and 1939, other Conferences of Registrars met at Delhi and discussed the situation further.

As a result, consolidation, rectification and rehabilitation of the Credit Societies were accepted as the policy, whereas expansion and diversification were severely restrained. Official Control was strengthened and the Movement which was being passed on to the co-operators themselves in the twenties became more officialised than ever before.

It may also be mentioned that the Indian States were not slow in introducing the co-operative movement within their limits, and the movement in some of the more important of the States, such as Hyderabad (Deccan), Mysore, Baroda, Gwalior and Indore has made considerable progress, more or less on the same lines as those followed in the neighbouring British Indian Provinces.

The landmarks in the history of the co-operative movement in India are: the Co-operative Credit Societies Act of 1904; the Co-operative Societies Act of 1912; the Maclagan Committee Report, 1915; the provincialisation of co-operation, 1919; the establishment of institutes, unions and federations for propaganda; the Committees of Enquiry into the co-operative movement in several provinces; provincial legislation; the Report of the Royal Commission on Agriculture, 1928; Reports of the Indian Central and Provincial Banking Enquiry Committees, 1931; greater official Control; marketing surveys, debt conciliation schemes, land mortgage banking and organisation of provincial marketing societies; Report of the Co-operative Planning Committee.

The movement has thus developed rapidly and the stages of its evolution may be briefly summarised as—agricultural credit; urban credit; central credit organisations; apex co-operative banks; propaganda by co-operators themselves; beginnings of non-credit agricultural co-operation; urban co-operative banking; land mortgage banks; co-operative education; rectification and consolidation of the credit movement; organisation of supervision over primary societies and rural reconstruction; multi-purpose societies and co-operative marketing.

In recent years, the Provincial Governments have been seriously undertaking programmes in the interests of the agriculturists. Money-lenders' bills have been passed to restrict the evils of usury and debt legislation has been or is being passed in Madras, Central Provinces, Bombay and a few other provinces so as to reduce agricultural debt and to bring it within the repaying capacity of the debtor. The strengthening and reorientation of the co-operative movement has also been taken earnestly in hand, which would by the conversion of the credit primaries into multi-purpose societies, by organising co-operative sale of agricultural produce and by promoting secondary occupations for the agriculturists on a co-operative basis, change the whole emphasis of the movement from merely credit to the entire needs of the rural population. Active mass-scale efforts at rural reconstruction and at increasing the earnings of agriculturists represent the keynote of the present day trend of the Co-operative Movement.

The titanic struggle in which the forces of barbarism had drawn the Empire led to concentration on war effort increasingly in this country on the part both of officials and non-officials, and the drive that was taken earnestly in hand a few years back towards the village and its problems and towards a reorientation and expansion of the Co-operative movement lacked force. But the same forces are leading to an ever increasing industrialisation of India and an ever decreasing dependence of her increasing population on agriculture. Already with the end of the War, the Government of India and the Provincial Governments are increasingly busy with formulating plans and policies of post-war reconstruction and it is of interest to note that co-operation looms large in these plans and policies. Developments in co-operative marketing and rural industries can be expected at an early date and co-operation, though more controlled by Government than ever before, will be the accepted organisation for all schemes of rural betterment. An important land mark in the history of the Co-operative Movement is the appointment of a Co-operative Planning Committee composed of senior Registrars and well-known Co-operators and the report of this Committee is expected to lay down the lines and principles of Co-operative development in India for the next few decades.

Annual subscription Rs. 10. *President*: Prof. G. S. Ghurye, M.A., Ph.D.; *Hon. Secretary*: Prof. K. T. Merchant, M.A., LL.B., B.Sc. (Econ.). *Office Address* : C/o K. R. Cama Oriental Institute Building, 136, Apollo Street, Bombay.

BENARES MATHEMATICAL SOCIETY.—Founded in 1918 for the encouragement and promotion of research in the various branches of Pure and Applied Mathematics, and in the History of Mathematics. It conducts a journal entitled *The Proceedings of the Benares Mathematical Society*, in which original papers on Mathematics are published, and maintains a library. It published 21 volumes of *The Proceedings* and 12 books. There are about 100 members from all parts of India. Admission fee Rs. 10. Annual subscription Rs. 6 (Resident members) and Rs. 5 (non-resident members). *President* : Dr. M. R. Siddiqi. *Vice-Presidents* : Dr. B. N. Prasad, Dr. B. R. Seth and Prof. V. V. Narlikar. *Secretary* : Dr. R. D. Misra, Ph.D. *Editor* : Dr. A. N. Singh, D.Sc.; *Treasurer* : Dr. R. S. Verma, D.Sc. *Librarian* : Dr. B. Mohan. *Address* : 22, Senpura, Benares City.

BHANDARKAR ORIENTAL RESEARCH INSTITUTE, POONA.—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of late Sir R. G. Bhandarkar, at the hands of H. E. Lord Willingdon, who became its first President. Its objects are to publish critical editions of texts and original works bearing on Oriental antiquities, to provide an up-to-date Oriental library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. The valuable library of the late Dr. Sir R. G. Bhandarkar, which he had bequeathed already to the Institute, was after his demise handed over by his executors to the Institute, and is now located in the Central Hall of the Institute. Since the 1st of April 1918 the Government of Bombay have transferred to the custody of the Institute the unique collection of nearly 20,000 manuscripts formerly accommodated in the Deccan College, together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute a grant of Rs. 10,000 a year for the publication of the B. S. S. and The Government Oriental Series. The Institute has also started a series called the *Bhandarkar Oriental Series* in which four works have been already published and some others have been undertaken. The Institute has undertaken to edit *Mahabharata* critically at the initiation of the Raja of Aundh who has promised a total grant of Rs. one lakh for that purpose. Dr. V. S. Sukthankar was the General Editor of the *Mahabharata* up to 21st January 1943 the date of his unfortunate demise. Dr. S. K. Belvalkar has now been appointed General Editor. Grants are being received from the Government of India (Rs. 4,000 a year), the University of Bombay (Rs. 3,000 a year) and the Government of Bombay (Rs. 6,000 a year), Madras, Hyderabad (Deccan), Baroda and Mysore as well as from several Southern Mahratta States. Recently the Government of H. H. The Maharaja Scindia of Gwalior sanctioned Rs.25,000 for the *Mahabharata* work at the rate of Rs.2,500 per year for 10 years. The Government of H. H. the Maharaja of Kashmir has sanctioned a grant of Rs. 2,000 a year for three years for this work. The Trustees of Sir Dorab Tata Trust have also sanctioned an annual grant of Rs.1,500 for the same purpose for 3 years. The British Academy has also given a grant to the *Mahabharata* as a token of their appreciation of this work. On 25th March 1944, the Institute inaugurated its *Mahabharata Printing Department* with a view to expedite the printing of the *Mahabharata* Edition. The Institute issues a Journal called *Annals of the Bhandarkar Oriental Research Institute* published four times a year. It also held under its auspices the First Oriental Conference on the 5th, 6th and 7th of November 1919 under the patronage of H. E. Sir George Lloyd and the presidency of Sir R. G. Bhandarkar. Thanks to liberal donations from the Tatas and the Jain community, supplemented by Grants-in-Aid from the Government of Bombay, the Institute is housed in a fine building. Since August 1927 the Institute has been conducting regular M.A. classes in Sanskrit, Pali, Ardhamagadhi and Ancient Indian Culture. It has also been coaching students for the Doctorate degrees of the University of Bombay. Lectures by eminent scholars are also delivered occasionally. Besides these lectures a regular series of free Extension Lectures at certain intervals has been arranged for the benefit of the public. The Institute celebrated its Silver Jubilee on the 4th and 5th of January 1943, when delegates from learned bodies all over India and other eminent scholars attended. Membership dues Rs. 10 a year or Rs. 100 compounded for life. Members can, subject to certain conditions, borrow books from the library and get the "Annals" free and other publications (a list covering about 100 titles

sent free upon request) at concession rates. *Secretary:* Dr. B. N. Dandekar, M.A., Ph.D.; *Curator:* P. K. Code, M.A.

THE BHARATA ITIHASA SANSHODHAKA MANDALA, POONA.—Founded in 1910 by the late Mr. V. K. Rajwade and Sardar K. C. Mehendale and registered under Act XXI of 1860 in 1910 with the object of collecting and conserving historical materials, erecting suitable buildings for preserving and exhibiting them, publishing such materials and other works of historical research and generally to encourage and foster critical study of and research in Indian history. Has a building of its own; has recently acquired new premises for additional buildings; possesses the best collection of Persian and Marathi historical papers owned by any private society. Has a rare collection of about a thousand Indian paintings now housed in a special wing recently added, maintains a coin cabinet and an armoury of old weapons. Has a section for copper plates, sculpture and archæology and has a library of general, historical and rare books. Holds fortnightly and annual meetings where notes and papers based on original documents are presented, discussed and afterwards published. The Poona City Research Section of the Mandal does research work in the city and publishes findings. Has published several volumes of original historical letters and other historical and literary books whose total number exceeds 90. Received Rs. 5,000 for publishing materials of the Shivaji period from the late Raja Sahib of Mudhol. Conducts a quarterly journal devoted to research. Work done mostly in Marathi. Celebrated the Silver Jubilee by calling the first All-India Modern History Congress in 1935. Has planned Commemoration volumes in English giving an analytical account of researches in various fields. Depends mainly on public subscriptions. Has been receiving some grant-in-aid from the Government of Bombay and the Poona City Municipality for the last five years. Is supported by many Rajas, Jahagirdars, Sardars and the public. The late Dr. J. E. Abbot of New Jersey, U.S.A., left by will a gift of 30,000 dollars to the Mandala for buildings. Annual membership fees for various classes are Rs. 3, 6, 12, 25, 125 and 500 which can be compounded for life by paying ten times the annual subscription for a particular class in a single year. Effective members over 1,000; Annual income averages between 5 to 6 thousand rupees. *President:* The Raja Saheb of Phaltan; *Vice-Presidents:* The Raja Saheb of Aundh, The Raja Saheb of Bhor and Sardar G. B. Patwardhan Shastri. *Chairman:* Prof. D. V. Potdar, B.A., ordinary Expert-member, Indian Historical Records Commission. *Secretaries:* Sardar G. N. Mujumdar, C.I.E., C. G. Karve, B.A., Prof. R. V. Oturkar, M.A. *Treasurer:* D. K. Sathe, B.Sc., B.A. *Address:* 312-13, Sadashiv Peth, Poona City.

BOMBAY ART SOCIETY.—Founded 1888, to promote and encourage Art by exhibitions of Pictures and Applied Arts, and to assist in the establishment and maintenance of a permanent gallery for pictures and other works of Art. Annual exhibition usually held every January. Annual subscription Rs. 10; Life member Rs. 100. *President:* Sir Cowasji Jehangir, Bart.; *Hon. Treasurer:* Rao Bahadur N. G. Agaskar; *Hon. Secretary:* V. V. Oak, Bar-at-Law. *Office:* R. I. S. Compound, near Secretariat, Fort, Bombay.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.—Founded 1804, to investigate and encourage Oriental Arts, Sciences and Literature. Annual subscription Rs. 60. *Secretary:* J. S. Tilley, Town Hall, Bombay.

BOMBAY MEDICAL UNION.—Founded 1883 to promote friendly intercourse and exchange of views and experiences between its members and to maintain the interest and status of the medical profession in Bombay and the Presidency. Entrance Fee for Resident members Rs. 5, monthly subscription Rs. 2, Absent members Rs. 2 yearly and non-resident members yearly subscription Rs. 5. *President:* Dr. R. N. Cooper; *Vice-Presidents:* Dr. S. B. Gadgil and Dr. N. J. Modi; *Hon. Secretaries:* Dr. Rustom Jal Vakil and Dr. George Coelho; *Hon. Treasurer:* Dr. B. B. Yodh; *Hon. Librarians:* Dr. F. N. Daji and Dr. M. G. Talwalkar, Blavataky Lodge Building, French Bridge, Chowpatty, Bombay.

BOMBAY NATURAL HISTORY SOCIETY. (Registered under Act XXI of 1860).—Founded 1883 to promote the study of Natural History in all its branches. The Society has a membership of about 1,400 all over the world and a museum with a representative collection of the different vertebrates and invertebrates found in the Indian Empire and Ceylon. In 1921 the Society was entrusted with the management of the Natural History Section of the Prince of Wales Museum, and a great part of the Society's collections have been transferred to that Museum. A Journal is published three times during the year which contains articles on natural history and sport as well as descriptions of new species and local lists of different orders. The Society's library is open to members and books may be borrowed under special arrangement by members residing in the mofussil. Annual subscription Rs. 25. Entrance fee Rs. 10. Life Membership Rs. 360 including entrance fee. *Patron:* H. E. The Viceroy of India; *Vice-Patrons:* H. E. H. The Nizam of Hyderabad, G.C.S.I., G.B.E.; H. H. The Maharaja of Baroda; H. H. The Maharaja of Travancore, G.C.I.E.; H. H. The Maharaja of Bikaner; H. H. The Maharao of Cutch; H. H. The Maharaja of Jodhpur, G.C.I.E., K.C.S.I., K.C.V.O.; H. H. The Maharajadhiraj of Patiala; H. H. The Maharaja of Bhavnagar, K.C.S.I.; H. H. The Nawab of Junagadh, G.C.I.E., K.C.S.I.; Sir David Ezra, Kt., F.Z.S.; A. S. Vernay; Lt.-Col. K. G. Gharpurey, I.M.S. (Retd.); W. S. Millard, F.Z.S.; *President:* H. E. The Governor of Bombay. *Vice-Presidents:* Sir John Greaves, Kt., C.B.E., M.L.A., J.P.; Rt. Rev. R. D. Acland, M.A.; W. S. Millard, F.Z.S.; *Hon. Secretary:* J. L. Bernard; *Hon. Treasurer:* T. E. Savaldes; *Curator:* S. H. Prater, O.B.E., M.L.A., J.P., C.M.Z.S.; *Joint Curator:* C. McCann; *Head Clerk:* A. F. Fernandes; *Accountant:* D. P. Lanjekar; *Gallery Assistants:* P. F. Gomes and N. A. Baptista; *Offices:* 114, Apollo Street, Bombay.

BOMBAY SANITARY ASSOCIATION.—Founded (*a*) to create an educated public opinion with regard to sanitary matters in general; (*b*) to diffuse the knowledge of sanitation and hygiene generally, and of the prevention of the spread of disease amongst all classes of people by means of lectures, leaflets and practical demonstrations and if possible, by holding classes and examinations; (*c*) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise; (*d*) to arrange for homely talk or simple practical lectures for mothers and girls in the various localities and different chawls, provided the people in such localities or chawls give facilities. The Sanitary Institute Building in Princess Street was built by the Association at a cost of nearly Rs. 1,00,000. The foundation stone was laid by Lady Willingdon in March, 1914, and it was opened in March, 1915. It is a large and handsome structure with a large Lecture Hall, Library, Museum, etc., and also provides accommodation for King George V. Anti-Tuberculosis League Dispensary transferred to the Municipality in 1924, the Museum and office of the Assistant Health Officer, C and D Wards, and the Vaccination Station. *Hon. Secretary and Treasurer:* Dr. B. C. Das Gupta, B.Sc. (Hons.), M.B., M.R.C.P., D.P.H., D.T.M. & H., Executive Health Officer, Bombay. *Joint Honorary Secretary:* Dr. C. Coutinho, B.Sc., L.M.&S., Bby. *Health Visitor:* S. K. Kulkarni.

BRITISH AND FOREIGN BIBLE SOCIETY.—The British and Foreign Bible Society has been at work in this country since 1811. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta in 1811, then followed the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. In November 1944 the "Bible Society of India & Ceylon" came into existence, and it is taking over responsibility for work hitherto done by the British and Foreign Bible Society, with which, however, as well as with the Scottish and American Societies, it remains in association. The Bible or some portion of it is now to be had in over 100 different Indian languages and dialects and the circulation throughout India reached 1,154,455 issues in 1945. The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Gifts of English Scriptures are made to students who pass University examinations, the New Testament and Psalms to Matriculates and the Bible to Graduates. (These gifts have been discontinued on account of the war). During the war special "Services" editions of the New Testament in English and of Gospel portions in several Indian languages were issued, and many thousands were distributed to men in the Forces.

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India:—

TABLE OF CIRCULATION OF THE B.F.B.S. IN INDIA.

These returns do not include the copies which any Auxiliary has supplied to London or to any other Auxiliaries during the year.

General Secretary for India and Ceylon: The Rev. J. S. M. Hooper, M.A., Mayo Road, Nagpur, C.P.

BRITISH MEDICAL ASSOCIATION (Bombay Branch).—Founded 1886, to promote Medical and the Allied Sciences and the maintenance of the honour and interests of the Medical Profession. *Secretary:* Dr. D. R. Bharucha, F.R.C.S. (Eng.), 'Dreamland,' 25, New Queen's Road, Bombay 4.

CHILDREN'S AID SOCIETY was established in 1927 to help forward the operation of the Bombay Children Act by taking over responsibility for the maintenance of the Umarkhadi Children's Remand Home, for the organisation of inquiry, and probation, including voluntary supervision work regarding the

cases of boys and girls dealt with by the Juvenile Court, for the management of the David Sassoon Industrial School, Matunga; The Society maintains the Children's Home, Chembur, which is an Agricultural biased school and the Home for Mental Deficients. The Society is a private charitable organisation with a grant-in-aid from Government. Its work lies amongst destitute children hailing from all parts of India, juvenile offenders less than 16 years of age and children offended against by adult persons, all of whom have been arrested under the Bombay Children Act in either Bombay City or Suburban District. *President:* H. E. The Rt. Hon'ble Sir John Colville, G.C.I.E., T.D.; *Vice-President:* Hon'ble Home Minister, Mr. Morarji R. Desai, *Chairman:* Dr. Jivraj N. Mehta *Jt. Treasurers:* L. V. Sathe, A.R.I.A., B.A., and Motichand G. Shah, B.A.; *Hon. Secretary:* Prabhashankar R. Bhatt, J.P.; *Secretary:* Dr. D. D. Mehta, Ph.D.

CONSUMPTIVES' HOMES SOCIETY.—This Society was started by the late Byramji Malabari and Dayaram Gidumal on the 1st of June 1909. Malabari secured a large grant of land in a Himalayan pine forest in Dharampur (Simla Hills) from H. H. the Maharaja of Patiala, for a Sanatorium for Consumptives. His Highness also gave a donation of Rs. one lakh. In 1911 by special permission the Sanatorium was named "The King Edward VII Sanatorium." It has its special water works known as the Lady Hardinge Water Works, presented by the late Sir Chinubhai Madhavlal, Bart., of Ahmedabad. The Sanatorium has a Guest House: The Noshirwan Adul Guest House for visitors to Dharampore. It has accommodation for 105 patients including the special Punjab Block built from a grant of the Punjab Government and meant for European patients. Most of the blocks and cottages are built by Parsis. The N.M. Wadia Charities built 5 cottages and 3 blocks of 11 rooms and gave yearly donations. Sir Dorab Tata Trustees are also Donors. The Sir Ratan Tata Charities donated large sums for the upkeep of the sanatorium from 1922, and in 1930 endowed the X-Ray and Electric Light Departments at a cost of Rs. 20,000. A donation of Rs. 15,000 is promised for the Sir Ratan Tata Laboratory. The Sanatorium has its own dairy and is called the Bai Pirojbai R. H. Patuck Dairy. The Sir Chinubhai Madhavlal Dispensary has an out-patient department. The Recreation Hall is called "The Sir Bhupinder Singh Recreation Hall" after the name of the late Maharaja of Patiala. Nearly Rs.8,16,000 have been spent on laying out the sites, buildings, etc., and the upkeep annual expenditure is about Rs.70,000. The Senior and Junior Medical Officers are in charge of the Sanatorium. The office of this Society is situated at the Seva Sadan Buildings, Gamdevi, Bombay. S. P. Wadia is the Hon. Secretary and Pirosha P. Mistri is the Hon. Treasurer.

EMPLOYERS' FEDERATION OF INDIA.—The Employers' Federation of India was registered early in 1933 with the following among its main objects:—To promote and protect the interests of employers engaged in the trade, commerce, industries and manufactures of India; to promote or oppose legislative or other measures affecting their interests; to collect and circulate statistics and other information of interest to employers; to nominate delegates and advisers to the International Labour Conferences and to formulate opinions on the subjects coming for discussion before such bodies, and to promote or oppose their recommendations; to secure concerted action on all subjects involving the interests of its members; to consider and support well-considered schemes for the welfare and uplift of Labour and establish harmonious relations between Capital and Labour; and to carry on propaganda for the purpose of educating public opinion with regard to the character, scope, importance and needs of industrial enterprise as represented by the Federation.

Most of the leading employers' organisations in India are members of the Federation.

The office-bearers for the year 1946 are :—*President:* Sir Homi Mody; *Deputy Presidents:* Sir John Burder, Sir Robert Menzies and Dewan Bahadur C. S. Ratnasabapathy Mudaliar.

The office of the Federation is at present located at Elphinstone Bldg., Churchgate Street, Bombay.

EUROPEAN ASSOCIATION.—The European Association was established in 1883 under the title of "The European and Anglo-Indian Defence Association" and was re-established in 1912 under the title of the European Defence Association, the present title being adopted in 1913. The Association has for its major object the organisation of European influence in the political life of India. The Head Office (Central Administration) is in Sassoon House, 4, Lyons Range, Calcutta. *President:* C. P. Lawson, M.L.A. (Central); *Vice-President:* H Rowan Hodge, M.L.A. and C. P. Bramble, C.I.E.; *Hony. General Treasurer:* R. S. Arthur; *General Secretary:* Mrs. I. Bryden.

UNITED PROVINCES.—*Chairman*, H. A. Wilkinson, O.B.E.; *Hony. Secy.*, H. W. Morgan, M.B.E.

THE IMPERIAL LIBRARY, CALCUTTA.

HISTORY.—The present Imperial Library was founded in 1902 by Lord Curzon, the then Viceroy of India, by amalgamating the former Calcutta Public Library with the then Imperial Library which itself had been founded in 1891 by combining a number of Departmental Libraries of the Govt. of India Secretariat. One of them, the Library of the Home Dept., contributed a very important and interesting collection of books, which formerly belonged to the East India College, Fort William, Calcutta, and to the East India Board, London. The Calcutta Public Library also contained a fairly large number of valuable and rare books and pamphlets. In 1904, Maulvi Sayyid Sadrud Din Ahmad al Musavi, Zamindar of Buhar, (Burdwan District), endowed a collection of 1,500 printed Arabic, Persian and Urdu books, along with 950 Arabic and Persian manuscripts which collection is named "Buhar Library" after the name of the place to which the donor belonged.

MANAGEMENT.—The Department of Education, Health and Lands of the Government of India, is responsible for the maintenance of the Library; while its management is vested in a Council appointed by the Governor-General in Council. The Educational Adviser to the Government of India is the ex-officio Chairman and the Librarian, Imperial Library, its ex-officio Secretary. The members represent the University of Calcutta (2), the Government of Bengal (2) and other Provinces (3).

AIMS.—The aim of the Imperial Library in the words of its great founder is that "it should be a Library of reference, a working place for students, and a repository of material for the future historians of India, in which, so far as possible, every work written about India at any time can be seen and read." The Library contains most of the important and rare works in English and Indian languages dealing with India. The Library is also in possession of a collection of important books of reference and of standard works on various subjects which is kept up-to-date by the addition of new books. The present strength of the stock of the Library is a little over 300,000 which makes it the biggest Library in India.

WORKING.—The Library is provided with Reading Rooms, public and private, where facilities are offered to students, Research workers and general readers. There is a separate Reading Room for ladies. Books are also lent out to any one living in any part of India, against cash security. The membership of both the Reading Rooms and the Lending Section is free. General and special reference enquiries are also attended to.

HOUSING.—The Library was housed in the Metcalfe Hall, Calcutta, from 1902 to 1923, when it was moved to the old Foreign and Military Secretariat Buildings, 6, Esplanade East, Calcutta. As a war measure the Library is temporarily housed in 34 Chittaranjan Avenue, Calcutta since February, 1942.

LIBRARIAN.—Khan Bahadur K. M. Asadullah, B.A., F.L.A.

INDIAN ACCOUNTANCY BOARD.—The Indian Accountancy Board is constituted under the Indian Companies Act VII of 1913 which was amended by the Indian Companies (Amendment) Act, 1930, in order to give effect to an All-India scheme of registration of public accountants and auditors and the creation of an Indian Accountancy Board to advise the Central Government on all matters relating to the accountancy profession in India.

Before 1930 local Govts. were empowered to grant auditors' certificates entitling persons to act as auditors of companies other than private companies. Auditors' Certificates were of two kinds "restricted" and "unrestricted." The holders of the former were entitled to practise within the jurisdiction of the Province granting the certificate while those of the latter were entitled to practise throughout British India.

There were several practical difficulties in administering a central subject by a provincial government and in 1932 the Central Government took charge of the accountancy profession—the youngest of the learned professions.

Every person desirous of practising as a public accountant in British India, has to be enrolled on the Register of Accountants maintained by the Central Government and is styled "Registered Accountant." Necessary conditions for eligibility for enrolment on the Register of Accountants are laid down in the Auditors' Certificates Rules, 1932, which have been framed under section 144 of the Indian Companies Act. There is, in operation, a strict scheme of professional examinations, registration of apprentices for the practical training, recognition of coaching institutions for the theoretical aspect, registration for the practising public accountant and an elaborate code of professional ethics, all conducted and rigorously enforced by the Central Government on the advice of the Indian Accountancy Board.

From 1932 to 1939 the members of the Indian Accountancy Board were nominated by the Central Government out of the ranks of the leading public accountants throughout India. In 1939 the Central Government changed the rules and introduced a progressive element of elected members from the practising accountants. The ultimate goal is to form an autonomous body of accountants to take charge of the profession. Under the present rules, the Indian Accountancy Board consists of 21 members. The term of membership is for 3 years. In exceptional conditions the Central Government is empowered to extend the term for a further specified period. The present term commenced from 1st July 1944.

Chairman: The Hon'ble Sir Muhammad Azizul Huque, D.Litt., in charge of the Dept. of Commerce. *Secretary:* P. N. Bhandari, B.Com. (London), A.C.A., B.A. *Address:* Under Secretary to the Government of India, Dept. of Commerce, Simla.

INDIAN ADULT EDUCATION ASSOCIATION.—Founded in the year 1937 in order to organise and carry on adult education work throughout the country. Among its earliest founders Prof. H. B. Richardson and Prof. J. B. Raju took a very prominent part.

The aims and objects of the Association are :—

To spread knowledge among the people of India on all subjects related to their all-round welfare and culture, in a popular and attractive manner through suitable agencies; to initiate, wherever necessary, adult education activities in co-operation with various organisations and individuals interested in the work, and to encourage and co-ordinate local efforts and organisations engaged in promoting the cause of adult education; to serve as a central bureau for information and advice concerning adult education in the different provinces and Indian States; to co-operate with movements aiming at the removal of illiteracy and ignorance and the promotion of the civic, economic and cultural interests of the people; to serve as a connecting link for inter-provincial and inter-State co-operation and co-ordination; to prepare and supply, if necessary, slides, charts, films, booklets, suitable literature, etc., and to undertake the publication of bulletins and journals; to arrange public lectures, demonstrations, seminars, etc., for the furtherance of the objects of the Association; to organise the Indian Adult Education Conference at least once every two years; to induce the Universities and other educational bodies in the country to take up adult education work, and to do all other acts that are incidental to the fulfilment of the above-mentioned objects of the Association.

The Association is affiliated to the World Association for Adult Education. Since its establishment it has held three important conferences. The first one in Delhi in 1938, presided over by the late Hon'ble Mr. Justice Sir Shah Mohammad Sulaiman; the second at Bhagalpur in 1939 under the presidentship of Mr. (now Sir) R. P. Masani, then Vice-Chancellor, Bombay University; and the third at Indore in December, 1942, under the patronage of His Highness the Maharaja Holkar of Indore, and the presidentship of Prof. A. Jha, Vice-Chancellor, Allahabad University.

Office-bearers include:—*President:* Dr. Amaranatha Jha; *Vice-Presidents:* Sir Maurice Gwyer, Sir Tej Bahadur Sapru, Dr. Syed Mahmud, Prof. A. N. Basu, J. L. P. Roche-Victoria, K. G. Saiyidain; *Hon. General Secretary:* Ranjit M. Chetsingh; *Associate Secretaries:* Mrs. Savitri Rajan, Mrs. Kulsum Sayani, Prof. B. C. Mukerji, Mumtazim i Khas Bahadur A. G. Sharma, I. Venkata Ramanayya; *Organising Secretary in South India:* P. M. Gopalakrishnan; *Hon. Treasurer:* Capt. H. B. Richardson.

INDIAN CHEMICAL SOCIETY.—Was founded in 1924 with Sir P. C. Ray as *President*, located in the University College of Science Buildings, 92, Upper Circular Road, Calcutta. Prof. J. N. Mukerjee, O.B.E., D.Sc.; *President:* Sir S. S. Bhatnagar, F.R.S., S.W., Dr. B. B. Dey, Prof. N. R. Dhar, Dr. Gilbert Fowler, Sir J. C. Ghosh, Dr. K. G. Naik, Dr. J. N. Ray, Dr. R. C. Ray, Prof. P. Ray, Prof. B. K. Singh, *Vice-Presidents;* Prof. B. Sanjiva Rao and Dr. P. K. Bose, *Hony. Editors;* Dr. B. N. Ghosh, *Hony. Secretary;* Dr. K. N. Bagchi, *Hony. Treasurer;* Dr. U. P. Basu, Dr. J. K. Chowdhury, Dr. S. Krishna, Dr. S. Joshi, Dr. M. Goswami, Dr. B. C. Guha, Prof. P. C. Guha, Dr. A. N. Kappana, Dr. A. C. Chatterji, Prof. P. C. Mitter, Dr. K. L. Moudgill, Dr. Mata Prasad, S. P. Sen, Dr. P. B. Ganguli, Dr. V. Subramanyan, Dr. K. Venkataraman, Dr. T. R. Seshadri, Dr. S. Siddiqui, Rao Bahadur Dr. B. Viswanath, *Members of the Council;* G. Banerjee, *Asst. Secretary;* S. N. Mukherjee and Dr. D. Chakravarti, *Asst. Editors.*

Bombay Branch: Dr. V. K. Bhagwat, *President;* S. M. Mehta, and Principal P. N. Joshi, *Vice-Presidents;* J. Samson and A. N. Kothare, *Joint Hony. Secretaries;* Dr. G. V. Jadhav, *Hony. Treasurer.*

Madras Branch: Sir J. C. Ghosh, *President;* Dr. K. L. Moudgill, *Vice-President;* H. Subba Jois, *Hony. Secretary and Treasurer.*

The Society publishes a monthly Journal dealing with original researches in Chemistry in India and a quarterly Industrial Edition of the main Journal specially devoted to industrial topics. Annual subscription for the Industrial Edition is Rs. 6 for non-Fellows. Subscription to Fellows: Rs. 16, Non-Fellows Rs. 18 and an additional Rs. 2 for the Industrial and News Edition. Fellowship is open to graduates of Chemistry and to those who are interested.

INDIAN AND EASTERN NEWSPAPER SOCIETY.—Formed in February 1939 to act as a Central Organisation of the Newspaper Press of India, Burma and Ceylon and to promote the common interests of its members. *President:* W. J. B. Walker, "The Statesman"; *Deputy President:* K. Srinivasan, "The Hindu"; *Vice-President:* Tushar Kanti Ghosh, "The Amrita Bazar Patrika"; *Hony. Treasurer:* J. K. Cowly, "The Statesman"; *Secretary:* Asu De, *Committee:* (1946) M. N. Cama, "The Bombay Chronicle", Ramanath Goenka, "The Indian Express"; S. Sadanand, "The Free Press Journal"; P. L. Sondhi, "The Tribune", C. R. Srinivasan, "The Swadesa Mitran". *Address:* Post Box No. 69, New Delhi.

INDIAN INSTITUTE OF SCIENCE (BANGALORE).—The Institute owes its origin to the munificence of the late Mr. J. N. Tata, whose plan for establishing a Research Institute, was brought to fruition after his death by the generosity of his two sons, the late Sir Dorabji Tata and the late Sir Ratanji Tata, supported by the Government of India and the Government of H. H. the Maharaja of Mysore. The Institute began work in July 1911, and its laboratories provide facilities for post-graduate work in five main branches of Science, namely, Physics, Cosmic Ray Research Unit, General Chemistry, Organic Chemistry, Biochemistry, Electrical Technology and Aeronautical Engineering. There is a library of scientific books and journals comprising upwards of 33,000 volumes. The Institute awards a limited number of research studentships, research scholarships and research stipends. The Associateship is awarded by the Governing Council on the recommendation of the

Senate after five terms devoted entirely to research. Certificates are granted to students who satisfactorily complete approved courses of study in Electrical Technology and Aeronautical Engineering. A department of the Metalurgy will also be added in the near future. The scientific work of the Institute is recorded in the Quarterly Journal of the Indian Institute of Science. *Director:* Sir Jnan Chandra Ghosh, Kt., D.Sc., F.N.I.; *Registrar:* A. C. Pai, M.A. (Cantab.).

INDIAN LIBRARY ASSOCIATION.—Founded in September, 1933, on the recommendation of the first All-India Library Conference, convened in Calcutta on the invitation of about 20 prominent librarians in the country. It has for his objects (*a*) the furtherence of the library movement in India; (*b*) the promotion of training in librarianship in India and (*c*) the improvement of Status of librarians.

Among the methods employed for an achievement of these objects, the Association has with the help of local workers and supporters been able to organise biennial Library Conferences, of which seven have been held so far. The Association is responsible for bringing out a professional journal, called the "Library Bulletin" which is published every quarter, since April, 1942 and which is supplied free to members of the Association. Another useful publication issued by the Association is the "Directory of Indian Libraries" of which two editions have been brought out so far and a third is under preparation. The Association has also undertaken the compilation and publication of certain works of reference, such as (*a*) the Union Catalogue of Scientific periodicals contained in important libraries of India; (*b*) a Compendium of Scientific and technical pamphlets as contained in important Indian Libraries; (*c*) a Catalogue of library literature found in important libraries of the country and (*d*) expansion of such topics of the well-known scheme of book classification, the Dewey Decimal, as pertain to India and Indian subjects. Of the last, certain expansions have been published in the Library Bulletin, while others are either awaiting publication or are being worked out.

The Association also contemplates a survey of Indian libraries, which work is held up as no financial assistance is forthcoming from the Govt. to carry out such a huge task.

The membership of the Association includes individual members, Libraries and Library Associations, of which about a dozen are affiliated to the Indian Association.

President.—Rao Sahib S. R. Ranganathan, Librarian, Benares Hindu University.

Hon. Secretary.—Khan Bahadur K. M. Asadullah, Librarian, Imperial Library, Calcutta.

INDIAN MATHEMATICAL SOCIETY.—Founded in 1907 for the advancement of mathematical studies in India. It conducts two quarterly journals, *The Journal of the Indian Mathematical Society* and *The Mathematics Student*; the former publishes original papers on mathematical subjects and the latter is devoted to the needs of students and teachers of mathematics. The Society maintains a library of current mathematical periodicals in all languages and some new books on the subject. The library is located at the Fergusson College, Poona, whence the journals and books are circulated to members by post. The journals of the Society are published in Madras. There are about 400 members from all parts of India. *President:* Dr. F. W. Levi, Ph.D., Hardinge Professor of Mathematics, Senate House, Calcutta. *Secretaries:* Dr. M. R. Siddiqui, Ph.D., Osmania University, Hyderabad (Deccan) and S. Mahadevan, M.A., L.T., Engineering College, Guindy, Madras. *Librarian:* D. D. Kosambi, Professor of Mathematics, Fergusson College, Poona.

INDIAN MUSIC ASSOCIATION, LUCKNOW.—Founded by Raizada Onkar Prasad in 1939, and is the only institution of its kind in India. Its object is to revive and reorganise the decaying art of the Indian music. Membership is open to both sexes and a nominal quarterly subscription is charged. The success of the Association has been proved by the recognition of the service of the members at various Music Conferences and Charity Shows. Membership this year has been opened to Burma evacuees interested in Indian Music.

FEDERATION OF INDIAN OVERSEAS ORGANISATION.—Founded in 1938. The objects of the Federation of Indian Overseas Organisation are, among others:—To promote, protect, safeguard and maintain the rights, privileges and interests of all Indians overseas; to secure for them by every possible endeavour equality of treatment as to admission, residence, occupation and status; to strengthen in every way constitutional organisations in different countries and colonies for the protection of Indian interests; to assist emigrating Indians; to encourage friendly feelings between Indians and non-Indians; to organise educational, cultural, commercial and agricultural exhibitions, and to publish, sell and distribute literature that furthers the objects of the Federation.

Membership is open to all Indians sympathising with the cause of Indians Overseas. Minimum annual subscription, Rs. 10; Life Membership, Rs. 250.

President.—The Hon'ble Mr. V. V. Kalikar, M.C.S.; *Working President:* Seth Govind Das, M.L.A. *Vice-Presidents:* Hon. Raja Govindlal Pittie; Hon. Mr. Hossain Immam; Hon. Pt. H. N. Kunzru; Prof. N. G. Ranga, M.L.A.; Khan Bahadur Haji Wajihudin, M.B.E.; S. B. S. Sunder Singhji Dhujna; Sir Padampatji Singhania; Seth L. N. Gadodia; Sir Hassan Suhrawardy, M.L.A.; Raja Sir Maharaj Singhji and Rao Bahadur L. Harish Chandra.

Treasurer: L. Narain Dutt. *Hon. Secretary:* C. L. Patel, 17, Panchkuin Road, New Delhi.

THE INDIAN ROADS AND TRANSPORT DEVELOPMENT ASSOCIATION LIMITED.—Registered Office—27, Bastion Road, Bombay.

Patrons: His Excellency Sir John Colville, G.C.I.E., T.D., Governor of Bombay; His Excellency Sir Hugh Dow, K.C.S.I., K.C.I.E.,

I.C.S., Governor of Sind; His Excellency Sir Maurice Hallett, K.C.S.I., C.I.E., I.C.S., Governor of the United Provinces.

The Association was formed in 1926 and registered in October 1927 having a Council with headquarters in Bombay and Branches at Calcutta, Bombay, Madras, Karachi, Lahore, Nagpur and New Delhi, each with a Local Committee.

The Annual Subscriptions for membership of the Association are: Associate Members Rs. 5; Ordinary Members Rs. 10; and Supporting Members Rs. 300.

The aims and objects of the Association are to promote the development of transport of any kind including Road, Motor and Air Transport throughout India by making representations to the Government of India, Governments of Provinces, District Boards and other Public Bodies concerned, regarding the construction, improvement and maintenance of roads, bridges and aerodromes, etc.; to make representations to all or any of the bodies regarding the adjustment of taxation, customs duties and excise affecting motor vehicles and other modes of transport and the employment of same in such a manner as to facilitate the development of transport throughout India; to educate the public by means of propaganda and to create authoritative public opinion with regard to the needs of, and advantages to be derived from, improved road and air communications and the use of these forms of transport.

All persons, associations, firms or companies interested in Transport Development are eligible for election as members.

The present constitution of the Council of the Association is:—

President: T. R. S. Kynnersley, O.B.E., M.C.; *Vice-President:*— Nurmahomed M. Chinoy, J.P.

Members of Council: Major-General Sir Reginald Ford, K.C.M.G., C.B., D.S.O.; H. E. Ormerod, J.P.; S. Guevrek; Sir Ness Wadia, K.B.E., C.I.E., J.P.; R. J. Watson; A. W. Percy, J.P.; I.A.T. Shannon; H. C. de Mierre; The Hon'ble Mr. M. N. Dalal, J.P.; B. O. Stevenson; V. F. Noel Paton; A. D. Wenzel; J. Littlejohn; S. E. Ekers and E. P. Nicolaides.

Branches are already in existence in Bombay, Calcutta, Madras, Karachi, Lahore, Assam, Nagpur and New Delhi and others will be formed as and when occasion demands.

Applications for membership should be made to the General Secretary of the Association 27, Bastion Road, Bombay, or to the Secretaries of the Branches, Bombay, P.O. Box 853; Calcutta, P.O. Box 2285; Madras, P.O. Box 1270; Karachi, P.O. Box 168; Lahore, P.O. Box 161; Nagpur, Velloz Bldg., Kingsway; New Delhi, P.O. Box 56, and Assam, P.O. Rehabari.

INDIAN SCIENCE CONGRESS ASSOCIATION.—The Association consists of the general body of scientific workers and also admits people interested in scientific activities. The subscription of ordinary members who are enrolled till July 15 is Rs. 12 per annum. They receive free the proceedings of the annual session of the Indian Science Congress which is organised by the Association with the help of a Reception Committee formed at the venue of the Congress. Besides, ordinary members, there is provision for Sessional Members. No educational qualification is generally insisted upon at the time of enrolment.

President:—Prof. M. Afzal Husain, M.Sc., M.A. (Cantab.).

President-elect—: Jawaharlal Nehru.

Treasurer.—Prof. P. Ray, Palit Professor of Chemistry, Calcutta University; *General Secretaries.*—Prof. P. C. Mahalanobis, F.R.S.; Prof. M. Qureshi, M.Sc., Ph.D., F.N.I.; *Address:* Statistical Laboratory, Presidency College, Calcutta.

INDIAN SOCIETY OF ORIENTAL ART (Calcutta).—*Patron:* Marquess of Zetland, G.C.I.E. *Secretary:* Dr. Niharranjan Ray. *Office:* 11, Wellington Square, Calcutta.

INDIA SUNDAY SCHOOL UNION.—The India Sunday School Union, founded in Allahabad in 1876, is an interdenominational organisation having for its object the strengthening of religious and moral education in the Christian schools throughout India. It has five full time workers, both Indian and European. Its General Council is composed of representatives from the National Christian Council, the Provincial Representative Councils, local Sunday School Unions which are Auxiliaries of the I.S.S.U., and from Church Councils and Christian Youth Organizations in the Country.

The headquarters of the Union are at Coonoor on the Nilgiri Hills, where, besides the office and well-stocked book shop, there is the St. Andrew Teacher Training Institution. In this institution Summer Schools are held where a short but intensive course of study and training is offered to leaders in religious education from all parts of India.

Besides the activities at headquarters, the Union offers courses of lectures in any part of the country, delivered by members of its staff. A Quarterly Journal is published in English, and Lesson Notes for teachers in English and several regional languages. Text-books on subjects connected with the work of Bible teaching are also published in various languages, and Scripture and Teacher Training examinations are held for Scholars and Teachers, respectively.

The officers of the Union are as follows:—

President: Prof. B. B. Malvea, Ph.D., Allahabad.

Vice-President: Bishop S. K. Mondol, Hyderabad, Deccan.

Treasurer: W. H. Warren, Madras.
General Secretary: V. M. Koshy, Coonoor.

The most recent statistics show that there are in India 21,704 Sunday Schools with 42,886 teachers, and 881,568 scholars.

INSTITUTION OF ENGINEERS (INDIA):—Founded in 1920; granted a Royal Charter in 1935. Objects:—(briefly) to promote the general advancement of engineering and engineering science and their application in India and to facilitate the exchange of information and ideas on those subjects amongst its members. The membership consists of Honorary Members; Honorary Life Members; Members and Associate Members (Corporate Members); Companions; Students, Subscribers and Associates. The Institution is an All-India body and comprises engineers of all branches, civil, mechanical, electrical, mining, structural, etc. Membership of the Institution demands the same high standard of professional status and qualifications as is required by the Civil, Mechanical and Electrical Institutions in England.

The Institution is administered by a Council consisting of 30 to 50 Corporate Members representing all branches of engineering. It has eight Local Centres with its own Administrative Committee, and the total membership is over 3,000. It publishes a quarterly technical Journal.

The Council of this Institution act as local technical advisers to the British Standard Institution on their draft specifications. *President:* Nawab Zain Yar Jung Bahadur; *General Secretary:*— R. D. Ratnagar. *Secretary:* Rai C. C. Seal Bahadur. *Headquarters.*—8, Gokhale Road, Calcutta.

ISMAILIA ASSOCIATION.—This Institution—a philanthropic and humanitarian body—was established by the members of the Ismaili Dharmic Library in 1911 under the name of the Recreation Club, with the object of uplifting and elevating the poor, without distinction of caste or creed. It also tries to improve the social, economic and spiritual condition of the depressed and poor class s of people and with this intent has founded primary schools, associations and such other departments in order to ameliorate their condition and to achieve these objects by constructive and constitutional means. It also maintains orphanages, lecture halls and Social Workers who constantly travel and impart general education. It has branches at Ahmedabad, Ahmednagar, Karachi, Hyderabad (Sind), Poona, Warrangal, Gondia, Dhoraji, Burma and East Africa. It publishes three Anglo-Vernacular papers, namely the "Ismaili" (a weekly Anglo-Gujarati), for the benefit of its members and the propagation of Islam. Its central office is situated in Bombay at Kandi Moholla, Imamwada Road. BOARD OF EXECUTIVES.—*President:* Abdulah S. Shivji, J.P.; *Vice-President:*—Rehemtula Virji; *Treasurer:*—Nazarali Hashim; *Chief Secy:*—Abbas Alimohamed; *Secy:* Yusufali E. Dossa.

KALAKSHETRA—INTERNATIONAL ARTS CENTRE, ADYAR, MADRAS.—Literally "The Abode of the Arts" was founded at Adyar in 1936 by Shrimati Rukmini Devi, to emphasize the essential unity of all true Art.

Rukmini Devi strongly holds that for India's true renaissance the glories of all her ancient cultures—Hindu, Buddhist, Islamic—must enter into the hearts of her people and become part of their daily lives. No less does she hold that for world peace and happiness the great culture of the East and of the West must become the common heritage of all.

Rukmini Devi, her staff and students in Kalakshetra are engaged in studying and popularising the principles and practice of various Hindu classical dances, Bharata Natya, Kathakali, etc. Special features are instrumental and vocal music, folk songs, dramatic arts, and painting. Recent expansion includes the inauguration of 4-year teachers course in Dance and Music. There is besides a crafts department including furniture and interior decoration and a weaving section.

Bookbinding and publications are also part of the Centre's activities. The Centre has an unique and rare collection of fifteen hundred Tamil palmleaf manuscripts on the *Kamba Ramayana*, many of these annotated by the late Mahamahopadhyaya Dr. U. V. Swaminatha Iyer.

Rukmini Devi has a deep understanding of Western Arts, also largely through the inspiration of the great Russian dancer, Madame Pavlova.

Dotoressa Montessori has entrusted to Kalakshetra the sole right of preparing and supplying throughout India educational material which might revolutionize and simplify education.

MADRAS LITERARY SOCIETY AND AUXILIARY OF THE ROYAL ASIATIC SOCIETY, College Road, Nungumbakam, Madras.

The Society's Library contains nearly a lakh of books which are circulated to members.

President:—The Hon'ble Mr. Justice A. C. Happell, I.C.S.; *Hony. Secy.:* J. Spencer; *Librarian:* C. N. Rama Krishna Iyer, B.A.

NATIONAL HORSE BREEDING AND SHOW SOCIETY OF INDIA:—Formed in 1923, by the late Major-General Sir Bernard James, Kt., C.B., C.I.E., M.V.O., who was President from 1923 to 1925.

Objects:—To improve the breeds of horses, ponies and mules in India; to expand the breeding of horses, ponies and mules in India in order to make the country self-supporting in this respect; to protect and promote the interests of breeders and to give them every encouragement; to secure uniformity throughout India in all matters connected with Horse Shows; to prepare an Indian Stud Book; to endeavour by intercourse and discussion to attract public attention to a subject so important to the nation, and to spread knowledge of the principles upon which better horses may be bred; to hold shows of horses and to offer prizes and premiums at such Shows, or at Imperial and District Board and Local Horse Shows or at the Shows of any other Society; to advice and assist Horse Show Committees in regard to the organization and management of Horse Shows, and in the appointment of Judges; to receive subscriptions and other payments for the general purposes of the Society.

Patron-in Chief:— His Excellency Field Marshal the Right Honourable Viscount Wavell of Cyrenaica and Winchester, G.C.B., G.M.S.I., G.M.I.E. C.M.G., M.C., Viceroy and Governor-General of India.

President :—(for 1946): Captain Sir Victor Sassoon, Bart., C.S.I., Bombay.

Vice-President and Hony. Secretary :—F. D. Wadia, Esqr., Yeravada, Poona.

The Society issues the following publication: "The Horse in India," an illustrated quarterly Journal in English. The Society holds the Imperial Delhi Horse Show annually in February, which has been suspended for the duration of the war.

Registered Office :—New Delhi. At present the office has been shifted from New Delhi and is situated C/o the Royal Western India Turf Club Ltd., 6 Burnett Road, Poona, Deccan.

PASSENGERS AND TRAFFIC RELIEF ASSOCIATION. (Established in 1915). *Head Office*—Albert Building, Hornby Road, Fort, Bombay. Objects: (*a*) To ascertain and endeavour generally to obtain redress of grievances of passengers travelling either by Railways, Steamers, Tramways or Motor Buses; (*b*) To deal with problems of transport in general; (*c*) To represent to Government, Local Bodies, and other authorities as also to Railway and Steamship Companies, and Tramway Company, carrying passengers and traffic to take all proper and necessary steps to obtain redress of such grievances; (*d*) To take all proper and necessary steps to obtain redress of aforesaid grievances and tackling of problems relating to transport in general and (*e*) To hold or join with other Associations, organisations or Institutions, having similar aims and objects in holding lectures, gatherings, public meetings, etc., and to carry on propaganda to further the objects of the Association and to educate the travelling public and the mercantile community with regard to their rights and remedies.

President :—D. C. Modi; *Vice-Presidents* : Jamshed J. J. Cursetji and N. M. Chinoy. *Hony. Secretaries* : H. N. Contractor, Veerbal H. Mehta and J. G. Mehta.

P. E. N. ALL-INDIA CENTRE.—The All-India Centre of this International Society of eminent poets, playwrights, editors, essayists, novelists (P.E.N.) was founded in 1933 by Sophia Wadia under the presidency of Dr. Rabindranath Tagore. After his death in 1941, Shrimati Sarojini Naidu was elected President. The Vice-Presidents are Maulana Syed Sulaiman Nadvi, Pandit Jawaharlal Nehru and Sir S. Radhakrishnan. The aim of the P.E.N. everywhere is to promote friendliness among writers and to uphold freedom of speech. In addition, the All-India Centre is working for national cultural unity by spreading appreciation of the many Indian literatures outside their own language areas and also abroad. This is done by means of public lectures, through its monthly journal *The Indian P.E.N.*, free to P. E. N. members and available to the general public in India for Rs.5 per annum, and through its "P.E.N. Books" series on the different Indian literatures. The All-India Centre has over 300 members among the country's leading writers and editors. Membership is open to any Indian of recognised position as a writer, subject to the approval of the Executive Committee. Entrance fee Rs.5; annual fee Rs.5; life membership fee Rs.100. *Honorary Secretary* : M. D. Altekar, M.A., "Aryasangha", 22, Narayan Dabholkar Road, Malabar Hill, Bombay.

PHILATELIC SOCIETY OF INDIA.—Formed March 1897; Annual subscription Rs. 5. *Hon. Secretary and Treasurer* : E. Franklin DeSouza, 30-C, Khotachiwadi, Bombay 4.

POONA SEVA SADAN SOCIETY.—This Institution was started in 1909 by the late Mrs. Ramabai Ranade, the late Mr. G. K. Devadhar and a few other ladies and gentlemen in Poona, and registered in 1917. Its main object is to make women self-reliant and to train them for missionary work, including educational and medical work, on a non-sectarian basis, amongst their sisters and brethren in backward areas, especially the former. Nominal fees are charged for instruction in all classes. There are eight different departments subdivided into about 110 classes. The total number of women and girls on the rolls at the various Centres of the Society is about 3,125. There are in Poona three hostels for women with 125 inmates including inmates from Backward Classes. Two fully qualified nurses were so far sent by the Society for Post-graduate Course in Public Health Nursing at the Bedford College for Women, London, with the partial help of a scholarship from the League of Red Cross Societies, Paris. Besides, there are Maternity Hospitals, Nursing Homes and Infant Welfare Centres at Ahmednagar, Alibag, Sholapur and Baramati under the management of the Society in connection with other organisations. The Institution is largely dependent upon public contributions and Government aids. The annual expenditure of the whole organisation now exceeds Rs. 2,50,000.

President : Shrimant Sow. Ranisaheb of Phaltan; *Local Secy. and Treasurer* : Mrs. Yamunabai Bhat; *General Secy* : G. B. Garud, B.A., (Senior Life-Member); *Jt. General Secy : and Lady Supdt.* Miss Kashibai Athavale, B.Sc., S.T.C.; *Hon. Medical Adviser* : Dr. N. L. Ranade, B.A., M.B.B.S.; *Asstt. Secy.* : C. G. Kulkarni, B.A., B.T.; *Member in charge of Propaganda work and Collection of Funds* : N. S. Pathak, M.A., S.T.C.

PRESS ASSOCIATION, NEW DELHI/SIMLA.—Established in 1938 to secure and safeguard the rights and the privileges of the press in the discharge of their duties in relation to the Central Government and the Central Legislature and to promote whatever may tend to the elevation of the status of the journalistic profession and the maintenance of the independence of the Press. *President* : Sir Usha Nath Sen, "Associated Press of India"; *Vice-President* : James Holburn, "The Times", London; *Secretary* : Durga Das, "The Hindustan Times"; *Jt. Secretary and Treasurer* : Mohd. Jafri, "Inquilab"; *Ordinary Members* : P. D. Sharma, The United Press of America; B. Shiva Rao, "The Hindu"; Sri Krishna, "The Pioneer"; Aslam Siddiqi, "Azad"; S. N. Bhatnagar, "Watan". *Address* : 2, Keeling Lane, New Delhi.

PRESS-OWNERS' ASSOCIATION, BOMBAY.—Started on 30th April 1919 to promote the interests of the printing and litho presses and allied trades, to bring about harmony and co-operation among press owners and

proprietors and to take such steps as may be necessary in furtherance of the above objects.

Office—196 B, Gaiwadi, Girgaum, Bombay 4.
Secretary :—Manilal C. Mod.

SAFETY FIRST ASSOCIATION OF INDIA, THE.—(Incorporated in 1932). Registered Office : Electric House, Colaba Causeway, Bombay. The Association is registered under Section 26 of the Indian Companies Act. The liability of its members is limited by guarantee to a contribution of Rs. 5. There are six classes of membership ranging from Rs. 5 per annum for Associate Members and Rs. 10 per annum for full Ordinary Members to a single payment of Rs. 1,000 for Supporting Life Member.

The aims, objects and activities include the promotion of safety teaching and safety measures for the prevention of accidents on roads, in factories, mines, workshops, schools and homes and the encouragement of co-operation between different sections of road-users and between employers and employed.

The maintenance of a continuous educational safety propaganda through the Press, Platform, the Wireless and the Association's monthly magazine "Efficiency News" and "Radiant Youth" as well as through other publications such as Industrial Safety Service Communiques, Games Lessons, "Stop Look Listen," Indian Highway Codes, periodical leaflets and posters combined with film exhibitions.

The holding of conferences, organisation of Safety Weeks, and the promotion of legislation covering all phases of road and industrial accident prevention.

Now that the threat of major air raids has passed, the Association is directing its efforts towards commercial and industrial advancement of India particularly through the conservation of Life, Material and Time.

President.—The Hon'ble Sir Rahimtoola Chinoy, Kt.
Hon. General Secretary.—A. S. Trollip, C.I.E.
Bombay Provincial Branch.—*Chairman* : A. S. Trollip, C.I.E.
Bengal Provincial Branch.—*Chairman* : Dr. A. C. Ukil.
Ahmedabad Provincial Branch.—*Chairman* : Mrs. R. S. Gidwani.
Surat Local Branch.—*Chairman* : Diwan Bahadur P. J. Taleyarkhan.
Bihar Provincial Branch.—*Chairman* : Sir Jehangir Ghandy, Kt., C.I.E.
Madras Provincial Branch.—*Chairman* : P. Venkataramana Raju.
Cawnpore Local Branch.—*Chairman* : J. Tinker.

SERVANTS OF INDIA SOCIETY.—The Servants of India Society, founded by the late G. K. Gokhale in 1905, is a body of men who are pledged to devote their life to the service of the country on such allowances as the Society may be able to give. Its objects are to train national missionaries for the service of India and to promote, by all constitutional means, the interests of the Indian people. Its present strength is 23 Ordinary members. The Society has its headquarters in Poona with branches at Madras, Bombay, Allahabad and Nagpur, and other centres of work at Mayanur, Mangalore and Calicut in the Madras Presidency; Shendurjana in C.P.; Lucknow, Kotdwara and Moradabad in U.P.; Lahore in the Punjab, Cuttack and Raigada in Orissa.

The Society's work is primarily political but as it believes in all round progress of the Indian people, it has always laid equal emphasis on social, economic, educational, labour and depressed class activities and has worked in these fields. The political work is done through the legislatures, the non-official political organisations, deputations to foreign countries and propaganda.

In the field of social, economic and educational work, the Society's activities are equally varied. Some of its members are practically the founders of such institutions as the Poona Seva Sadan, Bombay and Madras Social Service Leagues, the U. P. Seva Samiti, and the Bhil Seva Mandal catering for the needs and uplift of the aboriginal tribes in Gujerat. The Seva Sadan has been a model institution for the education of women which gives training to over 1,500 girls and women in all useful directions. It has many branches in different parts of India carrying on social and educational work. The Social Service League has done good co-operative, educational and welfare work for the mill workers in Bombay by starting Co-operative Societies, adult night and technical schools and conducting welfare centres. The Seva Samiti is an unique organization in Upper India doing service to pilgrims visiting religious places such as Hardwar and Benares, and working in times of epidemics. Its Boy Scouts organization is a well-knit body recognised both by the public and Government. Mr. Chitalia, one of the Society's members, has started a rural centre at Amreli in Kathiawar. The Society has been conducting a model Depressed Class Mission in Mangalore and the Devadhar Malabar Reconstruction Trust activities in Malabar district. In the Co-operative field the Society has done pioneering work in the Bombay and Madras presidencies. During natural calamities such as floods, famines and epidemics, the Society has done relief work in every part of India. By its work in the Moplah rebellion, the Society has become a household name in Malabar. During recent years several members of the Society have paid special attention to rural reconstruction, including rural education.

The Society in 1945 carried on work on a large scale to relieve distress arising from scarcity of food and clothing and prevalence of disease in parts of Bengal, Orissa, Malabar district and Travancore. It has opened a number of orphanages in Malabar district, which will maintain for about ten years orphans left as a result of a severe epidemic of cholera during 1943. Similar work has been started also in the Chicacole area of the Vizagapatam district in Madras Province.

The Society conducts two papers.—The *Dnyan Prakash*, the oldest Marathi daily, and the *Hitawad*, an English daily issued from Nagpur. The Society has also published several pamphlets on public questions of the day.

The question of the subjects of Indian States has also engaged the attention of the Society and some of its members, particularly Messrs.

S. G. Vaze and A. V. Thakkar, are devoting a part of their energies to that work.

Hon. Pandit H. N. Kunzru is the Persident, A. V. Thakkar, the Vice-President and D. V. Ambekar, the Secretary.

The Society is a non-communal, non-sectarian body which does not recognise any caste distinctions.

SEVA SADAN.—The Seva Sadan Society was started on the 11th of July, 1908, by the late B. M. Malabari and Dayaram Gidumal. It is the pioneer Indian ladies' society for training Indian ministrant sisters and through them, serving the poor, the sick and the distressed. To spread its Gospel far and wide, the first branch was opened at Poona as early as 1909. The Society has its headquarters in Gamdevi, Bombay, and maintains the following departments of work: (1) Home for the Homeless; (2) Ashrams (Training Homes); (3) a Marathi Training College, with a primary School; (4) Home Education Classes; (5) Industrial Department including a workroom, Sewing, Cutting, Hosiery, Cooking and Pastry, and machine and hand Embroidery are among the chief industries taught. The total number of women in the different classes is over 600.

Hon. Secretary: Miss B. A. Engineer, M.A., LL.B., M.B.E., J.P.

SOCIETY FOR THE PROTECTION OF CHILDREN IN WESTERN INDIA.—Office and Homes at King's Circle, Matunga, Bombay.

The Objects of the Society are: To rescue children of all castes and creeds from the streets of Bombay, to prevent begging or other improper use of poor children by adults, to pass such children on to existing charitable institutions and to provide for those otherwise unprovided for, with the support and assistance of the police, to prevent children so far as possible from appearing in Police Courts, to prevent the public and private wrongs of children and the corruption of their morals, to take action for the enforcement of the laws for the children and if necessary to suggest new laws or amendments to the existing laws, to promote education, to provide and maintain an organisation for those objects, to do all other lawful thing, incidental or conducive to the attainments of the foregoing objects.

The Society is responsible for the pioneer work of training public opinion regarding the children's Act of 1924. It has also given a lead in the matter of training sub-normal children. Subscription for Annual Membership, Rs. 10; for Life Membership, Rs. 100.

Chairman: Frank Oliveira; *President*: Sir Homi M. Mehta, Kt., K.B.E. *Vice-Presidents*: Sir Byramjee Jeejeebhoy, Kt., Sir R. P. Masani, Kt., Sir J. B. Boman-Behram, Kt. *Hon. Secretaries*: Lady B. P. Masani, Lady K. Kania, Mrs. B. P. Seerval, Diwan Bahadur Dr. J. S. Nerurker. *Hon. Treasurers*: J. R. B. Jeejeebhoy and N. B. Karanjia.

THEOSOPHICAL SOCIETY, THE.—International Headquarters: Adyar, Madras. Founded at New York, 1875, transferred to Madras, 1882 and incorporated, 1905.

Objects: To form a nucleus of the Universal Brotherhood of humanity, without distinction of race, creed, sex, caste or colour; to encourage the study of comparative religion, philosophy, and science; to investigate unexplained laws of nature and the powers latent in man.

Founders: Colonel H. S. Olcott and Madam H. P. Blavatsky. *Past Presidents*: Col. H. S. Olcott, 1875 to 1907 and Dr. Annie Besant, 1907 to 1933. Dr. G. S. Arundale, 1933-1945; *Present President*: C. Jinarajadasa. *Vice-President*: N. Sri Ram; *Recording Secretary*: Mrs. Jane Clumeek, *Treasurer*; Rai Bahadur Panda Baijnath.

There are National Societies, or Sections in 47 countries. Each Section organizes its own activities. The Indian Section consists of 300 Lodges with headquarters at Benares City, U. P.; *General Secretary*: Rohit Mehta.

Headquarters activities include the international organization and Theosophical publications. Tributary activities: Kalakshetra (Rukmini Devi's Cultural Centre), The Besant Theosophical School and other schools, The World Federation of Young Theosophists, The Order of the Round Table, etc.

The Society has its own printing-house (Vasanta Press) and the Theosophical Publishing House where books and journals are produced and dispatched to many countries.

The Adyar Library, containing about 50,000 books and pamphlets in the Western Section, over 24,000 Sanskrit books and MSS in the Eastern Section, and more than 2,000 Tamil MSS in the Dr. V. Swaminatha Iyer collection (owned by Kalakshetra), is one of the finest oriental libraries in the world.

The Headquarters estate comprises nearly 300 acres, extending east along the Adyar river from the Adyar Bridge to the sea, with many picturesque buildings in beautiful gardens including temples of the great religions. The banyan tree is one of the finest in India.

WESTERN INDIA AUTOMOBILE ASSOCIATION—Lalji Naranji Memorial Building, Churchgate Reclamation, Bombay.—The objects of the Association include: the encouragement and development of motoring; the improvement of road communications; the provision for its members of a centre of information and advice on matters pertaining to motoring; the provision for its members of protection and defence of their rights as motorists; free legal advice and defence; facilities for touring abroad and the use of International Touring Documents. Tel. Address:—"Windautas." Phone No. 31071 (*Three Lines*). Branch Offices: POONA:—Coronation Building, 7, Arsenal Road; AHMEDABAD:—Lal Darwaja.

Patrons: H. E. The Right Hon'ble Sir John Colville, G.C.I.E., T.D., Governor of Bombay and H. E. Sir Henry Joseph Twynam, K.C.S.I., C.I.E., Governor of the Central Provinces and Berar.

President: Sir Behram N. Karanjia, J.P., M.L.C. *Vice-Presidents*: A. S. Trollip, C.I.E., J.P. and J. J. J. Cursetji, B.A., LL.B. (Bar-at-law).

Secretary: Jehangir J. K. Patell, B.A., B.A., F.C.B.A. *Asst. Secretary*: K. G. Subramanian, B.A.

Other Motoring Associations in India and Ceylon are: The Automobile Association of Bengal, 40, Chowringhee Road, Calcutta; The Automobile Association of Ceylon, P. O. Box 338, Colombo; The Automobile Association of Northern India, Charing Cross, The Mall, Lahore; The

Automobile Association of Southern India, 200, Mount Road, Madras and the United Provinces Automobile Association, 32, Canning Road, Allahabad.

WESTERN INDIA NATIONAL LIBERAL ASSOCIATION—(*Founded in* 1919).—The Association was formed, in pursuance of clause (*b*) of Resolution XI of the First Session of the All-India Conference of the Moderate Party, with a view to do sustained work for the political progress and the moral and material welfare of the people; to give expression from time to time to the considered opinion of the Party on matters of public interest; and to inform and educate public opinion in this presidency in support of its views, policy and methods.

The objects of the Association are the attainment by constitutional means of full Dominion Status for India at the earliest possible date. For the promotion of these objects, the Association shall adopt constitutional methods of agitation and work and shall foster a spirit of broadminded liberalism based on principles of liberty, equality and fraternity among the different classes and communities of the people. For the fulfilment of these objects the Association shall carry on educative and propagandist work by means of leaflets, pamphlets and other publications, (*a*) representations to Government, (*b*) meetings or conferences, lectures and all such methods as may be deemed practicable and expedient to educate public opinion, and (*c*) for advancing the interests of the Liberal Party by organising and influencing elections to the legislatures, Central and Provincial, to Municipalities and District Local Boards.

The affairs of the Association are conducted by a Council consisting of 46 members who are elected every two years.

President: Sir Chimanlal H. Setalvad K.C.I.E., LL.D.; *Vice-Presidents:* Sir Cowasji Jehangir, K.C.I.E., M.L.A., Sir Vithal Chandavarkar, Kt., M.L.A., and D. G. Dalvi; *Hon. Secretaries:* J. R. B. Jeejeebhoy, A. D. Shroff and P. S. Bakhale.

Assistant Secretary: V. R. Bhende.

Office:—107, Esplanade Road, Fort, Bombay.

WOMEN'S INDIAN ASSOCIATION "MERU", TEYNAMPET, MADRAS.—This Association was started in Madras in July, 1917, with aims of service.

Aims and Objects:—To present to women their responsibilities as daughters of India. To secure for every girl and boy the right of education through schemes of compulsory primary education, including the teaching of religion. To secure the abolition of child-marriage and other social evils. To secure for women the vote for Municipal and Legislative Councils on the same terms as it is or may be granted to men. To secure adequate representation of women on Municipalities, Taluk and Local Boards, Legislative Councils and Assemblies. To establish equality of rights and opportunities between men and women. To help women to realise that the future of India lies largely in their hands; for as wives and mothers they have the task of training, guiding and forming the character of the future rulers of India. To band women into groups for the purpose of self-development and education and for the definite service of others.

The Association is actively engaged in the promotion of adult education, the training of women in industrial occupations and slum welfare work.

It interests women in maternity and child-welfare work in the uplift of the depressed classes and in other social and welfare activities for the general betterment of Indian society; has worked successfully for securing franchise for women in India, (see pages 93 and 94 of the Simon Report, Vol. II) and compulsory education for girls and also actually helped in the passage of Child-Marriage Restraint Act in the Assembly and the Acts for the Suppression of Traffic in women and children and the abolition of the Devadasi system. The Association is affiliated to all the important progressive women's associations in India and throughout the world. It was the initiator of the All-India Women's Conference and the First All-Asian Women's Conference at Lahore. The Madras Seva Sadan, the Madras Children's Aid Society, The Avvai Home for Orphan Children and the Montessori School owe their origin to the efforts of this Association. The Association opened a Rescue Home to facilitate the working of the Rescue Section of the Immoral Traffic Act, enforced by Government. The Home was opened on 21st March 1934 by Lady Beatrice Stanley and is now under the Madras Vigilance Association.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—This Association, which was founded by the late Sir George Williams in 1844, is now a world-wide movement, well established in almost every country in both the hemispheres. The aim of the Association is, through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men and boys.

The Young Men's Christian Association, though relatively new to India, is spreading rapidly. The 'local' Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a General Board which is responsible for the supervision and expansion of all forms of the Association work in India, Burma and Ceylon.

There are now 65 Associations in large towns and cities and many village Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve as the local headquarters: Allahabad; Alleppey; Bangalore; Bombay; Calcutta; Calicut; Coimbatore; Colombo; Coonoor; Delhi; Galle; Hyderabad; Jubbulpore; Kandy; Karachi; Kunnamkulam; Kottayam; Lahore; Madras; Madura; Nagpur; Naini Tal; Ootacamund; Poona; Rangoon; Ernakulam;

Risalpur; Salem; Secunderabad; Simla; Trivandrum; Wellington. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 85 specially trained full-time Secretaries. Fully cognisant of the generous help in men and money the Association has received in the past from overseas organisations, the Indian Y.M.C.A. to-day have their own men conducting their affairs; five secretaries from foreign Councils still contribute their share to the work of the Indian Movement but all the rest are recruited in India and financed in India.

The work of the National Council (excluding that of the 65 local Y.M.C.As.) call for a Budget of Rs. 83,480 in 1945. Of this sum Rs. 21,000 has to be raised from the public in India.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are:—

Patron:—His Excellency Field Marshal The Right Hon'ble Viscount Wavell of Cyrenaica and Winchester, G.C.B., G.M.I.E., C.M.G., M.C., Viceroy and Governor-General of India.

President of the National Council:—Raja Sir Maharaj Singh, Kt., C.I.E., Bar-at-Law.

National General Secretary of India, Burma and Ceylon—T. D. Santwan, 5, Russell Street, Calcutta.

The Bombay Association now possesses four well-equipped buildings:—Wodehouse Road, Lamington Road, Rebsch Street and Reynolds Road. Patron of the Association, His Excellency Lt.-Col. The Right Hon'ble Sir John Colville, P.C., G.C.I.E., T.D.; *President*, Sir Francis Low, Kt.; *General Secretary*, K. E. Vergese. In connection with each branch there is a well-managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied activities designed to meet the physical, spiritual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting four centres, serving mill workers, Municipal menial employees, Port Trust and Railway employees. A programme of education, lectures, physical culture, play and general uplift, profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city, which are financed by the Municipality.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON.—This Association founded in the year 1875 was organised nationally in 1896.

The aim of the Association is to unite women and girls of India, Burma and Ceylon in fellowship and mutual service for their spiritual, intellectual, social and physical development.

The Association exists for women and girls of all communities. There are the following branches: General 75; Fellowship Groups 32; School Girl and Junior Branches 54; Girl Guide Companies 11. There are 9 Leave Clubs in the hills and large cities for Women in the Services and 16 Drop-in-Clubs where Women in the Services may entertain their friends. The needs of girls are met by recreation, clubs and classes, lectures, commercial classes, Bible Study and devotional meetings, and meetings for social intercourse. Hostels, some of them holding as many as 70 girls, are established where there is a demand for them and the Association, at present owns 20, including 6 Holiday Homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation, though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday Homes provide inexpensive holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to Holiday Homes, Summer Conferences are held annually in South India and at Mussoorie. Special Girls' Camps are arranged from time to time in many centres.

Traveller's aid work is done in the large ports, and a large number of transient guests and visitors are accommodated in the Homes in these centres. The Association also runs Employment Bureaux through the agency of which many girls find positions. The commercial schools train girls for office and business life. These larger Associations are manned by trained Secretaries, some of whom come from India, Great Britain, America, Australia, New Zealand and Canada, though the majority of staff members are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year.

The Association, which is affiliated to the World's Young Women's Christian Association is international and inter-denominational. Full membership is open to all who declare their faith in our Lord Jesus Christ and desire to serve others in His spirit of love, and Associate membership is open to any girl or woman, regardless of what her religion may be, who wishes to join the world-wide fellowship of the Y. W. C. A. and declare her sympathy with its purpose, and to share in its activities.

The Patroness of the Association is H.E. The Viscountess Wavell.

President, National Committee.—Rani Lady Maharaj Singh. *Vice-Presidents*: Mrs. Loos Mrs. G. Dey, Mrs John Matthai, Dr. Poonnen Lukose.

Copies of the Annual Report and other printed matter can be obtained from the National Office which is at 37, Cantonment Road, Lucknow, U.P. The official organ of the Association is the leaflet "Everymember" which is issued each month and sent to members and friends of the Association.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are:—

(1) To facilitate intercommunication and co-operation between women of any nationality who are members of the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the British Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates; but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has had several branches. The address of the Honorary Secretary, Bombay is as follows:—

Mrs. R. T. S. Miller, 19,
Gowalia Tank Road, Bombay 7.

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches have been influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products. This branch, however, has not functioned for a number of years.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organised public meetings for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of **Women's Employment Bureaus** in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

This Association is Federated to the "Federation of University Women in India," and thus forms one of the Units of the Indian Federation.

Federation of University Women in India.

The Federation of University Women in India unites various Associations of University Women throughout the country, its object being to promote friendship and understanding among University Women of all races resident in India and to further their common interests. It is affiliated to the *International Federation of University Women* which has a membership of over 60,000, representing thirty-three nations and which seeks by scholarships, exchange of teachers, group discussions and conferences to unite in common action and understanding the University women of the world.

The Federation in India is controlled by a Central Committee at present located in Bombay. It has branches in Bombay, Kodaikanal and Lahore, while women, eligible for membership, resident in places where no branch exists can be enrolled as "Scattered Members."

PRINCIPAL CLUBS IN INDIA.

ABBOTTABAD CLUB, LTD., Abbottabad, N.-W.F.P. *Entrance Fee:* Rs. 40. *Monthly Subscription:* Single Rs. 13; Married Rs. 18.

ADYAR CLUB, Adyar. *Entrance Fee:* Rs. 100. *Annual Subscription:* Rs. 12. *Monthly Subscription:* Rs. 6 during the months April to September inclusive. Rs. 8 during the months October to March inclusive. *Hon. Secretary and Treasurer:*—R. W. Douglass.

AGRA CLUB, LTD., Agra Cantonment. (Estd. 1863). *Entrance Fee:* Rs. 50. *Subscription:* Monthly Rs. 10.

AHMEDNAGAR CLUB, Ahmednagar. (Estd. 1889). *Entrance Fee:* Rs. 40. *Subscription:* Monthly, single Rs. 12; married Rs. 18. *Secretary:*—Lt.-Col. W. F. Crotty, M.B.E.

AIJAL CLUB, Lushai Hills, E. B. & Assam. (Estd. 1893). *Entrance Fee:* Rs. 32 to be paid at the end of the third month of membership. *Subscription:* Monthly, varying from Rs. 9 to Rs. 19 according to income of members. *Secretary:* Lt.-Col. H. M. Williams.

AJMER CLUB, Kaiser Bagh. (Estd. 1888). *Entrance Fee:* Rs. 100, payable in four half-yearly instalments. *Subscription:* Monthly, single Rs. 12; married Rs. 15.

AKOLA CLUB, Berar. (Estd. 1870). *Entrance Fee:* Rs. 100. *Subscription:* Monthly, single Rs. 13; married Rs. 15. *Honorary Secretary.*—Rai Saheb V. P. Mathur.

TUTICORIN: (Provisional). *President:* Raja Saheb R. J. V. R. M. V. Ettappa Naicker Aiyan, Zamindar of Ettayapuram, Ettayapuram, (Kollpatty Taluk); *Secretary:* J. L. P. Roche-Victoria, Chairman, Municipal Council, "Sukhastan", Tuticorin.

ROTARY INTERNATIONAL.

Office for Middle Asia: Brabourne Stadium, North, Churchgate Street, Bombay.

The Office for Middle Asia of Rotary International provides the services of R. I. Secretariat, at Chicago, to all the district governors in this region and the Rotary clubs and the Rotary organisation in India, Burma, Ceylon, Afghanistan, Straits Settlements, Federated Malay States, Unfederated Malay States, Siam, French Indo-China, Sarawak, Brunei, British North Borneo and the Netherlands East Indies. *Secretary for Middle Asia.*—Herbert W. Bryant.

Church Organisation in India.

ANGLICAN.

Down to March 1st, 1930, the Church of England in India (and Ceylon), though possessing its own bishops and Metropolitan, was in the eyes of the law an integral part of the Church of England, and subject to the general supervision of the Archbishop of Canterbury. By the Indian Church Act and the Indian Church Measure passed by Parliament in 1927 this legal connection was severed, and on March 1st, 1930, for the fixing of which date provision was made by the Indian Church Measure, the Church of England in India and in Ceylon, in future to be known as The Church of India, Burma and Ceylon, and, for short, The Church of India, (or of Burma or of Ceylon, in those countries) became wholly responsible for the management of its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Anglican work in India dates from the first establishment of the East India Company in the 17th Century on the shores of India at Surat, Madras, and Bombay, where the servants of the Company were ministered to by a continuous succession of chaplains. The first chaplain was the Revd. Peter Rogers, Surat, 1612. The first church built was St. George's, Madras, in 1680, followed by Bombay Church, now St. Thomas' Cathedral, in 1716. In South India the work of Danish and German Lutheran missionaries was assisted by the English S.P.C.K. (Society for the Promotion of Christian Knowledge), but missionary work was not attempted by the Church itself till the beginning of the 19th Century.

Like all other branches of the Anglican Communion the Church of India is episcopal. The first bishopric was not, however, founded until 1814 when the See of Calcutta was set up, the first bishop being Thomas Fanshaw Middleton. His jurisdiction at first included not only British India but the British settlements in Australia, the Straits, the Cape and St. Helena's. At the same time India was divided into three Archdeaconries, and two of these, Madras in 1835 and Bombay in 1837, were later erected into bishoprics. The three dioceses thus formed have been repeatedly subdivided, until there are now fifteen, the dates of their creation being as follows: Calcutta 1814; Madras 1835; Bombay 1837; Colombo 1845; Lahore 1877; Rangoon 1877; Travancore 1879; Chota Nagpur 1890; Lucknow 1893; Tinnevelly 1896; Nagpur 1903; Dornakal 1912; Assam 1915; Nasik 1929; Bhagalpur 1943. There are assistant bishops in the dioceses of Lahore, Calcutta and Dornakal.

Rules for the government of the Church are contained in its "Constitution, Canons and Rules" adopted by its General Council in session at Calcutta in 1930. All clergy before receiving a license from their bishop make, in addition to an oath of canonical obedience to their bishop, a declaration accepting the Constitution, Canons and Rules, as well as a declaration concerning the faith and formularies of the Church. Lay members of the General and Diocesan Councils also make declarations of assent and acceptance. The government of the Church is through these councils, the General Council being for the whole ecclesiastical province of India, Burma and Ceylon. Its membership consists of the bishops of the province, and houses of clergy and laity elected by the diocesan councils. The Diocesan Councils consist of the Bishop of the Diocese and all its clergy, together with lay representatives elected by the parishes. To exercise a vote in the election of lay representatives parishioners must be adult communicant members of the Church. It is open to a diocese to add to these qualifications that of having contributed some specified amount to the expenses of the Church. In addition to these councils every parish has a Church committee or council with a recognized constitution and these are in many areas organised into district Church councils, particularly where Indian parishes are numerous. Again in addition to these councils the bishops of the province meet in Synod, with clerical and four lay assessors if a matter of faith or order is being dealt with, and the bishop of a diocese can at any time hold a Synod of his clergy. Determinations on matters of faith and order are made only by the House of Bishops of the General Council and cannot be made subjects of disciplinary action unless adopted in the form of a canon by the whole Council.

The additional title of Metropolitan was given to the Bishop of Calcutta when the Sees of Madras and Bombay were formed. It is an ancient title similar to archbishop and indicates that its holder has jurisdiction over the other bishops of the province. Before consecration a diocesan bishop takes an oath of canonical obedience to the Metropolitan. Under the Constitution of the church bishops are elected by the diocese, subject to confirmation by the bishops of the province. In the Constitution, Canons and Rules, the Constitution consists of Declarations laying down the position of the Church of India as a part of the One, Holy, Catholic and Apostolic Church; the Canons lay down principles of government and organisation; the Rules arrange in detail for the carrying out of the Canons, and are more easily altered or added to than the Canons. The salaries and allowances of the Bishops of Calcutta, Madras and Bombay have from the foundation of those Sees been paid out of the Revenues of Government, as also in part those of the Bishops of Lahore, Rangoon, Lucknow and Nagpur. Down to 1930 these bishops were appointed by the Crown. Since 1930 vacancies are filled by election, and Bishops elected to the Sees of Calcutta, Madras and Bombay, instead of being paid wholly by Government are so paid only in part. For the other seven bishoprics, and for any others, set up, Government is in no way responsible.

The Ecclesiastical establishment of the Government of India is an inheritance from the East India Company. That Company from the first

provided chaplains for its servants. The chaplains of the present establishment are maintained for ministration to the Government's British born servants, civil and military. They are chosen by the Indian Chaplaincies Board sitting in London, are appointed by the Secretary of State, are posted to Dioceses by the Governor-General in consultation with the Metropolitan, and within their Dioceses are posted to stations by the Provincial Governor on the recommendation of the diocesan bishop. Their pay and allowances are wholly met by Government. In spiritual matters they are subject to the supervision and jurisdiction of their bishop, and while Government servants, civil and military are their primary charge, they are the parish priests of the chaplaincies to which they are appointed and are responsible for the care of all members of the church in their parish except in so far as Indian Members of the Church are cared for by missionaries or Indian clergy. Besides providing chaplains the Government of India, again following the practice of the East India Company, has provided or assisted in the provision of churches and their maintenance, and also of cemeteries. Where numbers do not warrant the provision of an Establishment chaplain Government has assisted in the provision of clergy by grants-in-aid, and when from time to time the number of Establishment chaplains has been reduced special grants-in-aid have been granted. The Establishment and all grants-in-aid are subject to revision and are in fact revised from time to time. The latest retrenchment, carried out in 1940, reduced the number of chaplains by twelve, and savings effected, along with those under other heads, amounted to Rs.187,276.

The great influx of British troops caused by the war has necessitated the provision of additional religious ministrations. This need was met by the organisation in 1942 of an Indian Army Chaplains Service. It provides ministrations for Indian Christian as well as British Christian troops.

(The Ecclesiastical establishment includes besides Anglican chaplains, Church of Scotland, Free Church, and Roman Catholic chaplains, for ministrations to members of those communions; and churches and grants-in-aid are provided or given on the same principles as for Anglicans.)

The special interests of those parishioners whose domicile is England in the continued use, should they so desire, of the services of the English Prayer Book, which the Church of India is now free to alter at its discretion, are safeguarded by certain of the canons, and these interests together with other matters concerning the undertakings and relation of the Government of India to its chaplains and the Church are provided for by a set of Statutory Rules drawn up under the Indian Church Act. Members of the Church of England or any of the branches of the Anglican Communion are, while resident in India, full members of the Church of India, and are a most important part of the Indian Church, their numbers still in some places exceeding those of Indian members, and some stations being still exclusively European, although in the Church as a whole the number of Indian members greatly exceeds that of Europeans. European clergy numbered 389 in 1939, and Indian clergy 716. Exact later figures are not available. There are no racial distinctions whatever in the Church. Indian clergy frequently preach or celebrate for European congregations, and in a few instances are in permanent charge of European parishes. The Indian laity though usually preferring services in their own languages are everywhere free to attend English churches, and to be enrolled, if they wish, as parishioners.

The education of European children, and more particularly the children of the Domiciled and Anglo-Indian community, has from early days been a concern of the Church. In addition to day-schools it has established over 70 boarding schools for boys and girls, many of them in hill stations. The provincial Governments assist these schools with grants-in-aid both for building and current expenditure, just as they do all other schools, according to the rules of the education codes. The schools are inspected by Government inspectors. Indian boys and girls are admitted to these schools, but the number that may be taken is limited to a percentage fixed by the local Government. An appeal issued by the Archbishop of Canterbury in 1938 for the endowment of these schools had produced by June, 1939, just under £30,700. The fund is known as The Anglo-Indian Schools Fund and is still open for the receipt of donations. Indianisation of Government services, especially of the railways, customs and post and telegraph departments has severely hit the Domiciled and Anglo-Indian community, and the ability of parents to pay fees is steadily decreasing. Hence the urgent need for increased endowments. The existing endowments of all the schools yield an income of less than £1 per child per annum.

(The Church of India is not the only community responsible for European education in India. The Roman Catholics, the Church of Scotland and the various free churches provide schools for their children, and receive similar assistance from Government.)

The Government of India Act of 1935, section 83, provides for the continuance of government grants to European schools at a total figure in each province not less than the average figure for the ten years preceding 1933, unless the whole grant of a government to education is reduced, when the grant to European education may be reduced in proportion. And, as a result of the recommendations of a sub-committee of the Round Table Conference, provincial boards for Anglo-Indian and European Education have been set up, and also an Inter-Provincial Board, to consider and advise Governments on matters connected with the schools.

Missions.

In Malabar, on the south-west coast of India, there have been Christians certainly from the 6th century, probably from the 4th century and possibly from the 1st century A.D. They are called "Syrian" Christians owing to their connection with the Church in Syria. They do not appear to have attempted to spread the Christian faith in India. The Portuguese may therefore be regarded as the first missionaries in India, and from their arrival at Goa the Franciscans and Dominicans who accompanied their fleets in large numbers threw themselves with great activity into the work of evangelism. The formation of the Society of Jesus led to one of its first members, the famous St. Francis

Xavier, being sent to Goa, where he arrived in 1541. Under his leadership the preaching of Christianity was carried on with great earnestness. The missionary work of the Roman Catholic Church thus begun has been continued, and at the present day the number of Indian members of that Church is given as 2,113,659 (Census 1931), to which may be added 654,939 Syrian Christians attached to the Roman Church. The number of independent Syrian Christians (Census 1931) is given as 525,607.

Protestant missions did not begin till the 18th Century, and as missionaries were not allowed to establish themselves in the Company's territories, they worked from Danish territory and in Indian States. These missionaries were Lutherans, but as stated above, were in the latter part of the 18th Century assisted with funds from England. Famous men among them were Ziegenbalg, Kiernander, Schultze and Christian Friedrick Schwarz. By the end of the 18th Century it is believed that there were in South India about 30,000 Lutheran converts. In 1800 the famous Baptist trio, Carey, Marshman and Ward established themselves at Serampore in Bengal (Carey had come to India in 1793). Men of humble origin and education, one was a cobbler, one a ragged-school teacher, and one a printer, they displayed great ability and enterprise, and threw themselves not only into evangelism but into the scientific study of India, its languages and culture, and its flora and fauna. Books and translations poured from their printing press. Carey was made professor of Sanscrit in Lord Wellesley's College for the training of civil and military officers.

The 19th Century saw a great increase in missionary effort of every sort. This was due to the opening of the Company's territories to missionaries by the Government of India Act of 1813, and it was only after that date that Anglican (Church of England) missionary Societies took up work in India, namely the Church Missionary Society and the Society for the Propagation of the Gospel, by sending as missionaries ordained clergy of the Church of England, those hitherto subsidised or sent by the S.P.C.K. (see above) being Lutherans. The first missionaries to arrive after the passing of the Act were American Congregationalists. The London Missionary Society were also early in the field and Presbyterians from America and Scotland soon followed. In the course of the century India became covered by a network of missions, engaged not only in evangelism, but in educational work in schools and colleges, in medical work and in industries. Among famous names of missionary educationalists are those of Dr. Duff of Calcutta, and Dr. Wilson in Bombay. In the education of women missions may fairly claim to have taken the lead. The total number of missionary societies from Europe and America working in India is now over 150. For consultation and common action there is a National Christian Council with headquarters at Nagpur, first organised in 1914, and in connection with this there are 10 Provincial Christian Councils. Membership of these councils is by election or appointment by local churches and mission councils.

The Directory of the National Christian Council shows that the missions connected with it have 53 Colleges; 315 High Schools and about the same number of middle schools; 103 Teachers training institutions; 217 industrial schools, and very many primary schools; 250 hospitals and about the same number of dispensaries; 68 Leper institutions and 11 Tuberculosis Sanatoria, and 15 homes for the Blind or Deaf; 64 Agricultural Settlements; 31 Co-operative Societies; 40 printing presses; 36 miscellaneous industries. The Census of 1931 gives 3,002,558 as the total number of Protestant Christians in India, making the total number of Christians, including Roman Catholics, Romo-Syrians and Syrians (see above) 6,296,763; included in this total are 167,771 Europeans and 138,758 Anglo-Indians. Reliable figures of a latter date are not available.

Reunion.

Since the Great War there has been widespread interest in India in the subject of the reunion of the separated Christian bodies. In South India the movement for union was started in 1919 by a group of Indian clergy. This has led to the preparation of an elaborate scheme of union the parties to which are Anglicans, Methodists and the already united South Indian United Church which consists of Presbyterians and Congregationalists. Much time and thought have been given to the preparation of the scheme, the problem presented by the task of reconciling Anglican, Presbyterian, Wesleyan and Congregationalist principles being of extreme difficulty.

If the scheme is accepted the four southern dioceses of the Church of India, Madras, Dornakal, Tinnevelly and Travancore will be separated from the rest of the province and form part of the united Church, which is pledged to maintain episcopal government. The present position of the scheme is that it has been accepted by the Church of India, Burma, and Ceylon at a meeting of its General Council in January 1945. It has also been accepted by the Methodists. The decision of the South India United Church will be made in 1946, and whether it decides to join or not the Union may be expected to be inaugurated in 1947.

The existence of a united church in South India consisting of Congregational and Presbyterian elements has been mentioned in the preceding paragraph. In north India there has been in existence for some years the Church of Northern India, consisting of similar elements. Since 1929 a further movement for a wider union in north India has been considered at a series of Round Table Conferences to which the Church of India has sent representatives.

Anglican Missions.

In addition to the two principal missionary societies of the Church of England, the S.P.G. (Society for the Propagation of the Gospel in Foreign Parts) and the C.M.S. (Church Missionary Society) already mentioned, whose missionaries in India, Burma and Ceylon numbered according to the latest available figures:—

	Ordained.	Laymen.	Women.	Total.
S.P.G. ..	79	23	167	269
C.M.S. ..	65	28	127	220+60

married women, there are also certain smaller, but important missions, namely The Oxford Mission to Calcutta working in Calcutta among students and also at Barisal; the Cowley-Wantage-All Saints Mission, working in Poona and Bombay; the Dublin Mission at Hazaribagh, the Cambridge Mission at Delhi, the Cawnpore Brotherhood; the Scottish Episcopal Church Mission at Chanda, C.P.; the Bible

Churchmen's Missionary Society (12 ordained missionaries in the Lucknow and Nagpur and Rangoon dioceses); the Christa Seva Sangha, Poona, 1927 and the Christa Prema Seva Sangha, Poona, 1934; the Canadian Church Mission (4 ordained missionaries in the Lahore Diocese); the Church of England Zenana Missionary Society, in several dioceses; the Sisters of St. Margaret (East Grinstead) in the Colombo diocese; Sisters of St. Denys (Warminster) in the Chota Nagpur Diocese; Sisters of the Holy Family, Naini Tal; the Winchester Brotherhood, Mandalay, and the Sisters of the Church, Maymyo. The first two of these, and several of the others in the list, consist of communities of priests or sisters under religious vows. Members of the brotherhoods mentioned are in most cases not under life vows. The work and influence of these communities is a most important element in the life of the Church of India.

The Church of India has taken its full share in educational, medical and industrial work in India. Among colleges founded and managed by its missionaries St. Stephen's, Delhi, St. John's, Agra, St. Columba's, Hazaribagh, Christ Church, Cawnpore, and Trinity College, Candy; are well-known. A college at Trichinopoly has been amalgamated with the inter-denominational Madras Christian College. For the training of Indian and Anglo-Indian ordination candidates Bishops' College, Calcutta, serves the whole of India. In the various language areas are other colleges for the training of ordinands and lay church-workers through the medium of the local language. Among hospitals made famous by the work of the doctors in charge are those at Quetta (Sir Henry Holland) Bannu (the late Dr. Pennell) and St. Stephen's, Delhi (for women). The C.M.S. High School at Srinagar is distinguished among the many High Schools of the Church for the methods adopted to develop manliness and *esprit de corps* in the boys. Cawnpore in the north and Nazareth in the extreme south are well-known centres of industrial work and training. The Diocesan Press at Madras was built up into a very large and efficient institution by a retired C. M. S. Missionary. At Hubli, in the Bombay Diocese, S. P. G. Missionaries have, since 1919, done extremely good work in charge of an Industrial Settlement (for the reformation and training of members of criminal tribes) committed to their care by Government.

Exact figures of the membership of the Church of India are not obtainable. From figures, available there appear to be about three-quarters of a million (750,000) of which about a lakh and a half (150,000) are European and Anglo-Indian; dioceses, with large numbers of Indian Christians are Dornakal, Tinnevelly, Travancore, Lahore, Madras, Calcutta, Lucknow, and Chotta-Nagpur. The number of clergy, European and Indian, has been given in an earlier paragraph.

Bengal Ecclesiastical Department.

Hubback, Most Rev. George Clay, B.Sc., D.D. .. Lord Bishop of Calcutta and Metropolitan of India.

SENIOR CHAPLAINS.

Tucker, Ven'ble G. E., B.Sc.	Archdeacon of Calcutta and Senior Chaplain of St. John's Church, Calcutta.
Boulton, Rev. Canon Walter, B.A.	On leave ex-India.

THE ROMAN CATHOLIC CHURCH.

The Catholic community is composed of the following elements:—

(1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syriac rite.

(2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.

(3) European immigrants at all times, including British troops.

(4) Modern converts from Hinduism and Animism in recent mission centres.

(5) Recent converts from the Jacobite community in Malabar, of which 3 Bishops, 71 priests and some 28,000 laity have been received into the Catholic Church.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended by the Agreement of 1928, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy which after subsequent adjustments now stands as follows:—

Under the Sacred Congregation of **Extraordinary Ecclesiastical Affairs**:—

The archbishopric of Goa and Damau (having some extension into British territory) with suffragan bishoprics at Cochi and Mylapore (both in British territory).

Under the Sacred Congregation of **Oriental Churches**:—

The archbishopric of Ernakulam, with suffragan bishoprics of **Changanacherry, Kottayam and Trichur.**

The archbishopric of Trivandrum, with suffragan bishopric of **Tiruvella.**

Under the Sacred Congregation of **Propaganda Fide**:—

The archbishopric of Agra, with suffragan bishoprics of Allahabad, Ajmer and Lucknow and the Prefectures Apostolic of Indore and Jhansi.

The archbishopric of Bombay; with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly, Tuticorin, Madura and Missions of Karachi and Ahmedabad.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur, Patna and Shillong and the Prefecture Apostolic of Sikkim.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam, Nagpur, Bezwada, Cuttack and Guntur, the Prefecture Apostolic of Jubbulpore, and the Mission of Bellary.

The archbishopric of Pondicherry (French) with suffragan bishoprics of Mysore, Coimbatore, Kumbakonam, Salem, Malacca and Bangalore.

The archbishopric of Delhi and Simla, with suffragan bishoprics of Lahore and Multan, the Prefecture Apostolic of Kashmir.

The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar, Trivandrum and Vijayapuram.

The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy; Galle, Jaffna, Trincomalee and Chilaw.

Three Vicariates Apostolic and three Prefectures Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number over 2,000 besides which there is a body of secular clergy mostly Indian, etc., numbering about 2,800, and over 11,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education in 1936 exceeded half a million. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Gujerat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of *the Society for the Propagation of the Faith* and of *the Holy Childhood* helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkels, D.D., appointed in 1931.

THE CHURCH OF SCOTLAND.

The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated; Calcutta, 1914; Bombay, 1919; Madras, 1921. There are 15 chaplains on the staff. Some of these are attached to the Scottish battalions in India, while the others minister to the civil population of the towns where they are stationed and to those living in the smaller outstations in their respective areas. In addition to the regular establishment, there are a number of ministers throughout India who are maintained by the various communities to whom they minister and by the Additional Clergy Societies in India; Missionaries of the Church also maintain regular services in English in many centres. There are three Presidency Senior Chaplains in charge of this branch of the Church work in Bengal, Bombay and Madras respectively.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium of instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. In the Punjab Evangelistic work is being carried on from eight centres, and the baptised Christian community now numbers over 30,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 15,000. In the eight mission district of Calcutta, the Eastern Himalayas, Madras, Santalia, Rajputana, Nagpur, Western India, and the Punjab there were at the end of 1938 over 70,000 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much for education in India. The Church in Bombay has six representatives on the Governing body of the Anglo-Scottish Education Society, and exercises pastoral supervision over the Bombay Scottish Orphanage. The now well-known St. Andrew's Colonial Homes at Kalimpong, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now over twenty cottages, and about 700 children in residence. The Church has many schools in all parts of its field, and it has also made a large contribution to the work of higher education in India through five Christian Colleges. The Scottish Church College, Calcutta, is well-known. The Madras Christian College, which has been rebuilt on a magnificent

site at Tambaram and which has recently been the meeting place of the world Missionary Conference, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay, Hislop College, Nagpur, and Murray College, Sialkot. The Church also carries on important medical work. There are nineteen Mission Hospitals at different centres, among which are four excellently equipped and staffed Women's Hospitals in Madras, Nagpur, Ajmer and Poona. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons: "The Church of Scotland, Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar, Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 190 missionaries and 1,067 Indian and Singhalese workers. Connected with the Society are 493 Indian and Singhalese Churches, 313 Primary Day Schools, 28 Middle and High Schools, and 3 Theological Training College. The Church membership at the close of 1942 stood at 29,670 and the Christian community at 77,831. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack, Patna and Delhi where there are hostels for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College with its Royal Charter granted by His Danish Majesty in 1827, and confirmed by the British Government in the Treaty of Purchase of the Settlement of Serampore in 1845, was placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary educational operations, in Arts and Theology. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

In Arts and Science the College prepares for the Calcutta Examinations.

There is a vernacular institute also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 7 Hospitals. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretary of the Mission is the Rev. D. Scott Wells, 44, Lower Circular Road, Calcutta.

The Headquarters of the Mission are at 19, Furnival Street, Holborn, London. The total expenditure of the Society for 1942 amounted to £210,490 of which £94,480 was expended in India and Ceylon.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Telugu and Oriya Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 20 stations and 535 outstations with a staff of 70 missionaries including 6 qualified physicians, and 1,250 Indian workers, with Gospel preaching in 1,659 villages. Organised Churches number 138, communicants 34,000 and adherents 40,000 for the past year. 32 Churches are entirely self-supporting. In the Educational department are 415 village day schools, with 19,000 children, 12 boarding schools, 2 High schools, 2 Normal Training schools, a Bible Training School for Women, a Theological Seminary providing in all for 5,850 pupils. There are 6 Hospitals, two leper-asylums and an Orphanage. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. Indian Secretary: The Rev. O. E. Daniel, Ph.D., Chicacole, Vizag. Dt.

THE AMERICAN BAPTIST ASSAM MISSION.—Was opened in 1836, and has 11 main stations staffed by about 30 missionaries. There are about 850 native workers, 1,200 organized churches, about 89,000 baptized members, 400 schools of all grades including 2 High, 1 Normal Training, 2 Bible and 9 station schools. There are 3 hospitals and 4 dispensaries which treated about 4,465 in-patients and about 16,200 out-patients during the year. Mission work is carried in 16 languages.

Treasurer and Cor. Sec.- Miss Marion Burnham, Gauhati.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION AND INDUSTRIAL CENTRES.—Commenced in 1836. Area of occupation: Midnapore district of Bengal, Balasore district of Orissa and Jamshedpur Town of Bihar. Work chiefly for Oriya and Santal peoples. *Address:* Kharagpur. Edwin C. Brush, Secretary, Kharagpur.

THE AUSTRALIAN BAPTIST FOREIGN MISSION.—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 15 Australian workers. There are 4,299 communicants and a Christian community of 7,529.

Secretary, Field Council: The Rev. W. G. Crofts, Mission House, Birisiri, P. O. Hatshibganj, Dist. Mymensingh, E. Bengal.

THE STRICT BAPTIST MISSION.—Has 20 European Missionaries, and 227 Indian workers in Madras, Chingleput, Salem, Ramnad and Tinnevelly Districts. Communicants number 1,781; organised churches 62; Day and Sunday schools 92, with 3,887 pupils.

Treasurer and Secretary: Rev. D. A. Thrower, Kilpauk, Madras.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION:—Operates in Gujarat and Kathiawar with a staff of 29 Missionaries, of whom 8 are clerical, 14 Educationalists, 5 are Doctors and 2 Nurses. The Indian staff numbers 500, of whom 19 are Pastors, 108 Evangelists, 2 Colporteurs, 40 Bible-women, and 331 are Teachers. There are 23 Organised Churches, a communicant roll of 3,565, and a Christian Community of 9,967. In Medical work there are 5 Hospitals including one at Dohad and several Dispensaries, with 4,199 in-patients, 25,353 new cases, and a total attendance of 108,851. The Mission conducts 3 High Schools, 1 Anglo-Vernacular School, 1 Preparatory School at Parantij and 100 Vernacular schools affording tuition for 8,000 pupils; also 1 creche, 4 Orphanages, an Industrial School at Borsad, a Teachers' Training College for Women at Borsad co-operates in a United Divinity College at Baroda, and has a Mission Press at Surat. The Mission has made a speciality of Farm Colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 4 Missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts, with Farm Colonies attached.

Secretary: J. C. Watson, B.Ag., Anand, Kaira Dist.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The Sialkot Mission of this Church was established at Sialkot in the Punjab, in 1855. It is now carrying on work in eight civil districts in the Punjab and two in the North-West Frontier Province. Its missionaries number 81. Its educational work comprises one Theological Seminary, one College, four High Schools, one Industrial school, 8 Middle schools and 64 Primary schools. The enrolment in all schools in 1914 was 15,367. Medical work is carried on through five Hospitals and 7 Dispensaries. The Communicant membership of the Church which has been established is 45,178 and the total Christian community 105,044.

General Secretary: W. H. Merriam, M.A., American Mission, Gujaranwala.

THE AMERICAN PRESBYTERIAN MISSION operates in three main sections, known as the Punjab (1834), North India (1836) and Western India (1870) Missions. According to statistics for the year ending March 31, 1913, the American staff, including women and special-term Missionaries numbers 214, and the Indian staff about 987. There are two and thirty main stations and 197 out-stations. Organised churches number 125 of which 38 are entirely self-supporting. There are 22,797 communicants and a total baptized community of about 70,000.

Educational work as follows:—Two men's colleges and an interest in the Isabella Thoburn and Kinnaird Colleges for Women,—students about 2,700; one Theological College, students 16 and an interest in Poona Theological College; two Training Schools for Village Workers; thirteen High Schools; two Industrial Schools; three Agricultural Demonstration Farms; four Teachers' Training Departments; The Miraj Medical School and an interest in the Ludhiana Medical College for Women; 107 Elementary Schools; 139 Schools of all grades,—pupils about 13,000.

Medical Work:—Eight Hospitals; twenty-one Dispensaries and four Specialty Hospitals.

Evangelistic Work:—258 Sunday Schools, with an average attendance of 6,414 pupils. Contributions for church and evangelistic work, on the part of the Indian church, have decreased slightly, and amount to about Rs. 45,000.

The Hospital at Miraj, founded by the late Sir William J. Wanless and under the care of R. H. H. Goheen, is well-known throughout the whole of South-West India, and the Forman Christian College of Lahore, under the principalship of the Rev. C. H. Rice, Ph.D., LL.D., is equally well-known and valued in the Punjab. The Ewing Christian College, B. B. Malvea, Ph. D. (Principal) and Allahabad Agricultural Institute (Dr. S. Higginbottom, Principal) have grown rapidly in numbers and influence.

Secretary of Council of A. P. Missions in India.—The Rev. J. B. Weir, Ph.D., D.D., "Lowriston," Dehra Dun, U.P.

Secretary, North India Mission.—The Rev. W. L. Allison, A. P. Mission, Mainpuri, U. P.

Secretary, Punjab Mission.—The Rev. B. T. Schuyler, 3, Empress Road, Lahore, Pb.

Secretary, Western India Mission:—The Rev. D. B. Updegratt, D.D., A. P. Mission, Nipani, Belgaum Dist.

THE NEW ZEALAND PRESBYTERIAN MISSION—Commenced as recently as 1910 at Jagadhri, Punjab. It also works in Kharar and Saharanpur.

Secretary: Miss V. J. Sutherland, Kharar, Dist. Ambala.

THE UNITED CHURCH OF CANADA MISSION.—Commenced in 1877, has 13 main stations in Indore, Gwalior, Ratlam, Dhar, Sitamau, Bhopal and Banswara States. The Mission staff numbers 73, Indian workers 200. This Mission works in conjunction with the Malwa Church-Council and also the Ratlam Church Council of the United Church of Northern India, which reports for this part of its territory. Organised churches 50; Unorganised churches 8; Communicants 4,303; Baptised non-communicants 21,599; Unbaptised adherents 4,026; Total Christian Community 29,928.

Educational work comprises Elementary and Middle Schools for boys and girls; a High School for girls, an Arts College for students of both sexes (The Indore Christian College), a Normal School for girls, and the Union Theological Seminary. Women's industrial work is carried on in Mhow and Ratlam, and Vocational Training for boys is a feature of the Rasalpura Vocational High School, where training is provided in printing, tailoring, carpentry and welding.

The medical work is large. There are three General Hospitals, where both men and women are treated, and five Women's Hospitals, and also a number of dispensaries in central and out-stations.

General Secretary and Treasurer of the Mission:—The Rev. F.J. Anderson, Dhar, C.I.

Associate Secretary of Mission:—Miss F. E. Clearihue, Kharua, C. I. (*Via* Mehidpur Road Station).

Secretary of Malwa Church-Council:—Rev. Jacob Masih, Indore, C.I.

Secretary of Ratlam Church Council:—Rev. Kenneth B. V. Yohan Masih, B.A., Neemuch, C.I.

THE CANADIAN PRESBYTERIAN MISSION operates in two sections, the Northern Section with headquarters at Jhansi in the U.P., and the Central India Section, known as the Bhil Field.

In Central India the Mission comprises within its area the States of Alirajpur, Barwani, Jobat and Kathiawar also parts of the States of Jhabua, Chhota Udaipur (in the Bombay Presidency) and Dhar, Indore and Gwalior bordering on the Jobat-Barwani Road. The five central stations are Amkhut, Mendha and Alirajpur located in Alirajpur State, Jobat in the State of Jobat and Barwani in Barwani State. The staff consists of 16 missionaries and 50 Indian workers. There are several elementary schools in the area and a central Anglo-Vernacular School at Amkhut in which upwards of 300 children are being educated. At Amkhut also there is a Children's Nursery Home. At Jobat there is a General 60 bed Hospital with a Canadian Medical man, Dr. W. R. Quinn in charge.

There are in the district 7 organized and 2 unorganized congregations with a Communicant membership of 430 and a baptized community of slightly over 1,500.

Secretary:—Rev. A. E. Toombs, Barwani (*Via* Mhow), Central India.

The Jhansi Section formerly known as the Gwalior Mission was founded by the late Dr. J. Wilkie in 1905. There is now a staff of 9 missionaries and twenty-five Indian workers who are engaged in Jhansi city, Esagarh, Baragaon, Babina and the surrounding villages.

Activities include Anglo-vernacular middle schools for girls and hostels for Christian pupils in each. There are also an orphanage for children under school age, a dispensary. There is an agricultural settlement at Esagarh where the Mission has a farm of 1,200 acres.

There are two organised churches having a communicant membership of 150.

Secretary.—Mrs. Muckan.

THE WELSH CALVINISTIC METHODIST (PRESBYTERIAN) MISSION established in 1840 with a staff of 54 Missionaries and 1,200 Indian workers, occupies stations in Assam in the Khasi and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khasi language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has also been produced in the Lushai language. Communicants number 57,622; the total Christian community 144,646; organised Churches 880. Elementary schools number 610. Scholars 20,366; in addition to Industrial Schools and Training Institutions, 3 Theological Seminaries, Sunday Schools 1,033, three Hospitals and several Dispensaries provide annually for more than 20,000 patients.

Secretary: Rev. G. Angell Jones, P.O. Jowai, Shillong, Assam.

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS.—In 1945 it included 31 missionaries and 363 Indian workers operating in 11 stations and 163 outstations. There were 59 churches with 6,368 communicants. Besides conducting 6 secondary and training schools with 1,302 pupils, the Mission has a large share in various union educational enterprises. There are 44 primary schools and 10 kindergartens with a total of 3,162 pupils. Its 5 hospitals and dispensaries treated a total of 60,181 patients. The Mission has a total of 10 major social service centres with 29 full time and 16 part time workers. During 1944 these served a total 400,327 persons. *Secretary*, Rev. W. Q. Swart, Rahuri, Ahmednagar District.

MADURA CHURCH COUNCIL.—Of the South India United Church. This body administers all affairs connected with the Church and with elementary education in the villages. It has five first grade boarding schools. The Secretary is Rev. Paulraj Thomas, B.A., B.D., Tirumangalam, Madura Dist.

Chairman.—Rev. A. A. Martin, M.A., B.D., "College House," Tallakulam, Madura.
Executive Secretary—Rev. Paulraj Thomas, B.A., B.D., Tirumangalam, Madura Dist.
Treasurer.—G. Chinniah, 211, S. Marret St., Madura.

MADURA MISSION SANGAM.—This Sangam now carries on all the work formerly administered by the Madura Mission, except the American College. The institutions under the Sangam are :—

The Pasumalai High and Training School for Boys; The Capron Hall Training School for Girls; The O. O. P. Memorial High School for Girls, Sokkikulam, Madura; The Union Theological Seminary, Pasumalai; The Lucy Perry Noble Institute for Women, Rachanyapuram, Madura; The Willis F. Pierce Memorial Hospital for Men and the Hospital for Women and Children; The Trade School, Pasumalai.

The Sangam also nominates a person to be honorary superintendent of the Dayapuram Leper Hospital at Manamadura.

Chairman—A. Ranjitham, M.A., L.T., Madura.
Secretary—E. W. Wilder, M.D., Madura.
Treasurer—G. Chinniah, 211, S. Marret St., Madura.

THE AMERICAN COLLEGE, MADURA.—The American College, then located at Pasumalai, was affiliated with the University of Madras as a second Grade College in 1881. In 1904 the College Department was removed to Madura where for five years it was accommodated in

what is now the Union Christian High School building. In 1909 the College was removed to its present site in Tallakulam on the north side of the Vaigai river. It was affiliated as a First Grade College in 1913.

In 1934 at the time of the centenary of the Mission, the American College became organically independent under its own Governing Council. In the same year it was granted affiliation as an Honours College.

The present College site comprises about forty acres. On the College grounds are located the Main College Hall, the Ellen S. James' Hall of Science, Binghamton Hall, the Chapel, Daniel Poor Memorial Library, Main Hostel, Zumbro Memorial Hostel, Hostel Dining Halls, Women's Day Building, Principal's residence, three Wardens Lodges, four additional bungalows, and athletic fields.

AMERICAN MADURA MISSION, *Secretary.*—L. L. Lorbeer, Pasumalai. *Medical Officer*—Willis F. Pierce Memorial Hospital, East Gate, Madura, Dr. E. W. Wilder. *Manager*—Orlinda Childs' Pierce High School for Girls, Miss K. Wilcox. *Manager*—Capron Hall Training School for Girls, Miss D. Abraham, B.A., L.T. *Manager*—High, Training and Trade Schools, Pasumalai, L. L. Lorbeer. *Manager*, L. P. N. I. Madura, Miss G. E. Chandler. *Medical Officer*, A. M. Hospital for Women and Children, East Gate, Madura, Dr. H. S. Thomas. *Principal*, Union Theological Seminary, Pasumalai, Rev. G. P. James. *Principal*, American College, Madura. A. Ranjitham.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA.—The mission staff in Khandesh is represented by 28 missionaries and 80 Indian workers. There are 869 Church members and 1,635 pupils in Sunday Schools. 37 Elementary Schools provide for 1,183 pupils.

Secretary.—Miss Olga E. Noreen, Yaval, East Khandesh.

THE SWEDISH ALLIANCE MISSION.—Working among Bhils, Hindus and Mahommedans in West Khandesh, has 20 missionaries and 83 Indian workers. There are 8 congregations with a total membership of 1,457 of whom 744 are communicants. There are 10 Elementary Schools, 2 Training Schools and 4 School Homes. The pupils in all schools number 623.

Secretary: Miss E. V. Anderson, Shirpur West Khandesh.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1798 and occupies 3 centres in N. India, 12 in S. India and 7 in Travancore State. The Mission engages in every form of Missionary activity.

UNION INSTITUTIONS.—With which the London Missionary Society is connected, and is a contributing Body. Number of Institutions 13; Schools, 6; Scholars, 2,084; Colleges, 8; Students, 1,284.

The main centres of the Mission in N. India are at Calcutta and Murshidabad District, Bengal; L.M.S. work in the United Provinces has been closed but a Union Mission of the W. M. S., C. M. S. and L. M. S. has been opened in Benares City, of which the Rev. J. S. Moon of the W.M.S. is Superintendent. This Mission concentrates especially on work amongst pilgrims and students. Special efforts are made amongst the Nama Sudras. The S. India district and Travancore are divided into Kanarese, Telugu, Tamil and Malayalam fields with 22 stations and 1,095 out-stations. At Nagercoil (Travancore) is the Scott Christian College and High School with 974 students, a Church and congregation said to be the largest in India and a Printing Press, the centre of the S. Travancore Tract Society.

India—Secretary and Treasurer—Rev. L. J. Thomas, 18, Lavelle Road, Bangalore.

Bengal Secretary:—Miss Olive Stellwell, 3, Ashutosh Mukerji Road, P.O. Elgin Road, Calcutta.

Benares Superintendent.—Rev. J. S. Moon, Ramkatora, Benares Cantonment, U.P.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE.—Dates from the year 1892 under the name of the International Missionary Alliance, but a number of its missionaries were at work in the province of Berar much earlier. Work is carried on in the provinces of Berar, Khandesh and Gujarat. There is a staff of 44 missionaries and 137 Indian workers. The number of mission stations is 16, with additional out-stations. There is a Christian community of 3,294 adults. There are 4 boarding schools, two for boys and two for girls, 3 training schools for Indian workers There are 26 organised congregations, including one English at Bhusawal.

Executive Secretary.—The Rev. K. D. Garrison, Akola, Berar, C.P.

THE CHURCH OF THE BRETHREN (AMERICAN)—Opened work in 1894, and operates in Broach, Surat and Thana Districts, also in Baroda and Rajpipla States. Its staff number 37 foreign workers, including missionaries' wives, and 216 Indian workers. The baptized (immersed) membership stands at 7,600. Education is carried on in 2 Boys' Boarding Schools, 2 Girls' Boarding Schools, and in 3 Co-educational Boardings with separate hostel quarters. Females under instruction number 877, males 3,107, total 4,084. There are 106 Sunday Schools with a total enrolment of 5,244 (teachers included). There were 58,049 calls at Mission dispensaries in 1944. The foreign medical staff consists of 4 doctors and three nurses. Industrial work is carried on in 5 of the Boarding Schools. A vocational school, including teachers' training, village trades and agriculture for boys and a school of

practical arts for girls are conducted at Ankleswar. Evangelistic, Temperance and Publication work receive due emphasis.

Secretary:—L. A. Blickenstaff, 240, Hornby Road, Bombay.

THE POONA AND INDIAN VILLAGE MISSION.—Founded in 1893, Mission Stations:—Poona City, Khed-Shivapur, Poona District; Nasrapur and Bhor (Bhor State), Poona District; Lonand, M. S. M. Ry., Satara District; Phaltan (Paltan State), Satara District; Pandharpur, Sholapur District; Nateputa, Sholapur District; Akluz, Sholapur District; Chiplun, Khed, Ratnagiri; Sangola and Nandeshwar, Sholapur District.

The Staff consists of 32 Europeans and 60 Indian workers, including hospital staff, with a community of about 600 Indian Christians and their families. The main work is evangelising in the villages, women's zenana work, and primary education and a baby boy's orphanage. Medical work is conducted at most stations, with a hospital at Pandharpur. There is also a Bible School, Mission Headquarters, Nasrapore, Poona Dist.

Secretary:—Rev. S. D. Davidson.

THE AMERICAN CHURCHES OF GOD MISSION—Has three missionaries at Bogra, two at Khanjanpur, Bogra District, Bengal and two at Ulubaria, Howrah District, Bengal.

President:—Rev. H. W. Cover, M.A., Bogra, B. A. Railway.

Secretary:—Miss Eunice Catlin, *Mission House*—Ulubaria, Howrah Dist.

THE CHURCH OF THE NAZARENE MISSION.—Has its headquarters for India at Chikhli, Berar, where it has a Girls' Boarding School with primary and secondary departments. In Buldana, 14 miles from Chikhli, there is a Boys' Boarding School with secondary training. At Basim, Berar, 70 miles from Chikhli there is a Day School, a Bible Training School and the Reynolds Memorial Hospital—a hospital for women and children. There are also other Day schools in the District. At present there are but eight missionaries in India. Numbers of others are expected within the year. There is an organized Indian District Assembly with about 22 churches. The Indian Staff of preachers and teachers number 55.

Mission Chairman: Rev. P. L. Beals, Chikhli, Berar, C.P.

THE HEPHZIBAH FAITH MISSIONARY ASSOCIATION.—At present there are no foreign Missionaries and the native workers are in charge of the work. Rev. S. N. Hembrom is the Chairman.

THE INDIAN MISSIONARY SOCIETY, TINNEVELEY (DORNAKAL AND THE HILL TRIBE MISSION)—Opened in 1903, operates in the Warangal District of the Nizam's Dominions as well as among the hill tribes called Paliars in the British and Travancore Hills. It is the missionary effort of the Christians living in India and overseas. There are now nearly 14,500 Telugu Christians in 180 villages and 550 Paliyar Christians in the hills. Annakkari in Travancore has become a well established colony of the hill tribes. The nomads have began to do agricultural work. The Society publishes monthly *The Missionary Intelligencer* containing information about the Society's work in both the fields. Headquarters: Palamcottah.

Secretary—Rev. D. D. Rajamani, Palamcottah.

THE MISSION TO LEPERS—Founded in 1874. An interdenominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children, working in 20 countries but largely in India, Burma, China and countries in Africa. Its work in India is carried on through co-operation with 30 Missionary Societies. In India and Burma alone the Mission now has 32 Asylums of its own with upwards of 7,200 inmates and is aiding or has some connection with work for lepers at 22 other places in India. Altogether in India and Burma over nearly 10,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 900 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases, both adults and children, are now benefiting.

Most of the Mission's income is derived from voluntary contributions. Some funds are raised in India and Burma but the bulk of the money expended by the Mission in India and Burma is received from Britain, although the provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers of which Mrs. R. G. Casey, The Hon'ble Lady Hope, Lady Lewis and Lady Twynam are Vice-Presidents.

Hon. Treasurer:—William McIntyre, c/o Macneill & Co., 2, Fairlie Place, Calcutta.

Hon. Treasurer, Bombay:—R. C. Lowndes, c/o Messrs. Killick, Nixon & Co., Bombay.

The General Secretary of the Mission is A. Donald Miller, 7, Bloomsbury Square, London, W.C. 1. The Secretary for India is Rev. Wilfrid H. Russell, B.A., Fyzabad, U.P.

THE REGIONS BEYOND MISSIONARY UNION,—An interdenominational Society which commenced work at Motihari, Bihar, in 1900, and now occupies 7 stations and 6 out-stations in the Champaran and Saran Districts, with a staff of 30 European and 8 Indian Missionaries and 25 other Indian workers. The Mission maintains 2 Hospitals, 1 Girls' Orphanage, 1 Women's Home, 1 Boys' Orphanage and Boarding School with a Carpentry industrial department, and 1 M. E. School with 150 pupils. Communicants number 200.

Secretary:—Rev. S. W. Law, Motihari, Champaran District, Bihar.

THE NATIONAL MISSIONARY SOCIETY OF INDIA.—Established 1905, started, financed and managed by Indian Christians; has a staff of 36 missionaries and 166 helpers and voluntary workers; operates in Montgomery District (the Punjab), Firozabad (U.P.); Haluaghat, Mymensingh District (Bengal), Murwahi (C.P.), N. Kanara, Mirajgaon and Poona (W. India), Parkal Taluk

(Nizam's Doms.), Tirupattur Taluk (N. Arcot) and Kottayam in Travancore and Dasarpuram. Direct evangelistic work from 50 centres in 10 language areas; Interdenominational; 35 Higher Elementary, Primary and night Schools, with 2 Hostels for boys and 1 for girls, 1 High School, 1 Printing Press, 7 dispensaries, 1 Hospital, and one Child Welfare Centre. Annual expenditure Rs. 74,153 including self-supporting institutions The *National Missionary Intelligencer* (a monthly Journal in English sold at Re. 1 per year, post free), *Deepikai* (a monthly journal in Tamil at 8 annas per year. Post free).

Address:—N. M. S. House, Royapettah, Madras.

President:—The Rt. Rev. S. K. Mondol.
General Secretary:—S. J Duraisamy, Madras.

THE SEVENTH-DAY ADVENTIST MISSION.—The Seventh-day Adventists commenced mission work in India in 1893, and now employ a staff of 553 workers, European and Indian, including 132 ordained and licensed ministers. Evangelistic and educational work is conducted in sixteen vernaculars, beside work for English-speaking peoples in the large cities. For administrative purposes, there are five branch organisations located as follows:—

Seventh-day Adventist Mission—Western India. (Pastor F. E. Spleas. Superintendent.) *Office Address*: Salisbury Park, Poona.

Seventh-day Adventist Mission—Burma. (Pastor E. M. Meleen, Superintendent.) *Office Address*: 68, U Wisara Road, Rangoon, Burma. Office Address during Japanese occupation: Salisbury Park, Poona.

Seventh-day Adventist Mission—North east India. (Pastor H. G. Woodward, Superintendent.) *Office Address*: "Baragain", Ranchi.

Seventh-day Adventist Mission—North-west India. (Pastor O. O. Mattison, Superintendent.) *Office Address*: 23, Curzon Road, New Delhi.

Seventh-day Adventist Mission—South India. (E. M. Meleen, Superintendent). *Office Address*: 9, Cunningham Road, Bangalore.

The general headquarters for India, Burma and Ceylon is located at Salisbury Park, Poona. A. L. Ham, President; A. F. Tarr, Secretary and Treasurer. (Office Address: Post Box 15, Poona). On the same estate is an up-to-date publishing house devoted to the printing of health, temperance, evangelical and associated literature. (Address: Oriental Watchman Publishing House, Post Box 35, Poona).

A large number of day and boarding vernacular and Anglo-vernacular schools are conducted in different parts of the country; and at Vincent Hill School, Mussoorie, European education is provided, a regular high school course, with more advanced work for commercial and other special students, being available. In all the denominational boarding schools increasing emphasis is being laid on vocational work, the students being required to share in the domestic work of the institution, and in many cases, to engage in some trades or other work.

Five physicians, and a number of qualified nurses are employed, regular medical work being conducted at thirty-two stations.

The baptized membership (adult) is 8,013 organized into 172 churches; and in addition a substantial community of enquirers is receiving systematic instruction. 444 Sabbath Schools are conducted with an enrolled membership of about 13,921.

The Bombay address is No. 15, Club Back Road, Byculla.

THE AMERICAN MENNONITE MISSION.—Established 1899, works in the C. Provinces & Bihar. Mission staff numbers 30, Indian workers 140, Church members 1,446, (children (unbaptized) 930, Industrial Training institutions 1, Academy including High School, Normal School and Bible School—Anglo-Hindi Middle Schools 2, Elementary Schools 12, Hostels 3, Women's Home 1, Hospital 2, Dispensaries 8, Leper Home 1, Home for untainted children of Lepers 2, Farm Village projects, 2.

Secretary:—Rev. A. C. Brunk, P. O. Shantipur, Via Dhamtari, C.P.

THE KURKU AND CENTRAL INDIA HILL MISSION.—Established 1890 in the C.P. and Berar, has a mission staff of 6 workers; Indian workers 14; Churches 6; Communicants 500; Christian Community 1640; 1 Elementary School.

Chairman-Secretary:—Rev. A. R. Fromman, Ellichpur, Berar, C.P.

THE CEYLON AND INDIA GENERAL MISSION.—Established 1892, occupies stations in Mysore State, in the Coimbatore and Anantapur Districts, also in the United Provinces. Mission staff 34; Indian workers 64; Churches 44; Communicants 1,284; Christian community 3,243; Orphanages 4; Schools 4; Pupils 376.

Headquarters.—"Mizpah," Richards Town, Bangalore.

THE BOYS' CHRISTIAN HOME MISSION.—The Boys' Christian Home Mission, better known as the B. C. H. Mission, was founded by Albert Norton in 1899, when a severe famine swept the land. The Headquarters of the Mission is Dhond, Poona District.

The main function of the Mission is the care of orphans and at present it is looking after 150 orphans or needy children.

It also runs a day school which has an attendance of nearly 280 children. A little agricultural work is also being carried on. The Mission has a work centre at Orai, U.P., where a school for girls is conducted, with an attendance of about 100.

There are 6 missionaries in the Mission at present and nearly 50 Indian workers. The Mission is evangelical and does evangelistic work in many villages around the main stations. Its object is to help the Indian people in any way it can, especially poor Indian Christians.

Director.—Rev. John E. Norton.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an interdenominational society, with headquarters, 33, Surrey Street, London, working among women and girls in 5 stations in the Bombay Presidency, 6 in United Provinces,

and 4 in the Punjab. There are about 45 European Missionary ladies on the staff with Assistant Missionaries, Indian teachers, nurses and Bible women. There are three hospitals supported by the Society—Nasik, Lucknow and Patna. There are High Schools in Bombay Lahore and Panchgani and a number of City schools of which those at Benares are the largest. At Lahore there is a University Department. The Evangelistic side of the work is largely done by house to house visiting.

Hon. Treasurer: Rev. Roland A. Smith, M.A.
President:—The Lady Kinnaird.
Secretary:—Miss N. Lamport.

WOMEN'S CHRISTIAN MEDICAL COLLEGE, LUDHIANA with which is incorporated THE PUNJAB MEDICAL SCHOOL FOR WOMEN. In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influence to Indian women. Doctor Edith Brown, D.B.E., M.A., M.D., M.C.O.G., etc., was its Founder and Principal until October 1942 when she became Principal Emeritus, and Dr. A. M. S. Pollock, F.R.C.S.E., was appointed Principal. The School is Inter-denominational, and trains students for various Missionary Societies.

The Memorial Hospital in connection with the College has 270 beds and 61 cots.

1944 is the year of the College Jubilee and in these 50 years 476 medical students qualified as Doctors, 186 as Dispensers, over 300 Nurses and over 1,500 Midwives and Nurse Dais. Nurses and Dispensers also do midwifery and are included in this last figure.

There are at present 107 students, 5 dispensers, 52 Nurses, 1 Mothercraft Pupil, 18 Midwives and 52 Nurse Dais making a total of 235 women in training, besides 20 Indigenous Dais receiving instruction at the Health Centres run in connection with the Hospital. There are 3 City Centres.

During the year 1943 there were 5,229 In-Patients, and 54,525 Out-Patients.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1896. Its work is religious, social and educational. The Settlement supplies a hostel for University students of all nationalities. Classes for educated girls are provided and teaching is also given in pupils' homes. The Settlement staff take part in many of the organised activities for women's work in the city. The Social Training Centre for women is now an integral part of the work of the Settlement. The course, lasting a year, includes both theoretical and practical work.

Warden:—O. M. Kaae, B.Sc. (London), Reynolds Road, Byculla, Bombay.

Warden:—R. Navalkar, B. A., University Settlement, Sardar Modliar Road, Poona.

THE RAMABAI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in 1925), the well-known work of the late Pandita Ramabai shelters about 700 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kedgaon, Poona District.

Secretary and Treasurer.—Miss J. I. Craddock.

Inter-denominational Missions.

"THE CENTRAL ASIAN MISSION." Founded 1902. Head Office, 47, Victoria Street, London, S. W. 1; Field Secretary, Bandipur, Kashmir. Stations at Mardan, Bandipur, Shigar, Khapalu, Kargil and Zangskar. Protestant, Evangelical, inter-denominational. 17 European workers.

THE FRIENDS' SERVICE COUNCIL.—The Friends' Service Council works in five stations of the Hoshangabad District besides two organized congregations in Central India.

The Church, which is composed of 6 Monthly Meetings united in the Mid-India Yearly Meeting, is largely organised on the lines of the Society of Friends in England. There are 330 full members and 1,562 adherents.

There are 15 missionaries, 12 on the field and 3 on furlough, also 1 retired missionary living in the district.

The principal activities are a general hospital with dispensary and nurses' training department, a Primary School and an Anglo-Vernacular Middle school at Itarsi; a Boarding school for girls with Primary and Anglo-Vernacular Middle Departments at Sohagpur; a Home for older girls in Sohagpur where toys are made for sale; a Boys' Hostel at Hoshangabad for boys attending Primary, Middle and High schools there. The Council's work also covers two villages in the Seoni Tahsil of the Hoshangabad district in one of which, Makoriya, there is a dispensary and a Primary School.

A Settlement is maintained near Hoshangabad, where village problems are studied, and work of an educational and social nature is carried on. *Wardens*, Donald G. and Erica M.Groom.

There is also a Weavers' Co-operative Society at Khera, Itarsi, where cloth is made on handlooms.

A "Quaker Centre" has been opened at 772 East Park Road, P.O. Karol Bagh, New Delhi. People interested in the international service, carried on by the Society of Friends may communicate with the wardens, Ranjit and Doris Chetsingh.

Mission Secretary: Erica M. Groom, Hoshangabad, C.P.; Church Secretary; Dhan Singh, Sohagpur, C.P.

THE AMERICAN FRIENDS' MISSION.—With Missionaries working in Bundelkhand, Hospital for Women and Children at Chhatarpur, Orphange, and school work at Nowgong. Churches and Evangelistic work throughout the district.

Superintendent: Rev. Everett L. Cattell, Chhatarpur, C.I.

THE OLD CHURCH HEBREW MISSION was established in 1858, in Calcutta, and is the only Hebrew Christian Agency in India. *Hon. Secretary*: Rev. C. F. Westcott, B.Sc., M.A., 11, Mission Row, Calcutta.

Lutheran Societies.

THE INDIA MISSION OF THE UNITED LUTHERAN CHURCH IN AMERICA—founded 1842—commonly known as the United Lutheran Church Mission. From October 1944 all departments of work under the Mission have been transferred to the Evangelical Lutheran Church and all Missionaries serve under the Indian Church. The following work is now carried on by the A. E. L. Church in East and West Godavari, Guntur, Nellore, and Kurnool, Districts: The Andhra Christian College (First Grade), three High Schools for Boys; two for Girls; one Normal Training School for Masters and one for Mistresses; a Theological College, three Bible Training Schools, an Industrial School and Farm; 24 Higher Elementary Schools; 817 Village Schools; 7 Hospitals; a School for the blind; a Tuberculosis Sanatorium; a Printing Press, and a Public Reading Room and Hostel for College Students. The Foreign Missionary Staff on the Field December 1944, 60; Indian staff of all grades, 3,533; Schools, 846; Pupils, 53,286. The Church has a baptized membership of 206,757; 2,079 Congregations; 114 Indian Pastors; 706 Evangelistic workers; 2,072 School Teachers.

President of the U. L. C. Mission: Rev. F. L. Coleman, D.D. Rajahmundry.

President of the Andra Evangelical Lutheran Church: Rev. E. Prakasem, Guntur.

Financial and Legal Agent:—Rev. I. Cannaday, D.D., Treasurer, Guntur.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF STOCKHOLM, SWEDEN.—A Church of Sweden Society, founded in 1856, occupies the Districts of Saugor, Betul and Chhindwara in the Central Provinces.

There are about 3,100 Church members constituted into an indigenous Church called the Evangelical Lutheran Church of the Central Provinces. The European and Indian staff numbers 38 and 173 respectively. There is a Training school for Indian workers and 26 Primary Hindi Middle and Indian English Middle schools with 1,629 children in attendance; one High School; 37 Sunday schools with 729 Christian and 1068 non-Christian attending; 1 Hospital with 30 beds and 632 patients and 590 operations during 1944; 10 Dispensaries with 64,033 patients during 1944; 4 Workshops; one women's industrial school; one widows' Home with 107 women; 3 orphanages, one Boys' Boarding school and one Girls' Boarding school with 176 boys and 232 girls and 3 farms where modern village uplift is attempted.

Secretary—Rev. R. Asplund, Chhindwara, C.P.

THE BASEL EVANGELICAL MISSION (Incorporated in Switzerland), with its headquarters in Mangalore, South Kanara, was founded in 1834 and is at present carrying on the work in South Kanara, South Mahratta, Malabar and Coorg. It has at the beginning of 1945, 28 chief stations and 84 out-stations with a total missionary staff of 18 European and about 800 Indian workers. The membership of the churches is 29,000. Educational work embraces 100 schools, among which a Theological Seminary, a second grade college and 7 high schools. The total number of scholars is 18,000. Medical work is done at Betgeri-Gadag, Southern Mahratta Country, where a hospital for men and women and at Udipi, South Kanara, where a hospital for women and children is maintained. The Mission maintains a Home Industrial Department for women's work. There is also connected with the Mission a large Publishing Department with a Book Shop and a Printing Press, with about 100 workers, at Mangalore, S. Kanara, which is doing work in English and in a number of Indian languages.

President and Secretary:—Rev. A. Streckeisen, Calicut, Malabar.

ANGLICAN EVANGELICAL MISSIONARY SOCIETY.—Constituted and Established by the Government of India Act XXI of 1860. British Headquarters, 37, Cecil Street, Picton Road, Wavertree, Liverpool, England. *Chairman*, British Council,—the Right Rev. T. Stanley Bray, D.D. *Secretary*—Miss. Ada Cook, B.S.L. *Chairman*, American Council—The Right Rev. Everett Wm. Ellenwood, D.D. *Secretary*—Miss. E. H. Ellenwood, S. T. B., Kewanee, R. R. 2., Illinois, U.S.A. For India, Burma, Ceylon and Malaysia—The Right Rev. the Lord Bishop of Ambur, India. Registered Office: Bishop's Settlement, Gudiyatam, South India.

THE FEDERATION OF EVANGELICAL LUTHERAN CHURCHES IN INDIA was established in 1926 as an outward expression of the spiritual unity of the Lutheran Churches in India. It consists of 10 constituent churches and 3 co-operating Missions in India with a total membership of over 480,000. The work of the Federation is carried on by the Triennial Conference of the Federation, by its Executive Council, by a number of standing and special Committees and by its office-bearers. It was registered under the Societies Registration Act (Act XXI of 1860) in Oct. 1942. Including the members of one Lutheran Mission in South India, co-operating in the work of the War Emergency Committee of the Federation, the Lutheran baptised membership in India is just a little over 500,000.

The names of Officers for the triennium 1945-47 are as follows:

President:—The Rev. C. W. Oberdorfer, Gudur (Nellore Dt.).

Vice-President:—The Rev. Joel Lakra, Ranchi.

Treasurer:—The Rev. Dr. I. Cannaday, Guntur.

Secretary:—The Rev. Prof. J. D. Asirvadam, Christ Church, Tambaram.

The Federation has set up a War Emergency Committee and from contributions received chiefly from America and partly from India, are supported for the distressed Missions and Churches connected with the Federation. The budget of disbursements for 1945 amounts to Rs. 299,050, out of which Rs. 22,800 is expected to be raised in India.

THE CHURCH OF SWEDEN MISSION was founded in 1874. It operates in the Trichinopoly, Coimbatore, Madura and Ramnad Districts. In conjunction with the Leipzig Evangelical Lutheran Mission (L.E.L.M.) it co-operates with the Tamil Evangelical Lutheran Church. The C. S. M. maintains a general and eye hospital at Tirupattur, an eye hospital at Coimbatore, High Schools for boys at Madura and Pudukotah, a High School for girls at Tanjore and various Primary Schools. European staff 43; School Teaching staff 154; Schools 22; Pupils: boys 2,555 and girls 1,120.

President:—Rev. B. Fr. Tiliander, B.A., B.D., Arasaradi, Madura.

LEIPZIG EVANGELICAL LUTHERAN MISSION.—The Lutheran Mission work in India was commenced in 1706 by German Missionaries under the Danish Tranquebar Mission. It was taken up by the L.E.L.M. (founded in 1836) in 1841. The L.E.L.M. re-entered into the work after the great war in 1927. It is located in the Madras, Chingleput, South Arcot and Tanjore Districts. The Mission co-operates with the Church of Sweden Mission and the Tamil Evangelical Lutheran Church. The L.E.L.M. maintains two High Schools for boys at Madras and Shiyali (Tanjore Dt.), a number of Elementary Schools for boys and girls in different places, and various other institutions.

Owing to the war, the whole Mission work has been temporarily placed under the Mission-Council of the Church of Sweden Mission. The work is administered by a Special Committee. "The Northern Field Committee".

Chairman: Rev. C. G. Diehl, B.A., B.D., No. 1, Madavakan Road, Kilpauk, Madras.

TAMIL EVANGELICAL LUTHERAN CHURCH.—Organised Churches (Pastorates) 52; Ordained Indian Ministers 49; other Indian workers 107; Baptised membership 42,956; Schools 183; Teaching staff 707; Pupils: Boys—11,941; Girls—5,366.

President:—Rt. Rev. J. Sandegren, M.A., D.D., L.N.O., Bishop of Tranquebar, Trichinopoly.

MISSOURI EVANGELICAL LUTHERAN INDIA MISSION (M.E.L.I.M.). Located in British India, Mysore, Travancore and Ceylon (1895).

In British India, in North Arcot (Ambur, Vaniyambadi, Pernambut), Salem (Krishnagiri, Bargur), Tinnevelley (Vallioor, Vadakangulam) Tanjore, Trichinopoly, Madura, Ramnad Districts.

THE SALVATION ARMY.

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker; and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 6 Territories, each under a Territorial Commander; and one smaller Command.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Eastern Territory, with Headquarters at Calcutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory.—The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U.P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformative work was commenced). A special Settlement has also been opened in the Andamans during the last few years.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces; and also in one dispensary. The Hospital in the U.P. has been loaned to the Military for the duration of the war.

Other institutions include, Day and Boarding Schools, Agricultural Colonies Soldiers, and Hostel, Delhi. Our Hostel at Delhi is for H. M. Forces only.

Village centres at which the S. A. Works	2,111
Officers and Employees	610
Social Institutions	13

Territorial Headquarters:—35, Queen's Road, Lahore, Punjab.

Territorial Commander:—Lt.-Colonel W. E. Carter, in-charge.

Western India Territory.—The Western India Territory comprises Sind, Rajputana, Central India, Kathiawar, Bombay Presidency, Goa, Marathas, Mauritius.

Territorial Headquarters:—The Salvation Army, Morland Road, Byculla, Bombay.

Territorial Commander:—Lieut.-Commissioner A. Moffat.

Corps, 316; Outposts 521; Societies 453; Social Institutions 18; 209 Day Schools and 4 Boarding Schools.

Besides the distinctly evangelistic operations there are established 2 large General Hospitals—"Emery Memorial," Anand; "Evangeline Booth", Ahmednagar; several Dispensaries; 209 Day Schools; 4 Boarding Schools; Industrial and Rescue Home for Women; Released Prisoners' Home; the management of the King George V Memorial Infirmary, and Lady Dhunbai Home for the Destitute; Weaving Schools, Factory for the making of Weaving and Warping Machines; and a Land Colony. Two Red Shield Hostels and three Canteens for Servicemen.

Madras and Telugu Territory Embraces Madras City, the Central and Northern Districts of the Presidency, as also Hyderabad and the Central Provinces; due to the lack of personnel it has not been possible to make all the advances desired or respond to the many requests that continue to reach the Headquarters.

In addition to evangelical, educational and village uplift work carried on in just on 400 villages, we have two Central Boarding Schools; 2 Training Institutes for Men and Women selected for Officership; a Criminal Tribes Settlement with 2,500 men, women and children, many of the adults work in the Tobacco Factory, Chirala, while others work the land; a Leper Colony; a General Hospital for Women and Children, though men are also treated; a Social Services Department, where waste paper sorting, etc., is carried on with two out-country depots; a Women's Industrial Home in Madras. Much has also been done with Red Shield activities in connection with welfare of the Troops. In Madras, we have a Red Shield Residential Hostel, also a modern Canteen, The Lady Hope Red Shield Canteen near the Egmore Railway Station; also two Mobile Canteens for Troops and Emergency Services.

Territorial Headquarters:—The Salvation Army, 2, Ritherdon Road, P. O. Box 453, Vepery, Madras.

Territorial Commander:—Lt.-Colonel Edward Walker.

Chief Secretary:—Brigadier Victor Thompson.

Southern India Territory.—The Territorial Headquarters is Trivandrum, Travancore State.

The work of The Army had its beginning among the Tamil-speaking people of the southern part of the State nearly fifty years ago. The work developed and extended northward through the whole State of Travancore into Cochin, and during the past twenty-five years eastward into the British administered districts of the southern part of the Madras Presidency.

More than 494 corps and over 1,218 officers labour amongst the village populations. The Army has a membership in South India of some 81,415. Hundreds of Salvation Army Halls have been erected in which gather Sunday after Sunday congregations of Christian men and women, converts from among those who have been the most depressed people in the country, now of the third, second and first generations.

This territory is divided for administrative purposes into seventeen divisions and Districts seven among the Tamil-speaking people and ten amongst those who speak Malayalam.

Medical work, also the work of our Leper Hospitals take care of a vast amount of human suffering. The Catherine Booth Hospital at Nagercoil, which has grown out of a very small beginning, is now a fully equipped, modern institution of many departments, dealing with all manner of medical and surgical cases. The Hospital is equipped with X-Ray, radium, iron lung and splendid nursing facilities. Branches from this Institution carry the service of the Hospital to some of the most remote regions, dealing, among other things, with malaria which has ravaged and undermined the health of a whole population in certain areas in South Travancore.

181,645 patients were treated during the past year in the Catherine Booth Hospital and its several Branches and 1,136 major operations and 2,095 minor operations were performed. Two Leper colonies are run one on behalf of the Cochin Government and the other the Evangeline Booth Leper Hospital in North Travancore, have combined 495 patients. These two institutions carry on the work ranking with the highest traditions of Christian service.

Workers in the Territory consist of 1,218 Officers, 396 employees. There are 457 Officered Corps and 128 Societies, 139 primary day schools. 3 Boarding Schools, 2 Middle Schools, 1 High School, 4 Night Schools, 2 Training Garrisons, 1 Women's Industry and 2 Men's Industries.

Territorial Headquarters:—S. A. Kowdyar, Trivandrum, Travancore State.

Territorial Commander:—Commissioner Chas. F. A. Mackenzie.

Chief Secretary:—Lieut.-Colonel Charles Sylvester

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated.

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The Indian Penal Code has from time to time been amended. The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes as amended from time to time are now in force. The years between 1870 and 1885 saw a great deal of legislative activity in British India, and important branches of the law, like Evidence, Contract, Transfer of Property, Trusts, Negotiable Instruments, etc., were codified in the form of Acts of the Indian Legislature applicable to the whole of British India. These, amended from time to time and supplemented by rules derived from English decisions, constitute the bulk of the law administered in British India.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government Act III of 1884; by which the law previously in force was amended; cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision, however, is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans..... Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered."

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code

of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (sections 443-463) the new Chapter XXXIII (sections 443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code. Since 1836 no distinction of race has been recognised in the civil courts throughout India.

The Federal Court.

A Federal Court is, according to the Joint Parliamentary Committee's Report, a necessary element of any Federal Constitution. It is at once the guardian and interpreter of the Constitution, and arbiter of the disputes between the Federal Units. The Government of India Act 1935 accordingly provides (sections 200-218) that there shall be a Federal Court consisting of a Chief Justice of India and such number of other judges as His Majesty may deem necessary; but the number of puisne judges shall not exceed six, unless and until an address is submitted by the Federal Legislature for an increase. Every judge of the Federal Court is to be appointed by His Majesty by warrant under the Royal Sign Manual. He shall hold office until he attains the age of 65 years, but is liable to be removed from office on the ground of misbehaviour or of bodily or mental infirmity, provided that the Judicial Committee of the Privy Council on a reference reports that the judge ought on any such ground to be removed. The Federal Court shall be a Court of Record, and shall sit at Delhi or such other place or places as the Chief Justice may with the approval of the Governor-General from time to time appoint.

The Federal Court has exclusive original jurisdiction in any dispute between any two or more of the following parties, that is to say, the Federation, any of the Provinces, or any of the Federated States, if and in so far as the dispute involves any question (of law or of fact) on which the existence or extent of a legal right depends. Certain restrictions are placed upon the Court's jurisdiction over disputes to which a state is a party. In the exercise of its original jurisdiction the Court can pronounce only a declaratory judgment. The Court is invested with appellate jurisdiction over any judgment decree or final order of a High Court in British India, if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Government of India Act, or any Order in Council made thereunder. No direct appeal in such a case lies to His Majesty in Council either with or without special leave. The Federal Legislature is empowered to enlarge the appellate jurisdiction of the Federal Court so as to extend to certain civil cases involving large stakes. An appeal also lies to the Federal Court from a High Court in a Federated State on the ground that a question of law has been wrongly decided concerning the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of the Instrument of Accession of the State or arising under Agreement made under Part VI of the Act in relation to the administration in the State of a law of the Federal Legislature.

An appeal may be brought to His Majesty in Council from a decision of the Federal Court in its original jurisdiction in any dispute which concerns the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of an Instrument of Accession, or under an agreement made under Part VI of the Act. An appeal may also be brought to the Privy Council where special leave is granted either by the Federal Court or the Privy Council. All authorities, civil and judicial, throughout the Federation are enjoined to act in aid of the Federal Court. All proceedings in the Federal Court shall be in the English language, and judgment must be pronounced in open court in accordance with the opinion of the majority of the judges.

The Federal Court was established and commenced to function from 1st October 1937. The Court in the first instance consists of a Chief Justice and two puisne judges. The Chief Justice receives a salary of Rs. 7,000, and each of the puisne judges Rs. 5,500 per month.

Sir Maurice Gwyer, K.C., was appointed to be the first Chief Justice of India, and Sir Shah Mahomed Sulaiman and Mr. M. R. Jayakar to be judges of the Federal Court.

Sir Maurice Gwyer, K.C., retired on 25-4-43. Sir Srinivasa Vardachariar acted as Chief Justice from 25-4-43 to 7-6-43 when Sir Patrick Spens, the present Chief Justice was appointed. His other two colleagues are Justices Zafrulla Khan and Harilal Kania who succeeded Sir Srinivasa Varadachariar in June 1946.

The functions of the Federal Court are not to be affected in any way by the assumption of emergency powers by the Governor-General under section 45 of the Act in case of failure of the Constitutional machinery.

High Courts.

High Courts of Judicature were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown; they hold office until they attain the age of 60 years; generally one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held certain Judicial Offices in India or lawyers qualified in India. This fixed proportion of Barristers and Civilian judges has now been abolished by Government of India Act, 1935. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

A High Court has since January 1936 been established at Nagpur; there has also been constituted a Chief Court for the Province of Sind. The principal legal tribunal in the N.W.F.P. is known as the Court of the Judicial Commissioner.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. But there is no Court of Criminal Appeal, and as the Judicial Committee of the Privy Council has repeatedly disclaimed all Jurisdiction as a Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted of serious and even capital offences and sentenced by the High Courts in their original or appellate Criminal Jurisdictions. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the Federal and the High Courts; Vakils and Attorneys (Solicitors) of High Courts and Pleaders, Mukhtiars and revenue agents. Advocates of the Federal Court are divided into two classes, senior Advocates and Advocates. The Federal Court maintains Rolls of senior Advocates and Advocates. All Advocates in the Federal Court must be instructed by Agents on the Rolls of the Federal Court Agents and no Senior can appear without a Junior. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts, and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of the Bombay and Calcutta High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts. The Bar Councils Act of 1926 aims at abolishing the various grades of practitioners, and under it each of the High Courts maintains a roll of advocates entitled to practise within its jurisdiction.

Law Officers.

The Government of India has its own Law Colleague in the Legal Member of Council. All Government measures are drafted in this department after their substance is decided upon by the administrative departments concerned. Outside the Council the principal law officer of the Government of India is the Advocate General of India who is appointed by the Governor General under section 16 of the Government of India Act 1935. At Bombay and Calcutta the Government of India have their own solicitors. Each of the Provincial Governments has its own Advocate General appointed under Section 55 of the Government

of India Act 1935. The Provincial Governments have usually their own Legal Remembrancers and professional lawyers as Government Advocates and Assistant Government Advocates.

Sheriffs are attached to the High Court of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of Court.

Law Reports.

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad Patna, and Lahore under the authority of the Governor-General-in-Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Bengal Judicial Department.

Derbyshire, The Hon'ble Sir Harold, K.C., M.C., Barrister-at-Law.	Chief Justice (on leave).
Mitter, The Hon'ble Mr. Justice Rupendra Coomar, M.Sc., M.L.	Do.

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Province.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police; and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which have its own Police Act (IV of 1890).

Working.—The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned and is not now subject to the general control of the Governor-General. The Police in minor provinces, *viz.*, Coorg, Delhi, Ajmer-Merwara, Andaman and Nicobar Islands, and Panth Piploda, and in other centrally administered areas is administered by the Chief Commissioner or the head of the administration concerned, subject to the general control and direction of the Central Government.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary.

The District Superintendent of Police is subject to dual control. The force he commands is subject to the general control of the District Magistrate for the enforcement of law and the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police and Inspector-General of Police. Generally speaking, the District Superintendent of Police has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C. I. D.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as **Criminal Investigation Departments** and work under a Deputy Inspector-General. They collate information about crime, edit the *Crime Gazette*, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux. There is also an **Intelligence Bureau** under the Home Department of the Government of India which collects information from all provincial Criminal Investigation Departments and works for inter-provincial liaison. It has its branches at various centres throughout British India and at Quetta in Baluchistan. The Head of the Bureau known as the Director, Intelligence Bureau, also acts as Advisor to the Home Department of the Central Government in police matters.

Headquarters and Armed Police.—At the chief town of each District the Superintendent of Police has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the Superintendent are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain armed police who mount guard on Treasuries in the District, and also provide prisoners and treasure escort. The armament of the Police has been improved recently. The main weapons are the ·410 bore musket and ·303 rifles. At most headquarters, there is also a reserve of armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mofussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint

must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a *prima facie* case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is a police officer. Personal inspection and supervision are the common means for the District Superintendent of Police to know whether his subordinates are doing their work properly.

Out-Posts.—When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana. The secret of good mofussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion.—A constable may aspire to become a Police Station Officer or higher officer. The directly recruited candidate who comes in through the Police Training School as a Thanadar is, it is understood, a graduate and may quite often rise to be an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General. The direct Assistant Superintendent is sure of a Superintendentship, and has chances of D.I.G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him. Members of the Police Force are eligible for the award of the King's Police Medal and the Indian Police Medal for long and meritorious services and for conspicuous acts of gallantry.

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is modified in the Presidency Towns by special Police Acts which prescribe police procedure.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasised in orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognizable crime:—

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the Provincial Governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

Since the introduction with effect from the 1st April 1937 of the Government of India Act, the administration of "Jails" is a provincial matter, and the power of legislation in respect of prison administration vests in the Provincial Governments, the Central Government exercising only concurrent legislative powers with the Provincial Governments in the matter of the transfer of prisoners and accused persons from one unit to another.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organisation and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Provincial Governments, but in various matters, mainly of a minor character their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, **large central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails**, at the headquarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. During the war the number of I.M.S. Officers in Jail Department has been reduced to the minimum. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour.

The Jails Committee.—The obvious advisability of proceeding along certain general lines of uniform application led to the appointment of a Jails' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation; of recruiting a better class of warders; of providing education for prisoners; and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders; the adoption of the English system of release on license in the case of adolescents; and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners; the provision of separate accommodation for prisoners under trial; the institution of the star-class system; and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners for employment as convict officers.

Juvenile Prisoners.—As regards "youthful offenders"—*i.e.*, those below the age of 15—the law provides alternatives to imprisonment; and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline. These are but general principles which have been variously given effect to by various Provincial Governments.

The question of the treatment of "young adult" prisoners has in recent years received much attention.

Children's Acts and Borstal Schools Acts for the special treatment of juvenile offenders have been passed by several Provincial Legislatures.

The Madras Children Act, passed in 1920, is the earliest and has been largely followed in the other provinces. It classifies as "children" boys and girls under the age of 14 and as "young persons" those between the ages of 14 and 16. It enacts that a child or young person convicted of any offence, may as an alternative to the usual punishments of fine, whipping or imprisonment be discharged after due admonition, committed to the care of a parent, guardian or relative, or of a person named by the court, or sent to an Industrial School set up or certified under the Act. It further enacts that no offender under the age of 16 may be sentenced to transportation, nor under 14 to imprisonment. Offenders between the ages of 14 and 16 may be sentenced to imprisonment in very special circumstances. Provision is made for the committal to an Industrial School or to the care of a suitable person of neglected, ill-treated or uncontrollable children under the age of 14. The Act empowers the Government of the Province to establish juvenile courts consisting of a stipendiary magistrate and one or two Honorary Magistrates who shall, where possible, be women and directs that, where such courts have not been established, young offenders shall be tried in a different room or at a different time from those at which the ordinary sittings are held.

The Bengal Act provides for the committal to an Industrial School of children under 14 found begging or destitute and of children living in immoral surroundings. It further provides for the punishment of cruelty to children, of causing and abetting the seduction or prostitution of girls under 16, and of accepting articles in pawn from a child.

The Bombay and Central Provinces Acts, which are practically identical, go further and provide for the punishment of persons found drunk in a public place when in charge of a child under 7, or giving intoxicating liquor or drugs to a child under 14, or inciting a child to gamble. They also empower police officers to confiscate tobacco in possession of children.

The Bombay Act has been extended throughout the province with satisfactory results and it will not now be necessary to send any children to prison except in very exceptional cases.

There are several certified schools established under the Bombay Act and there are a number of other institutions which co-operate with different juvenile courts. A Children's Aid Society is in existence which offers active co-operation. The Bombay Children Act has been amended mainly to prohibit the publication of names, addresses or other details of children or young persons involved in offences; to provide for a system of true probation as distinct from supervision; to empower the Chief Inspector of Certified Schools to release youthful offenders on license and to raise the minimum term of detention in the Borstal School from 2 to 3 years.

These provisions of the Bombay Act which relate to youthful offenders, the maintenance and treatment of persons sent to certified schools or committed to the care of relatives or other fit persons and the establishment of industrial schools and juvenile courts were applied to the province of Sind in March, 1936.

The Factories Act in Bombay was amended in 1940 so as to abolish the employment of child labour in Factories.

The Bombay Children Act with some modifications has been extended to the Delhi Province.

The operation of the Bengal Act which was passed in 1922 is at present confined to the town, port and suburbs of Calcutta, Howrah and to certain portions of the District of the 24-Parganas. A Central Children Court has been established in Calcutta, which has jurisdiction over the whole area to which the Act has been extended.

The Governments of Madras, Bombay, U.P., Punjab and the Central Provinces have also enacted Probation of Offenders Act which allow of the release of young offenders on parole under Probation Officers. Similar legislation is under contemplation in Assam.

The provisions of the Borstal Schools Act are practically the same in the provinces where such Acts have been enacted.

In provinces where there is no Borstal Schools Act juvenile offenders are sent to the reformatory schools established under the Reformatory Schools Act, or confined in juvenile or ordinary jails, but are not allowed to mix with adult prisoners. In the Punjab a Reclamation Department has been established the main function of which is the working of the Punjab Good Conduct Prisoners Probational Release Act, 1926. Officers of the Department visit jails for the selection of prisoners on probation release. The probationers are usually sent to special farms.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

The N.-W. F.P. (Adolescent) Prisoners Release on Probation Act, 1940 (Governor's Act II of 1940) was introduced in 1940 in the North-West Frontier Province whereby adolescent prisoners after completion of ⅓rd of their sentence are released and handed over to their guardians who are required to look after their conduct and welfare and generally to act *in loco parentis*.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing

to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached. It was then decided that henceforth only those convicts should normally be sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to release, to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of their sentences had expired, make the Andamans their permanent home. During the war the islands came under Japanese occupation but they were reoccupied on the 7th October 1945 and civil administration was resumed on the 7th February 1946. They are no longer a penal settlement and active rehabilitation measures are now in force.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

Political Offenders.—Much controversy rages round the classification and special treatment of what are popularly known as political offenders. Government do not accept that offences are distinguishable as political or non-political but have adopted a system of classification dividing convicts into three classes according to their standard of living in civil life and the character of the offence. The proposal for according special treatment to political offenders still continues to be mooted and one provincial Government has in fact framed rules for the purpose.

LAWS OF 1945.

1. The Indian Tea Control (Amendment) Act, 1945.—This Act amends the Schedule to the Indian Tea Control Act (VIII of 1938).

The Schedule lays down the principles to be followed in determining the crop basis of a Tea Estate.

Clause 1 of the Schedule provides that where a tea estate has received an export quota the crop basis to be taken shall be the highest crop basis assigned to the estate subject to an admissible allowance for young areas.

There is a proviso to the admissible allowance and s. 2 of this Act substitutes a new proviso for the old proviso by enacting that any allowance made in respect of young areas which has already been included in determining the cardinal crop basis of the estate, shall be deducted. By Clause (1) (*b*) of the Schedule an allowance is also allowed for low producing areas determined in the prescribed manner.

To this sub-clause there is a proviso for which s. 2 of this Act substitutes a new proviso that any allowance made in respect of low producing areas which has already been included in determining the cardinal crop basis of the estate shall be deducted.

2. The Code of Criminal Procedure (Amendment) Act, 1945.—S. 2 of this Act adds sub-sec. (3) to s. 161 of the Criminal Procedure Code (Act V of 1898) s. 161 empowers a police-officer making an investigation under Chapter XIV to examine orally any person supposed to be acquainted with the facts and circumstances of a case. This section had made no provision for reducing such statement into writing. Hence the new sub-sec. (3) to s. 161 provides that the police-officer making an investigation may reduce into writing any statement made to him in the course of an examination and if he does so he shall make a separate record of the statement of each such person whose statement he records.

S. 3 of this Act introduces a new sub-sec. (2A) to s. 426 of the Code of 1898.

S. 426 provides for suspension of sentence of a convicted person and for releasing him on bail pending an appeal by the Appellate Court or the High Court.

The new sub-sec. (2A) to s. 426 provides that when any person other than a person accused of a non-bailable offence is sentenced to imprisonment and an appeal lies from such sentence, the Court which passes the sentence is satisfied that the convicted person intends to present an appeal, such Court may order the person to be released on bail for a period sufficient to enable him to present the appeal and till then the sentence shall be deemed to be suspended.

3. The Factories (Amendment) Act, 1945.—This Act amends the Factories Act (XXV of 1934) in connection with holidays and leave with pay to factory workers.

This Act comes into force from 1st January 1946.

S. 2 inserts a new section 35A in the Act of 1934 and provides for compensatory holidays to a worker who is deprived of any of the weekly holidays for which provision is made in sub-sec. (1) of s. 35.

S. 3 inserts a new Chapter IV A in the Act of 1934 under the heading "Holidays with pay." In this new Chapter are added Sections 49A to 49I.

S. 49A provides that this new chapter is not to apply to a seasonal factory and shall not operate to the prejudice of any rights to which a worker may be entitled under any other enactment or under the terms of any award, agreement or contract of service.

S. 49B provides that every worker who has completed a period of twelve months continuous service in a factory shall be allowed in the succeeding period of twelve months, holidays for a period of ten or if a child, fourteen consecutive days and if he fails in any one such period of twelve months to take the whole of the holidays allowed to him, he shall be entitled to add the holidays not taken by him to the holidays for the succeeding period of twelve months, but the total number of the holidays which may be carried forward shall not exceed ten or in the case of a child fourteen days.

If a worker entitled to holidays is discharged by his employer then the employer shall have to pay the worker in respect of the holidays the amount payable under s. 49C below.

Under s. 49C a worker is entitled to be paid during the holidays at a rate equivalent to the daily average of his wages as defined in the Payment of Wages Act (IV of 1936) for the days on which he actually worked during the preceding three months exclusive of his earnings for overtime.

Under s.49D the worker shall before his holidays begin, be paid half the total pay due for the period of holidays.

S. 49F gives power to an Inspector to institute proceedings on behalf of a worker to recover any sum required to be paid to him for the holidays.

S. 49G empowers the Provincial Government to exempt factories from the provisions of this new chapter.

4. The Indian Companies (Amendment) Act, 1945.—S. 282B of the Indian Companies Act (VII of 1913) deals with the employees' deposits or securities given to the Company and the investment of the provident fund moneys.

In s. 282B sub-sec. (2) it is provided that where a company has constituted a provident fund for its employees, all moneys contributed to such fund whether by the company or its employees shall be invested in securities mentioned in s. 20 of the Indian Trust Act 1822.

The present Act amends s. 282B by adding sub-section (6) to it to the effect that the provision relating to investment of contributions to the provident fund shall not affect any rights of an employee under the rules of a provident fund to obtain advances from or withdraw money standing to his credit in the fund where the fund is a recognised provident fund.

5. The Indian Merchandise Marks (Amendment) Supplementary Act, 1945.—This Act amends the Indian Merchandise Marks (Amendment) Act 1941 and modifies the provision that cotton thread ordinarily sold in bundles shall be conspicuously marked with the weight of thread in the unit by providing alternatively that a declaration of the length of thread in the unit may be substituted for a declaration of the weight.

S. 2 amends s. 7 of the Act of 1941 which was substituted for s. 12 of the Indian Merchandise Marks Act (IV of 1889).

It provides that in sub-sec. (2) of s. 7 for the words "cotton sewing or darning thread" the words "cotton thread namely sewing, darning, crochet or handicraft thread" shall be substituted; for the words "in premises which are a factory as defined in the Factories Act 1934" the words "in any premises not exempted by rules made under s. 20 of this Act" shall be substituted; and for the words "marked with the weight of thread in the unit," the words "marked with the length or weight of thread in the unit" shall be substituted.

S. 2 further adds a proviso to s. 7 to the effect that the rules made under s. 20 shall exempt all premises where the work is done by the members of one family with or without the assistance of not more than ten other employees and all premises controlled by a co-operative society where not more than twenty workers are employed in the premises.

S. 3 substitutes a new section 9 in place of the old s. 9 of the Act of 1941.

This new s. 9 amends s. 20 of the Act of 1889 by adding sub-sec. (1A) to s. 20 whereby the Central Government is empowered to make rules for the manner in which cotton yarn and cotton thread shall be marked and for the exemption of certain premises used for the manufacture bleaching, dyeing or finishing of cotton yarn or cotton thread from the provision of s. 12 of the Act.

6. The Repealing and Amending Act, 1945.—This Act removes from the Statute-book certain Acts, Regulations and Ordinances or portions of them which have either ceased to have effect or ceased to be in force or which are spent or have become unnecessary.

The Acts or portions thereof which are repealed are specified in the First Schedule to this Act.

This Act also amends and corrects errors detected in certain Acts, Regulations and Ordinances which are specified in the Second Schedule.

This Act has a savings clause which provides that this Act shall not affect by reason of the repeal of the various Acts, Regulations and Ordinances, the validity, invalidity, effect or consequences of anything already done or suffered or any right title, obligation or liability already acquired, accrued or incurred nor shall this Act affect any principle or rule of law or established jurisdiction, practice or procedure etc nor shall the repeal of any of the enactments revive or restore any jurisdiction, office, custom, liability, right, title, usage, etc. not now existing or in force.

7. The Indian Army (Amendment) Act, 1945.—The object of this amending Act is to ensure the speedy disposal of the moveable property in camp or quarters of Indian Commissioned officers dying or deserting while on active service. Under the procedure in force before this amending Act the disposal of such property devolved upon the Commanding Officer. His duty was to secure all the moveable property that might be in camp or quarters and to realise any pay and allowances due; he might also if he thought fit realise a deposit not exceeding one thousand rupees which might have been left in a Government Savings bank. If a representative of the deceased officer gave security for the payment of the regimental and other debts in Camp or quarters, the Commanding Officer delivered all the moveable property received by him to that representative. Otherwise the Commanding Officer would sell the moveable property and pay the debts, handing over the surplus if any, to the representative of the deceased officer.

As it was found in the existing conditions that the Commanding Officer was normally engaged with operational commitments and was therefore unable to devote adequate time and attention to the disposal of property this Act has been passed to relieve him of this duty and to set up an expert body, a Standing Committee of Adjustment.

S. 2 amends s. 114 of the Indian Army Act (VIII of 1911) by the insertion of two new rules after rule (6).

Rule (7) provides that in the foregoing rules all references to the Commanding Officer shall be construed as references to the Standing Committee of Adjustment.

Rule (7) also empowers the Standing Committee of Adjustment to withdraw the deposit left by the deceased officer in any bank upto Rs. 2,000 instead of Rs. 1,000 formerly.

Rule (8) provides that the decision of the Commanding Officer or the Standing Committee of Adjustment as to what are the regimental and other debts in camp or quarters of a deceased person and as to the amount payable therefore shall subject to the result of any appeal to the principal court of original civil jurisdiction in the locality be final.

To s. 114 of the Act of 1911 an *explanation* is added defining the expression "regimental and other debts in camp or quarters" as including military debts *i..e* money due for quarters, mess, band, and other regimental accounts and for military clothing, appointments and equipments not exceeding a sum equal to six months' pay of the deceased and having become due within eighteen months before his death.

8. The Indian Air Force (Amendment) Act, 1945.—The object of this Act is the same as of the Indian Army (Amendment) Act 1945.

S. 2 amends s. 126 of the Indian Air force Act (XIV of 1932) and inserts two new rules similar to the rules in the Indian Army Act (Amendment) Act 1945 for the substitution of the Standing Committee of Adjustment in place of the Commanding Officer with power to the Committee to withdraw deposits from any bank not exceeding rupees one thousand five hundred.

In the case of the Air Force, the expression used is "service and other debts in camp or quarters" and this expression is defined as including air force debts *i.e.* moneys due for quarters, mess, band, and other service accounts and air force clothing, appointments and equipments not exceeding a sum equal to six months' pay of the deceased and having become due within eighteen months before his death.

9. The Indian Patents and Designs (Amendment) Act, 1945.—This Act amends the Indian Patents and Designs Act (II of 1911) by classifying the specification which the true and first inventor is required to send along with his invention for a patent into a provisional specification and a complete specification.

S. 2 amends s. 3 of the Act of 1911 and provides that the applicant for a patent may send either a provisional or a complete specification.

S. 3 substitutes new s. 4 in place of old s. 4 of the Act of 1911 and provides that a provisional specification must describe the nature of the invention while a complete specification must particularly describe and ascertain the nature of the invention and the manner in which the same is to be performed and a specification whether provisional or complete must commence with the title and in the case of a complete specification must end with a distinct statement of the invention claimed. It also provides that the Controller may where the application was accompanied by a specification purporting to be a complete specification, if the applicant so requests treat the specification as a provisional specification and proceed with the application accordingly.

S.4 inserts new Sections 4A and 4B to the Act of 1911.

S. 4A provides that the applicant may leave a complete specification, if he has not done so along with his application within nine months from the date of the application; provided that the nine months shall be extended to such period not exceeding ten months from the date of the application as may be specified in a request made by the applicant to the Controller.

Sub-sec. (2) of S. 4A provides that if the complete specification is not left within the period allowable under sub-sec. (1) of S. 4A, the application shall be deemed to be abandoned at the expiration of ten months from the date thereof.

S. 4B gives provisional protection to an invention between the date of the application for a patent and the date of sealing the patent and such invention may be used and published without prejudice to the patent.

S. 4B sub-sec. (2) gives the meaning of the expression "date of an application for a patent" where it is post-dated or ante-dated as the date to which the application is post-dated or ante-dated or as the date on which the application is actually made.

S. 5 introduces the following amendments to S. 5 of the Act of 1911. This section describes the proceedings to be taken by the Controller upon receiving an application.

S. 5 (1) (*i*) as amended provides that the Controller shall refer to an examiner every application in respect of which a complete specification has been filed.

By S. 5 (1) (*ii*) (*a*) and (*ii*) (*dd*) as amended provide that where the nature of the invention or the manner in which it is to be performed is not particularly described and ascertained in the complete specification or if the invention particularly described in the complete specification is not substantially the same as that which is described in the provisional specification the Controller may refuse to accept the application or require the application, specification or drawings to be amended.

To S. 5 (1) of the Act of 1911 a second proviso is added to the effect that where a complete specification is left after a provisional specification, the Controller may if the applicant so requests, cancel the provisional specification and direct that the application shall be deemed to have been made on the date on which the complete specification was left and proceed with the application accordingly.

A further amendment is introduced in s. 5 of the Act of 1911 in that the period of 12 months for accepting the application is extended to 18 months.

A new sec. 7 is substituted in place of the old s. 7 of the Act of 1911 and it provides for the use of the invention on acceptance of the application until the date of sealing the patent or the expiration of the time for sealing during which period the applicant shall have the like privileges and rights as if a patent for the invention had been sealed on the date of the acceptance of the application.

Provided that the applicant shall not be entitled to institute any proceedings for infringement until the patent has been sealed.

S. 9 of the Act of 1911 provides for the grounds upon which any person may at any time within four months oppose the grant of the patent. Four grounds are given.

This Act adds a fifth ground of opposition in s. 9 of the Act of 1911 namely where the complete specification describes or claims an invention other than that described in the provisional specification and such other invention has already been submitted for a patent by the opponent or has been made available to the public.

The time for sealing a patent under s. 10 (2) of the Act of 1911, is extended by the amending Act from eighteen months to twenty-four months.

S. 10 of the amending Act inserts a new section 13-A to the Act of 1911 for granting a single patent for cognate inventions and it provides that, where the applicant has put in two or more provisional specifications for inventions, which are cognate or modifications one of the other, and the Controller is of opinion that the whole of such inventions constitutes a single invention, he may allow one complete specification and grant a single patent.

S. 11 of the amending Act inserts a new clause (*o*) in sub-sec. (1) of s. 26 of the Act of 1911 to the effect that the revocation of a patent by petition to a High Court may be obtained on the ground amongst others specified therein that the invention claimed in the complete specification is not the same as that contained in the provisional specification and that the provisional specification was not new at the date when the complete specification was filed.

S. 12 of the amending Act inserts a new Sec. 38-A to the Act of 1911 providing that a patent shall not be held to be invalid on the ground that the complete specification claims a further or different invention to that contained in the provisional, if the invention claimed was novel at the date when the complete specification was put in and the applicant for the patent was the true and first inventor thereof.

S. 14 substitutes a new proviso in place of the old proviso in sub-sec. (3) of sec. 78-A of the Act of 1911 which enables a person who has applied for protection for any invention or design in the United Kingdom to apply for a patent under this Act under a convention of reciprocal arrangements.

The proviso in sub-sec. (3) of S. 78-A requires that the application for the grant of a patent which has to be made in the same manner as an ordinary application under the Act, shall be accompanied by a complete specification and if the application is not accepted within eighteen months from the date of the application for protection in the United Kingdom, the specification shall with the drawings be open to public inspection.

S. 15 of the amending Act makes consequential amendments in the Schedule of fees for applications accompanied by provisional or complete specifications.

10. The Mines Maternity Benefit (Amendment) Act, 1945.—This Act introduces certain amendments to the Mines Maternity

Benefit Act (XIX of 1941) prohibiting the employment of women below ground in mines when expected to be delivered of a child within ten weeks and providing for authorised absence on leave.

S. 2 amends s. 3 of the Act of 1941 by re-numbering s. 3 as s. 3 sub-sec. (1) and by adding a new sub-sec. (2) to s. 3.

This sub-sec. (2) of s. 3 provides that no owner or manager of a mine shall employ any woman below ground in a mine if he has reason to believe or if she has informed him that she is likely to be delivered of a child or if she has to the knowledge of the management been delivered of a child within the preceding twenty-six weeks.

For the next ten weeks following the twenty-six weeks after the delivery, such woman shall not be employed for more than four hours in a day unless a *creche* is provided at the mine or in any case for more than four hours at a time; provided however that if the child born is dead the restriction of four hours will not apply.

S. 3 amends s. 4 of the Act of 1941 by substituting three new sub-sections (2), (3) and (4) in place of the old sub-section (2).

The new sub-sec. (2) of s. 4 of the Act of 1941 provides that if any woman employed below ground in a mine gives notice to the manager that she expects to be delivered of a child within ten weeks, the manager may require the woman to be examined and permit her to absent herself from work upto the day of her delivery and such absence shall be treated as a period of authorised absence on leave.

Sub-sec. (3) provides that the examination of the woman if she so desires shall be carried out by a woman.

Sub-sec. (4) provides that the absence of the woman in the period during which she is entitled to maternity benefit shall be treated as authorised absence on leave.

S. 4 amends s. 5 of the Act of 1941 and provides for an increase in the daily rate of maternity benefit from eight annas to twelve annas generally and an enhanced rate of six rupees a week for a woman who has worked below ground for not less than 90 days in all during the six months preceding the time when she is debarred from further work below ground.

S. 6 amends s. 8 of the Act of 1941 by inserting a new sub-section (1A) to it providing that where a woman entitled to maternity benefit gives notice of her condition to the manager, then the manager shall within three days thereof pay to her maternity benefit for ten weeks in advance unless it is certified by a doctor that she is not pregnant or not likely to be delivered of a child within ten weeks.

11. The Aligarh Muslim University (Amendment) Act, 1945.—S. 16 of the Aligarh Muslim University Act (XL of 1920) provides that the officers of the University shall be the Chancellor, the Pro-Chancellor, the Vice-Chancellor and the Pro-Vice-Chancellor and such other officers as may be declared by the statutes to be officers of the University.

This amending Act abolishes the office of the Pro-Vice-Chancellor. By reason of this abolition consequential amendments are made in sections 21, 32 and 38 of the Act of 1920 by deletion of the word "Pro-Vice-Chancellor" and sections 20 and 41 are altogether deleted.

12. The Indian Finance Act, 1945.—This Act by s. 2 imposes for a further period of one year beginning on the 1st day of April 1945 the duty on salt manufactured in or imported by land into British India at the rate of one rupee and nine annas per standard maund.

S. 3 provides for the continuance for a further period of one year of the present inland postage rates except that in the case of parcels, the rate for every 40 tolas or fraction thereof exceeding the first 40 tolas is increased from four annas to six annas.

S. 4 provides for the continuance for another year of the additional customs duties on certain goods chargeable with a duty of customs imposed by s. 6 of the Indian Finance Act (XII of 1942) subject to the modification that the additional duty on spirits shall be one-half instead of one-fifth of the amount of the duty of customs specified in the First schedule to the Indian Tariff Act (XXXII of 1934) and that no such additional duty shall be levied or collected on tobacco comprised in items Nos. 24, 24 (1) to 24 (3) of the Schedule.

S. 5 provides for certain increases in the existing duty of customs on tobacco being items Nos. 24 to 24 (3) in the First Schedule to the Indian Tariff Act (XXXII of 1934).

S. 6 provides for certain changes in the excise duty on tobacco in item No. 9 in the first schedule to the Central Excises and Salt Act (I of 1944).

S. 7 read with the second schedule to this Act provides for the continuance for another year of the existing basic rates of income-tax and super-tax. It also specifies the amount of deduction that will be allowed in respect of earned income if any provision for such deduction is made in the Indian Income-tax Act (XI of 1922). It further provides for an increase of 3 pies per rupee in the surcharge on income-tax on slabs of income above Rs. 15,000 and on income taxable at the maximum rate.

S. 8 provides for the continuance of the excess profits tax at the rate of 66⅔ per cent.

Labour in India.

A HISTORICAL SURVEY OF THE GROWTH OF THE LABOUR PROBLEM.

India is and always has been a predominantly agricultural country and over 73 per cent. of her population is dependent on the soil for their principal means of livelihood. Agriculture by itself, however, does not always afford, either to the agriculturist or to the agricultural labourer, the wherewithal for keeping body and soul together. It is necessary, therefore, for both the smaller cultivators and the agricultural labourers to migrate frequently to the towns and cities in search of additional work in order to keep the wolf from the door; but, the migration is generally always of a temporary character, and the agriculturist's contact with his land is seldom, if ever, permanently broken.

Up to almost the end of the nineteenth century there was no State control over conditions of employment in any industry in India. Employers were free to do what they liked with the result that Indian labour was exploited to the fullest extent possible. Hours of labour were inordinately long, rates of wages unduly low and other conditions of employment as bad as they possibly could be. There was no regulation of the age at which children could be employed; there were no periodical or weekly holidays; and there was no legislation to safeguard factory workers from injury through accident caused by entanglement with unfenced machinery in motion. With the growth of factory organisation in India and the rapid development of her industries, the minds of certain men, notably the late Mr. Sorabjee Shapurjee Bengali, C.I.E., however, began to be awakened to the existence of evils which by the standards of to-day would be considered intolerable, and unceasing efforts at securing some improvement in conditions of work in factories resulted, notwithstanding strenuous and universal opposition at the time from all employers, in the passing of the first Indian Factories Act of 1881. This Act gave a limited measure of protection to children; firstly, by prohibiting their employment in factories if they were under seven years of age and also in two separate factories on the same day; secondly, by restricting their hours of employment to nine per day; and thirdly, by requiring that they should be granted four holidays in a month and also rest intervals in accordance with rules to be framed by local governments. The Act contained no restrictions in connection with the employment of adult labour but provision was made for the fencing of such parts of machinery as would be dangerous if left unfenced and for the reporting of accidents. Owing to an almost complete lack of adequate inspection, the 1881 Act became a dead letter in most provinces. Most factories worked from daybreak to sunset, Sundays were usually working days and, if they were holidays, they had to be used for cleaning. There were no proper intervals for rest or meals. Both women and children were worked for excessively long hours. Ventilation in most factories was extremely bad and sanitation left much to be desired.

A Factories Commission was appointed in 1890 and on the basis of its recommendations, a new Factories Act was passed in 1891. The qualification for registration was the employment of 50 workers as against 100 in the 1881 Act and local Governments were empowered to notify concerns employing as few as twenty. The main features of this Act were: (1) a compulsory rest interval of half an hour; (2) a weekly holiday; (3) non-employment of a child under nine and a 7-hour day for children between nine and fourteen; (4) a 11-hour day for women with a 1½-hour interval if they were required to work for the permissible maximum hours; and (5) restriction in the employment of women during 8 p.m. and 5 a.m.

Apart from the mass meetings of workmen which were organised in the eighties by humanitarian social reformers for the purpose of memorialising Government for improvement of conditions of work in factories, Indian factory labour was almost up to the beginning of the twentieth century, a silent and unorganised factor in the industrial organisation that was coming into being in India. Trade unionism was non-existent and there was no channel through which the Indian workman could ventilate his grievances and ask for their redress. The strike as a weapon of defence against oppressive conditions was almost unknown and such industrial disputes as did occur soon terminated in favour of the employer owing to the unfettered power which he enjoyed of replacing all men who downed tools with blackleg labour.

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in India which were destined, for the time being at any rate, to worsen conditions in Indian factories. The first was the introduction of electricity for purposes of factory lighting and the second was the widespread epidemic of plague. By 1900, the majority of the cotton textile mills in Bombay City and almost all the jute mills in Bengal were lit by electricity, and by the end of that year the ravages of the great epidemic of plague, which first broke out in Bombay City in 1896 and soon spread all over the country, resulted in the reduction of the labour force in most centres to a third to a half of its normal strength. The immediate effect of these two events was a considerable increase in working hours. Many of the larger textile mills resorted to day and night working and evidence is not wanting that some mills worked their operatives continuously for stretches of fifteen to twenty hours per day. In Bombay City there were actually auctions for labourers at street corners. The weaker of both the cotton and the jute mills, however, began to be alarmed at the competition from the mills which worked day and night and many of the millowners were not unwilling that Government should step in and prohibit night working altogether.

The ravages caused by the plague were, however, not entirely devoid of some good effects. The heavy mortality caused by it had thinned the ranks of agricultural workers; and the inequality between the demand for and the supply of labour naturally led to a marked improvement in agricultural wages. The beginning of the twentieth century hence saw the first awakenings of a sense of class consciousness among industrial workmen. They were less ready to submit to the old conditions; and wherever employers tried to force those conditions upon their workmen they were met by opposition. Early successes led to disputes of a more widespread and concerted character—disputes which resulted in a general all-round improvement in wages.

There was no further advance in factory legislation in India for twenty years after 1891. The period 1891-1911 was one of changing conditions and of investigation. It was also marked by intense industrial activity in the country. There was a rapid expansion in road and railway construction with a collateral activity in building, engineering and mining. The number of factories rose from 656 in 1892 to 2,403 in 1911 and the average daily number of persons employed in these factories increased from 316,816 to 791,944 over the same period. "The result of the scarcity of labour was to increase the interest of the employers in making conditions more attractive. The raising of wages was one step, the provision of houses was another .... Inside the factory less was done to make industrial labour attractive... It was an axiom with a number of employers that labour did not object to long hours in the factory, and that the actual hours of work were not considered excessive by those who worked."

Conditions of work in factories in India during the period were inquired into by the Freer Smith Committee which was appointed in 1906 and by the Factory Labour Commission which was appointed by the Home Government in 1907. The Commission endorsed the abuses and the evasions of the 1881 and 1891 Acts in connection with the employment of children and were unanimously of opinion that some limitation in hours of work was essential but the majority were opposed to any direct limitation. As far as women's hours were concerned, they proposed that the statutory maximum should be increased from 11 to 12. It is noteworthy that only one member (Dr. Nair) recommended a limitation in the hours of adult male workers to twelve per day and a continuation of the 11-hour day for women with less power to local Governments to grant exemptions. A new Factories' Bill was introduced in the Governor-General's Legislative Council in July, 1909. In drafting the Bill, the Government of India followed the proposals made by Dr. Nair rather than by the majority of the Commission. This Bill was passed into law in 1911.

The 1911 Act sought to make a beginning in the restriction of the hours of work of adult males by prescribing that men's hours in textile factories should not exceed twelve per day. The provisions of the 1891 Act in connection with women's hours were maintained but with the difference that the rest interval of an hour and a half prescribed for women who were made to work for the full permissible hours was reduced. This was done in order to limit the spreadover. Children's hours in textile factories were reduced to six per day and more stringent measures were provided for inspection and certification. A compulsory rest interval of half an hour in the middle of the day was provided for all operatives except for those employed in continuous process factories. A number of provisions was made for the health and safety of the operatives and several changes designed to make inspection more effective and to both prevent and punish breaches of the Act were incorporated; but, at the same time, wide powers were given to local Governments to grant exemptions. The 1911 Act was brought into force with effect from the 1st of July 1912.

THE ADVENT OF THE GREAT WAR AND ITS AFTERMATH.

Owing to the restriction on imports resulting from conditions prevailing during the World War of 1914-18, there was considerable expansion of Indian industries resulting in greater employment. The War provided an opportunity for Indian manufacturers to increase their production and their profits. Some industries made phenomenal profits and there was also considerable increase in the scope for employment of industrial labour. New factories began to spring up and many mushroom concerns came into existence. Labour, however, still remained very inarticulate and unorganized and it did not reap the benefits of the War to the same extent as industrialists, traders and manufacturers did. Although prices were soaring high, wages did not keep pace with prices and there was considerable discontent among labour. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents soared to heights which forced several local Governments to pass legislation to control them.

The successful emergence of the British Empire and its Allies from the War of 1914-18 opened up vistas of untold prosperity in the minds of the people of the victorious countries. Corporations, Companies and shareholders were flush with money—thirteen large jute mills in Bengal had paid dividends of 200 per cent. and over for the year 1918—and with the gradual closing down of plants which had been engaged in the manufacture of munitions of war, everybody was looking for new fields for investment. Big companies for the establishment of transport services, for the construction of new mills and factories and for the exploitation of mineral resources were floated. Hectic building activity was evident everywhere and this was naturally followed by heavy demands for all types and kinds of labour. The Utopian hopes which most men had built upon were, however, destined to evaporate into thin air sooner than the worst pessimists could have imagined. Two entirely unforeseen factors intervened to blast these hopes. The first was the worldwide epidemic of influenza which broke out in the year following the end of the War and which was responsible for a total death roll of over eight million persons in India alone. The second was that prices, instead of falling, rose more sharply than ever before—due, in a large measure, to the unprecedented depreciation in the currencies of most European countries.

The influenza epidemic had left large gaps in the ranks of available labour especially as the age groups between 20 and 40 had suffered most heavily. A situation very similar to that which followed the great plague of the 'nineties was created; but, on this occasion, there were no auctions of mill workers at street corners because as the result of a country wide expansion in transport services labour had become much more mobile. Notwithstanding this, higher rates of wages were demanded and were, in some cases, paid. Wages, in the more organised industries, however, lagged far behind the rapid rise in prices and real wages were not enough to maintain the pre-war standard of life of the workers. The beginning of the year 1919 therefore saw the outbreak of industrial strife on a scale previously unknown. Although sporadic strikes had occurred prior to and during the war, strikes on any organised scale upto then were rare and the employers were not giving anything away unless they were absolutely forced to do so. Prices, however, continued to rise and it was becoming extremely difficult for the workers to meet even their most necessary expenditure on the existing rates of wages.

The post-war boom was short-lived. Demobilisation and the closing of niunition factories swelled the ranks of the unemployed. Rising prices and inflation hamstringed the reorganisation of industry and stocks of all kinds of manufactured articles began to accumulate. Production had consequently to be eased off and the trail was laid not only for a reduction in hours of work but also for reforms of a world-wide and far-reaching character which were to be introduced in all countries as the result of the formation of the International Labour Organisation.

THE INFLUENCE OF THE INTERNATIONAL LABOUR ORGANISATION.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be "of special and urgent importance" but also brought into being the International Labour Organisation which was entrusted with the task of securing, as far as practicable, the observance of these principles. The duties of this organisation which was to be controlled by a Governing Body consisting of members representing Governments, employers and labour from all countries of chief industrial importance, and from other countries by rotation, were to collect all possible information regarding conditions of employment in all countries and to present reports of such enquiries to the International Labour Conference which was to meet periodically. Each subject was to be discussed at first at one and later at two sessions. After a first preliminary discussion, the views of various Member States were to be invited on tentative proposals. The International Labour Office would then re-examine these proposals in the light of the criticisms and opinions received and submit a final Report with a Draft Convention or Recommendation to the next Conference for a final discussion and decision. It was laid down that it would be obligatory on all Member States to introduce legislation in their respective countries to deal with matters covered by a Draft Convention but that it would be optional for a Member State to adopt a Recommendation.

The First Session of the International Labour Conference met at Washington on the 29th October 1919. India, as an original member of the League of Nations, was among the 39 countries represented. The Indian delegates were Sir Louis Kershaw and Sir Atul Chatterjee representing the Government of India, Sir Alexander Murray representing Indian employers and Mr. N. M. Joshi representing Indian labour. The Conference was asked to consider proposals relating to a number of subjects including the eight-hour day, unemployment, night work of women and young persons, employment of children, maternity benefits and industrial diseases. The Washington Conference adopted the Hours Convention, but as far as India was concerned, her delegates were able to impress the Conference that the adoption of an 8-hour day would be too revolutionary a change for the country and would never be accepted by Indian employers. The Conference therefore agreed to grant a special relaxation in the case of India and it was decided that a beginning should be made by the introduction of a 60-hour week in factories subject to the Indian Factories Act.

EVENTS LEADING UP TO THE PASSING OF THE FACTORIES ACT, 1922.

The winter of 1919-20 saw the recrudescence of industrial strife of a greater intensity than that of the year before. The principal cause again was the fact that cash wages were lagging far behind the continued rise in prices and that real wages were again falling. On this occasion, however, the workmen did not limit their demands to increases in wage rates alone and their leaders everywhere demanded both increases in wages and reductions in hours of work. Concerted strikes in the cotton mills of Bombay, Ahmedabad and Cawnpore resulted in the employers conceding a ten-hour day in addition to the granting of higher wages. In March 1920, the Millowners' Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in India from twelve to ten. The rapid sequence of events in favour of a ten-hour day broke the back of all opposition to reduced hours of work in Indian factories and an easy passage for the necessary legislation was assured.

Prior to 1920, there was little co-ordination between the Centre and the Provinces in matters connected with labour, and there were no provincial or All-India enquiries into wages or

onditions of employment in industrial establishments. Official effort at mediation in industrial disputes was practically unknown and the policy of Government in this matter was to keep the ring clear and to allow the parties to settle all disputes between themselves. The participation of India in International Conferences and the increasing interest taken by the Indian public in questions connected with labour made it necessary both for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions. The Government of India established a Labour Bureau in the year 1920 and the Governments of Bengal and Madras created special appointments of Commissioners of Labour in the same year. The Labour Bureau of the Government of India published a series of bulletins on certain phases of factory work but before its utility could be established the office was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by the late Lord Lloyd, then Governor of Bombay, who created a Labour Office for the Bombay Presidency in 1921. Further details in connection with this Office and other matters dealing with Government administration of labour subjects will be found in a separate chapter at the end of this section.

THE FACTORIES ACT OF 1922.

The law relating to factories was amended and consolidated by the Act of 1922. The main provisions of factory legislation as it now stood were as follows: (1) the qualification for registration was the employment of 20 persons—factories employing not less than ten workers could be notified; (2) non-employment of a child under 12, a 6-hour day for children between twelve and fifteen, a half-hour rest interval after four hours work and prohibition of the employment of a child in two factories on the same day; (3) restriction in the hours of work of adults to eleven per day and sixty per week; (4) prohibition of the employment of women between 7 p.m. and 5-30 a.m. except in the fish curing and canning industry; (5) compulsory rest intervals and a weekly holiday; and (6) measures for controlling excessive artificial humidification and for the health and safety of operatives. Exemptions on well defined principles were to be permitted. The Amending Acts of 1923, 1926 and 1931 effected minor improvements but the general principles remained unaltered until the Act was again overhauled in 1934.

NEW LABOUR LAWS.

Up to the end of the year 1922, the only important law relating to labour in India was that regulating the conditions of employment in factories. The influence of the International Labour Organisation was, however, soon felt and industrial strife was, moreover, on the increase. Little attempt had so far been made for the peaceful and amicable settlement of trade disputes. Such attempts as were made were hampered by the absence of reliable and accurate data regarding wages and conditions of employment. The Bombay Labour Office conducted an inquiry into wages in cotton textile mills in the Province of Bombay in 1921 and another inquiry into family budgets of industrial workers in Bombay City in the same year. It also set itself to compile a cost of living index for working classes in Bombay City. Acting on a private resolution adopted in the Provincial Legislative Council, the Government of Bombay appointed an Industrial Disputes Committee in 1922 under the chairmanship of Sir Stanley Reed, M.P., then Editor-in-Chief of the *Times of India*, "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of trade disputes." This Committee submitted a comprehensive report on the subject of industrial strife and made various recommendations for the prevention of disputes and their settlement when they arose. Among its main recommendations was one for the setting up of an Industrial Court. The Government of Bombay drew up a Bill on the subject and this was introduced in the local Legislative Council in the winter of 1923-24. This Bill was subsequently withdrawn on the Government of India formulating proposals for Central legislation on the subject; but it was not until 1929 that the Trade Disputes Act was placed on the Statute Book. Much headway had, however, been made in the meanwhile in the framing of new labour laws. Among the more important of these were the Workmen's Compensation Act and the Indian Mines Act which were passed in 1923 and the Indian Trade Unions Act which was passed in 1926.

EFFECTS OF THE POST-WAR DEPRESSION.

A period of acute depression set in in all industries towards the end of the year 1922. The cost of living index compiled by the Bombay Labour Office showed that prices had risen steadily for two years after the end of the war. The annual average of the monthly index numbers for the year 1920 (1914=100) was 183; for 1921 this average fell to 173 and for 1922 to 164. For the next five years the index numbers varied between 150 and 161. The enquiry into cotton mill wages showed that the real wages of cotton mill workers in Ahmedabad were thirty-three per cent. higher in 1921 than in 1914. The Ahmedabad Millowners' Association, thereupon, made the first organised post-war move in India for wholesale reductions in wages. A cut of 20 per cent. was announced with effect from 1st April 1923. The strike of the Ahmedabad cotton mill workers which followed was by far the largest and the most disastrous that had ever occurred in that city. It involved nearly 45,000 workpeople and resulted in a total time loss of nearly two and a half million man-days. A compromise was eventually arrived at by the terms of which wages were to be reduced by 15½ per cent. instead of by 20 per cent. Labour received a rude shock and it was felt that the turning of the tide had set in.

Cotton textile millowners in Bombay had met demands for higher wages between 1917 and 1920 partly by the grant of dearness of food allowances and partly by the payment of an annual bonus of one month's pay dependent on profits. In 1924, the Millowners' Association, Bombay, decided that the profits for 1923 would not justify the payment of the bonus. The workers of all mills in the city struck work. The Government of Bombay appointed a Committee of Enquiry under the Chairmanship of Sir Norman Macleod, Chief Justice of the Bombay High Court. The Committee's report was entirely against the workers. The Bonus Dispute Strike in Bombay in 1924 was by far the worst that had ever occurred in the country until that year and resulted in a time loss of nearly eight million working days.

The depression which set in in 1922 continued for several years. In the year 1925, however, the Government of India came to the rescue of the Cotton Textile Industry and the workers employed in it by abolishing the excise duty of 3½ per cent., which had been levied on cotton manufactures in India for many years past. In that year, millowners in Bombay announced a cut of 12½ per cent. in wages. This announcement was followed by a general strike which lasted for over two months and which resulted in a time loss of nearly eleven million working days. Both sides were adamant but the Millowners had given an undertaking to Government to drop the proposal for a wage cut if the excise duty was abolished. The strike, therefore, ended as soon as the Viceroy's Special Ordinance announcing the suspension of the excise duty was published at the end of November 1925. This strike "was a great victory for the workers and showed that, in spite of their illiteracy and inadequate organisation, they were able to take concerted action and to offer a stubborn resistance against any attack on their wages."

As compared with the period which has just been reviewed, the years 1926 and 1927 were of relative calm and peace in Indian industries. The time lost through industrial disputes during these two years amounted to just a little over three million man-days as against a loss of five millions in 1923, 8·7 millions in 1924 and 12·6 millions in 1925.

The year 1928 witnessed the outbreak of industrial strife of an intensity which has been unknown in India at any time before or after that year. Two causes were directly responsible for this. The Indian Tariff Board (Cotton Textile Industry) constituted by the Government of India in 1926 had made a number of recommendations aiming at a more efficient conduct and management of cotton textile mills in India. A group of these recommendations concerned the introduction, by the mills, of "rationalised" methods of work by which is meant the asking of workers to mind more machines. The second was the formation of the Workers' and Peasants' Party the members of which secured appointments on the executives of many trade unions in the country. The industrial strike was the chief weapon in their armoury. Following the recommendations of the Tariff Board, Messrs. E. D. Sassoon & Co., Ltd., who at that time owned eleven large cotton mills in the City of Bombay, introduced certain measures of rationalisation in their Manchester Mills. This was at once met by a prolonged strike in that mill. Early in the year 1928, a few other groups of mills announced their intention of securing greater efficiency. This was the opportunity which the Communists were waiting for and they took it by the forelock. The strike of cotton textile mill operatives of 1928 in Bombay City was the most disastrous that had yet taken place in India. All the mills in the City were affected and there was complete stoppage of work for over six months. The time loss to the industry amounted to twenty-two and a half million man-days. Both parties put up different sets of demands. The millowners proposed a cut of 7½ per cent. in the wages of weavers and drew up a set of standing orders for the enforcement of discipline. A Joint Strike Committee prepared a list of Seventeen Demands. Various discussions were held but to no avail. Finally, the Joint Strike Committee agreed to call off the strike on Government assuring the parties that they would appoint an impartial Committee to inquire into and report on all the points in dispute. The Report of this Committee was more favourable to the workers than to the employers and it still continues to be one of the standard works of reference on conditions of employment in cotton textile mills in Bombay City. Other important strikes during the year 1928 occurred in the Tata Iron and Steel Company's Works at Jamshedpur, on the East Indian and South Indian Railways, in the Fort Gloster Jute Mills and in the textile mills at Sholapur and Cawnpore. The statistics in connexion with all the industrial disputes in India in the year 1928 are as follows: Number of disputes—203; Number of workers involved—506,850; Total time loss—31,647,404 man-days.

APPOINTMENT OF THE ROYAL COMMISSION ON INDIAN LABOUR.

Seven years' administration of the labour laws enacted during the years 1922-23 had brought several defects to light. Moreover, it was felt that, as compared with similar legislation in other countries, much of the labour legislation which had been enacted in India was of a very halting character and that it did not go far enough. Labour leaders who had attended several sessions of the International Labour Conference started intensive agitation in the country for both reform and expansion of existing laws. These demands coupled with the great industrial unrest prevalent in India at the time made a complete survey by an impartial body inevitable and in the middle of the year 1929 the Government of India announced the appointment, by His Majesty the King Emperor, of a Royal Commission on Indian Labour "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India; on the health, efficiency and standard of living of the workers; and on the relations between the employers and the employed; and to make recommendations." The late Rt. Hon. J. H. Whitley was appointed Chairman. The other members of the

Commission were the Rt. Hon. Shrinivasa Sastri, P.C.; Sir Alexander Murray, Kt., C.B.E.; the late Sir Ibrahim Rahimtoola, G.B.E., K.C.S.I., C.I.E.; Sir Victor Sassoon, Baronet; Sir Andrew Clow, K.C.S.I., K.C.I.E., I.C.S.; Dewan Chaman Lal, M.L.A.; Miss Beryl M. Le Poer Power, Deputy Chief Inspector, Trade Boards, England and Messrs. N. M. Joshi, M.L.A.; Kabeeruddin Ahmed, M.L.A.; G. D. Birla, M.L.A.; and John Cliff, Assistant General Secretary, Transport and General Workers' Union, England. The Report of the Whitley Commission which was published in June 1931 is a document of first-rate importance dealing with almost every aspect of the labour problem in India and it contains many hundreds of recommendations covering a very wide field of subjects.

Most of the Royal Commission's recommendations with regard to the expansion of the scope and the improvement of the existing Acts relating to conditions and hours of work in factories and mines, workmen's compensation and to the control and supervision of the labour which migrates from India to the tea and other plantations in Assam have already been implemented by amending or consolidating Acts. Acts amending the Trade Disputes Act in a minor particular and placing it permanently (the original Act had been passed for a period of five years) on the Statute Book were passed in 1932 and 1934. The Employers' and Workmen's (Disputes) Act which had been passed as early as 1860 for the speedy determination of disputes relating to wages of certain classes of workers employed on the construction of railways, canals and other public works and which had been almost a dead-letter was repealed in 1932. Acts to prevent the pledging of children and to facilitate the acquisition of land for industrial housing were passed in 1933. Legislation on the lines of the British Truck Acts to control the deductions which employers may make from wages in respect of fines and to provide for the early payment of wages was passed early in 1936. Many other recommendations of the Royal Commission were forwarded by the Government of India to the Provincial Governments for examination and opinion; in some cases Bills were actually drawn up. In view, however, of the impending transfer of power to popular Governments in the Provinces and the many practical difficulties that stood in the way of giving legislative effect to the proposals, it was probably considered that the force of public opinion in India as expressed in the legislatures of the various Provinces should be allowed to determine the question as to whether legislation should be enacted or not in particular cases.

SUBVERSIVE LABOUR PROPAGANDA.

We have already referred to the infiltration of extremist elements into the trade union movement in India and to the manner in which the Communists brought many industries in the country to an almost complete standstill during the year 1928. The year 1929 saw the outbreak of extensive rioting and lawlessness in Bombay City which lasted for several weeks. A Committee appointed by Government to inquire into the cause of these riots found that they were due to the inflammatory speeches made by extreme left wing labour leaders. In February all the leaders among the ranks of the Communists were arrested and sent to Meerut for trial. This trial lasted for many months and resulted in the conviction of the vast majority of the accused to varying terms of imprisonment. Although the leaders among Indian Communists were out of the way, their henchmen were not. When a dispute arose in the Spring Mill in Bombay over the question of the dismissal of one solitary worker, this was made a *casus belli* for the declaration of another general strike in the cotton textile industry in Bombay City. This strike which lasted from the 16th April to the 18th September involved 109,232 workers in 62 mills and resulted in a time loss of nearly seven million working days. The Government of Bombay appointed a Court of Inquiry under the new Trade Disputes Act with Mr. Justice Pearson as its Chairman. The Court came to the conclusion that all the blame in connexion with this strike rested with the Bombay Girni Kamgar Union.

We may, in order to complete the chronicle of the important events of the year 1929, refer briefly here to the split brought about in the Trade Union Congress. Voting in the Annual Sessions of the Congress was on the basis of the membership of the affiliated Unions. As a result of the affiliation of certain communist organizations, the Communists had secured a majority vote at the Tenth Session of the Congress held at Nagpur in that year. Resolutions were accordingly passed for the boycott of the Royal Commission on Indian Labour and the International Labour Conference, for the affiliation of the Congress to the League against Imperialism and for the appointment of the Workers' Welfare League a communist organization in England, as agents of the Congress in Great Britain. This led to the breakaway of the moderate elements in the Congress who set up a new central trade union organization under the name of The India Trades Union Federation.

Another important event which occurred in the world of Indian Labour during the year 1929 was the strike of the employees of the B.B. & C.I. Railway's Loco. and Carriage Workshops at Dohad. The railway administration had transferred a number of operatives from their old workshops in Bombay to the new workshop which they had built at Dohad and had given them certain allowances on reduced rates of pay. The men demanded a continuation of the old rates plus Dohad allowances and failing a restoration of these cut they struck work. After the strike had proceeded for some weeks, the Government of India appointed a Board of Conciliation under the Trade Disputes Act and this Board upheld the workmen's claims. Mention should also be made of the initiative taken by the Government of Bombay in that year by passing the first piece of provincial labour legislation—The Bombay Maternity Benefits Act.

Statistics of industrial disputes in India have been maintained only since the year 192 The tremendous dislocation which the subversi propaganda carried on by the communist el ments in the trade union movement was respo sible for in Indian industries during the two ye

1928 and 1929 can best be judged by the fact that the industrial strife of these two years alone was responsible for a total time loss of 43·8 million man-days as against the loss of 40·4 million man-days in the seven years from 1921 to 1927 and the loss of 16·9 million man-days in the seven years from 1930 to 1936. After the struggle of 1928-29 labour was thoroughly beaten and trade unionism, except in Ahmedabad, was somewhat discredited. Except for strikes of a comparatively minor character which were organised by the communists in centres and industries which had not been affected in 1928 and 1929, there were no general strikes of any particular magnitude in any centre of industry for the next four years.

No event of any particular significance occurred in the world of Indian Labour during the three years between 1930 and 1933. Both Capital and Labour sent their representatives annually to the International Labour Conferences held at Geneva. The Conventions and the Recommendations adopted at these Conferences and the recommendations made by the Royal Commission on Indian Labour were subjected to careful scrutiny and examination by the Central and the Provincial Governments in close consultation with the associations of the employers and the employed. After the bitter struggles of 1928 and 1929 employers were not only anxious to allow sleeping dogs to lie as far as wages were concerned but many of them, in anticipation of the legislation which they knew was coming, endeavoured to improve conditions of employment wherever possible. The cost of living was falling: real wages, expressed in terms of purchasing power, were rising. The beginning of the year 1933, however, saw the intensification of a depression which had set in about the year 1929. With the continued fall in prices, the purchasing power of the agriculturist had worsened and, as a consequence, stocks of manufactured articles on the hands of the industrialists were accumulating in spite of the introduction of 'rational' methods of work in some Bombay mills. Profit and loss accounts were showing adverse balances.

WAGE REDUCTIONS.

The first attempt at reduction of wages in organized industry was made in cotton textile mills in Bombay. The Millowners' Association, Bombay, gave a free hand to its Member Mills in the matter. Many mills closed down for a few months and reopened with offers of reduced rates of wages. There was little night working and there was a considerable volume of unemployment. Workers had no option but to accept employment on the reduced rates. Other mills taking advantage of the situation, effected reductions either in basic rates or in the dearness allowances or imposed percentage cuts on earnings. Not satisfied with one cut some mills imposed another within the short space of a few months. Employers in many other industries all over India also began to reduce wages. There was little or no opposition from Labour but many prominent labour leaders began to be alarmed at the turn things were taking. Many representations and memorials were submitted to Government but no Provincial Government, except Bombay, took any action in the matter. In March 1934, the Government of Bombay instructed its Labour Office to institute a Departmental Inquiry into the extent to which wages had been reduced during the year 1933-34 in the various centres of the cotton textile industry in the Province and also to ascertain the extent of unemployment prevailing in the industry. Bombay and Sholapur were again the scenes of prolonged strikes in most cotton mills in these centres. The Report of the Departmental Inquiry was published on 21st June 1934 and the strike in the Bombay mills was called off simultaneously. The results of the Inquiry showed that, as compared with the general levels of 1926, wages in 1934 were five per cent. higher in Ahmedabad and twenty-one and seventeen per cent. lower in Bombay and Sholapur respectively. Notwithstanding the cuts that had been effected, real wages in 1934 were fifty-four, eleven and fifteen per cent. higher in Ahmedabad, Bombay and Sholapur respectively as compared with 1926.

The publication of the report of the Departmental Enquiry was followed by the Millowners' Association, Bombay, adopting a simple scheme of standard minimum rates for unrationalised occupations on time rates of wages for affiliated mills in Bombay City. They also agreed, in cases where the dearness allowance for weavers had fallen to less than 40 per cent. to raise this allowance to that figure after the coming into effect of the 54-hour week on the 1st January 1935.

Towards the end of the year 1933, the Ahmedabad Millowners' Association, attempting to profit as a result of the successful experience of the Bombay Mills in the matter, decided to reduce wages in the cotton mills in Ahmedabad by 25 per cent. and an agreement was concluded early in January 1935 on the basis of a uniform cut of 6¼ per cent. subject to the proviso that the earnings of a two loom weaver should not be reduced below Rs. 41-4-0 for 26 working days.

By far the most important result of the report of the Bombay Departmental Enquiry was the passing by the Government of Bombay of a Trade Disputes Conciliation Act in August 1934. This Act made provision (1) for the appointment of a Labour Officer to look after the interests of cotton mill workers in Bombay City, to represent their individual grievances to their employers and to secure redress of such grievances whenever and wherever possible; and (2) for the appointment of the Commissioner of Labour as an *ex-officio* Chief Conciliator to whom the Labour Officer could bring all cases in which he could not succeed. Although the functions of the Chief Conciliator were to bring about an agreement between two opposing parties, he came to be regarded almost as an industrial judge whose decision was mostly accepted by both the parties to a dispute. This Act was superseded with effect from the 1st August 1939, when the Bombay Industrial Disputes Act, 1938, which we describe lower down, was brought into operation for the cotton textile industry in the Province of Bombay. During the period of nearly four years for which the 1934 Act had been in operation considerable results were achieved

and there was much less industrial strife in the cotton mill industry in Bombay City than there had been prior to that year.

WAGE DATA.

The only Province which has so far instituted any inquiries into wages and conditions of employment in industrial establishments in India was Bombay where the Labour Office had conducted three enquiries into the wages and hours of work of cotton mill workers in the Bombay Presidency for selected months in the years 1921, 1923 and 1926. Other wages enquiries of a limited character covered municipal workers, peons in Bombay City and workers in a few selected printing presses in Bombay City. None of the other industries, especially the engineering, had been touched. No other province in India had attempted an enquiry into industrial wages and such information as was available on the subject consisted of a few figures of wage rates in some important occupations in selected units which were contained in some of the annual provincial administration reports on the working of the Indian Factories Act. The Royal Commission on Indian Labour, throughout their Report, had deplored the absence of reliable and accurate data regarding wages for Provinces other than Bombay; they had, moreover, made certain recommendations regarding the fixation of minimum rates of wages in industries where wages were low, but they had suggested that before any legislation on the subject was devised general surveys of wage rates and earnings should be conducted in all Provinces. Both for this and for the reason that no information regarding wages in the Province of Bombay was available for industries other than the cotton textile, the Government of Bombay instructed their Labour Office to make a survey of wages and conditions in factory industries —the first part to cover all perennial factories and the second seasonal factories. This census covered nearly 1,250 factories in over 25 different industries spread over nearly 100 towns and villages in the Province of Bombay. The first of the series of the General Wage Census reports covering the engineering trade was published in December 1935, the second covering the printing industry was published early in March 1936, the third covering all the textile industries (cotton, silk, wool and hosiery) in the Bombay Presidency was published early in May 1937; and the fourth covering the Oils, Paints and Soap; the Match manufacturing and fourteen other miscellaneous industries was published in May 1939. The Report with regard to wages and conditions of employment in the seasonal factories was published in 1936. These reports, in so far as they relate to basic rates of wages and conditions of employment, contain a fund of most valuable information and they should be of the greatest possible value to both employers and the employed, to Government administrations, to economists and to the public generally.

Reference has been made in another section to the appointment of a Labour Investigation Committee by the Government of India. As this was a far-reaching committee and one of its important terms of reference was an enquiry into the wages and earnings of workers employed in industries, the Committee during their investigations made intensive enquiries into this subject. For some of the industries, *e.g.*, Cotton, Jute, Cement, Paper, Matches, Coal-mines, etc., they conducted wage censuses on a sample basis. All these data have been incorporated in the Reports issued by members of the Committee. For the first time, therefore, now we have more or less a complete picture of wages and earnings in the principal industries in India.

LABOUR UNDER PROVINCIAL AUTONOMY.

With the advent of the new reforms under the Government of India Act, 1935, full provincial autonomy was established in all Provinces in India with effect from the 1st April 1937. The Indian National Congress contested most and won the majority of the seats for the Legislative Assemblies in the Provinces of Madras, Bombay, the United Provinces, Bihar, the Central Provinces and Orissa. The Labour Policy of the Indian National Congress, as set out in its election manifesto is "to secure to the industrial workers a decent standard of living, hours of work and conditions of labour in conformity, as far as the economic conditions in the country permit, with international standards; suitable machinery for the settlement of disputes between employers and workmen; protection against the economic consequences of old age, sickness and unemployment; and the right of workers to form unions and to strive for the protection of their interests." The earlier resolution of Congress on fundamental rights, generally states in addition, that "the State shall safeguard the interests of industrial workers" and makes special reference to women workers and children. Congress Ministries, for reasons set out elsewhere in this volume, accepted office in July 1937 but resigned in all Provinces in November 1939. Whilst the Congress was in power its Labour Policy was amplified by responsible Ministers in various Provinces either by the issue of Press Notices or by statements made in public speeches. The most comprehensive statement with regard to this policy was contained in a press note issued by the Government of Bombay in August 1937 from which certain of the more important passages were reproduced at pages 521 and 522 of the 1940-41 Edition of this publication.

In Bengal, where a popular Ministry was formed with representatives from the Progressive Muslim League, the Independent Hindu and the Independent Muslim parties, the policy of the Government with regard to labour was contained in a statement made by the Honourable Minister in charge of the Department of Commerce and Labour to representatives of the Press in September 1937. He stated that some of the important items which the Government of Bengal were considering for the amelioration of labour were the establishment of industrial tribunals, employment exchanges, decasualisation of labour, schemes for health insurance, adequate housing, regulation of employment in shops, conciliation of debts, penalising of illegal gratification and the institution of enquiries into conditions of living by means of collecting family

budgets with a view to ascertaining whether it would be possible to introduce minimum wage fixing machinery and schemes of unemployment insurance.

The Governments of Bombay, Bihar, the Central Provinces and Berar and the United Provinces appointed Committees of Inquiry to examine existing levels of wages and conditions of employment, and to make recommendations. In Bombay and in the C.P. these enquiries were to relate to labour employed in cotton textile mills. In the United Provinces and in Bihar, labour in all industries was covered. The Government of Madras, following a prolonged strike of cotton mill workers in Coimbatore, appointed a Court of Inquiry under the Indian Trade Disputes Act. Fortunately for labour all these various enquiries were conducted during a period when the textile industries in India were, after a fairly prolonged period of depression, showing signs of revival owing mainly to the Sino-Japanese war. The margins between costs of production and selling prices had widened to the advantage of industry and it was consequently possible for employers to accept the recommendations made by various Committees and Courts of Inquiry and Boards of Conciliation for increases in wages and for certain improvements in conditions of work. These acceptances were, however, not made by employers entirely of their own free will. In some cases the Governments concerned issued resolutions and notifications accepting such of the recommendations made by the Committees which they concurred in and recommending their adoption by the employers.

During the year 1938 the Government of Bombay put through the Bombay Legislative Assembly their Bombay Industrial Disputes Act. They also issued to the various interests concerned for opinion draft proposals for the conditions to be fulfilled for the recognition by employers of unions of their workers; for the grant of holidays with pay during periods of sickness; and for the regulation of hours of work, rest periods and the grant of holidays in commercial offices, shops, hotels, theatres, cinemas, etc. As far as the last is concerned, the Bombay Shops and Establishments Act was passed on the 31st October 1939.

There was a spate of activity for legislative measures for the amelioration of labour conditions in other provinces as well. Both the United Provinces and Bengal enacted legislation during the year 1938 for the payment of maternity benefits and the Sind Legislative Assembly passed an Act in June 1939 to amend the Bombay Maternity Benefit Act, 1929, in its application to the Province of Sind. In the Central Provinces and Berar Bills were drawn up for (1) the collection of statistics; (2) for amending the Indian Factories Act, 1934, to provide for the registration of all factories and for the payment of registration fees in a manner to be prescribed by Government; and (3) to make provision for relief or benefits to workers in industrial occupations who are rendered unemployed and consequently destitute. The first has been passed into law. The second was enacted in 1939 and brought into force with effect from 1st April 1940. Scales of registration fees depending upon the maximum number of persons employed in any one day in the year have been prescribed. The Governments of Bengal, Punjab and Sind have adopted legislation for the control of hours of work in shops and commercial establishments. The Punjab Trade Employees Act was enforced in Punjab with effect from 1st March 1941, the Bengal Shops and Establishments Act was brought into effect from the 1st April 1941 and the Sind Act was brought into force from the 20th November 1941. The Government of the United Provinces published, on the 21st October 1939, the draft of a Bill to regulate the hours of employment and certain conditions of employment in shops and commercial establishments. The Government of Assam had drafted a Bill for the freedom of movement of tea garden labourers in that Province but this was subsequently withdrawn. The Government of the United Provinces introduced a Trade Disputes Bill in the Provincial Legislative Assembly but withdrew it later on with a view to the introduction of a fresh Bill on the lines of the Bombay Industrial Disputes Act, 1938. Private members' Bills introduced in the different Provincial Legislative Assemblies during the period immediately under review covered minimum wage fixing machinery and further regulation of conditions in unregulated factories in the Central Provinces and for the compulsory recognition by employers of unions of their workers in Bombay, Madras and in the United Provinces. As far as Madras is concerned, the Minister for Labour was successful as a result of his personal efforts in the matter, to secure recognition by the employers of all unions which had been registered under the Indian Trade Unions Act.

The tempo of industrial strife in India which had shown a marked slowing down for seven years after the catastrophic strikes of 1928 and 1929 began to show a rapid quickening after the advent of Provincial Autonomy. Both Labour and its leaders believed that popular Governments in the Provinces would do all they could to improve the standard of life and the conditions of employment of the workers and they thought that the only method by which they could bring their grievances to the notice of the authorities was through the medium of the "strike". During the middle and the late 'twenties, the most striking feature of the struggle between Capital and Labour was its protracted intensity. The chief characteristic of this struggle during the three years beginning with that in which Congress Ministries took office was its frequency. This is verified by the fact that the number of disputes which occurred during the three years from 1937 to 1939 amounted to as many as 1,184 as against a total number of 1,039 disputes which occurred during the seven years from 1930 to 1936. The actual numbers of disputes in 1938 and 1939 were 399 and 406 respectively as against 203 in 1928 and 141 in 1929. Although the disputes of the latter period were not so intense as those of 1928 and 1929 when 43·8 million man-days were lost to Indian industry, these 1,184 disputes were, however, responsible for the loss of as many as 28·2 million man-days.

Whereas the strikes of 1937 and 1938 may have brought about a large amount of beneficial concessions to Labour, they were also

responsible, in a large measure to the passing by a popular Congress Government of the Bombay Industrial Disputes Act, 1938, by virtue of which all strikes are prohibited in the industries to which the Act is applied unless the formalities laid down by the Act have been observed.

It will have been noticed that we have, in this brief historical survey, laid particular emphasis on the course of industrial strife in India. This has been done deliberately because the problem of industrial relations and its adequate solution is the most outstanding of all the problems which confronts Indian industry today. In this connection it is of interest to observe that a Conference of the Prime Ministers of all the Provinces in India which was held in Poona in August 1939 decided on uniformity in Trade Disputes legislation and on the establishment of Industrial Courts in all the Provinces.

Among the more important events that occurred in the world of Indian Labour during the years 1937 to 1939 must be mentioned the visit paid by Mr. Harold Butler, Director of the International Labour Office, to India, Ceylon, Malaya and the Netherland Indies during the winter of 1937-38. Mr. Butler has recorded the impressions gained as a result of his tours in an exceedingly well written and interesting report entitled "Problems of Industry in the East"—International Labour Office, Geneva, 1938, Studies and Reports, Series B (Economic Conditions) No. 29, which should be read by everybody interested in Labour.

LABOUR COMMITTEES APPOINTED BY CONGRESS GOVERNMENTS.

In a preceding paragraph we made a reference to the Committees of Inquiry appointed by the Governments of Bombay, the United Provinces, Bihar and the Central Provinces to examine the existing levels of wages and conditions of employment in the cotton textile industry (in Bombay and in the Central Provinces) and in all industries (in Bihar and in the U.P.). The events leading up to the appointment of these Committees, their terms of reference and the more important of the recommendations made by them have been given in some detail at pages 531 to 535 of the 1941-42 Edition of this publication and it is not therefore necessary to reproduce the same here. We, however, give below a few salient facts regarding these Committees for purposes of ready reference.

The Bombay Textile Labour Inquiry Committee :—This Committee was appointed in October 1937. Chairman—Mr. Jairamdas Doulatram; Members—Messrs. Vaikunth L. Mehta, D. R. Gadgil and S. A. Brelvi; Associate Members—Sir Sorabji Saklatvala and Mr. Sakarlal Balabhai representing employers and Messrs. Khandubhai K. Desai and R. A. Khedgikar representing workers' interests; Secretary—Mr. S. R. Deshpande, M.B.E., Assistant Commissioner of Labour. The Committee published an Interim Report in February, 1938. This Report mainly recommended an immediate increase of about 12½ per cent. in the wages of all cotton mill operatives in the Province of Bombay. Government published the Report with a Resolution stating that the Committee's recommendations were entitled to the weight and authority of an award of a Court of Arbitration and as such should be accepted both by employers and labour. All cotton mills in the Province accordingly gave the recommended increases in wages with effect from February 1938. This increase has come to be regarded as the "Congress *Inam*". The Committee dispersed for some time after completing its Interim Report. Mr. Doulatram, the Chairman, fell ill and Mr. Deshpande, the Secretary, proceeded on leave. Government, thereupon, appointed the Honourable Mr. Justice H. V. Divatia, Chairman and Mr. N. A. Mehrban, M.B.E., F.S.S., Secretary. The reconstituted Committee commenced its work in Bombay in November 1938 and submitted its Final Report to Government in July 1940. This was published in June 1941. It is a document of over 500 pages containing 485 conclusions and recommendations and is priced at Rs. 1-5-0 per copy.

Cawnpore Labour Inquiry Committee :—Immediately after the advent of the Reforms, Cawnpore was a storm centre of conflict between Capital and Labour. In July 1937 industrial strife culminated in a complete stoppage of work in almost all cotton textile mills in the City and several units in many other industries were also affected. A settlement of the strife was reached in August by virtue of one of the terms of which the Government of the United Provinces agreed to appoint a Committee to examine and report on the conditions of life and work of labourers employed in factories in Cawnpore. Chairman—Sriyut Rajendra Prasad Saheb; Members—Mr. B. Shiva Rao and Professor S. K. Rudra. The Committee's Report covering a wide field of subjects and including a host of recommendations closely following those made by the Bombay Committee was submitted to and published by the Government of the United Provinces in April 1938.

The Central Provinces Textile Labour Inquiry Committee :—The Government of the Central Provinces and Berar appointed a Committee under the Chairmanship of Mr. N. J. Roughton, I.C.S., Financial Commissioner, in February 1938 to examine and report on the wages question of the workers in the cotton textile mills in the Province. The terms of reference of this Committee were, however, restricted to an examination of the Interim Report of the Bombay Committee with a view to assessing the extent to which the recommendations contained in the Report could be applied to mills in the Province. Members—Messrs. A. C. Sen Gupta, V. L. Kalappa, M.L.A., and C. C. Desai, I.C.S.; Technical Advisers—Messrs. S. H. Ratliwalla and R. Ruikar. The Report of this Committee was published in May 1938. Its main recommendation was the restoration, by the employer of 60 per cent. of the wage cuts effected in the period 1933 to 1937. This was given effect immediately by the employers and was accepted by the workers.

The Bihar Labour Inquiry Committee :—The Committee was appointed in March 1938 to inquire into the conditions of labour in industries in the Province and to make recommendations for their improvement. Chairman—Mr. Rajendra Prasad; Deputy Chairman—Mr. R. Bakhale; Members—Professors Abdul Bari a

S. K. Saran, Dr. R. K. Mukerjee, and Messrs. M. P. Gandhi, Jagat Narain Lal, H. P. Chandra and G. M. Hayman. This Committee's Report which runs into nearly 300 pages and contains over 150 recommendations was submitted to Government in June 1940 and was published in August during the same year.

With the exception of the Central Provinces and the Bihar Reports, the Reports of the two other Committees dealt with above were submitted to Government after the resignation of the Congress Governments by whom they were appointed. The more important of the recommendations made by these Committees cover a wide field of social legislation which can only be put through by popular Governments and which cannot be made the subject-matter of Governor's Acts. All the Governments concerned have, however, taken administrative action in connexion with such of the recommendations as could be given effect to either by the issue of departmental orders or by circulation to the interests concerned. Quite a number of the recommendations made by all these Committees have been taken up for consideration by the Central Government in consultation with Conferences of Labour Ministers with a view to the passing of uniform Central legislation applicable to all Provinces. The questions so far discussed and those on which action has been initiated will be dealt with under the heading of " Conferences of Labour Ministers."

We shall deal with the more important matters which have happened in the world of Indian Labour since the outbreak of the present War in the next chapter.

SECOND WORLD WAR—ITS EFFECTS AND REPERCUSSIONS.

In the previous Chapter we referred to the effects which the World War of 1914-18 had on the growth and development of the labour problem in this country. That War found labour in India inarticulate, spasmodic and unorganised. The Factories Act of 1911 was practically the only piece of labour legislation on the Statute Book. The " strike " as a method of securing the redress of grievances was practically unknown. We have already given the milestones in the progress of labour legislation and organization in the previous Chapter. In this Chapter we review the principal events that have occurred in the world of Indian Labour since the outbreak of the Second World War in in August 1939.

Immediately prior to the outbreak of the Second World War, the main Indian industries—especially the Textiles—were beginning to feel the effects of a slump. Night shifts were closing down and the Mill-owners' Associations of Bombay and Ahmedabad were engaged in a nation-wide campaign to resort to organised short time working. Industrialists all over India were again considering ways and means of reducing costs of production. The outbreak of War, however, stemmed the tide. There was a big world-wide demand for jute textiles in consequence of the widespread use of sandbags for the protection of public and other buildings against the effects of aerial bombardment. Cotton textiles and especially cotton yarns were finding more expanded markets outside the country. Night shift working was again resorted to in an increasing measure. The engineering and allied trades whose prosperity is closely linked up with that of the textiles began to look up. There was a wide expansion in many other industries consequent on the placing in India, by the Home Government, of large orders for war supplies.

When Japan started rattling the sabre towards the end of 1940 and throughout the year 1941 it became evident that India would not only have to be turned into the arsenal of the East in the same way as the United States of America had become the arsenal of the West but that she would also have to build up an army of considerable size of her own. This army had to be clothed, fed and supplied with all the modern equipment of war. A Central Department of Supply was formed with the Government of India and Provincial Branches were established. Huge orders for the supply of cloth and all kinds of other articles were placed with mills and factories. A number of large workshops were commandeered for the manufacture of shells and ammunition. Shipbuilding yards and mammoth plants for the assembly of motor vehicles and aeroplanes were established. Night work became almost universal and there was a nation-wide expansion of employment. We may here review briefly the period 1939-45 from the point of view, generally of the effect of war conditions on Indian labour. An outstanding feature is that during these years India, for the first time, reached more or less the ideal of full employment when both manual and clerical labour found it easy to get a job. The full employment was largely the consequence of expansion of industries, military recruitment, requirements of auxiliary services, military construction, etc.

The year 1942 witnessed in the principal cities of India evacuations of large cities on an unprecedented scale owing to the panic created by the apprehension of bombardments. This, for the time being, caused tremendous dislocation of industry.

The war period, notably the period from 1942-45 has witnessed stoppages and unavailability of different types of supplies and this has affected the community and labour in diverse directions. For instance, owing to the acute shortage of coal and in some cases of electric power, factories had to be intermittently closed down and this led to considerable voluntary unemployment and reduction in earnings. Industries taken as a whole did not compensate their workers for such voluntary idleness although a notable exception has been the Jute Mill Industry which agreed to

give to its workers what is known as " khoraki " amounting to Rs. 4-6-0 a week during such weeks as the workers had to remain compulsorily idle owing to shortage of raw material or fuel.

Bengal having been in the war theatre, its principal industry, namely, the Jute Mill Industry, was affected by war conditions in a peculiar way. While there was an insistent cry for more production, many of the Jute mills were commandeered by the military authorities and the industry was forced to make some mills, known as " Foster Mills," work double shifts in order to keep up production and find employment for workers employed in mills which had been commandeered for the army.

The unavailability and short supplies of daily articles of consumption affected labour like other members of the general community but one of the War-time developments has been that most large employers in the country have made arrangements for the supply of such articles to their employees with the result that labour on the whole has been placed in a more favourable position in this respect than the members of the general community. Even during the dark and dangerous days of the Bengal famine of 1943, the Jute mill workers in Bengal, for instance, were fairly well provided for with daily articles of consumption at reasonable prices. The loss on account of supply of such grains has been made good by the employers.

The enormous expansion of credit and currency which took place during the War resulted, as will be seen from another section of the Chapter, into a tremendous rise in prices and the index numbers have gone up in some cases upto 300 as compared to the pre-war period. The usual method followed for compensating the workers for the increase in the cost of living has been the grant of what is known as dearness allowance. There has, however, been no uniformity as between industry and industry and even between the same industry in different centres as regards the scale of relief granted. The highest scale of relief granted has been in the Cotton Mill Industry in Ahmedabad where, at one time, the workers were compensated upto about 100 per cent of the rise in the cost of living. Generally speaking, the scale of dearness allowance granted has been in the neighbourhood of only about 50 per cent of the increase in the cost of living. One notable feature of the relief granted has, however, been that those on the margin of subsistance have been granted, a much larger quantum of relief than those in receipt of higher wages. Speaking generally, however, although money incomes of the workers have gone up considerably, barring a few exceptions like workers in Ahmedabad and Karachi, on the whole, the working classes have not benefited much as a result of the conditions created by the War. Apart from the fact that wages and earnings have not kept pace with the increase in the cost of living, the working classes in the country generally have had to undergo many sacrifices resulting from short supplies, unavailability of supplies, etc. along with the general community.

The quinquennium 1940-1945 has seen an expansion in Indian industries which not even the most optimistic of persons would have ever dreamt of as even possible before the War started. To-day India and her workmen are producing commodities, articles and munitions of War which, five years ago, were the special prerogative of the highly industrialised countries of the West. There has occurred an unparalleled rise in employment. Women have come into industry, commerce and trade in increasing numbers. There have been bitter struggles and disputes between employers and labour for bigger wages, for higher rates of dearness allowances, for greater participation in War profits. These would be too numerous in character to deal with here. Many of these disputes were solved without actual stoppages of work by referring them to Courts of Inquiry and Boards of Conciliation created under the Trade Disputes Acts and to Adjudicators appointed under Rule 81A of the Defence of India Rules. Quite a number were, however, solved only after bitter and prolonged strikes. Among the more recent of these big strikes was that of the cotton mill workers in Nagpur and other textile centres of the Central Provinces and Berar who downed tools for nearly three months in connexion with their main demands for a 40 per cent. increase in wages and for a bonus equivalent to three months' wages. The latter was secured before resumption of work. We regret want of space will not permit us to deal even briefly with others.

DEMANDS FOR DEARNESS ALLOWANCES.

One of the earliest repercussions of the War was the panic it caused in the commodity markets in India. Prices of all foodstuffs and consumable commodities shot up and, as far as Labour was concerned, the authorities were at once faced with two major problems of prime importance: (1) the devising of measures to check profiteering by controlling prices; and (2) the stabilising of the existing levels of real wages by securing to the workers adequate dearness allowances to enable them to maintain the standard of life which they had at the commencement of the War. With regard to prices, the Government of India had taken power under sub-rule (2) of Rule 81 of the Defence of India Rules both to make provision " for controlling the prices at which articles or things of any description whatsoever may be sold " and to delegate these powers to Provincial Governments as well. Almost all Provinces appointed Controllers of Prices at Headquarters and empowered Revenue Officers in charge of Districts to act as local controllers in respect of the areas within their jurisdiction. A detailed description of the measures adopted when the Prices Control scheme was first launched was given at pages 535 to 537 of the 1941-42 Edition of this publication and it is not necessary to traverse the same purely historical background over again here. Consequent, however, on the introduction of rationing in Bombay City with effect from May 1944 and its extension to other towns and areas, most Provincial Governments in India have set up large establishments to deal with questions connected with food supply. Control has been extended over a wide field of commodities and everything possible is being done to keep down prices.

One of the most vexed questions in Indian industry since the advent of the second World War has been the maintenance of the workers' pre-war standard of life. During the earlier stages of price control, prices varied within narrow margins. The official cost of living index for Bombay City with prices in 1933-34 as the base stood at 105 for August, 106 for September, 108 for October, 109 for November and rose to 113 for December in the year 1939. The limit of variation in the monthly index numbers in this series during the whole of the year 1940 was within six points only : 110 for March and April and 115 for December. Organised demands for dearness allowances in Indian industry were first made in Bombay in December 1939 and these thereafter spread to other centres. The demand made by cotton mill workers in the City of Bombay was referred by the Government of Bombay to a Board of Conciliation appointed under the Bombay Industrial Disputes Act, 1938 presided over by Sir Sajba Rangnekar. Conciliation failed but the Millowners' Association, Bombay, accepted the recommendations made by the Board and sanctioned the payment of a dearness allowance at a flat rate of two annas per day of attendance, with retrospective effect from 1st December 1939, to every worker whose earnings did not amount to more than Rs. 150 per month. Dearness allowance at this rate was to be paid so long as the official cost of living index for Bombay City remained between the limits of 105 and 123. It was reckoned that an allowance at this rate would compensate the workers to the extent of an average of 76·9 per cent of the actual rise in the cost of living so long as the official index remained between these limits. The demand for dearness allowance made by cotton mill workers in Ahmedabad was also referred to conciliation. As in Bombay, conciliation failed also in Ahmedabad but in the latter centre an agreement was reached between the Ahmedabad Millowners' Association and the Textile Labour Association, Ahmedabad, to refer the dispute to the arbitration of the Industrial Court, Bombay. The Industrial Court in its award on this dispute laid down a sliding scale of allowances varying with the fluctuations in the official cost of living index for Ahmedabad on the basis of a grant of an allowance equivalent to one-elevenths of Rs. 3-8-0 per month for every rise of one point in the index, as compared with the figure for August 1939, in the month two months prior to the one for which the allowance is to be paid. It was calculated that this would compensate the workers to the extent of 66·67 per cent of the actual rise in the cost of living at any particular date. A part of the balance was to be made up by opening cost price grain shops. This was the first beginning in India of the payment of dearness allowances on a sliding scale linked up with fluctuations in the cost of living index.

The position in the principal industries in India is somewhat as follows :—

In the main centres of the industry in the Bombay Province the dearness allowance is based on the cost of living index figures. The allowances are paid at a flat rate irrespective of the income, subject to a maximum. As a result of this, employees earning lower scales of pay stand to benefit more than others and the least skilled worker is often remunerated to the full extent of the rise in the cost of living. According to the latest information available, the monthly rate of dearness allowance in Bombay, Ahmedabad and Sholapur was in the neighbourhood of Rs. 31, Rs. 60 and Rs. 22 respectively. In Nagpur the rate of dearness allowance was about Rs. 27 while in Southern India it varied from Rs. 15 to Rs. 24. In the Jute Mill Industry in Bengal, immediately on the outbreak of hostilities in order to keep labour contented, the Jute Mills Association sanctioned an increase of 10 per cent in the wages. The industry pays no dearness allowance as such but an allowance known as the "amenity allowance" is paid instead. The rate of this allowance was Re. 0-4-0 per month in July 1941. This has been increased from time to time and since December 1944 stands at Rs. 2 per week. The payment of the allowance is linked to attendance. In addition to the cash allowance the mills issue foodstuffs from the mill ration shops at concession rates. The quantities allowed and the amounts charged vary from mill to mill but it is estimated that the loss to the mills per worker amounts to about a rupee per week.

The rates of dearness allowance in the Woollen industry vary considerably from centre to centre and the extreme limits are Rs. 30 per month in Bombay and only Rs. 10 at Kashmir. On the other hand, it must be stated here that basic wages have been increased by more than 25 per cent since the War in many units of the Woollen Industry.

In centres other than Bombay City, the dearness allowance paid in the silk industry has not been commensurate with the rise in prices. The establishments in Mysore pay Rs. 8 per month to adults and only Rs. 5 to half-time workers. In Government factories in Kashmir 50 per cent of the earned wages are paid by way of dearness allowance. In Bengal the rate varies from Re. 0-1-6 to Re. 0-5-0 a rupee of the total earnings while in Bombay the scale of dearness allowance is linked to the official cost of living index numbers which amounts to about Re. 0-14-0 per day.

So far as municipal labour is concerned, the scales of dearness allowance are generally lower than those obtaining in private industries but they are in accordance with the scales prescribed by the Provincial Governments. These vary from Rs. 22 in Bombay to Rs. 10 only in Madras. It is understood that in Karachi, in addition to a dearness allowance of Rs. 18 per month, compensatory allowance varying from Rs. 4 to Rs. 7-8-0 per month is also paid. So far as workers in Ports are concerned, they also get dearness allowance at rates lower than those prevailing in private industries. In the Port of Bombay, for instance, the scale of dearness allowance is 10 per cent of the monthly earnings, subject to a minimum of Rs. 16 per month. Many of the port authorities, however, although they pay a smaller dearness allowance, have made arrangements for supplying grain and other necessary supplies at concessional rates and it is understood that the value of the concession varies from Rs. 6 to Rs. 10 per month.

Many employers in Bombay and elsewhere in India waited to see as to what action the Millowners' Association, Bombay, would adopt in

the matter of granting dearness allowances to cotton mill workers in the City of Bombay. As soon as the Association declared its policy in the matter many employers in other industries fell into line. A few employers, however, had already decided on granting certain rates of allowances to their workers as early as in November 1939. The rates of these earliest allowances were one to two annas in the rupee of earnings or a percentage of total earnings varying according to income groups: those workers in the lowest income groups getting a higher percentage and those in the higher income groups getting a lower percentage. The most notable example of this method was the Employers' Association of Northern India which divided the employees or its member mills in the cotton textile and leather industries into seven wage groups—under Rs. 19 per month, from Rs. 19 and under Rs. 25 and so on up to "Rs. 75 and up to Rs. 150". Dearness allowances ranging from two annas in the rupee of earnings for the lowest and coming down to six pies in the rupee for the wage group Rs. 59 to Rs. 75 were granted in January 1940. The highest wage group got nothing at that time. The Indian Jute Mills Association sanctioned the grant of a uniform increase of ten per cent over pre-war wages to the employees of all jute mills in Calcutta with effect from November 1939.

As far as railway employees are concerned, the Railway Board, in accordance with the recommendations made in the matter by the Rau Court of Inquiry and in consultation with the All-India Railwaymen's Federation, divided low-paid railway servants into three groups according to zones: the first zone consisting of the cities of Calcutta and Bombay (including suburbs); the second zone consisting of towns having a population of more than 100,000 inhabitants according to the census of 1941; and the third comprising all other areas. Varying upper limits of monthly earnings beyond which workers got no dearness allowance and varying rates of dearness allowances were fixed for each zone. These have been varied from time to time. The present position regarding the number of zones and the allowances paid will be given lower down.

By about the middle of 1940 all organised employers and large labour-employing organizations such as the Municipalities, Port Trusts, Transport Services, etc., had granted varying rates of dearness allowances to most of their employees. A very large number of the smaller and the unorganised employers, however, lagged far behind in this matter. The workers employed by such employers secured these allowances either by going on strike or by taking the matter into conciliation with the Officers of the Provincial Labour Departments. Prominent among employers who persistently refused to grant any dearness allowances to their workers for nearly two years after the commencement of the war were the cotton textile mills in East and West Khandesh. Notwithstanding the fact that these employers gave no dearness allowances to any of their workers they actually announced cuts in wage rates at the beginning of the year 1941. The Government of Bombay, by virtue of the powers which they had taken by an amendment of the Bombay Industrial Disputes Act for reference of certain disputes to the compulsory arbitration of the Industrial Court, referred both the demand by cotton mill workers in Khandesh for dearness allowance and the demand of cotton Millowners in Khandesh for a cut in wages to the arbitration of the Industrial Court. The Court gave an award disallowing any cut in wages and awarded dearness allowances on a sliding scale varying with the changes in the cost of living index for Jalgaon to the operatives in all the mills in the area with retrospective effect for twenty months.

Matters in connexion with the payment of dearness allowances to workers in Indian industries may be considered to have reached a climax about the middle of the year 1941 when the official cost of living index for working classes in Bombay City touched 122 for the month of June in that year. There was a marked tendency at that time for prices to rise still further and it appeared that the limit of 105 to 123 laid down by the Rangnekar Board of Conciliation for the payment by cotton mills in Bombay of a flat rate of dearness allowance of two annas for each day's work would soon be passed. The Government of Bombay took up the question of the revision of the rate of dearness allowance hitherto paid by the member mills of the Millowners' Association, Bombay, with the Association and, as a result of the discussions which followed, the Association fixed a sliding scale of allowances varying with fluctuations in the cost of living index between 124 and 143. The allowance was to be at Rs. 4-8-0 for 26 working days rising by successive stages of four annas and three annas for each rise of one point in the index to Rs. 9 for 26 working days when the index stood at 143. The Government of Bombay issued a comprehensive Press Note on the subject in August 1941 in the course of which they expressed the fervent hope that employers in all other industries in Bombay would fall into line with the Millowners' Association, Bombay, and pay dearness allowances to their workers accordingly. Between August 1941 and July 1945 the Millowners' Association, Bombay, revised their sliding scale of dearness allowances on several occasions, the last revision covering fluctuations in the index between 204 and 223 for which dearness allowances ranging from 23-8-0 to Rs. 28 per month of 26 working days were payable. The cost of living index for Bombay City for the month of April 1943, however, exceeded the limit of 223 and stood at 225. The Millowners' Association decided not to issue any further extensions of its sliding scale but to announce the amount of dearness allowance payable as against the cost of living index for any particular month as soon as the official figure for the index for that month is available. In accordance with this decision the dearness allowance due for the month of May 1945, was announced at Rs. 28-11-0 for 26 working days. It would be of interest to mention that the highest peak in the dearness allowances paid to cotton mill workers in Bombay City was reached in September 1944, when the index for the cost of living for that City reached 250 against which an amount of Rs. 34-6-0 for 26 working days was paid. Most large employers in the City of Bombay such as General Motors (India) Ltd., Messrs. Lever Brothers (India) Ltd., the Bombay Garage, the Soonderdas Saw Mills, Messrs. Godrej

and Boyce Manufacturing Co., Ltd., and a host of others are paying dearness allowances to their workers on the basis of the sliding scale of the Millowners' Association, Bombay. As the result of adjudication proceedings in a recent dispute between the Bombay Electric Supply & Tramways Co., Ltd., and its employees, the adjudicator (Mr. E. M. Nanavatty) awarded the Bombay Millowners' scale of dearness allowances to the employees of this company as well. A group of large engineering firms in Bombay such as Messrs. Richardson and Cruddas, the Mazgaon Dock of Messrs. Mackinnon Mackenzie & Co., Messrs. Alcock Ashdown & Co., Ltd., and a few others have laid down a sliding scale of dearness allowances based on an increase of one per cent., over earnings from existing basic rates of pay for every rise of two points in the cost of living index for Bombay. The Silk and Art Silk Mills Association, the Bombay Gas Co., Ltd., has also adopted sliding scales of dearness allowances but the actual amounts paid are somewhat less than those adopted by the Millowners' Association, Bombay.

The highest rates of dearness allowances paid in India are those that obtained in cotton textile mills in Ahmedabad. In an earlier paragraph we have stated that in awarding an addition of one eleventhe of Rs. 3-8-0 for every rise of one point over the figure of the official cost of living index for Ahmedabad for the month of August 1939, the Industrial Court intended that cotton mill workers in that centre should be compensated to the extent of 66·67 per cent of the actual rise in the cost of living at any particular date. Part of the balance was to be made up by opening a number of cost price grain shops. These were started but great difficulties were experienced in connexion with their running and the Scheme was abandoned with the consent of the Industrial Court. In view, however, of the continued improvement in the condition of the cotton textile industry in India, the Ahmedabad Textile Labour Association, successfully pressed a demand on the Ahmedabad Millowners' Association in the middle of the year 1941 for the uncompensated balance of 33·33 per cent in the rise of the cost of living at Ahmedabad to be made good to the workers and the two Associations reached a further agreement on the 12th August 1941 by virtue of which the dearness allowance for any particular month would be increased by 45 per cent with retrospective effect from July 1941. This agreement was ratified by the Industrial Court in an award dated 15th September 1941. It is of interest to observe that on the basis of this agreement the dearness allowance for cotton mill workers in Ahmedabad for the month of October 1943, amounted to as much as Rs. 77-0-9 for each individual worker. A petition filed by the Ahmedabad Millowners' Association in the Industrial Court in August 1943 for a substantial reduction in the quantum of dearness allowance payable to cotton mill workers in Ahmedabad on the ground that the profit making capacity of the industry had been considerably worsened during the year 1943 was rejected by the Court. The original award of the Industrial Court was based on a submission entered into between the Ahmedabad Millowners' Association and the Textile Labour Association, Ahmedabad. By virtue of one of the articles of that submission, the dearness allowances awarded by the Industrial Court were to be paid up to the end of the European war involving England and for a period of three months therafter if prices continued to be affected by war conditions. With the unconditional surrender of Germany on the 8th May 1945 the Ahmedabad Millowners' Association suspended the payment of dearness allowances in all member mills. The Textile Labour Association, Ahmedabad, thereupon filed a petition in the Industrial Court, Bombay, praying for a continuation of the payment of the dearness allowances on the existing scales for a period of three months up to 8th August 1945. The Industrial Court made an order accordingly. The Association further served another notice on the Ahmedabad Millowners' Association demanding a continuation of the payment of the existing scales of dearness allowances until such time as the Cost of Living Index for Ahmedabad reached the pre-war figure of 73. No decision had been reached in this matter by the time we went to Press.

Industrial workers in no centre in India outside Bombay and Ahmedabad are paid dearness allowances as high as those earned by cotton mill workers and others in these two centres. In the cotton mills in the Central Provinces and Berar, dearness allowances are paid on the basis of the recommendations made in the matter by the Mahalanobis and the Jayaratnam Committees according to which a uniform allowance of one pie per day of attendance for every rise of one point in the three-monthly moving average of the cost of living index for the centre concerned is paid to each worker. The Indian Jute Mills Association, in addition to the allowance of ten per cent of earnings which it had sanctioned for jute mills workers in Calcutta and Howrah with effect from November 1939 gave an additional flat rate of Rs. 1-4-0 per week per head with effect from 1st August 1942. This amenity allowance as it is called was later increased to Rs. 2 per head per week. In May, 1945, the dearness allowances paid by other large employers in Calcutta were as follows: Indian Engineering Association—flat rate of Rs. 9-8-0 per month; Calcutta Corporation Rs. 18 per month up to pay of Rs. 35 and Rs. 22 per month up to pay of Rs. 300; Calcutta Electric Supply Corporation Ltd.—Rs. 14-8-0 per month with food concession of Rs. 7-8-0; Calcutta Tramways Co., Ltd.—Rs. 16 per month with food concession of Rs. 10; Bengal Telephones—Rs. 20 up to Rs. 35 with food concession of Rs. 20 according to Government rules, and the Oriental Gas Company Ltd.—Rs. 16 per month and food concession of Rs. 9-8 0. Profiting by the experience gained by employers in Bombay and Ahmedabad and with a view to check inflationary tendencies, the general practice adopted in Bengal for neutralising the effects of increasing dearness in prices has been to 'freeze' the dearness allowances granted in cash at the figures obtaining about August-September 1942 and to permit workers to obtain generous supplies of essential foodstuffs and necessaries of life at the prices obtaining for these articles at the dates when the dearness allowances in cash were frozen. Industrial employers in Bengal do not follow any fixed formula coupled up with

fluctuations in the cost of living in determining the dearness allowances which they have decided to pay.

A system of freezing has also been adopted in the Tata Iron and Steel Works at Jamshedpur. The allowances granted with effect from 1st August 1940 through the mediation of a Board of Conciliation were increased from 1st October, 1941. A further increase was effected from 1st October, 1942. Increase in the cost of living after that date was offset by providing food grains to workers at rates current in the month of October, 1942. The last revision in the scale of allowances was introduced from 1st May 1943, the rates being fixed as follows: Rs. 10 per month for those drawing less than Rs. 100 per month; Rs. 13 for those drawing between Rs. 100 and Rs. 200 and Rs. 16 for those getting between Rs. 200 and Rs. 300 per month. Rationing was introduced in Jamshedpur with effect from 26th July 1944. Even with rationing the Company continues to bear the difference between the controlled prices of grains and those ruling in October 1942 under its compensatory food grains supply scheme.

As far as railway servants and employees in the industrial undertakings of the Central Government are concerned, the Government of India had fixed the following rates of dearness allowances with effect from 1st March 1944: (1) persons employed in the Cities of Bombay, Calcutta and Cawnpore on pay up to Rs. 250 per month to get Rs. 16 per month; (2) persons employed in other towns containing over 250,000 inhabitants on pay up to Rs. 200 per month to get Rs. 14 per month; (3) persons employed in towns of over 50,000 inhabitants but not more than 250,000 inhabitants whose pay was not more than Rs. 175 per month to get Rs. 11 per month; and (4) persons in all other places whose pay was not more than Rs. 150 per month to get Rs. 9 per month. All workers getting more than the maximum limits specified for the different areas but less than Rs. 266, Rs. 214, Rs. 186 and Rs. 159 per month respectively would be paid dearness allowances which would bring their total emoluments up to these amounts. These rates were revised on two occasions since then: (1) 1st July, 1944; and (2) in April 1945. The last revision was to take retrospective effect from 1st January, 1945. All Government servants have been broadly divided into two main groups: (*a*) 'Railway employees': and (*b*) 'Others'. 'Railway employees' have been grouped into four Zones, "X", "A", "B" and "C". These Zones correspond to the cities and towns described above. There is a further distinction between those having a pay of Rs. 40 per month and above and those getting below Rs. 40 per month. The rates in force in June 1945 were as follows: "X" Areas—Rs. 20 and Rs. 19 per month respectively for those drawing Rs. 40 per month and over and for those drawing under Rs. 40 per month or 17½ per cent. whichever is greater; "A" Areas—Rs. 19 and Rs. 17 per month respectively or the percentage as for "X" Areas; "B" Areas—Rs. 16 and Rs. 14 per month respectively or the percentage; and "C" Areas—Rs. 14 and Rs. 12 per month respectively or the percentage. 'Others' have been grouped into three Zones "A", "B" and "C" according to expensiveness in the cities, towns and areas concerned. The pay limits for those earning Rs. 40 and over also vary. The rates in force in June 1945 for 'Others' who include employees in Government industrial undertakings are as follows: "A" Areas—Rs. 20 per month for those whose pay is under Rs. 40 per month and Rs. 22 per month or 17½ per cent. of pay whichever may be greater for those drawing over Rs. 40 up to Rs. 250 per month; "B" Areas—Rs. 16 and Rs. 18 per month respectively as for "A" Areas but with an upper pay limit of Rs. 200; and "C" Areas—Rs. 14 and Rs. 16 per month respectively as for "A" Areas but with an upper pay limit of Rs. 150.

For the first time, the higher paid employees of Government were given a war allowance from 1st July 1944. Persons drawing upto Rs. 1,000 per month, if married, got 10 per cent. of their pay subject to a minimum of Rs. 50. Unmarried persons drawing up to Rs. 750 got 5 per cent. of pay subject to a minimum of Rs. 30. With effect from 1st January, 1945, these allowances were increased to 17½ per cent. in the case of married persons drawing upto Rs. 1,500 per month and to 7½ per cent. in the case of single persons drawing upto Rs. 1,000, the minima in both cases remaining the same. In the case of married persons drawing above Rs. 1,500 and upto Rs. 2,000 per month a flat allowance of Rs. 263 has been allowed with marginal adjustment up to Rs. 2,263, *e.g.*, an officer drawing Rs. 2,150 per month would get a war allowance of Rs. 113 per month.

The Employers' Association of Northern India which covers jute mills, textile, woollen and leather factories and other employers in Northern India has recently adopted scales of dearness allowance which fluctuate with changes in the cost of living but whereas the Ahmedabad, Bombay and the Central Provinces and Berar schemes vary the allowances for every change of one point in the cost of living indexes for these centres, the scheme adopted by this Association keeps the allowances granted stationary for fluctuations within groups of 20 points. There is also another important difference. The sliding scales which apply to cotton mill workers in Ahmedabad, Bombay and in the C. P. and Berar give a uniform rate of dearness allowances to all workers irrespective of their pay. The Northern India scheme varies the rates of allowance according to income groups in different types of concerns. Thus, for fluctuations in the cost of living index between 161 and 180, jute mill workers getting under Rs. 14 per month, get an allowance of seven annas in the rupee of earnings; the group Rs. 14 but under Rs. 18 gets six annas in the rupee; Rs. 18 but under Rs. 24, five annas; Rs. 24 but under Rs. 30, 4¼ annas; Rs. 30 but under Rs. 75, four annas; and Rs. 75 and up to Rs. 150 gets three annas in the rupee of earnings. Workers in textile, woollen and leather factories are divided into seven categories as against six categories for jute mill workers.

Payment of dearness allowances in industrial concerns in Indian States is based mainly on the principles followed in the most adjacent large industrial towns in British India. Certain States, however,—notably Gwalior—entrusted the examination of the question of the quantum of the allowance which should be paid to Com-

mittees specially appointed for the purpose. In the year 1942, H.H. The Maharaja Scindia of Gwalior appointed a Textile Labour Inquiry Commission comprising of officials and representatives of labour and Millowners in Gwalior State to find a suitable reply for labour complaints and Millowners' difficulties. According to the recommendations of the Commission, which have been given retrospective effect from 1st October 1943, an equal amount of dearness allowances is to be paid to all workers irrespective of their wages. The amount of dearness allowance payable will be reckoned every three months by relating it to the average of the cost of living index numbers for Bombay, Ahmedabad and Sholapur for the previous three months and by taking average index numbers as the index number for that month and the subsequent two months. The amount of the allowance would be arrived at by calculating it at the rate of annas three per unit of rise of the average number. Employees who, under existing arrangements, were getting an allowance in excess of the amount calculated at the flat rate would continue to draw the same higher rate of allowance and would be entitled to higher allowance only when the amount calculated at the flat rate exceeds their existing allowance.

Dearness Allowance Committee :— In pursuance of a decision reached at the Plenary Session of the Tripartite Labour Conference held on the 7th February 1943, the Hon'ble Dr. B. R. Ambedkar, Member for Labour, as Chairman of the Conference, appointed a Committee to make recommendations on the general principles of fixing dearness allowance to employers in industrial concerns. The Committee consisted of Dr. Sir Theodore Gregory, D.Sc., Economic Adviser to the Government of India as Chairman, Mr. J. E. Pedley, C.I.E., M.C., I.C.S., Labour Commissioner, United Provinces, as Vice-Chairman and six members, namely : Mr. F. R. Bristee, I.C.S., and Mr. D. V. Rege, I.C.S., Labour Commissioners, Madras and the C.P. and Berar respectively ; Sir Shri Ram, New Delhi and Sir George Morton, Calcutta, representing employers and Messrs. Jamnadas Mehta, Bombay and Mr. B. Mookerjee, Calcutta, representing workers. This Committee submitted its report, which is being treated as a confidential document, to the Hon'ble the Labour Member early in the year 1944. The Report has been circulated to Provincial Governments and to important Federations of Employers' Associations and Trade Unions for an expression of their views.

We have endeavoured to give a brief outline of all the more important schemes of dearness allowances which were in operation for industrial workers in India as in May 1945. As will have been seen, there is little uniformity either in the method adopted or in the amounts of allowances actually given in any two centres of industry.

There appear to be two main schools of thought in this matter even outside industrialists. One school favours the cheap food policy : the other automatic increases based on cost of living indices however unreliable they may be for the purpose. The latter category, as a rule, also favours paying the men substantial bonuses. In the circumstances set out we regret our inability to give any more information on this subject.

DEMAND FOR PARTICIPATION IN WAR PROFITS.

During the period of the General Strike in cotton textile mills in the City of Bombay in 1940, the Government of Bombay had enquired of the Millowners' Association, Bombay, whether it was willing to give an undertaking to Government that the Millowners would be prepared to give a war bonus to their workers if increased profits were made by the industry as a result of war conditions, as soon as the extent of these profits had been determined. The Government of Bombay were aware of the increasing desire of textile workers to be given an adequate share in the improved trading conditions of the industry resulting from the war and they, therefore, took up the matter again with the Millowners' Association, Bombay, towards the end of the year 1941. As a result of these discussions, the Association decided that its Cotton Mill Members in the City and Island of Bombay should grant to their workers a cash bonus equivalent to 12½ per cent of, or two annas in the rupee on, their actual earnings (exclusive of dearness allowances) for the period 1st January to 31st December 1941. The Government of Bombay issued a Press Note on the subject on 3rd December 1941. In accordance with the decision reached a large majority of cotton mill-workers in Bombay received a bonus equivalent to about six weeks' pay in January 1942. For the year 1942, the Millowners' Association, Bombay, in consultation with the Government of Bombay, decided to pay to each permanent worker a bonus equivalent to one-sixth of the total earnings accruing to him from his basic rates of pay during the year in two equal instalments on the 23rd January and on the 21st March 1943 subject to the proviso that the name of the worker was on the muster roll of the Mill concerned on the 31st December 1942 and on each of the dates when each instalment of the bonus was paid. Substitute or *badli* workers, in addition to satisfying these conditions, were required to have put in 75 days' work during the year 1942 in order to earn the bonus. The Millowners' Association, Bombay, sanctioned similar bonuses for cotton mill-workers in Bombay for the years 1943 and 1944 and decided that all workers who had been retrenched during each year should also get the bonus provided that they entered into agreements with their employers regarding the terms of retrenchment. The Bombay Girni Kamgar Union (Red Flag), early in the year 1944, sponsored a demand for a bonus equivalent to three months' wages to be payable in one lump sum without any conditions. It secured support from the workers of nearly 60 mills in Bombay for this demand and a number of intimations in the matter were sent to the Labour Officer, Bombay. Meetings were held in a large number of mills and a number of cases were taken into conciliation but the Millowners' Association refused to make any further concessions in the matter.

In August 1941 the Textile Labour Association, Ahmedabad, put up a demand to the Ahmedabad Millowners' Association for an increase of 25 per cent. in wages. After prolonged and protracted negotiations and discussions, the two parties agreed to refer the matter to the Industrial Court on the basis of

an agreed settlement, according to which the Association agreed to grant for the whole of the year 1941 a bonus ranging from Rs. 2/4 to Rs. 10/8 per head for each month in 1941 to different categories of workers. In effect, cotton textile workers in the City of Ahmedabad received a bonus equivalent to that secured by their confreres in Bombay. The award of the Industrial Court in this matter has been reproduced at pages 374 to 378 of the December 1941 issue of the *Labour Gazette*. For the years 1942 and 1943, the Ahmedabad Millowners' Association decided to pay a bonus roughly equivalent to two and a half months' wages from basic rates of pay to all permanent and substitute workers employed in Cotton Mills in Ahmedabad. The bonus for the year 1943 was, in addition, to be paid without any conditions.

As far as the bonus for the year 1944 was concerned, the Textile Labour Association, Ahmedabad, served a notice of change under the Bombay Industrial Disputes Act, 1938, on the Ahmedabad Millowners' Association demanding a bonus equivalent to four months' wages. The matter was taken into conciliation. During the conciliation proceedings before the Chief Conciliator, the Textile Labour Association expressed its willingness to accept a bonus equivalent to three months' wages but the Millowners would not agree and the conciliation proceedings, therefore, failed. On the publication of the Chief Conciliator's report, the Textile Labour Association served a notice of a general strike in Cotton Mills in Ahmedabad on this issue. The Government of Bombay, thereupon, under the powers vested in them under section 49A of the Bombay Industrial Disputes Act referred this dispute to the compulsory arbitration of the Industrial Court, Bombay. One mill in Ahmedabad, acting on behalf of itself and other member mills of the Ahmedabad Millowners' Association, filed an application in the Bombay High Court praying for the setting aside of the Government order on the ground that 'bonus' is not a part of wages and is not an industrial matter within the meaning of the Act. The Court dismissed the petition on the ground that the parties were outside its original Jurisdiction.

Since the beginning of the year 1942, hundreds of disputes have arisen all over India in connexion with demands made by industrial workers for the payment of war bonuses similar to those paid to cotton mill workers in Bombay and Ahmedabad. Labour Departments of the Provincial Governments have been inundated with requests for mediation in the matter. Anticipating trouble, many employers announced their intention to pay such bonuses before demands for them were put up to them by their workers. A number of others agreed to do so immediately on intervention in the matter by Government Conciliators. In a large number of other cases where the employers were at first adamant on not conceding this demand, the workers, insistent on equal treatment in the matter, resorted to direct action. In the vast majority of the cases where strikes occurred on this issue, the employers were compelled to climb down and to pay the bonus asked for. In some cases where demands for a war bonus were linked up with several other demands, the disputes were referred by the Provincial Governments concerned to adjudication under Rule 81A of the Defence of India Rules. No exact information is available with regard to the number of concerns which have paid war bonuses but it may be safely asserted that most of the leading firms or organisations in India have paid or sanctioned the payment, by their members, of a bonus equivalent to one to two months' pay to their workers. It would be of interest, however, to mention that all Cotton Mills in the Central Provinces and Berar and in Indore State and the majority of the mills affiliated to the Employers' Association of Northern India paid bonuses for the years 1943 and 1944 which were equivalent to 25 per cent. of the earnings of the workers during each year from basic rates of pay.

CREATION OF NATIONAL SERVICE LABOUR TRIBUNALS.

With the object of taking power to require industrial undertakings, including mines, in India to release technical personnel for employment in factories under the Crown or declared to be engaged on work of national importance, the Governor-General promulgated the National Service (Technical Personnel) Ordinance, 1940, on the 28th June 1940. This Ordinance was amended by three further Amending Ordinances issued in September 1940, in January 1942 and in July 1943. The term 'technical personnel' includes persons over the age of 17 and under the age of 50 years and employed in the capacities enumerated in the Schedule attached to the Ordinance. These are divided into three groups: (1) Managerial Staff; (2) Supervisory Staff; and (3) Skilled and Semi-skilled trades. The first includes Works Managers, aircraft pilots, and all kinds of Engineers; the second, foremen, inspectors, chargemen and *maistries*; whilst the third group includes almost all occupations in the engineering, electrical, wood and chemical trades; photo-litho operators, process photographers, lithographers and litho-printers; rope workers, riggers and slingers; motormen and petrol mechanics; and bricklayers and brick moulders. All 'technical personnel' who are British Indian subjects or Asiatic immigrants from Malaya, Burma, Nepal and Portuguese and French India and who are over the age of 17 and under the age of 50 are, under heavy penalties for default, liable, when called upon to do so, to undertake employment in the National Service.

The Central Government has power to declare any factory which is engaged in the production of munitions or other war supplies or in work which is likely to assist the efficient prosecution of the war to be a factory engaged on work of national importance and on the declaration of a factory as such it becomes a "notified factory."

The Ordinance gives powers to the Central Government to constitute for such areas and in such places as it thinks fit National Service Labour Tribunals to exercise such functions as have been assigned to them by the Ordinance. Each Tribunal is to consist of a Chairman and not less than two other members all of whom must be servants of the Crown; it has the right to associate with itself in its deliberations such other persons as it thinks fit. Every 'notified factory' has the right to apply to a Tribunal

or to the Central Government for technical personnel. An important function of a Tribunal is, therefore, to find the necessary personnel for such notified factory. With this object in view, National Service Labour Tribunals have been given power to ascertain particulars of the technical personnel employed in all industrial undertakings, the suitability of such personnel for employment in national service and the capacity of the undertaking to release such personnel or any part thereof for such employment. In order to enable the Tribunals to discharge these functions they have been given all the powers of Civil Courts for enforcing the attendance of witnesses, production of documents, recording of evidence on oath, etc., and also wide powers of inspection and the carrying out of trade tests. The Tribunals can call upon the management of any industrial undertaking to release such technical personnel as it may specify, direct any person listed as 'technical personnel' to undertake employment in the national service within its jurisdiction or in any factory or technical posts under the Crown in any part of British India, direct such persons to submit themselves to tests of their technical skill and they can lay down the terms of service of such persons subject to such conditions as may be prescribed. Such persons cannot leave or be discharged from their employment without the previous permission in writing of the Tribunal in whose jurisdiction they are working. Correspondingly, no employer in any industrial undertaking can discharge or dismiss any person so classified without previously obtaining the permission in writing of the Tribunal except in cases of medical unfitness, gross insubordination, habitual absence from work, serious misconduct or adverse police report. In such cases however, the employer has to give notice to the Tribunal within 24 hours of the discharge or dismissal. This amendment, enacted in July 1943, makes an important departure from the previous provisions of the Ordinance and places both the employers and technical personnel on an equal footing. Before the amendment, while technical personnel had to obtain the previous permission in writing of the Tribunal for leaving his employment, an industrial undertaking could discharge or dismiss any technical personnel by giving 15 days' notice of such intention to the Tribunal.

Once a notified factory applies to a Tribunal or to the Central Government for technical personnel it is obligatory for such concern to take into employment such personnel as may be sent to it and on such terms and conditions as the Tribunal or the Central Government may direct. Appeals against the decisions of a Tribunal lie with the Central Government.

No person employed in any industrial establishment which is either a notified factory or a factory which has sought the protection of the National Service Labour Tribunal against the exodus of technical personnel under Section 13 of the Ordinance who is classified under one of the capacities included in the Schedule annexed to the Ordinance can leave his employment unless he has previously obtained the permission in writing of the Tribunal. Correspondingly, no employer in any industrial undertaking can discharge, dismiss or release any person so classified unless he has given 15 days' notice of such intention to the Tribunal.

Whereas a Tribunal can control the engagement of technical personnel by industrial undertakings in such manner as it thinks fit, the Government of India alone has the power to transfer technical personnel from one notified factory to another. Similarly, no technical personnel employed in a training establishment or in a technical post under the Crown can be discharged from or leave his employment unless the head of the establishment concerned has previously obtained the permission in writing of the Central Government. All employers in non-notified factories are compelled to reinstate men who may be returned to their original posts on the same terms as obtained when their services were first requisitioned but these may be modified or compensation given on and after appeal to a Tribunal.

Penalties of imprisonment up to six months and a fine up to Rs. 1,000 are provided for infringements of the Ordinance.

Each Tribunal has attached to it a local Advisory Committee consisting of representatives of employers and labour. The Chairman of the Tribunal is the Chairman of the Advisory Committee. The Committee is purely advisory and advises the Tribunal on matters of general policy affecting employers and labour and arising out of the administration of the Ordinance.

The names of the Chairmen of and the addresses of the offices of the ten National Service Labour Tribunals which have been so far constituted in the various Provinces in India are as follows: —

1. Bengal: A. Hughes, O.B.E., I.C.S., Dewar House, 13, Hare Street, Calcutta.
2. Bombay: D. R. Pradhan, I.C.S., Hasan Chambers, Parsee Bazar Street, Bombay.
3. Madras: V. Ramakrishna, I.C.S., Office of the Labour Commissioner, Madras.
4. United Provinces (also for Delhi and Ajmer-Merwara): E. Ahmed Shah, M.A., B.Litt. (Oxon.), M.L.C., Office of the Labour Commissioner, Cawnpore.
5. Punjab (also for the North-West Frontier Province): Khan Bahadur Malik Noor Mohammad Khan, M.A., LL.B., Office of the Punjab and N.-W. F. Province Joint Public Service Commission.
6. Sind (also for Baluchistan): A. P. Le Mesurier, I.C.S., Office of the Commissioner of Labour, Sind Secretariat, Karachi.
7. Central Provinces and Berar: Sardar Bahadur Ishar Singh, Labour Commissioner, C. P. and Berar, Civil Secretariat Building, Nagpur.
8. Bihar and Orissa: S. R. Bose, I.C.S., Office of the Labour Commissioner, Bihar, Patna.
9. Assam: A. S. Ramchandran Pillai, B.A., Office of the Controller of Emigrant Labour, Shillong.
10. Delhi and Ajmer-Merwara: Lt.-Col. the Rev. J. E. Chatterjee, M.A., D.Litt., Vice-Chancellor, Agra University, Delhi.

Several Conferences of Chairmen of National Service Labour Tribunals have been held at New Delhi with a view to pool experience and decide on the methods likely to lead to greater efficiency and utility of the Tribunals. It would be of interest to mention that after the second of these Conferences held in November, 1941, the appointments of the Chairmen of the Bengal, the Bombay and the Madras Tribunals have been converted into full time jobs.

An Ordinance, (No. XLVII of 1944) to amend the National Service (Technical Personnel) Ordinance, 1940, was promulgated by the Central Government on 7th October 1944. The amending Ordinance brings ships registered in British India under the Merchant Shipping Act 1894, within the purview of the parent Ordinance and enables Government to deal with them as if they were factories. National Service Labour Tribunals constituted under the Ordinance are now empowered to direct suitably qualified officers to undertake employment in any shipping company or under port trusts and call upon shipping companies to release any of their officers who may be surplus to their requirements and to direct the latter to take up national service elsewhere.

TECHNICAL TRAINING SCHEME.

About the end of the year 1940, the Government of India instituted a Technical Training Scheme designed to provide for the intensive training of a large number of skilled tradesmen required for the technical branches of the Defence Services and for ordnance and munitions factories. When the scheme was first initiated the number of persons to be trained was fixed at 15,000. This was increased to 44,600. The scheme covers not only special technical institutions which have been expressly opened for this purpose but also a large number of existing factories and workshops. The total number of training centres in India as at 30th April, 1945, was 163 of which 30 were in Madras, 25 in bengal, 14 in the Province of Bombay and 23 in Indian States. The actual number of trainees at all these centres at that date was 21,266 out of a possible capacity of 30,096 seats. The total number of trainees who had passed out of the various training centres since the scheme was first started up to 30th April, 1945, was 80,352. These were disposed of as follows: Indian Army, 69,592; Royal Indian Navy, 6,100; Indian Air Force, 1,940; Ordnance Factories, 4,125; Civil Industry, 3,890; and Civil Pioneer Force, 195.

The qualifications required of candidates are that they must be between the ages of 17 and 80, they must conform to certain standards of height and physical fitness and, as a general rule, they must be literate. The extent of the knowledge of English required varies according to the trades for which they desire to be trained. The maximum duration of training is one year but trainees are passed out as soon as they are able to pass the tests laid down by Government. Candidates for technical training are ordinarily selected by the National Service Labour Tribunals and Selection Committees appointed for each District, to whom application has to be made. Selected candidates receive T. A. from home to the centres to which they are posted and also from the centres to places of employment if they are 'placed' on the conclusion of the training. Placement is not guaranteed. Every selected candidate has to enter into an undertaking to accept any employment that may be offered to him under the Crown either in India or overseas, and the parent or guardian of such person has to enter into an agreement with Government to refund all expenses incurred on his training in the event of his failing to carry out the undertaking.

Not only is training in all centres given free of charge, but during their training all candidates receive generous stipends which vary according as to whether they are matriculates or not and which are varied from time to time according to dearness plus free medical treatment. All trainees are entitled to the benefits provided under the Workmen's Compensation Acts. On selection, a trainee is posted to a Civil or a Civ.-Mil. (Civil-Military) Centre. After a period of two months trainees in a Civil Centre as are willing to enrol in the Defence Services are enrolled and transferred to a Civ.-Mil. Centre where he remains until he passes certain trade tests. He is then drafted into one of the services on a minimum salary which varies. All drafted men are entitled to free board and lodging, clothing and medical attendance. Men sent overseas are entitled to an expatriation allowance and *batta* if authorised. Promotions depend on efficiency. A scheme has recently been adopted to enable technical personnel directed to take up employment in the national service at distant places to visit their homes once a year at Government cost. Persons who have completed 12 months' national service who have not taken their families to place of work, who are 100 miles or more from their homes and who are in receipt of pay not exceeding Rs. 200 per month are allowed actual rail fare and/or charges of road journey from place of work to home and back.

At the earlier stages of the scheme efficiency was, to some extent, sacrificed to speed. Recent policy has tended towards concentration on the improvement of training and the production of a better article in somewhat smaller numbers. Regular trade testing panels have now been formed at most headquarter centres. With a view to improving the training standards of instructors, classes for instructors have also been started in all training centres. Hindustani is being taught with the object to universalise training in this language throughout the country. Recruitment of a better type of trainee is being effected by requiring candidates seeking admission to training centres to pass intelligence tests on the lines of the psychology tests given in other countries. A measure adopted to improve the physical standard of the trainees is to give shark oil at the rate of two teaspoonfuls a day to underdeveloped men. A total quantity of 48,000 lbs. of this oil was bought from the Government of Madras for this purpose. In order to enable trainees who have not passed the prescribed trade tests qualifying for industrial employment at the date of conclusion of hostilities, the Government of India have decided to continue their technical training scheme on a diminishing basis for a period of 18 months after the War.

Trainees will continue to receive free instruction and the usual stipends and concessions. A New Instrument Mechanics Training Centre was started at Hindupur near Bangalore with 275 seats in the year 1944 for training boys in the manufacture of precision tools which at one time was considered unsuitable for India. The trade is open to young men who have reached Matriculation Standard and are between the ages of 17½ and 30. They are trained under the guidance of a British expert. Trainees get a scholarship of Rs. 59-4-0 per month with free food, lodging and clothes.

The Technical Training Scheme has demonstrated that, with intensive training semi-skilled men can be trained for all industries and that the standard of such men, after from six to eight months' training, is at least up to, if not above, the standard reached under ordinary peace-time apprenticeship schemes of two to three years' duration. The Government of India felt that if the training imparted under the Technical Training Scheme is supplemented by further 'biassed' training, the final product would be more acceptable to employers. With a view to adjust the scheme to the wartime needs of civil industry they decided to set up an Advisory Committee whose functions are (1) to review the existing methods and syllabuses of training under the Scheme and to advise how it should be adjusted to meet the present day-needs of industry; and (2) to advise Government as to how Govt. trainees may be utilised for dilution and upgrading so that skilled and highly skilled men can be released for more important jobs which the less skilled men are unable to perform. Two new junctions were allotted to this Advisory Committee early in the year 1945: (1) to find employment for trainees who will be discharged from the army when the war is over and for those who will be completing the prescribed courses of training; and (2) to revise the scheme of technical training as a part of the post-war plan of industrial reconstruction with a view to make it serve fully and completely the present-day needs of civil industry. This Committee consists of six representatives of private engineering employers, two of Labour, one representative each of the Railway Board, the Ordnance factories and the ship-building industry and two senior Chairmen of the National Services Labour Tribunal. The Addl. Secretary in the Labour Department is the Chairman and the Director of Training, Department of Labour, is the Vice-Chairman of the Committee. At a recent meeting of this Committee held in Bombay in February, 1945, it was decided to start a training scheme designed to train craftsmen for the post-war needs of civil industry in India and to aim at a national system of training including a National Certificate of Craftsmanship on the completion of training.

The immense possibilities which the Technical Training Scheme holds for Indian youth and the industrialisation of the country after the War have not yet been realised in India. Skilled workers are at any time an asset of great value to a nation and it is generally admitted that one of the most serious setbacks to the development of Indian industries in the past has been the absence of trained workers. With the outbreak of War and the vital importance which mechanisation quickly assumed, the number of skilled workers which a nation or a group of nations can produce has become the key to victory or defeat. Skilled workers are required not only for the production of tanks, guns and munitions but also for their maintenance and repair in the field. It is to meet this need and also to build up an army of skilled workers which after the war will enable India to compete on equal terms with other highly industrialised countries that the Technical Training Scheme of the Government of India has been devised.

It would be of interest to observe that with a view to secure an adequate supply of technical personnel to meet the demands of the administrative services and industrial development in the country in the post-war period, the Government of India have appointed a Special Committee with N. R. Sarkar as Chairman to consider the question of the establishment of a high grade technological institute in India possibly on the lines of the M.T.T. to provide advanced instruction and training in technology.

The number of technicians trained under the scheme and supplied to the Defence Services up to 31st October 1945 was 83,867. More than 100,000 trained men have passed through the Training Centres during the five years of the operation of the scheme. With the termination of the war, however, the recruitment of trainees under the Scheme has ceased.

THE BEVIN TRAINING SCHEME.

In November, 1940, Mr. Ernest Bevin, the British Minister of Labour, made a statement in the House of Commons regarding a scheme which he proposed to put into effect for training Indian workers in factories and workshops in England. The object of the scheme was to accelerate munitions production in India and, at the same time, to inculcate in the men an appreciation of British methods of industrial co-operation between employers and workers and the value of sound trade union principles. Details of the proposed scheme were published by the Government of India in December 1940.

Candidates for the scheme are chosen from the working classes, preferably from among men of the Engineering trades, *e.g.*, fitters, turners, millers and grinders drawing wages of Rs. 40 to Rs. 60 per month. Candidates must have had three years' experience of factory work and have given promise of intelligence and adaptability. They might be married or single but they should be young and not below the age of 18, healthy, intelligent, able to read, write and do simple calculations and possess manual dexterity and some knowledge of English. Preference is to be given to persons who are likely to be adaptable to conditions in England and especially to those who are prepared to mix and are least likely to raise difficulties over food which is on the English style and not on a caste or communal basis. In August, 1944, the Government of India relaxed the condition of three years' workshop experience and gave eligibility for inclusion in the Scheme also to men trained under the Technical Training Scheme. Every batch to be sent to England would include 15 ex-trainees provided they had passed the prescribed trade test and had acquired at least one year's practical workshop experience in a factory engaged on work connected

with the war. Of these 15 ex-trainees, 10 would be from Ordnance Factories and 5 from civil industry. The selection of candidates is made by the National Service Labour Tribunals. All selected candidates have to produce certificates of recent vaccination and pass strict medical tests particularly to show that they are free from any kind of tubercular trouble.

The courses of training cover engineering occupations mainly, *e.g.*, fitting and machine operating and ordinarily last for nine months for aircraft trainees and eight months for others. For the first two months the trainees work at a special training centre at Letchworth where they receive elementary training and instruction in English and get time to become acclimatized. They are then placed in groups with selected employers in factories where they receive training side by side with British workmen. For the first month after the arrival of a batch of candidates in England, they are accommodated in a hostel run on English lines under a carefully selected manager after which they are lodged with selected British families.

All selected candidates receive travelling allowances (inter class fares plus Re. 1 per day for subsistence allowance) to port of embarkation and from port of disembarkation on return, free return passage and food on the journey to and from the United Kingdom, a subsistence allowance of Rs. 30 per month for the whole period of journey from home to England and back to home, the necessary warm outfit in India plus an allowance in the United Kingdom for the purchase of suitable clothing. The allowances in England are : (*a*) during preliminary training—free boarding and lodging in a special hostel plus pocket money at the rate of 11½ shillings per week ; (*b*) during subsequent training wages at 64 shillings a week out of which he is required to pay 31 shillings per week for his board and lodging. In addition to the above, a separation allowance of Rs. 44 per month is paid in India to the family of a married man.

On their return to India, the services of the trainees are at the disposal of the National Service Labour Tribunals originally concerned with their selection and these Tribunals decide how best their services can be utilised, but no guarantee of employment is given. A settling allowance of Rs. 40 is paid to each trainee on his return to India after training to enable him to settle down.

By the end of May 1945, thirteen batches had been selected and sent to the United Kingdom. Of these, six batches were of 50 men each, one of 54, one of 55, one of 73, one of 74, one of 75, one of 78, and one of 79 men. Among the 788 candidates so far selected, 139 were from Madras, 161 from Bombay, 192 from Bengal, 98 from the United Provinces, 89 from Bihar and Orissa, 19 from Delhi, 43 from the Central Provinces and Berar, 29 from Sind and 14 from Assam. Commencing from 1943 the scheme has been extended to Indian States as well. It is of interest to mention that Their Majesties the King and the Queen paid two visits to Letchworth, the British Government Training Centre at which the Bevin Boys are trained and that Their Majesties spoke to all the Indian trainees who were there at the time. By the time we went to Press eleven batches comprising 643 trainees in all had returned to India. It is a remarkable fact that there has not been a single mishap in sending and bringing these boys to and from England by sea and that all the boys have gone and come back safely. On return, the trainees are trade tested by a special Board of Examiners appointed by the Government of India and if found suitable are posted as Supervisors in Ordnance factories or as Instructors at the Technical Training Centres on salaries which are about double or more than what they were getting before they left India.

It is computed that there has been an average increase of 227 per cent. in the earnings of Bevin Boys who have returned to India after completing their training in the United Kingdom. Four whose previous salaries were between Rs. 40 and Rs. 70 per month are now Commissioned Officers in the Corps of Indian Engineers at a starting salary of Rs. 445 per month. A fitter from Punjab who used to earn Rs. 70 per month is now an Asst. Inspecting Officer in the Indian Stores Department on Rs. 350 per month. More than 160 men are holding supervisory jobs on salaries ranging from Rs. 75 to Rs. 385 per month. One Bevin trainee has secured an appointment as a general foreman with a Bombay firm on a salary of Rs. 1,000 per month. The returned Bevin Boys are not only providing a nucleus of skilled workers who are furthering the war effort but who are also helping the industrial progress of India.

MAINTENANCE OF ESSENTIAL SERVICES.

As a consequence of the entry of Japan into the War, the danger had arisen of persons in India abandoning their employment or leaving certain areas. If this fear were to materialise it would be impossible to maintain certain services essential for the public safety, the maintenance of public order, the efficient prosecution of the war or the maintenance of supplies or services necessary for the life of the community. In order to avoid such a danger, the Governor General, in exercise of the powers conferred on him by Section 72 of the Government of India Act, 1935, promulgated an Ordinance called the Essential Services (Maintenance) Ordinance, 1941. This Ordinance applies to all employment under the Crown and to any employment or class of employment which the Central or a Provincial Government declares to be an employment for the purposes of the Ordinance. When once any employment in any particular area has been "declared", no person engaged in that employment is permitted to depart outside of that area. Any person in an employment which has been "declared" who disobeys any lawful order given to him in the course of such employment, or without reasonable excuse abandons such employment or absents himself from work, or departs from any area specified in the declaration without the consent of the authority making that order, and any employer of a person engaged in an employment which has been "declared" who, without

reasonable cause, discontinues the employment of such person or by closing an establishment in which such person is engaged, causes the discontinuance of his employment is guilty of an offence under the Ordinance. Penalties for infringement are imprisonment up to one year with additional liability to a fine. Courts can only take cognizance of offences under this Ordinance upon receipt of complaints made in writing by a person authorised in this behalf by the Central or a Provincial Government. Both the Central Government and the Provincial Governments with the previous sanction of the Central Government have the power to make rules regulating or empowering a specified authority to regulate the wages and other conditions of employment of persons in an employment which has been "declared" by this Ordinance. When any direction regulating wages or conditions of service have been given by an authority empowered by such rules to give them, any person failing to comply therewith is guilty of an offence under the Ordinance. The Governments of Bengal, Orissa and U.P. have framed rules under Section 6(1) of the Ordinance. The Labour Commissioners in Bengal and U. P. and the District Magistrates in Orissa have been empowered under the rules to regulate wages and conditions of service generally. In Assam, the Controller of Emigrant Labour and Labour Commissioner has been authorised for the purpose.

Both the Central Government and many of the Provincial Governments in India have issued notifications under the above Ordinance "declaring" many essential services such as railways, oil and fuel installations port trusts and dockyards, municipalities, gas and electricity producing plants, telephone systems, certain banks, *et cetera*, as employments to which this Ordinance has been made applicable. No such declarations have, however, been made by the Governments of the Central Provinces and Berar, the Punjab, the N. W. Frontier Province and Orissa or by the centrally administered areas other than Delhi and Baluchistan. The number of prosecutions launched under the Ordinance up to about the end of February 1945 amounted to over 3,000. The very large majority of these cases were of Government servants.

CREATION OF EMPLOYMENT EXCHANGES IN INDIA.

When the National Service Labour Tribunals were established under the National Service (Technical Personnel) Ordinance, it was the intention that they should gradually assume the role of employment exchanges for technical personnel. This they had been doing but the statutory powers given to Tribunals to fix wages and terms of service and to compel an employer to give up an employee and an employee to take up employment in the national service have distinguished them from the voluntary employment exchanges commonly met with in other countries. The exacting needs of war made it necessary for the Tribunals to have these statutory powers and they served their purpose. As the war progressed it was felt necessary to look ahead and to build up an employment organisation which would be in a position to deal with the registration and voluntary placement of the many skilled and semi-skilled workmen who would be thrown out of employment on the termination of hostilities. The Tribunals had gained much experience of the requirements of employers and the placement of labour and it was therefore decided to use these organisations in the first instance for the setting up of voluntary employment exchanges for skilled and semi-skilled personnel. Employment exchanges for technical personnel were accordingly established at Calcutta, Bombay, Ahmedabad, Madras, Cawnpore, Lahore, Nagpur and Delhi with effect from the beginning of the year 1944 and at Dhanbad and Karachi later on in the year. These Exchanges were, for the time being, placed under the control of the local National Service Labour Tribunals. It is the intention of the Government of India to open up 71 employment Exchanges in all in India by the end of February, 1946. For example, there will be five more Exchanges in the Province of Bombay in addition to those at Bombay and Ahmedabad. These will be located in the Parel and in the Docks' areas in the City of Bombay and in Poona, Sholapur and Hubli. In addition to the one at Cawnpore, there will be seven more Exchanges in the United Provinces at Agra, Bareilly, Meerut, Lucknow, Gorakhpur, Allahabad and Benares.

It is proposed that the new net-work of Employment Exchanges should be as follows:—

Central Exchange	1
Regional Exchanges	9
Special Exchanges for Naval and Aircraft respectively	2
Sub-regional Exchanges	59
	71

There will also be one Employment Information Bureau in each area covering 1,000 demobilised persons.

Objects and Methods of Work.—(i) Each exchange provides a place where information is collected and furnished to the public in respect of employers who desire to engage technical personnel and personnel who seek employment; (ii) information obtained from employers regarding vacancies is recorded on "order cards" for vacancies which are maintained on the card index system; (iii) information obtained from persons seeking employment is recorded on individual card index envelopes which are filed on the card index system. Each such envelope forms the file for the correspondence relating to the individual concerned; (iv) employers are encouraged to apply to the employment exchanges for any technical personnel they require and the exchanges place suitable applicants in touch with employers. Employers are not required to accept candidates sent to them by the exchanges if they do not wish to do so but in such cases they are required to give their reasons for not accepting the candidates. For this purpose each recommended candidate is supplied with an identification card addressed to the employer to which a pre-paid reply card is attached. On the pre-paid card there are entries to enable the employer to state if the candidate has been employed and if he has not

been employed the reasons therefor; and (v) the exchanges have no concern with the wages and terms of service of the men they supply. These are to be settled between the applicant for employment and the employer and once a man has been engaged the exchange has no further concern with him.

Classes of Workers Covered.—For the present, employment exchanges have been asked to deal with all classes of technical personnel as defined in section 2 of the National Service (Technical Personnel) Ordinance but in the first instance the benefit of the exchanges were to be extended only to unemployed technical personnel who were drawing a wage of Re. 1 per day or more when last employed. It is hoped, in the near future to grade persons belonging to each occupation on the basis of their skill and duties and responsibilities which they are capable of discharging, but for the present the following gradation on a wage basis has been laid down: *Grade I* ' person in receipt of Rs. 2 per day and over in the cities of Bombay and Calcutta and their suburbs and Rs. 1-8-0 per day and over in other areas. These are further classified as 'supervisory staff', '*mistries* or master tradesmen' or 'operatives' according to the nature of their duties; *Grade II*: persons in receipt of Rs. 1-8-0 and over but less than Rs. 2 per day in the cities of Bombay and Calcutta and their suburbs and Re. 1 and over but less than Rs. 1-8-0 per day in other areas; and *Grade III*: persons in receipt of wages below Rs. 1-8-0 per day in the cities of Bombay and Calcutta and their suburbs, and below Re. 1 per day in other areas. Exchanges will not at present register tradesmen belonging to grade III and managerial grades. Clear definitions have been framed giving the classifications of the different classes of technical personnel covered. Unemployed technical personnel are being encouraged to register with the employment exchanges but registration is not compulsory. Employment exchanges also deal with ex-Servicemen. In order to look after their interests an Army Officer has been appointed in each exchange with the status of Joint Manager of the Exchange.

Statutory Obligations of Employers.—Though employers are *not required* to fill vacancies only by the acceptance of candidates sent by the exchanges, they are required to notify the exchanges of all vacancies for technical personnel in their establishments (other than those reserved for their own apprentices) as they occur and to furnish monthly reports to the exchanges as to how the vacancies have been filled. Every industrial undertaking is also required to issue to any technical personnel discharged, dismissed or released by it or permitted by the Tribunal to leave their employment a service certificate in Form O of the forms prescribed by the National Service (Technical Personnel) Rules, or if the employee is already in possession of such a certificate to make such additions to the certificate as will bring it up to date.

Management.—Each exchange is managed by a Manager who is appointed by the Tribunal and who is generally the Tribunal's Technical Inspector. The Manager has sufficient technical qualifications and experience to enable him to appreciate the requirements of industry generally and the special requirements of his particular locality and it is his duty to maintain close contact with employers and local bodies and assist them to secure the personnel they require. It is also the duty of the Manager to deal sympathetically and tactfully with technical personnel who visit the exchange in order to register themselves. Each Manager is assisted by a representative of the Army, a clerical staff, the strength of which depends on the volume of work to be dealt with from time to time and where the activities of the exchange justify it by a Tradesman Supervisor for carrying out trade tests in the main engineering trades. Where difficulties arise over the administration of an exchange they are to be placed before a committee consisting of the Chairman of the National Service Labour Tribunal (President), the Manager and the Army representative (if any) for solution.

Employment Committees.—Each employment exchange has attached to it a local Employment Committee consisting of representatives of employers, and labour, 1 representative of the Provincial Government and 1 Army representative. The Chairman of each Employment Committee is elected by the members themselves. The Employment Committee advises on all matters affecting the working of the exchange, including the general aspects of the problem of placement of personnel. The Committee does not however concern itself with individual cases.

Central Exchange.—A Central Employment Exchange has been opened in the Labour Department of the Central Government at Simla. The functions of this exchange are to issue general directions when required and to co-ordinate the needs of the different provinces and ensure that no province goes short of skilled or semi-skilled labour while there is a surplus in any other province. For this purpose each employment exchange has to send a weekly report to the central exchange giving a brief outline of the needs and surpluses of the area in its charge. The Central Exchange will not register unemployed personnel nor will it accept orders from private employers but it will accept orders from employing Department of the Government of India or their attached and subordinate offices which find it impracticable to place orders on any particular Exchange or Exchanges.

Manner in which the Exchanges are operating.—Workmen wishing to register themselves at an employment exchange are asked by the exchange staff to supply such particulars about themselves as age, technical education and experience, willingness to serve away from their homes, etc. This information is recorded on specially designed envelopes, within which is placed any other correspondence which may later develop in regard to the individual's placement. On registration, each workman is given an identity card containing his registered number, address, identification marks, signature or thumb impression and trade. To make identification easier, the identity card may also bear a photograph. Employers may notify vacancies to the exchange in person, by telephone, or on a specially prepared form which may be obtained from the exchange manager. It is not incumbent on employers to supply all the information as in the application form, but evidently, the more detailed are the particulars supplied, the easier it

will be for the exchange staff to submit the right type of personnel. Particulars about vacancies are also recorded on envelopes, and these as well as the envelopes containing information about workmen in need of employment are maintained on the card index system. Each envelope forms a complete record in itself. When a vacancy is notified, the exchange staff goes through its records and selects the most suitable person or persons and directs them to interview the employer. Persons so directed are supplied with introduction cards to be presented to the employer at the time of interview. A duplicate of this card is sent simultaneously to the employer. The form sent to the employer has space in which the employer is requested to state whether the candidates appeared for interview, whether they were taken into employment and if so on what wages, and if rejected, the reason therefor. When an exchange finds that it cannot fill a vacancy locally or place a certain workman, it will notify the fact with full particulars of the vacancy or workman to the Central Exchange, Simla, for circulation to other exchanges. Detailed information is not available regarding the members of registrations at and placements from all the Employment Exchanges which have so far been opened in India but it is of interest to note that these figures for the Exchange in Bombay amounted to 6,337 and 3,521 respectively since the Exchange was opened early in 1944 up to the 31st May, 1945.

The following table contains the latest available information regarding registrations and placements by Employment Exchanges. These figures are, however, somewhat incomplete because they do not contain information relating to Bengal, Bombay, Madras and Orissa :

Month.	No. of Employment Exchanges submitting returns.	Total Registration.	Placing during the month.	Total Vacancies.	Vacancies cancelled.	Vacancies outstanding at the end of the month.
July	10	8,713	1,420	11,205	1,621	8,697
August	10	9,688	1,175	13,485	2,650	10,245
September ..	10	10,922	893	14,257	4,304	9,366
October	13	16,150	1,132	13,562	2,358	10,396
November	14	19,293	1,057	16,755	2,903	12,850
December	18	23,954	1,476	20,428	2,914	16,366

CREATION OF A STATUTORY COAL MINES LABOUR WELFARE FUND.

With a view to meet expenditure incurred in connection with measures which in the opinion of the Government of India are necessary or expedient to promote the welfare of labour employed in the coal mining industry, the Government of India, under the powers conferred by Section 72 of the Government of India Act, promulgated the Coal Mines Labour Welfare Fund Ordinance, 1944, on the 31st January 1944. By virtue of Section 4 of this Ordinance, a Coal Mines Labour Welfare Fund has been created which will derive its revenue from a cess or a duty of excise at such rate, not less than one anna nor more than four annas per ton, as may from time to time be fixed by the Central Government by notification in the Official Gazette. Specified classes of coal or soft coke may be exempted from this duty. The principal objects for which this fund will be utilised are defined in the Ordinance. These are : (1) the improvement of standards of living, including housing and nutrition, the amelioration of social conditions and the provision of recreational facilities for the benefit of the labour employed in the coal mining industry ; (2) the provision of transport to and from work ; (3) the provision of improvement of educational facilities ; (4) the provision of improvement of supplies of water ; and (5) the improvement of public health and sanitation, the prevention of disease, the provision of medical facilities and the improvement of existing medical facilities. The Ordinance makes provision for the appointment of an Advisory Committee consisting of Government Officers and equal numbers of members representing colliery owners and workers employed in the coal mining industry of whom one has to be a woman and it contemplates the appointment of Welfare Administrators, Inspectors and other officers to supervise or carry out the activities financed from the fund. The functions of the Advisory Committee are to advise the Central Govt. on all matters which the Ordinance requires Government to consult it and on any other matters arising out of the administration of the Ordinance and the fund. Both the cost of administration of the fund and the salaries and allowances of the Officers appointed in connection therewith are to be defrayed from the fund itself.

The Rules framed under the Coal Mines Labour Welfare Fund Ordinance were published in the Gazette of India dated the 15th October, 1944. These make provision for the composition of the Advisory Committee, the collection of the excise duty or cess levied under the Ordinance and its administration. The members of the Advisory Committee are as follows : Mr. H. C. Prior, Secretary to the Government of India in the Department of Labour, Chairman ; Mr. V. K. B Pillai, Coal Mines Labour Welfare Commissioner Vice-Chairman ; Mr. P. C. Young, Coal Commissioner ; Mr. W. H. Kirby, Chief Inspector of Mines ; Mr. R. S. Nimbkar, Labour Welfare Adviser to the Government of India ; Mr. A. Hughes, Labour Commissioner with the Government of Bengal ; Mr. A. G. Bunn, Additional Deputy Commissioner, Dhanbad ; Sardar Bahadur Ishar Singh, Labour Commissioner with the Government of the Central Provinces and Berar ; Messrs. J. Latimer and S. F. Tarlton, nominees of the Indian Mining Association ; Mr. M. N. Mukerjee, nominee of the Indian Mining Federation ; Mr. R. D. Rothore, President, Indian Colliery Owners' Association ; Mr. Boothroyd, nominee of the C. P. & Berar

Mining Association; Mr. Mono Gopal Sen Gupta, representing other Colliery Owners; Mr. S. N. Mallick, representing the Indian Mine Managers Association; Mr. W. M. Burch, nominee of the National Association of Colliery Managers; Messrs. H. Ghosal and P. Bhattasali of the Indian Federation of Labour; Messrs. Nirpada Mukherjee and Chapal Bhattacharya of the Trade Union Congress; Kulada Bibi, a woman worker of 45 years of age who has been employed for the last 30 years as a coal cutter and Mr. Ram Dhar Singh, a 25-year old miner from the Barari Jalgera Colliery in the Central Provinces who can read and write Hindi. The Rules provide for the appointment of a number of Sub-Committees which include (1) a finance Sub-Committee to frame schemes of expenditure and to advise generally on the budget and all expenditure debitable to the Fund; (2) a Works Sub-Committee to consider all major projects and (3) separate Coalfields Sub-Committees for each of the main Coalfields in Bengal, Bihar, the Central Provinces and Berar and Assam to consider and advise on all matters relating to expenditure from the Fund in their respective Coalfields.

The Rules further empower the Central Government to impose certain conditions on Provincial Governments, local authorities or Owners, Agents or Managers of Coalmines to whom grants are made from the Fund in aid of any schemes approved by the Central Government. These conditions may be imposed to ensure that the work for which the grant is made is duly and promptly executed, that all the necessary facilities are given for any inspection that may be made for checking and that proper accounts are maintained for the money granted.

At the Second Meeting of the Advisory Committee held at Dhanbad on the 12th October 1944, the Committee decided to recommend to the Government of India that a cess of four annas per ton should be levided on all coal and coke despatched from collieries in British India with effect from 1st November, 1944. In deciding on the maximum amount of cess permissible under the Ordinance, the Committee felt that it might not be possible to maintain this figure in periods of slump and they recommended that Government should accept, as a general principle, the building up of a reserve fund in those periods in which the maximum was levied so as to ensure that welfare measures could be maintained in periods of slump. Some of the welfare schemes so far recommended by the Board are as follows: (1) Anti-Malaria Campaign with a recurring annual expenditure of Rs. 7 lakhs and a non-recurring expenditure of 3 lakhs; (2) the provision of two regional hospitals in the Jharia Coalfields at an estimated capital cost of Rs. 3,00,000 and two hospitals for Raniganj Coalfields at an estimated cost of Rs. 1,34,000; (3) part provision of grants of Rs. 3,00,000 each towards the captial costs of Central hospitals in Jharia and Raniganj; (4) a token grant of Rs. 5 lakhs for a water supply scheme; (5) a token grant of Rs. 10 lakhs for a housing scheme; (6) grants for propaganda measures and for growing vegetables; and (7) a sum of Rs. 27 lakhs to be spent immediately to build for coal miners a township of two roomed tenements on the outskirts of coal areas in the Raniganj Coalfields.

SOCIAL SECURITY: INVESTIGATION AND PLANNING.

The Tripartite Labour Conference at its meeting in September 1943 unanimously passed the following resolution:

'This Tripartite Labour Conference recommends that with a view to provide adequate materials on which to plan a policy of social security for labour the Central Government in co-operation with the Governments of Provinces of British India, Indian States and the Chamber of Princes should immediately set up machinery to investigate questions of wages and earnings, employment and housing and social conditions generally, and that as soon as possible after receipt of the required statistics and other data the Central Government should appoint a mixed committee to formulate plans of social security.'

In pursuance of this resolution and in order that information may be collected bearing upon various aspects of social security, so as to enable the Planning Committee subsequently to be set up to draw up a programme of social security for labour in India, the Governor-General-in-Council appointed, early in the year 1944, a Committee of Enquiry to be known as the Labour Investigation Committee. The Committee is composed of Mr. D. V. Rege, I.C.S., as Chairman and Mr. S. R. Deshpande, M.B.E., Dr. Ahmad Mukhtar and Mr. B. P. Adarkar as Members.

The terms of reference of the Committee are as follows: (*a*) to collect data relating *inter alia* to wages and earnings, employment, housing and social conditions of labour and in particular of industrial labour in India; and (*b*) to investigate and report *inter alia* on: (*i*) the risks which bring about insecurity; (*ii*) the needs of labour, by various classes, to meet such risks; (*iii*) the methods most suitable for meeting such risks; and (*iv*) housing and factory conditions. The Headquarters of the Committee are at Simla.

The Committee first proceeded on a preliminary all-India tour with a view to discussions with representatives of workers and employers and visits to important industrial centres. After their return from tour, they issued general and special questionnaires, and also launched sample and *ad hoc* surveys in all major and certain minor industries. As we go to Press, we understand that the Committee has completed its surveys into wages and is now engaged in writing its Report at Simla.

A special branch entitled the Social Security Branch of the Labour Department of the Government of India was opened towards the beginning of 1945 with Mr. B. P. Adarkar as Officer on Special Duty and ex-officio Deputy Secretary in charge to deal with the special problems of Social Security Planning. The following three distinct schemes are under preparation in this Branch:

(1) A Unified Scheme of insurance against sickness, accident and maternity for factory workers, to replace the original health insurance scheme drafted by Mr. Adarkar (an outline of this scheme has been circulated amongst Provincial Governments and Associations of Employers and workers for eliciting opinion).

(2) A unified scheme of insurance against sickness, accident and maternity for coal miners. And,

(3) A scheme of sickness insurance and old age pensions for Indian seamen serving on Indian and foreign ships.

WAR INJURIES (COMPENSATION INSURANCE) SCHEME.

A War Injuries (Compensation Insurance) Scheme was enacted by the Central Government under the War Industries (Compensation Insurance) Act, 1943, which was brought into force on the 16th November 1943. The objects of this Act is to impose an obligation on the employer to pay compensation in respect of war injuries to workmen covered by the Essential Services (Maintenance) Ordinance, 1941, factory workers, mine workers, workmen employed in the major ports, and to workers employed on any estate where cinchona, coffee, rubber or tea is grown. The amount of compensation is roughly the difference between the amount paid by Government under the War Injuries Scheme and the amount which would have been payable under the Workmen's Compensation Act if the war injury had given a right to compensation thereunder. There is no limit as regards the monthly salary of the workman as in the Workmen's Compensation Act. Insurance has been made compulsory for every employer covered by the Act who has to take out a policy of insurance from the Central Government on payment of an advance premium at the rate of annas four per Rs. 100, subject to a minimum of Rs. 8, on the wage bill for the quarter ended 31st December 1943, if the employer was an employer for one quarter before the 1st January 1944, otherwise for any subsequent quarter during which he became an employer for the first time; provided the quarterly wage bill has exceeded Rs. 1,500. All the premia received from the employer go to make the War Injuries Compensation Insurance Fund from which all payments of compensation, etc., will be met. The fund cannot be utilized to pay compensation to Crown employees as the Crown is not required to pay insurance premia in respect of its employees. The same machinery as administers the War Injuries Scheme is to be utilized for the purpose of the War Injuries Compensation Insurance Scheme.

UNSKILLED LABOUR SUPPLY COMMITTEES.

During the earlier stages of the War the supply of unskilled labour had been satisfactory requiring no measures for its control or allotment. By the end of the year 1942, however, there were indications that the problem of supply of such labour was assuming importance in a few areas. The Government of India therefore decided to set up both Provincial and Regional Labour Supply Committees for areas where serious shortages were being experienced or were likely to be anticipated and a beginning was made by the setting up of such a Committee at Jubbulpore where the needs of the Central Government establishments predominate. The Committees have no statutory powers. They are ordinarily, under the chairmanship of the Chairmen of the National Service Labour Tribunals of the Provinces in which they are established. Their recommendations are to be followed by the local undertakings of the Central Government—any differences to be decided by that Government at headquarters. The functions of Unskilled Labour Supply Committees are as follows: (1) to co-ordinate the recruitment of unskilled labour for all Government undertakings in the area; (2) to arrange a priority of utilization of any other recruited labour and of existing labour forces in accordance with any priority orders that may be received from competent authorities; (3) to advise on any measures necessary to secure adequate unskilled labour force, including all amenities and conditions of service, grain shops, housing, medical relief, etc.; and (4) where necessary to advise on scales of wages and dearness allowance. The Committee appointed for the Province of Bombay is under the chairmanship of Sir Charles Bristow, Kt., C.I.E., I.C.S., Adviser to His Excellency the Governor of Bombay and the Regional Committee for Bombay City is under the Chairmanship of Mr. H. E. Butler, Commissioner of Police, Bombay.

PAYMENT OF FAMILY ALLOTMENTS.

A scheme was sanctioned early in 1942 enabling Government servants in "threatened" areas to arrange for a regular monthly remittance of a portion of their salaries (not exceeding 50 per cent.) to their families living away from them. The scheme has now been extended to all daily-rated labourers in Central Government undertakings whose employment is expected to last for at least 12 months from the date of first appointment.

PREVENTION OF HARTALS.

We refer elsewhere in this publication to the widespread disturbances which occurred in India in August 1942 following the arrest of Mr. M. K. Gandhi and the leaders of the Indian National Congress as a result of the All-India Congress Committee deciding, at its historic Session of 6th 8th August in Bombay, to empower Mr. Gandhi to launch a Civil Disobedience Movement in this country. These disturbances included *hartals* or stoppages of work for prolonged periods in many industrial units in several centres in India. All the cotton textile mills in Ahmedabad remained totally closed for nearly four months. A number of other factories and large engineering workshops in Bombay, Cawnpore, Nagpur and in many other places were also affected and essential War production was considerably interfered with. In order to prevent a repetition of similar trouble in the future, the Government of India, by a notification dated the 17th April 1943, have amended the Defence of India Rules by adding a new rule—Rule 56A—for the Prevention of *Hartals* in Places of Employment.

'*Hartal*' has been defined as any concerted cessation of work or refusal to work by a body of persons employed in any place of employment, except a cessation or refusal in furtherance of a trade dispute with which such body of persons is directly concerned. If in the opinion of a Provincial Government a body of persons employed in any place of employment is likely to take part

in, or is taking a part in, a *hartal*, then, without prejudice to any other proceedings which may be taken in respect of such *hartal*, the Provincial Government may by order in writing require the person owning or having the management of such place of employment to take, within such time as may be specified to secure that the *hartal* shall not take place, or, as the case may be, shall cease. Further, if in the opinion of a Provincial Government a place of employment has been closed for reasons other than the furtherance of a trade dispute, the Provincial Government may by order in writing require the owner or persons having the management of such place of employment to take, within such time as may be specified in the order, such measures as may be so specified to secure that the place of employment shall be opened, and shall remain open, for the unimpeded employment of persons employed therein. Contraventions of the provisions of any order made under Rule 56A of the Defence of India Rules are liable to be punished with imprisonment for a term which may extend to five years or with fine which may extend to five lakhs of rupees or with both.

COMPULSION OF PERSONS TO WORK:

The Government of India, early in the year 1943, promulgated Rule 78A of the Defence of India Rules conferring powers on both the Central and the Provincial Governments to compel certain persons to do work. This Rule empowers any Officer of Government authorised in this behalf by a general or special order to require any male person within such area as may be specified in the order to assist in the doing of work on land for such period and in such manner as the officer may direct, being work the doing of which is in the opinion of the officer necessary to meet an actual or apprehended attack, or to repair or to reduce the damage resulting therefrom or to facilitate offensive or defensive operations in the area. Refusal by any person to comply with any lawful direction given to him under this order renders him liable to imprisonment which may extend to six months or with fine or both. The Officer giving a direction under this order has the right to determine the remuneration to be paid for the work.

WORK FOR RETURNING SERVICEMEN.

The Government of India, in a Press note dated the 10th May, 1945 have announced their plans for the Setting up of a co-ordinated organisation to deal with the re-settlement and re-employment in civil life of demobilised members of the defence services and discharged war workers. We have already dealt with the subject of the network of employment exchanges which have been or will be set up under the Labour Department to facilitate registration for the placement in civil employment of demobilised persons. This set-up will be the beginning of a well-organised and co-ordinated employment service to help workers to find the most suitable employment, to assist employers to secure the most suitable workers and to ensure that the available workers and available jobs are brought together as promptly and satisfactorily as possible. It will also ensure that the necessary skills are available and are distributed satisfactorily among the various branches of production.

Effective Machinery will be required in connexion with military and industrial demobilisation after the war for facilitating the transfer of a large number of workers from one job, occupation, industry and area to another. Information will have to be collected in advance regarding persons likely to be seeking work, employment opportunities likely to be available for various categories of workers, and the probable area-by-area balance of labour supply and demand. Special problems will also arise with regard to employment re-adjustment during the transition from war to peace and positive steps will have to be taken to facilitate the mobility of labour, both occupational and geographical. Programmes of technical training and vocational guidance for demobilised persons have to be organised to equip them for the type of employment for which they are most suited and for meeting the man-power requirements of post-war development schemes. After their placement in civil employment, the interests of ex-servicemen and women will also need watching for some time, with a view to assisting them to adapt themselves to their new surroundings and bringing about mutual understanding and cordial relations between them and their new employers. It is the intention of the Government of India to establish the following six Directorates at Headquarters under a Director General of Re-settlement and Re-employment to deal with these various problems :

(1) The Directorate of Employment Exchanges and Statistics will supervise, integrate, and direct the work of the central, regional and sub-regional exchanges. It will collect data regarding the numbers of persons likely to be demobilised and the employment opportunities likely to be available, and all other relevant information pertaining to Employment.

(2) The Directorate of Employment will function as an employment finding body. It will tap all available sources and will explore new avenues of employment and keep abreast of post-war development schemes.

(3) The Directorate of Technical Training will, in collaboration with Government factories, railways, the Provincial Governments and Civil Industry, organise facilities for further technical training and apprenticeship training for such demobilised technicians as may need them for civil employment

(4) The Directorate of Vocational Training will organise training facilities in non-engineering trades and vocations in collaboration with the Provincial Governments, universities and private institutions.

(5) The Directorate of Publicity will popularise the employment of demobilised persons in Civil employment and canvass private employers. And,

(6) The Directorate of Welfare will maintain a close liaison with labour welfare organisations of the Central and Provincial Governments with a view to ensuring that the interests of demobilised persons in civil employment are being properly watched and safeguarded.

For the purposes of the above organisation the country has been divided into nine regions—the Punjab and the North West Frontier Province; Sind; the United Provinces; Bengal and Assam; Central Provinces and Berar; Bombay; Bihar and Orissa; Madras and Coorg; and Delhi. The regional organisation will be under a Director of Re-settlement and Employment and attached to him will be an employment advisory committee consisting of representatives of Government departments, employers and workers' organisations and the Soldiers,' Sailors' and Airmen's Board. The Government of India have arrangements well in hand for training the necessary personnel which will be required in connexion with all these schemes both in England and in India.

CONTROL OF LABOUR RECRUITMENT.

By a notification published in the Gazette of India dated the 9th June 1944, the Government of India have directed that Rule 81 of the Defence of India Rules is applicable "for controlling the recruitment and employment of labour in such areas as may be specified in the order, with a view to securing that sufficient workers are available for essential undertakings.

The Labour Recruitment Control Order which was brought into force with effect from the 18th December, 1944 is designed to regulate the recruitment of labour from certain controlled Districts in Bengal, Bihar and the Central Provinces and Berar. The order requires contractors and employers of labour to obtain licenses for recruiting labour from controlled districts for work outside the controlled districts. All works or employments within the controlled districts are exempted from taking out licenses. This order is expected to improve the labour supply position in the collieries.

PROMULGATION OF RULE 81A OF DEFENCE OF INDIA RULES.

We deal with this below under the heading of Industrial Disputes Legislation in the following Chapter.

LABOUR LEGISLATION—ITS ADMINISTRATION AND STATISTICS.

The Central co-ordinating authority in India for questions connected with labour legislation is the Department of Labour of the Government of India with a member of the Viceroy's Executive Council holding the portfolio. The administration of matters connected with the English and Indian Merchant Shipping Acts, the Mercantile Marine Department and Indian Seamen is with the Department of Commerce. In respect of all the Federal Railways, the Labour Member is responsible for the administration of the Payment of Wages Act, 1936, Trade Disputes, Hours of Work for employees not covered by the Factories Act and regulation of employment of children. He is also responsible for Regulation of Labour and Safety in respect of mines and oilfields; trade disputes in industries, businesses or undertakings carried on by the Central Government; and Inter-Provincial Migration. In the field of Concurrent Legislation, the Labour Member is responsible for (1) Factories; (2) Welfare of Labour, conditions of labour, provident funds and workmen's compensation, health insurance including invalidity pensions and old age pensions; (3) unemployment insurance; (4) trade unions and industrial and labour disputes; (5) electricity; and (6) boilers. As the permanent ex-officio Chairman of the Tripartite Labour Conference, all matters connected with the Conference and its Standing Labour Committee are dealt with by the Labour Member. He is also responsible for the administration of the National Service (Technical Personnel) Ordinance; recruitment of unskilled labour throughout British India for employment on defence works the administration of the Technical and the Bevin Training Schemes, the Cost of Living Index Scheme, the Essential Services (Maintenance) Ordinance, and Air Raid Precautions in Factories. Among the many matters and subjects not directly connected with Labour, the Member for Labour is responsible for the administration of the Central Public Works Department and the Indian Service of Engineers; the Civil Pioneer Force Ordinance, 1942; Government Printing and Stationery; the Central Boilers' and Electricity Boards and the Coal Grading Board; the Central Board of Irrigation and the Geological Survey of India. Under the Devolution Rules made under the Government of India Act, 1919, 'Regulation of Mines' and 'Inter-Provincial Migration' were central subjects whereas industrial matters included under the head 'factories' and 'welfare of labour' fell within the scope of the provincial legislatures. Although the Government of India has passed central legislation in connection with most questions affecting the welfare of labour—in order to secure uniformity of treatment in all provinces—the administration of the various Acts connected with factories, workmen's compensation, trade unions, payment of wages, the pledging of child labour, etc., falls on the Provincial Governments who have to bear the entire cost of administration as it is not permissible under the constitution for the Central Government to incur any expenditure from Central revenues on the administration of provincial subjects. This constitutional position was perhaps, to some extent, responsible for the opposition shown by some of the Provincial Governments to labour measures on which their views were invited by the Government of India during recent years.

The Governor-General in Council exercises control over the administration of the Acts passed by the Central Legislature in two ways: in the first place he is vested by Statute with the general power of superintendence, direction and control; and, secondly these Acts in most cases reserve certain power to him to make the powers conferred on Provincial Governments subject to his control. The general principle observed by

the Government of India, however, has been to grant to the provinces as free a hand as possible in the administration of the various all-India Acts. The Central Government in the Department of Labour, however, maintains control in connection with the Indian Mines Act and the Mines Maternity Benefit Act.

The Royal Commission on Indian Labour recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration; and that, if federal legislation were not practicable, efforts should be directed to securing that, as early as possible, the whole of India should participate in making progress in labour matters. For Indian States in which there was appreciable industrial development, the Commission thought that the Industrial Council which they recommended should be set up would offer a suitable channel for co-operation. (It may be mentioned here that Indian States have been given six seats in the Tripartite Labour Conference). The whole question was discussed threadbare at the various Round Table Conferences which were held in London in connexion with the new reforms; and Mr. N. M. Joshi who represented the interests of Indian Labour at these conferences pressed that as far as possible labour legislation should be a federal subject. Owing largely to Mr. Joshi's efforts, the Joint Parliamentary Committee decided for concurrent legislation. The Government of India Act, 1935, lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures:—

(1) Factories; regulation of the working of mines, but not including mineral development;

(2) Welfare of labour; provident funds; employers' liability and workmen's compensation;

(3) Trade Unions; industrial and labour disputes.

Since the institution of the Annual Conference of Labour Ministers, the First Session of which was held at New Delhi in January, 1940, the trend has been for Central rather than Provincial Labour Legislation—with this difference, that, whereas all the Central Acts passed prior to 1941 automatically applied to the whole of British India, some of the recent labour legislation has been permissive, that is to say, it is open to any particular Province to extend such legislation to its territory or not as it pleases.

In this Chapter we shall give the principal features of all the Central Labour Acts as also of all the more important Provincial Labour Acts; but, where more than one Province has similar legislation, we shall describe the parent Act and indicate important differences, if any, between that and the similar subsequent Acts. As far as statistics are concerned, the Government of India, owing both to the shortage of paper and the undesirability of publishing information which is likely to be of value to the enemy, have stopped the issue, since the year 1940, of the Annual Reports which they used to publish in connexion with the administration of the various Labour Acts in the country. We shall, therefore, only give such statistics as are available in this Edition. We shall conclude this Chapter with a section on the recent demand for uniform labour laws for India and the action taken in connection therewith by the institution of the Conference of Labour Ministers and the Tripartite Labour Conference.

THE FACTORIES ACT, 1934.

In the Chapter on the historical survey of the growth of the labour problem in India we have traced the development of factories' legislation in the country since 1881 when the first Factories Act was passed and we gave the main features of that Act and the 1891 and the 1911 Acts as amended by the Amending Acts of 1922, 1923, 1926 and 1931. Factory law in India was completely overhauled in 1934 as the result of the acceptance by Government of most of the recommendations made for its improvement by the Royal Commission on Indian Labour. A new consolidating and amending Act was passed by the Central Legislature in 1934 and "The Factories Act, 1934" was brought into operation with effect from 1st January 1935. This Act has been amended on five occasions in 1936, 1940, 1941, 1944 and 1945. The last amendment of the Act which was effected in 1945 deals with holidays with pay for all workers employed in perennial factories. The main provisions of the law relating to factories as it stands today are as follows:

(*a*) *Classification of Factories.*—A distinction is drawn between 'seasonal' and 'perennial' factories. A factory which is exclusively engaged in cotton ginning, cotton or jute pressing, the decortication of ground-nuts, or the manufacture of coffee, indigo, lac, rubber, sugar (including gur) or tea is to be a seasonal factory, provided that a Provincial Government may, by notification in the official gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The Provincial Government may also, by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.

By virtue of the Factories (Amendment) Act, 1940, the provisions of the 1934 Act relating to health, safety, regulation of child labour and registration may be applied to power factories employing from 10 to 19 workers and in which children are employed. It was felt that this amendment would lead to the complete non-employment of children in small factories because rather than be compelled to register under the Act, the owners concerned would prefer not to employ children at all.

There has been an increasing tendency in most Provinces in India during recent years especially in Bombay, to take advantage of Section 5 of the Factories Act, 1934, by notifying all factories employing ten or more persons as "factories" for the purposes of the Act. In this connection it is of interest to record that Dr. K. N. Katju, Ex-Minister for Industries in the United Provinces conducted a detailed inquiry into alleged sweated labour in small factories for a period of over two years. He

found that in over 300 factories employing 4,000 workers labour was sweated, there were no fixed hours of work and health and sanitary conditions were deplorable. The Government of the United Provinces thereupon took immediate action by declaring all such factories as employed 10 or more persons as factories for the purposes of the Act. The Second Conference of Labour Ministers held in January 1941 decided that the Factories Act should be so amended as to make registration of all factories employing 10 or more persons compulsory but this recommendation has not yet been given effect to.

(*b*) *Age and Sex Groups.*—Factory operatives are divided into four age and sex groups. (1) adult males, (2) adult females, (3) children of both sexes, *i.e.*, persons over 12 and under 15 years of age, and (4) 'adolescents' defined as persons of both sexes who are over the age of 15 years and under the age of 17 years but who have not been certified as fit for employment as adults. Such adolescents as have not been so certified are to be deemed to be children.

(*c*) *Hours of Work.*—The maximum limits of eleven hours per day and sixty hours per week laid down by the 1922 Act for both adult males and females are permitted only in the case of seasonal factories. The maximum hours permitted for perennial factories have been reduced to ten per day and 54 per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted for both uncertified adolescents and children have been limited to five per day both in seasonal and in perennial factories.

(*d*) *Spreadover.*—By "spreadover" is meant the limitation of the period of consecutive hours during which the daily limits of hours of work may be availed of by the owner or occupier of a factory. This principle was introduced in factory legislation for the first time in 1934. The spreadover in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half continuous hours; but the continuous period of eleven free hours in every twenty-four hours in the case of adults and of sixteen and a half free hours in the case of children must include the hours between 7 p.m. and 6 a.m. for both women and children. The effect of the Amending Act of 1944 on this question has been dealt with below. The power to grant exemptions in the case of women where technical reasons require that work should be done at night, *e.g.*, in the fish curing industry, continues to be allowed.

(*e*) *Artificial Cooling and Humidification.*—Power has been given to Provincial Governments to authorise Factory Inspectors to call upon managers of factories to carry out specific measures for increasing the cooling power of the air if they are of opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort; provided, however, that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(*f*) *Welfare.*—Provision is made for four matters in connection with workers' welfare: (1) for the maintenance of a suitable and sufficient supply of water for washing for the use of persons employed in processes involving contact with obnoxious or poisonous substances; (2) for adequate shelter for rest in factories employing more than 150 persons; (3) for the reservation of suitable rooms for the use of children of women employed in factories employing more than fifty women; and (4) for the maintenance of adequate first aid appliances.

(*g*) *Rest Intervals and Holidays.*—The provisions of the 1911 and the 1922 Acts with regard to rest intervals and the weekly holiday were maintained subject only to verbal modifications of a minor character.

(*h*) *Holidays with Pay.*—The Factories (Amendment) Act, 1945 which comes into force with effect from the 1st January 1946 provides for compensatory holidays and holidays with pay. In cases where, as a result of the passing of an order or the making of a rule exempting a factory or the workers therein from the provisions of the Act relating to a compulsory weekly holiday, a worker is deprived of any of such holidays, he must be allowed, as soon as circumstances permit, compensatory holidays of equal number to the holidays so lost. The provisions with regard to holidays with pay will enforce, in all perennial factories, an annual paid holiday of 10 days for adults and 14 days for children. These holidays can be accumulated over a period of two years. Half of the wages payable for these holidays are to be paid before the worker proceeds on leave and the balance on his return. A more liberal provision will not be affected by this law and factories providing benefits substantially similar to those laid down in the amending Act can be exempted from its provisions.

(*i*) *Overtime.*—The old Acts contained no limitations with regard to the overtime hours which could be worked by 'exempted' workers. The new Act places a limitation of hours on the amount of overtime that can be worked by virtue of any exemptions granted under the Act. With regard to overtime rates of pay, the Act lays down that a time and a half should be paid in all cases where a worker in a seasonal factory is required to work for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory is required to work for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory is required to work for more than fifty-four hours in any one week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay.

(*j*) *Certificate of Fitness for Children.*—Provincial Governments have been given powers to make rules prescribing the degree of fitness to be attained by children and it has been prescribed that whenever such a standard has been laid down, no child failing to attain it can be certified for employment in a factory. Similarly, adolescents cannot work as adults

unless certified 'fit to work as an adult'. If they are not so certified they are considered children.

(*k*) *Security of Factory Structures.*—Factory Inspectors have been given powers to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety. Provincial Governments are further empowered to make rules for the furnishing, by factories, of certificates of stability.

(*l*) *Exemptions.*—A frequent cause of complaint against the older Factory Acts was that they gave local Governments very wide powers to exempt certain classes of workmen from all or any of the restrictive provisions of the Act. The new Act limits these powers and prescribes further that no exemptions are to be granted in respect of the provisions for spreadover, prohibition of night-work and the limitations of weekly hours for women and persons under the age of sixteen years.

The Factories (Amendment) Act, 1944 was passed to remedy certain defects and meet some difficulties in the administration of the main Act. Washing facilities were required to be provided only in places where workers come in contact with injurious or obnoxious substances. By removing the restrictive clause, all factory owners are required to provide washing facilities for their workers. By the time we went to Press for the last edition, Bombay was the only Province in India, which had framed draft Rules in connexion with this matter. A recent judgment of the Bombay High Court held that orders passed by an Inspector of Factories regarding "means of escape" were *ultra vires*. In order to validate the rules made by Provincial Govts. in the matter of 'Precautions against fire,' Section 23 of the Act has been suitably amended. Under the provisions of Sections 45 and 54 no woman or child was allowed to work in a factory except between the hours of 6 a.m. and 7 p.m. but the limiting hours could be varied by a Provincial Government to cover a span of 13 hours between 5 a.m. and 7-30 p.m. Owing to the change in Indian Standard Time practical difficulties were felt in this respect in Western Provinces. The evening limit has therefore been extended from 7-30 p.m. to 8-30 p.m. This amendment, however, is to have effect only for the duration of the War.

A new rule has been promulgated under the Defence of India Act which enables the Central Government to require that the lighting of any factory or class of factories shall reach a certain standard. This has been done to remedy defective lighting arising from one or the other of the following two causes: (1) many factories planned their interior lighting under peace-time conditions on the assumption that night-work would rarely be necessary; (2) compliance with black-out or other A.R.P. regulations requiring the prevention of the emergence of beams of light from a building has actually reduced lighting of the interior below the standard required for efficient work.

The latest position in regard to the regulation of conditions of work by the Factories Act of 1934 is that it was amended in 1946 and became law with effect from 1st August 1946. Briefly, the provisions of the Amended Act are:—

(*a*) The daily hours of work are reduced from 9 to 8 and the weekly hours from 54 to 48 in the case of perennial factories and from 10 to 9 and from 60 to 54 in the case of seasonal factories.

The rate of overtime pay has also been appreciably increased.

C. P. Unregulated Factories Act, 1937.

The Legislative Council of the Central Provinces and Berar passed an Unregulated Factories Act early in 1937. This Act is intended to regulate the labour of women and children and to make provision for the welfare of labour in factories to which the Factories Act, 1934, does not apply. "Unregulated Factory" has been defined as "any place where in fifty or more workers are employed or were employed on any one day of the preceding twelve months and to which the Factories Act, 1934, does not apply and wherein the following industries are carried on:—(*i*) *bidi* making, (*ii*) shellac manufacture, and (*iii*) leather tanning." A "child" has been defined as a person who has not completed his fourteenth year. The provisions with regard to health and safety, notices and registers, penalties and procedure closely follow the similar provisions in the Factories Act. Children's hours are restricted to seven in any one day and no child can be employed in any unregulated factory except between 8 a.m. and noon, and 1 p.m. and 5 p.m. The double employment of children is prohibited and a child who has worked in any unregulated factory on any one day is prevented from working overtime or taking work home. The hours of work of adult males are limited to ten per day and provision has been made for the grant of a holiday after every period of six consecutive days. Women's hours are restricted to nine per day and they are prohibited from working in any unregulated factory before sunrise or after sunset.

Factory Statistics.

Upto and including the Report for the year 1939, statistics regarding the numbers of factories and of factory workers used to be given in the annual reports on the administration of the Factories Act published by all the Provincial Governments. The Government of India published a Summary of the Provincial reports every year. These summaries contained statistics in eight different statements in regard to the following matters: (1) totals of the number of working factories, classified by Provinces according to types of factories; (2) average daily numbers of workers employed classified in the same way and by age and sex groups; (3) intervals, holidays and hours of work separately for perennial and seasonal factories: (4) accidents: and (5) convictions in respect of offences under the Act. A table containing the figures for numbers of working factories and the average daily number of workers employed therein classified by age and sex groups, between the years 1894 and 1939 was published at page 479 of the 1942-43 Edition of this publication. Owing to the shortage

of paper, both the Provincial Governments and the Government of India discontinued the publication of the Annual Reports on the administration of the Factories Act and the Annual "Statistics of Factories" with effect from the publication of the Reports for the year 1940. In view, however, of the fact that information relating particularly to employment figures would be widely used, the figures for the years 1938 to 1942 were published in the August, 1943 and in the January, 1944 issues of the *Indian Labour Gazette*. (The figures for 1942 were, however, provisional. The corrected figures are now reproduced in the table below together with those for the year 1943.) No corresponding information was given in the published tables for numbers of factories but from figures recently published by the Government of India it would appear that the total number of factories registered in British India under the Factories Act, 1934 was 13,209 in the year 1943 as against 11,868 in the year 1941 and 12,527 in the year 1942. The following table sets out the statistics of the average daily numbers of persons employed in all factories in British India for the years 1939 to 1944 classified according to main industry groups and according to their employment in perennial and seasonal factories.

Statistics of Numbers of Workers employed in Factories in British India.

Classes of Factories.	Average Daily Number of Persons employed in the years.				
	1940	1941	1942	1943	1944
Government and Local Fund					
Perennial Factories	168,125	219,233	299,273	355,878	420,435
Seasonal Factories	1,038	853	620	507	484
Total ..	169,163	220,086	299,893	356,385	420,919
All Other Perennial Factories					
Textiles	829,162	953,320	965,459	1,001,893	993,269
Engineering	158,665	204,056	223,820	253,947	265,392
Minerals and Metals	62,357	76,162	82,493	92,694	91,126
Food, Drink and Tobacco	104,038	119,888	121,311	124,736	132,384
Chemicals and Dyes	57,485	71,150	72,626	82,755	88,813
Paper and Printing	46,445	48,245	48,501	50,534	52,696
Wood, Stone and Glass	59,122	77,627	82,334	89,824	96,189
Gins and Presses	22,846	21,538	17,029	15,408	14,850
Skins and Hides	18,097	23,516	29,608	33,669	34,624
Miscellaneous	21,679	35,346	38,465	37,091	35,477
Total ..	1,379,896	1,630,848	1,681,646	1,782,551	1,804,820
All Other Seasonal Factories	295,369	305,443	300,698	297,883	294,996
Grand Total: All Factories	1,844,428	2,156,377	2,282,237	2,436,819	2,520,251

A table published at pages 160-1 of the November 1944 issue of the *Indian Labour Gazette* gives the composition of the average daily number of workers employed in registered factories in the different Provinces by age and sex groups for the years 1942 and 1943 but not by industries. The figures for the year 1943 show that of the total number of workers in all factories in British India, 2,133,023 were men, 262,744 were women, 38,069 were children and 13,484 were adolescents.

THE INDIAN MINES ACT, 1923.

The conditions of employment of labour in Indian mines are governed by the Indian Mines Act, 1923, as amended by the Amending Acts of 1928 and 1935. The act of 1923 which came into force from the 1st July 1924 replaced the earlier enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff but it contained no provisions regulating the employment of labour. This defect was

first remedied by the 1923 Act, section 23 of which prescribed maximum limits of 54 hours per week for underground and 60 hours per week for above-ground workers. No limits were prescribed for daily hours. A daily limit of 12 hours was imposed for the first time by the Amending Act of 1928 which was brought into effect from 1st April 1930. As a result of the recommendations made in the matter by the Royal Commission on Indian Labour and the adoption of the Draft Convention on Hours of Work in Coal Mines by the Fifteenth Session of the International Labour Conference in 1931, the Government of India passed The Indian Mines (Amendment) Act, 1935, which was brought into effect from 1st October 1935. The main provisions of the law regarding hours and conditions of work in Indian Mines as it now stands, are as follows:—

(*a*) No person is to be employed in a mine for more than six days in any one week.

(*b*) No person employed above-ground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day; and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day spread over more than twelve hours.

(*c*) The periods of work of a person employed below ground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work and where work below ground is carried on by a system of relays, the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface.

(*d*) The employment in any mine of children under fifteen years of age is prohibited and those below the age of 17 are not permitted to work in mines unless certified medically fit.

(*e*) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

The Government of India promulgated regulations under section 29(*j*) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the salt mines in the Punjab with effect from the 1st July 1939 and in all other mines with effect from the 1st July 1929. In order to prevent undue hardship a principle of gradualness in the number of women to be reduced every year was laid down. Women are not prohibited from accepting employment in open workings and on the surface of mines. In view, however, of an acute shortage of labour in coal mining areas this policy has now been reversed. By two notifications dated the 24th November and the 4th December, 1943 respectively, the Government of India have exempted, until further orders, all coal mines in the provinces of Bengal, Bihar, Central Provinces and Berar and Orissa from the provisions of clause (*j*) of Section 29 of the Indian Mines Act, 1923 to the extent to which regulations made thereunder prohibit the entry of women into underground working, for the purpose of employment subject to the following two conditions: (1) no woman shall be employed underground in galleries which are less than six feet in height; and (2) every woman employed underground shall be paid wages at the same rate as a man employed underground on similar work. Milk is now to be supplied to women working underground.

Mining Statistics.

The collection of full statistics with regard to the numbers of mines and of the persons employed therein dates from 1924. These statistics used to be published in the Annual Reports of The Chief Inspector of Mines in India. Commencing from the year 1940, the Government of India have been publishing abridged reports which contain no figures for numbers employed. Statistics for the 16 years from 1923 to 1939 were given in a table at page 480 of the 1942-43 edition of this publication. The Government of India have, however, published figures showing the average daily number of persons employed in all mines in the various Provinces in India in the issues of the *Indian Labour Gazette*. We set out the available figures in the following table:—

Average Daily Number of Persons employed in Indian Mines.

Province	1938	1939	1940	1941	1942	1943
Assam	2,361	2,463	2,704	2,732	2,325	2,539
Baluchistan	829	617	707	834	1,131	2,518

Total ..	303,191	301,054	329,770	347,018	357,646	349,361

THE PAYMENT OF WAGES ACT.

Perhaps the most advanced and difficult piece of social legislation attempted in India is the Payment of Wages Act which was passed by the Central Legislature early in 1936 and amended in a minor particular by an Amending Act in 1937. A detailed note on the history of this piece of legislation will be found at pages 503 and 504 of the 1938-39 Edition of this publication. The more important provisions of this Act which were brought into operation with effect from the 20th May 1937 are as follows :—

(*a*) *Scope of Application.*—The Act in the first instance applies to factories and railways but Provincial Governments are empowered to extend it to tramway or motor omnibus services; docks, wharves or jetties; inland steamer vessels; mines, quarries or oil-fields; plantations; and any other class of workshops or establishments in which articles are produced, adapted or manufactured with a view to their use, transport or sale.

(*b*) *Wages.*—'Wages' for purposes of the Act means all remuneration, capable of being expressed in terms of money, which would, if the terms of the contract of employment, express or implied, were fulfilled, be payable, whether conditionally upon the regular attendance, good work or conduct or other behaviour of the person employed, or otherwise, to a person employed in respect of his employment or of work done in such employment, and includes any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of the termination of his employment but does not include travelling allowances, employees' contributions to provident funds, gratuities payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

Many industrial establishments, especially cotton textile mills in India, grant good attendance and efficiency bonuses in addition to wages. These bonuses operate as fines in cases where the standards for earning them are not attained. The Government of India, while framing the Act, included such bonuses within the ambit of "wages" but the definition of this term as far as bonuses are concerned has been widely interpreted. The Government of Bombay held that existing good attendance and efficiency bonuses wherever they obtained must be paid without conditions and notified all factories accordingly. As a test case, the Arvind Mills in Ahmedabad were prosecuted in the City Magistrate's Court for non-payment of these bonuses in cases where the conditions for earning them were not fulfilled. The Magistrate held that bonuses were wages and directed that the deductions made should be refunded to the workers. The matter was taken into appeal in the Court of the Assistant Judge, Ahmedabad, where the decision of the Magistrate was upheld. The Mills thereupon filed a further appeal in the High Court, Bombay, which reversed the Ahmedabad judgments and held that all bonuses must be earned. The Government of India intend introducing a Bill in the Central Legislative Assembly to amend this Act with a view to clarifying the position of 'bonuses.'

(*c*) *Wage Periods.*—No wage period is to exceed one month and all wages are to be paid in coin and/or currency notes.

(*d*) *Time of Payment.*—The wages of all persons employed in concerns employing less than one thousand persons are to be paid before the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.

(*e*) *Permissible Deductions.*—Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for custody, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over-payments of wages, for income-tax, for contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative societies and on orders made by courts of law. Deductions are also permitted in respect of such amenities and services supplied by the employer as the Governor-General in Council or a Provincial Government may, by general or special order, authorise. The Central Government promulgated a Payment of Wages Amendment Ordinance in 1940 amending the Act to enable deductions being made from wages with written authorisation of the employed person for investment in any War Savings Scheme approved by a Provincial Government. The Act does not permit an employer to make deductions from wages in respect of the value of material damaged in the process of manufacture and to hand over the same to the employee concerned. Such a system was widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deducted annually from the wages of about 25,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them.

(*f*) *Fines.*—No fines are to be imposed on children, *i.e.*, persons below the age of fifteen years. No fines can be imposed save in respect of such acts or omissions as have been exhibited in notices which have received the approval of the Provincial Government or of an authority which a Provincial Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period is not to exceed half an anna in the rupee of wages for that wage period and no fine can be recovered in instalments or after the expiry of 60 days from the day on which it was imposed. All fines are to be recorded in prescribed registers and all realisations from fines are to be expended on objects beneficial to the workers. Provincial Governments have been empowered to make rules in connection with most of these matters.

In December 1937, the North-Western Railway reduced the monthly rate of pay of an engine driver by Rs. 7 for unsatisfactory work. The employee filed an application against the

Railway in the Small Causes Court at Karachi for illegal deductions. The application was dismissed and the case was taken in appeal to the Chief Court of Sind. Mr. Justice Weston held that a reduction in an employee's wages by way of punishment was in contravention of the Payment of Wages Act and ordered a refund to the applicant of the amounts deducted from his wages.

(*g*) *Deductions for Absence from Duty.*—Deductions from wages for periods of absence from duty should be *pro rata* and should not bear a larger proportion than the period of absence bears to the period of duty (*i.e.*, if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7); provided that "subject to any rules made in this behalf by the Provincial Government if ten or more employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or impliedly by the terms of their service) and without reasonable cause, such deduction from any such person may include such amount not exceeding his wages for eight days as may by any such contract or terms be due to the employer in lieu of due notice." By the amending Act of 1937 an explanation was added to the Section dealing with this matter which provides that "an employed person shall be deemed to be absent from the place where he is required to work if although present in such place, he refuses to carry out his work."

(*h*) *Deductions for Recovery of Advances.*—Recovery of an advance of money given before employment began is to be made from the first payment of wages in respect of a complete wage period, but no recovery is to be made on advances given for travelling expenses; and recovery of advances of wages not already earned are to be subject to rules to be made by Provincial Governments.

(*i*) *Contracting-Out.*—No contracting-out is permitted.

(*j*) *Procedure.*—Provincial Governments are empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non-payment of wages. Penalties have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure has been laid down with regard to trials for offences under the Act. Since the passing of the Act it has been found that the procedure laid down in Section 15 of the Act in connection with claims arising out of deductions from wages is a very dilatory one. The action is a civil one and it takes a long time before the case is brought to a decision. In many cases where applications are filed for non-payment of wages the employer is let off if he has paid wages to the workers concerned after the filing of the complaint and the Courts ignore the fact that even in such cases delay in making payments had occurred.

(*k*) *Administration.*—Inspectors of factories are made responsible for the administration of the Act as far as factories are concerned and powers are reserved to the Governor-General in Council and to Provincial Governments to appoint such other persons as they think fit to be inspectors for the purposes of this Act for railways.

WORKMEN'S COMPENSATION ACT, 1923.

A brief account of the manner in which workmen could recover damages from their employers in respect of accidents before the passing of the Workmen's Compensation Act of 1923 has been given at page 583 of the 1941-42 Edition of this publication. In its main principles, the Indian Act which was brought into operation with effect from 1st July 1924, follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act. In its scope—type and classes of workers covered—the original Act of 1923 fell far short of the British Act but it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of vested interests to the original measure. The original limitations of scope were to a large extent removed by amending Acts passed in 1926, 1929, 1931 and 1933 and the Act as it stands to-day covers nearly fifteen million industrial workers in the country. Under the Act, payment of compensation has been made obligatory on all employers whose employees come within its scope, even in cases where there has been no negligence and injured workmen or the dependants of those killed can obtain compensation in all cases where personal injury has been caused by accident *arising out of and in the course of employment* and where the accident is not directly attributable to the workman having been at the time of the accident under the influence of drink or drugs or to wilful disobedience of rules or orders or wilful disregard of safety devices. Besides bodily injuries the contracting of certain occupational diseases such as anthrax and lead and phosphorus poisoning were deemed and treated for the purposes of compensation, as injuries caused by accident; provided however, that the worker concerned was in the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925. This list was further expanded in 1933 and again in 1938 by the addition of (1) poisoning by benzene and its homologues or the sequelæ of such poisoning; (2) chrome ulceration or its sequelæ; (3) compressed air illness (Caisson Disease) or its sequelæ; (4) arsenical poisoning or its sequelæ; (5) pathological manifestations due to (*a*) radium and other radio-active substances, and (*b*) X-Rays; and (6) Primary epitheliomatous cancer of the skin. The main provisions of the Workmen's Compensation Act as it stands today are as follows:

Classes of Workmen Covered by the Act.—These have been specified in the definition of the term "workman" contained in section 2(1) (*n*) and in Schedule II. In all cases persons employed in an administrative or clerical capacity and those whose monthly earnings exceed Rs. 300 (except Railway Servants) are excluded. According to the Amended Act passed in 1946, the upper income limit has been

extended to Rs. 400 per month. Speaking broadly, the Act covers railways; factories; mines; seamen; docks; persons employed in the construction, repair or demolition of buildings designed to be or which are of more than one storey or of twenty feet in height or of dams and embankments, roads, bridges or tunnels; or wharves, quays, sea walls or other marine work; the setting up, repairing, maintaining or taking down any telegraph or telephone line or overhead electric lines or cables; aerial ropeways, canals, pipe lines or sewers; the fire-brigade; railway mail service; persons employed in outdoor work in the postal and telegraphic services; operations for winning natural petroleum or natural gas; blasting operations and excavations; ferry boat services; cinchona, coffee, rubber or tea plantations; electricity or gas generating stations; lighthouses; cinematograph picture producing and exhibiting; divers; elephant and wild animal trainers and keepers and salaried motor drivers and cleaners. Recently persons employed in warehouses in markets employing ten or more persons have also been brought within the scope of the Act. Persons employed through sub-contractors by a person fulfilling a contract with a railway are also covered. The Government of Madras have recently brought persons employed in plucking cocoanuts within the scope of the Act. As far as seamen are concerned, those employed on ships registered in India are covered. But if accidents take place within the three mile limit of the territorial waters the Act applies even to those employed on ships not registered in India. But with a view to facilitate the settlement of claims in respect of seamen on ships not registered in India and to avoid litigation, provision has been made in the Lascar's Agreement for the settlement of claims for compensation on the lines of the Indian Act and in default of agreement the Commissioner of the Port where the agreements are signed has been accepted as the final authority to whom these matters should be referred for decision. Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned, those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered. The Provincial Governments are empowered to bring within the scope of the Act other classes of workmen whose occupations are considered to be of a hazardous nature. In pursuance of that power the Government of Bombay have extended the scope of the Act to persons employed on motors or other mechanically propelled vehicles engaged in loading, unloading, handling or transport of goods and to all employees of Municipalities and District Local Boards engaged in occupations ordinarily requiring outdoor work.

Amounts of Compensation Payable.—The amount of compensation payable depends, in the case of death, on the average monthly wages of the deceased workman and in the case of an injured workman both on the average monthly wages and the extent of disablement. The term 'wages' includes overtime pay and the value of any concessions or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to Schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes. The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 50 and Rs. 60, the corresponding figures are Rs. 1,800, Rs. 2,520 and Rs. 15 respectively. The maxima for persons earning over Rs. 200 per month are Rs. 4,000, Rs. 5,600 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement. No compensation is payable in respect of a 'waiting period' of seven days following that on which the injury was caused; but many large firms such as General Motors (India), Ltd., Messrs. Lever Brothers (India), Ltd., and others pay compensation in lieu of wages with effect from the date of injury.

(NOTE: *Permanent total disablement* means such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent. loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Who are Dependants.—These are defined in two categories: firstly, those who are in practically all cases actually dependants; and secondly, those who may or may not be in that position. The first includes a widow, a minor legitimate son, unmarried legitimate daughter and a widowed mother. The second includes a widower, a parent other than a widowed mother, a minor illegitimate son, an unmarried illegitimate daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter-in-law, a minor child of a deceased son and a paternal grandparent.

General.—The interests of dependants in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner; (2) in all cases where an employer admits liability the amount of compensation payable is to be promptly deposited with the Commissioner; and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependants get the information necessary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependant advances on account of compensation not exceeding an aggregate of one hundred

rupees and so much of such aggregate as does not exceed the compensation payable to that dependant is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration.—The Act is administered entirely on a provincial basis by Commissioners to be appointed by Provincial Governments. The Provinces of Bengal and Madras have one Commissioner each for the whole province. The Province of Bombay has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces, the District Magistrate or the District and Sessions Judge or the Senior or Sub-Judge is the Commissioner within his jurisdiction.

Under the common law of England, in civil suits for damages for injuries sustained by workmen it is open to the employer to plead: (1) the doctrine of common employment, by which the employer is not normally liable to pay damages to a workman for an injury resulting from the default of another workman; (2) the doctrine of assumed risk, by which an employee is presumed to have accepted a risk if it is such that he ought to have known it to be part of the risks of his occupation. The Royal Commission on labour regarded both these doctrines as inequitable and recommended by a majority that a measure should be enacted abrogating these defences. Provincial governments were consulted in 1932 and were almost unanimously in favour of legislation for the purpose. In the meantime judicial decisions in British India while generally agreeing as to the inequitability of the doctrines were such as to leave it open to employers in most Provinces to have recourse to them. The Government of India passed the Employers' Liability Act, 1938, through the Central Legislature declaring that these defences shall not be raised in suits for damages in British India in respect of injuries sustained by workmen.

During the year 1939, two amendments were made in the Workmen's Compensation Act, one in Section 5 and the other in Section 15. The first clarifies the meaning of the expression "monthly wages" which has now been defined to mean the amount of wages deemed to be payable for a month's service irrespective of whether the wages are payable by the month or by whatever other period or at piece rates. The amendment thus resolves any doubt as to whether a workman employed on wages payable otherwise than by the month or on a monthly basis is or is not a workman within the meaning of the Act. The Personal Injuries (Emergency Provisions 2 and 3 Geo. 6, C. 82) Act, 1939, provides for certain payments to be made in respect of personal injuries to seamen. The Workmen's Compensation Act had, therefore, to be amended in order to avoid double payment, both under this Act and under the Personal Injuries Act. The second amendment referred to above provides that failure to give notice or make a claim or commence proceedings within the time limit required by the Act shall not be a bar to the maintenance of the proceedings provided that the Commissioner is satisfied that an application was made in the reasonable belief that the injury was such that a payment could be made under the said Act and that the Provincial Government certifies that the application was rejected.

The Government of India in the Department of Commerce, in concurrence with His Majesty's Government, formulated a Lascars War Risk Compensation Scheme in August 1940 in respect of death or disablement directly attributable to war injuries sustained by lascars employed on ships registered in the United Kingdom. The scheme provides for widow's pensions, children's allowances and generous disablement allowances. For example, for total disablement due to War injuries a lascar earning Rs. 40 per month will be paid an allowance of Rs. 5,000 in full settlement of all claims. The widow of a lascar earning from Rs. 30 to Rs. 39 per month will receive a life pension at the rate of Rs. 10 per month.

It often happens, in cases before Commissioners for Workmen's Compensation, that there is a dispute between the parties on medical questions. In such cases the usual practice is to call in private medical practitioners to give verbal evidence on the points in dispute. This not only increases the cost of the proceedings but tends to delay settlements. With a view to preventing this unsatisfactory, dilatory and expensive procedure, the Government of Bengal passed The Workmen's Compensation (Bengal Amendment) Act, 1942 for the appointment of medical referees to whom any medical questions in dispute between employers and workers may be referred by the Commissioner for Workmen's Compensation and whose report would be binding on both the parties. This Act also provides for the creation of a permanent panel of qualified medical practitioners who may be appointed as medical referees. Since the passing of the Bengal Act, the Government of India circulated proposals to the Provincial Governments for the adoption of similar Central legislation on the subject, but the Third Conference of Labour Ministers which was held at New Delhi in January 1942 decided that central legislation on the subject was not necessary.

Workmen's Compensation Statistics.

All Provincial Governments in India used to publish Annual Administration Reports on the working of the Workmen's Compensation Act. The Government of India summarised these Reports and published an annual survey under the title "Statistics of Workmen's Compensation". The Government of India have stopped the publication of these summaries since 1939, but a note on the working of the act during the year 1942 was published in the June, 1944 issue of the *Indian Labour Gazette*. At page 585 of the 1941-42 edition of this publication we gave a table showing the figures of fatal and non-fatal cases in respect of which compensation was paid from the year 1924 when the act was first brought into effect up to the end of the year 1938 together with the figures for the total amount of compensation paid. The note published in the *Indian Labour Gazette* gives no separate statistics for fatal and non-fatal cases. Totals for all cases above have

been given. We are, therefore, reproducing the available figures in the following table: *Statistics of Workmen's Compensation*: 1924 *to* 1944.

Year	Total number of cases	Total compensation paid	Year	Total number of cases	Total compensation paid
		Rs.			Rs.
1924 (July-Decr.) .	4,168	1,50,224	1934	16,890	8,68,847
1925..	11,371	6,44,120	1935	22,999	11,61,465
1926..	14,096	8,21,476	1936	28,510	14,64,180
1927..	15,216	11,11,254	1937	29,645	12,88,764

Effects on Industry.

A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal *Vide* para. 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was then faced. In the Punjab, the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. There can, however, be no denying the fact that the introduction of workmen's compensation has helped considerably to improve the standard of safety in the country. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. This Bureau continued to render its valuable co-operation in the prompt settlement of claims. In Bombay, insurance companies are now concerned with half the number of cases that come up before the Commissioner. Insurance companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the textile industry. The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment.

The Government of India has now announced that it is their intention to provide for Workmen's Compensation in one comprehensive scheme which will cover sickness insurance, maternity benefits and compensation for accidents.

MATERNITY BENEFITS LEGISLATION.

A Bill introduced by Mr. N. M. Joshi in the Central Legislative Assembly in 1924 to provide for the payment of maternity benefits to women employed in certain industries was thrown out. The Government of Bombay, however, took up the question a few years later and the Bombay Maternity Benefits Act was passed in 1929. This was substantially amended by an Amending Act passed in 1935. A similar Act was passed in the Central Provinces in 1931. These were the first Acts of their kind in India. Since then, Maternity Benefit Acts have also been passed in the Provinces of Madras, Bengal, Sind, Assam, Punjab, and the United Provinces and in Ajmer-Merwara and Delhi. In the year 1941, the Bengal Legislature passed a second Maternity Benefit Act for women employed in tea plantations under the title of The Bengal Maternity Benefit (Tea Estates) Act, 1941. Except for the Assam Maternity Benefits Act which covers women employed in both factories and on plantations and the last Act, all the other Maternity Benefit Acts are applicable to women employed in factories. The subject of extending the benefits of such

legislation to women employed in Mines was discussed at the Second Conference of Labour Ministers held in January 1941 and as the result of those discussions the Central Legislature passed The Mines Maternity Benefit Act, 1941, in the same year. This Act was amended in 1943 in such a way as to prevent a woman from being debarred from drawing benefit for a day on which the mine is closed and a further amendment of the Act was made in 1945.

The main principles in all Maternity Benefit Legislation are the same: provision for the payment of a cash benefit to women for specified periods before and after childbirth, a compulsory period of rest after delivery and also before delivery if notice is given; but, in the latter case, the period for which an employer has to pay cash benefit is strictly limited. All Acts specify a qualifying period for the earning of the benefit; this varies from six months to a year. Women are prohibited, under penalty, from accepting employment under another employer during periods for which they are in receipt of cash benefit from the employer with whom this liability rests. In the Central Act for women employed in Mines and in the U.P. Act additional bonuses of Rs. 3 and Rs. 5 respectively are provided for if the services of a qualified midwife are availed of; but, if such assistance is provided for by or in an institution of an employer, this bonus is not to be paid.

The Assam Act has certain provisions which are not met with in the other Provincial Acts and the Central Governments Mines Maternity Benefit Act. One such provision is that no employer shall knowingly employ a woman in any employment during the four weeks immediately preceding the day of her delivery save upon such suitable light work as may be recommended by a medical practitioner. The other acts prohibit only the employment of women during the four weeks immediately following childbirth. By another provision an employer is required either himself to provide upon the premises to which the act applies, free medical treatment and attendance for every woman entitled to maternity benefit, or to make such arrangements with a medical practitioner to provide such treatment and attendance during pregnancy, and at, and after confinement. If a woman declines to accept this free medical attendance and treatment provided by the employer or leaves the service of the employer, she forfeits the maternity benefit which is admissible to her under the Act. Another interesting feature of the Act is that the qualifying period of employment entitling a woman to the maternity benefit is 150 days, which period is the lowest as compared with the periods prescribed in the other provinces and the mines where the periods range between 6 and 9 months. No qualifying period is required in the case of an immigrant woman who was pregnant when she first arrived in Assam. The Act provides for the payment of maternity benefit at weekly rates unlike the daily rates found in the other Acts. It provides for payment—(i) on plantations at the rate of Re. 1 per week during the period preceding the day of delivery and Rs.1-4-0 per week during the period following the day of delivery, provided that the total cash payment which the employer shall be required to make on this account shall be Rs. 14; and (ii) in employments other than plantations Rs. 2 per week or the average weekly wage or salary subject to a minimum of Rs. 2 per week.

The qualifying period in the Central and in the U.P. Acts is six months and in the Ajmer-Merwara Act twelve months. In all the remaining Acts it is nine months. The maximum period for which maternity benefits can be paid is six weeks under the Ajmer-Merwara Act, seven weeks under the Madras Act, sixty days under the Punjab Act and eight weeks under all the other Acts. The rate of benefit used to be eight annas per day or the average daily wage whichever was less in most Acts but many Acts are now adopting a uniform eight annas a day. The Punjab Act gives average daily earnings or twelve annas per day whichever is greater.

THE INDIAN TRADE UNIONS ACT, 1926.

The origin of the passing of a Trade Unions Act in India was the historic Buckingham Mill Case of 1920 in which the Madras High Court granted an interim injunction against the Strike Committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. Trade Union leaders found that they were liable to prosecution and imprisonment for *bona fide* union activities and it was felt that some legislation for the protection of trade unions was necessary. In March, 1921, Mr. N. M. Joshi, then General Secretary of the All-India Trade Union Congress, successfully moved a resolution in the Central Legislative Assembly recommending that Government should introduce legislation for the registration and protection of trade unions. Opposition from employers to the adoption of such a measure was, however, so great that it was not until 1926 that the Indian Trade Unions Act was passed. This Act was brought into operation with effect from 1st June 1927. Except for a slight modification which was made in 1928 in Section 11 regarding appeals, the present law on the subject remains the same as when the Act was first passed.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926, makes provision for three groups of matters: (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. 'Trade Union' has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers. Persons under the age of 15 are debarred from membership of any registered union.

Registration.—Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6; and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent. of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover.

The Government of Sind enacted legislation in the year 1944 to amend the Indian Trade Unions Act in such a way as to require that two-thirds of the members of the executive of a Union must be workers and also to prevent one individual person from being an Officer of more than one Union.

The registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself, or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the union has ceased to exist or has wilfully and after notice contravened any provision of the Act, or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register it or by the cancellation of its registration may prefer an appeal to a judge appointed by the Provincial Government for the purpose; and, in the event of the dismissal of such an appeal, the aggrieved party has the right of a further appeal to the High Court.

Obligations Imposed on Registered Trade Unions.—The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects; but the Act makes provision for the creation of a separate political fund, subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices of all changes in the rules or of the registered name or the registered address of the office of the union, of amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of their occurrence. Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The Act further requires that the rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union. The Govt. of Madras have recently tightened up their regulations in connexion with the maintenance, by registered unions of their registers. Among other things, all unions will now be required to maintain files of vouchers and machine-numbered subscription receipt books.

Rights and Privileges of Registered Trade Unions.—The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases.

The administration of the Indian Trade Unions Act is entirely on a provincial basis and each Provincial Government is required to appoint a Registrar of Trade Unions. A union is to be registered in the province in which its head office is situated and if this is transferred to another province, the registration has to be transferred to that province.

Registered unions are empowered under the Indian Trade Unions Act to carry on any form of insurance activity without being under any obligation to secure professional advice as to the actuarial soundness of such business. By virtue of Section 118 of The Insurance Act, 1938, insurance business carried on by a trade union is not subject to the provisions of that Act. The result therefore has been that certain unions are undertaking unsound schemes of insurance now banned by the Act especially that form of it which is carried on on the basis of the dividing principle. With a view to protect the interests of members of trade unions who are and might be the victims of impostures, the Government of India, in September 1940, issued a circular letter to all Provincial Governments inviting opinions as to the application of the Insurance Act, with such modifications as might be necessary, to insurance business carried on by Trade Unions.

One of the most vexed questions in connexion with trade unions in India is that of their recognition by the employers. We are dealing with this question more fully in the Chapter on Trade Unionism in India. Many Bills aimed at compelling employers to recognise unions of their workers have been introduced by private members in Provincial Legislatures but these failed to carry the support of the Governments concerned. The subject was discussed at the Second Session of the Labour Ministers Conference and, as a result of the decisions then reached, the Government of India drafted a Bill intended to add a New Chapter dealing with the Recognition of Trade Unions and Rights and Liabilities of Recognised Trade Unions to the Indian Trade Unions Act. This was circulated to all Provincial Governments for opinion after consultation with the interests concerned. In the light of the criticisms received, the Government of India drafted a new Bill on the subject and this was introduced in the Central Legislative Assembly by the Hon'ble the Labour Member on the 13th November 1943 on a motion for circulation of the Bill for eliciting public opinion. This Bill seeks to compel an employer to recognise a trade union which fulfils certain prescribed conditions and is approved by a Board of Recognition (where one has been set up), non-recognition under those circumstances being made an offence punishable by law. On critical examination, the Bill has been found to be so full of insurmountable difficulties that it is very doubtful if the Government of India will proceed with it in the form in which it was introduced in the Legislative Assembly.

As far as statistics of registrations are concerned, tables showing the numbers of registered unions on all the provincial registers in British India at the end of each financial year together with the membership and income of those which furnished returns have been incorporated in this section in some previous issues of this publication. A table giving this information for the years 1927-28 up to 1939-40 was published at page 487 of the Edition for 1942-43. As we have pointed out in the opening paragraphs of this

Chapter, the Government of India and the Provincial Governments have stopped the publication of annual reports on the administration of Labour Laws for the duration of the War.

The Government of India have, however, commenced publishing short and abridged reports containing the more important statistics in the *Indian Labour Gazette*. The latest year for which information of an All-India character is available is for the year ending 31st March 1943 and this has been given in an article appearing in the June, 1945 issue of that publication. The statistics relating to registered trade unions for that year are reproduced below :

Statistics of Registered Trade Unions in British India for year ending 31st March 1943.

Province	Number of Registered Trade Unions	Number of Unions making returns of Membership	Membership of Unions making returns
Ajmer Merwara ..	3	3	4,794
Assam	5	5	1,948
Bengal	229	147	221,635
Bihar	41	11	18,738
Bombay	77	69	130,688
C. P. & Berar ..	49	35	29,430
Delhi	30	23	16,895
Madras	143	86	49,451

Orissa	3	3	359
Punjab	24	23	12,493
Sind	28	28	8,934
United Provinces ..	28	27	20,976
Central Trade Unions (whose objects are not confined to one Province)	27	26	168,540
Total ..	693	489	685,299

INDUSTRIAL DISPUTES LEGISLATION.

Industrial Disputes Legislation in India today is comprised of a Central Act known as the Trade Disputes Act, 1929, Rule 81A of the Defence of India Rules and the Essential Services (Maintenance) Ordinance, 1941, in so far as it governs the question of workers being required to be at duty in the concerns to which it has been applied and the power which it gives to the Central and Provincial Governments to make rules with regard to the appointment of an authority to fix wages and conditions of employment in such concerns. These apply to the whole of British India. The Province of Bombay has the Bombay Industrial Disputes Act, 1938, in addition.

Trade Disputes Act, 1929.

This Act was first passed for a period of five years. By an Amending Act passed in 1934 it was placed permanently on the Statute Book. The Act was further amended in 1938 in order to provide for the appointment of conciliators. The main provisions of this Act as it stands today are as follows :

Appointment of Courts of Inquiry and Boards of Conciliation :—The Governor-General in Council, in the case of railways or concerns under the control of the Government of India : and the Provincial Government, in the case of all other concerns or groups of concerns, have power to refer any matters appearing to be connected with or relevant to any trade dispute which exists or is apprehended between an employer and his workmen to a Court of Inquiry for report ; or to refer the whole dispute to a Board of Conciliation for promoting a settlement thereof. Where no reference is made by either party or where a reference is made to Government by only one party, the appointment or otherwise of a Court or a Board is entirely at the discretion of Government ; but where both the parties to a dispute apply either conjointly or separately for the reference of the dispute to a Court or a Board it is obligatory on Government to proceed to appoint a Court or a Board, as the case may be, provided that Government are satisfied that the persons applying represent the majority of each party. The objects of Courts of Inquiry which may be composed of an independent chairman and other independent persons or only one independent person would be to investigate and report on such questions connected with the dispute as might be referred to them. The settlement of the dispute would depend on the force of public opinion on the Court's findings. The objects of Boards of Conciliation which may consist of one independent person or one independent chairman and two or four other members comprised of equal numbers of persons representing the interests of both the parties to a dispute and to be nominated by the parties concerned would be to secure a settlement of the dispute. Provisions are contained in the Act to enable both Courts and Boards to enforce the attendance of witnesses and the production of documents. Neither party is under any obligation to accept the findings of a Court or the advice of a Board : but in practice both parties would be expected to do so.

Special Provisions for Public Utility Services .—"Public Utility Service" has been defined to include any postal, telegraph or telephone services, any undertaking which supplies power, light or water to the public, any system of public conservancy or sanitation and any railway service or water transport services which have been declared as such by Government. It has been made a penal offence for persons employed in such services to go on strike without giving fourteen days' notice in writing to their employer of their intention to do so. Penalties are also provided for persons abetting such an offence.

Appointment of Conciliators.—The Central Government, in respect of industries, businesses or undertakings carried on by them or under their authority or by a railway company and the Provincial Governments, in respect of the undertakings within their Provinces, have been empowered to appoint Conciliation officers "charged with the duty of mediating in or promoting the settlement of trade disputes." Conciliation officers have the power to call for documents from and to enter the premises of employers.

Provisions relating to Illegal Strikes and Lockouts.—Any strike or lockout which has any object other than or in addition to the furtherance of a

trade dispute within the trade or industry in which the strikers or employers locking-out are engaged or which is designed or calculated to inflict severe and general hardship upon the community and thereby to compel any Government in British India the Federal Railway Authority or the Crown Representative to take or abstain from taking any particular course of action is illegal. Persons furthering illegal strikes or lock-outs are liable to punishment while those refusing to take part in them are protected from trade union disabilities to which they might otherwise be subjected.

Rule 81A of the Defence of India Rules.

This was promulgated by the Government of India in January 1942 and has been amended on several occasions since it was first promulgated. The text of this Ordinance, as amended up to the 30th November, 1944, has been published at pages 240 to 246 of the December 1944 issue of the *Labour Gazette* (Bombay). The object of Rule 81A of the Defence of India Rules is the avoidance of strikes and lock-outs. It empowers the Central Government to make, by special or general order, provision for (*a*) prohibiting, subject to the provisions of the order, a strike or lock-out in connection with any trade dispute; (*b*) requiring employers or workmen to observe for such period as may be specified in the order such terms and conditions of employment as may be determined in accordance with the orders; (*c*) referring any trade dispute for conciliation or adjudication in the manner provided in the order; and (*d*) enforcing for such period as may be specified in the order all or any of the decisions of the authority to which a trade dispute has been referred for adjudication; provided that no order made under (*b*) shall require an employer to observe terms and conditions of employment less favourable to the workmen than those existing in the undertaking at any time within three months preceding the date of the orders. A recent amendment made in December, 1943 requires the authority making an Order referring any particular dispute for adjudication to specify, as far as may be practicable, the matters upon which adjudication is necessary or desirable. The Central Govt. is empowered to amend or vary such matters or to postpone specification pending a preliminary enquiry.

By virtue of the above Rule, the Government of India issued a General Order on 6th March 1942 preventing any person in any undertaking (defined as any undertaking by way of trade or business) from going on strike in connection with any trade dispute without having given to his employer, within one month before striking, not less than fourteen days' previous notice in writing of his intention to do so. This order also lays down that where any trade dispute has been referred to a Court of Inquiry or a Board of Conciliation under the Trade Disputes Act, 1929 or for conciliation or adjudication under an order made under Rule 81A, no person employed in any undertaking concerned in the dispute shall go on strike until the expiry of two months after the conclusion of the proceedings upon such reference. The Central Government, by virtue of two notifications dated 12th March and 20th May 1942, have directed that the powers conferred on it by Rule 81A of the Defence of India Rules would also be exercisable by the Provincial Government subject to certain qualifications.

Most Provincial Governments have made extensive use of the powers conferred on them by Rule 81A of the Defence of India Rules in referring trade disputes to adjudication. The Adjudicators appointed in connexion with disputes in the Province of Bombay have been judges of the Bombay High Court or gentlemen of equal standing such as Mr. Alma Latifi, C.I.E., O.B.E., I.C.S. (Retd.) or Mr. E. Nanavatty, I.C.S. (Rtd.). In the Provinces of Bengal and Sind, the Commissioners of Labour have been appointed. The awards of Adjudicators cover a wide range of subjects regarding wage rates and conditions of employment. It is not possible for us to catalogue all the disputes which have been referred to adjudication since the promulgation of Rule 81A of the Defence of India Rules but we may mention that regular information on the subject is published in the *Indian Labour Gazette*.

Essential Services (Maintenance) Ordinance, 1941.

This Ordinance has been dealt with in the Chapter on "Second World War—Its Effects and Repercussions." Its main object is to prevent workers in certain essential services which have been 'declared' by Government to be such from leaving their employment. Under this Ordinance, however, a worker who disobeys any lawful order given to him in the course of his employment, is liable to be punished. An order not to strike work would be a lawful order. Section 6 of this Ordinance further empowers the Central Government or, with the previous sanction of the Central Government, a Provincial Government to make rules "regulating or empowering a specified authority to regulate the wages and other conditions of service of persons or of any class of person engaged in any employment or class of employment" in any concern which has been "declared" as an essential service under this Ordinance. As far as is known, Bengal is the only Province in India which has framed Rules empowering the Labour Commissioner, Bengal to issue directions regulating the wages and other conditions of service of persons coming within the scope of the Ordinance subject to certain conditions.

Bombay Industrial Disputes Act, 1938.

This Act is perhaps the most advanced and outstanding piece of Labour Legislation ever attempted in India. Put in a nutshell the object of the Act is to make all strikes and lock-outs illegal until such time as the procedure provided for in the Act for conciliation and arbitration is exhausted. All industrial matters relating to wages; conditions of employment; privileges, rights or duties of employers or employees, or the mode, terms and conditions of employment or non-employment are divided into two schedules. All matters which regulate the relations between employers and employees such as rules of conduct or standing orders for operatives are listed under Schedule I. Matters connected with wages, hours of work, conditions of employment, etc., with regard to changes in which employers are required to give notice

to the representatives of their employees are listed under Schedule II. Government have power to modify these schedules (Section 72).

Standing Orders :—Every employer in an industry to which the Act is made applicable is required to submit, within a period of two months from the date of the application of the Act to that industry, a draft of the Standing Orders which he proposes to adopt for governing the relations between him and his employees. The Commissioner of Labour is to "settle" these Standing Orders after consulting all the interests concerned in the industry. Any person aggrieved by any of the Standing Orders so "settled" has the right of appeal to the Industrial Court (Sections 26 & 27).

Changes :—No employer is to be permitted to make any change in any of the Standing Orders settled by the Commissioner of Labour or by the Industrial Court on appeal or in respect of any industrial matter included under Schedule II unless notice of such intended change is given to the representative of employees. Any employee who desires a change in any industrial matter is also required to give notice of such intended change to his employer. Copies of all such notices are required to be forwarded to the Commissioner of Labour, the Chief Conciliator, the Registrar, the Labour Officer and to any other person as may be prescribed (Section 28).

Representatives of Employees :—The Act contemplates the creation of three distinct types of unions. In the first place no union which has not been registered under the Indian Trade Unions Act, 1926, has any place in the scheme of things under this Act. Unions may be either *occupational unions* or *industrial unions*. Any union which has a membership of five per cent. of the total number employed in any occupation or industry in any local area and which has been recognised by the employers concerned or any union which has not been so recognised but which has a membership of twenty-five per cent. of the total number employed may apply for registration for the purposes of the Act (Sections 7 & 8). Any registered union which has a membership of twenty-five per cent. of the total number employed in the occupation or industry concerned may apply to the Registrar for declaration as a *representative union* (Section 12). Unions which have a membership of five per cent. or more but less than twenty-five per cent. and which have not been recognised by the employers concerned may apply to the Registrar for being declared as *qualified unions* (Section 11). The three types of unions, therefore, are: (1) Registered Unions; (2) Representative Unions; and (3) Qualified Unions. "Representative of Employees" means (*i*) where the majority of employees directly affected by a change are members of a registered union, such registered union; or (*ii*) where some of the employees directly affected by the change belong to a representative union, that representative union; or (*iii*) in other cases such representatives not being more than five as may be elected in the manner prescribed by employees directly affected by the change from among themselves; or (*iv*) in cases where representatives are not elected under (*iii*) and in all other cases not falling under any of these clauses, the Labour Officer [Section 3 (29)]. The Rules made under the Act make provision for the determination of the union which is a representative of employees; and, failing unions, for the election of the workers' own representatives.

Preliminary Procedure :—On the receipt of a notice of change, the employer and the representative of the employees concerned are to discuss the proposed change. A period of fifteen days has been allowed for these discussions. If an agreement is reached between the parties, the memorandum of such agreement is to be sent to the Registrar for registration (Section 30). In cases where the Labour Officer is one of the parties, the Labour Officer is required to put the terms of the proposed agreement before a meeting of the employees concerned and he is empowered to enter into an agreement only if the majority of such employees concur (Section 32).

When Dispute deemed to commence :—If the preliminary proceedings fail to produce an agreement, the party giving the notice is required, if he still desires that the proposed change should be effected, to send a full statement of the case to the Conciliator, the Chief Conciliator and the Registrar (Section 34). On receipt of the statement of the case, the Conciliator is required to enter the industrial dispute in a register (Section 35).

Conciliation :—The Act makes provision for the appointment of Conciliators and Special Conciliators. The Commissioner of Labour is to be the *ex-officio* Chief Conciliator for the purposes of the Act (Section 21). Provision has also been made for the appointment of Boards of Conciliation consisting of independent chairmen and members representing employers and employees to be selected by Government from panels formed for the purpose (Section 23). On making an entry of an industrial dispute, the Conciliator concerned has to try and bring about a settlement of the dispute (Section 36) but power is reserved to the Chief Conciliator to intervene at any stage in any conciliation proceedings held by another Conciliator (Section 37). The Chief Conciliator or the Conciliator has to send a report of the whole case to Government on the conclusion of the conciliation proceedings, and in all cases where settlements are reached copies of such settlements are to be forwarded to the Registrar (Section 38). During the pendency of any proceedings before the Conciliator the Government *may* and if both the parties agree either prior to the commencement of such proceedings or after the failure of the Conciliator to bring about a settlement *shall*, refer the dispute to a Board of Conciliation (Section 39). Government is empowered to lay down time limits for different stages of conciliation proceedings (Section 41) and the Act gives various powers to Conciliators and to Boards for summoning of witnesses, production of documents, etc. (Section 40).

Industrial Court :—The Act makes provision for the appointment of an Industrial Court for determining industrial disputes and for dealing with other matters under the provisions of the Act. The Court is to consist of two or more members to be selected from persons who are, have been or are eligible, for being appointed as Judges of a High Court (Section 24). The Industrial Court, *inter alia*, is to decide all matters referred to it under Chapter II

of the Act connected with the registration of unions and it has also to decide appeals from decisions of the Commissioner of Labour in connection with the Standing Orders (Section 53).

Arbitration :—Any employer and a registered union may by a written agreement (called a submission) agree to submit any present or future industrial dispute or any classes of such disputes to arbitration of any person whether such arbitrator is named in the agreement or not or to the Industrial Court. All submissions are to be registered with the Registrar (Section 43). In the absence of an agreement to the contrary, submissions are irrevocable but are terminable by giving six months' notice (Section 44). The conciliation proceedings provided for under the Act are barred in cases where the representative of employees is a registered union which is a party to a submission (Section 46). The Act contains various provisions with regard to the duties of the Industrial Court, procedure before the Court, execution of orders as to costs and the parties on whom orders or awards of the Industrial Court will be binding.

Compulsory Arbitration in Certain Disputes :—Under the Act as originally passed, industrial disputes could be referred to the arbitration either of the Industrial Court or of any other person only when an employer entered into an agreement with a Union registered under this Act to do so. In centres or industries where there are no registered unions or even where there is a registered union but the parties cannot agree to refer a dispute to arbitration, arbitration in an industrial dispute is not possible. In order to make arbitration compulsory in certain cases, the Governor of Bombay promulgated The Bombay Industrial Disputes (Amendment) Act, 1941, on the 29th May 1941, by virtue of which power is given to the Provincial Government to refer any dispute to the arbitration of the Industrial Court if it is satisfied that the continuance of any dispute is likely to cause serious or prolonged hardship to a large section of the community, or seriously affect an industry and the prospects and scope for employment in it, or cause a serious outbreak of disorder or a breach of the public peace. The Amending Act has been applied to all the industries in the Province of Bombay to which the main Act had been applied.

Illegal Strikes and Lock-outs :—A strike or a lock-out will be illegal if it is declared, commenced or continued (*a*) in cases where it relates to any industrial matter mentioned in Schedule I before the Standing Orders relating to such matter and submitted to the Commissioner of Labour are settled by him or by the Industrial Court, as the case may be, or before the expiry of six months from the date on which such Standing Orders come into operation ; (*b*) without giving notice in accordance with the provisions of Section 28 ; (*c*) only for the reason that the employer has not carried out the provisions of any Standing Order or has made an illegal change ; (*d*) in cases where notice of change has been given and where no agreement in regard to such change is arrived at before the statement of the case is received by the Registrar ; (*e*) in cases where conciliation proceedings in regard to the industrial dispute to which the strike relates have commenced, before the completion of such proceedings ; (*f*) in cases where a submission is registered until such submission is lawfully revoked ; or in contravention of the terms of a registered agreement, settlement or award. In cases where conciliation proceedings in regard to any industrial dispute have been completed, a strike or lock-out relating to such dispute will be illegal if it is commenced at any time after the expiry of two months after the completion of such proceedings. (Sections 62 & 63). The determination of the question of whether any strike or lock-out is illegal rests with the Industrial Court.

Illegal Changes :—No employer can make any change in any industrial matter in regard to which a standing order has been settled under Section 26 or which is mentioned in Schedule II before a notice in respect of such change has been given and the procedure laid down under the Act has been gone through. No employer can also make any change in contravention of the terms of a registered agreement, a settlement or an award. Any change made in contravention of these provisions is illegal. Applications for the declaration of any changes as illegal are to be made to the Industrial Court (Section 73).

Penalties :—Various penalties are provided for breaches of the Act (Sections 65 & 66) and for instigating or inciting others to take part in an illegal strike or lock-out (Section 67). Penalties are also provided for the making of illegal changes (Section 69); for disclosing confidential information (Section 68); for obstructing persons from carrying out duties imposed by the Act (Section 70); and for victimisation of employees for trade union activities or for participating in any of the proceedings under the Act (Section 64).

Miscellaneous :—Important provisions of a miscellaneous character relate to the binding character of and the periods for which agreements are to remain in force (Sections 76 and 77), jurisdiction of Courts (Section 79), etc. In cases in which a representative union is a party to any agreement, settlement, submission or award, the Provincial Government is empowered, after consulting the Industrial Court if it deems it necessary to do so, to extend the agreement, etc., to all employees in the industry concerned [Section 76 (2)].

Officers and Areas :—In addition to the Conciliators and the Industrial Court, the Act makes provision for the appointment of a Registrar of Unions for the whole Province (Section 4) and for the appointment of Labour Officers (Section 22). The powers and duties of the Labour Officer are defined in Section 25. " Local area " means any area notified as such by the Local Government.

Application of the Act :—The Government of Bombay decided to apply the Act, in the first instance, to the Cotton Textile Industry in the whole of the Province of Bombay. It was applied to this Industry in three stages : (1) Those parts of the Act relating to the settlement of the Standing Orders and the appointment of the various administrative officers were brought into operation with effect from 1st June 1939 ; (2) The sections relating to conciliation and arbitration were applied from 1st August 1939 ; and (3) The provisions relating to illegal strikes and lock-outs and the penalties connected therewith

were brought into operation from 20th August 1939. The term "cotton textile industry" was so defined as to include all factories notified under section 2 (*j*) of the Indian Factories Act, 1934, which are engaged in cotton spinning, cotton weaving with or without an admixture of silk, rayon or artificial silk, cotton knitting and hosiery, and all cotton dyeing, bleaching and printing departments, and mechanics' shops attached to such concerns. Every town and village in the Province of Bombay which has one or more cotton textile units according to the definition given has been declared as a "Local Area." The whole of the Act was applied to the Silk Textile Industry in the local area of Bombay City with effect from 1st October 1939 and to the Woollen Textile Industry in the local areas of Bombay and Thana with effect from 15th January 1940.

Statistics of Industrial Disputes.

Statistics of industrial disputes in India have been collected only since 1921. The following table sets out the number of disputes in each year since 1921, the number of persons affected by these disputes and the total time lost in man-days:

Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.
1921 ..	396	600,351	6,984,426
1922 ..	278	435,434	3,972,727
1923 ..	213	301,044	5,051,704
1924 ..	133	312,462	8,730,918
1925 ..	134	270,423	12,578,129
1926 ..	128	186,811	1,097,478
1927 ..	129	131,655	2,019,970
1928 ..	203	506,851	31,647,404
1929 ..	141	531,059	12,165,691
1930 ..	148	196,301	2,261,731
1931 ..	166	203,008	2,408,123
1932 ..	118	128,099	1,922,437
1933 ..	146	164,938	2,168,961
1934 ..	159	220,808	4,775,559
1935 ..	145	114,217	973,457
1936 ..	157	169,029	2,358,062
1937 ..	379	647,801	8,982,257
1938 ..	399	401,075	9,198,708
1939 ..	406	409,189	4,992,795
1940 ..	322	452,539	7,577,281
1941 ..	359	291,054	3,330,503
1942 ..	694	772,653	5,779,965
1943 ..	716	525,088	2,342,287
1944* ..	685	550,015	2,447,306

* A complete analysis of the statistics for the year 1944 will be found at page 58 of the August, 1945 issue of the *Indian Labour Gazette*.

EMPLOYMENT OF CHILDREN'S ACT, 1938.

The Government of India passed an Act in the Central Legislature in 1938 for the prevention of the employment of children who have not completed their fifteenth year in any occupation connected with the transport of passengers, goods or mails by railway or in any occupation involving the handling of goods within the limits of any port to which for the time being any of the provisions of the Indian Ports Act, 1908, are applicable. By an Amending Act passed in 1939 the employment of any child who has not completed his twelfth year is prohibited in any workshop connected with *bidi* making; carpet weaving; cement manufacture including bagging of cement; cloth printing, dyeing and weaving; manufacture of matches, explosives and fireworks; mica-cutting and splitting; shellac manufacture; tanning and wool cleaning. The prohibition, however, does not extend to any workshop wherein any process is carried on by the occupier with the aid of his family only and without employing hired labour or to any school established by or receiving assistance or recognition from a Provincial Government. Provincial Governments are empowered by the Amending Act to add any description of process to the industries already scheduled in which the employment of children under twelve years of age should be prohibited.

THE TEA DISTRICTS EMIGRANT LABOUR ACT, 1932.

One of the earliest pieces of labour legislation in India was the Assam Labour and Emigration Act of 1901 which was designed mainly to regulate the recruitment and engagement of indentured labour for the tea plantations in that province. Owing to altering conditions, it had not been possible for many years to subject plantation workers to penal contracts and although several attempts had been made to improve the law by amendments of the main Act in 1908, 1915 and 1927 and by the issue of rules and regulations, these proved to be abortive and ineffective and the law on the subject became extremely confused. The whole question was subjected to a thorough examination by the Government of India and the Provincial Governments in 1923-25 and by the Royal Commission on Indian Labour in 1929-30. The Commission recommended that the existing legislation should be replaced by a new enactment which should provide: (*a*) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the tea industry or by suitable groups of employers and approved by the Provincial Government; (*b*) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of depots at necessary intervals; (*c*) that the power conferred by section 3 of the 1901 Act to prohibit recruitment for Assam in particular localities should be withdrawn immediately; (*d*) that the existing Assam Labour Board should be abolished and that in its place a Controller of Immigrants in Assam should be appointed to look after the interests of emigrants from other Provinces; (*e*) that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense, and that the Controller should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the grounds of health, unsuitability of the work to his personal capacity or for other sufficient reason; and (*f*) that in the event of the recrudescence of abuses, Govern

ment should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed *garden-sirdars* and licensed recruitors. The Government of India implemented these recommendations in the Tea Districts Emigrant Labour Act, 1932, which was brought into effect from the 1st October 1933.

The first object of this Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam tea gardens as may be justified and required by the interests of actual and potential emigrants; and, on the other hand, to ensure that no restrictions are imposed which are not justified. Provincial Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (chapter III) or over both their recruitment and their forwarding as occasion may dictate (chapters III and IV). No license is required for recruiters but the forwarding of recruits to Assam must be made through the prescribed routes where arrangements for feeding, rest and medical treatment have been made and by authorised forwarding agents. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. A married woman who is living with her husband may only be assisted to emigrate with the consent of the husband. Full effect was given to the Royal Commission's recommendations regarding repatriation (sections 7 to 11) and it is further provided that where an employer fails to make all the necessary arrangements for the repatriation of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer, the Controler may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (sections 13 and 15). Section 3 of the Act makes provision for the appointment of a Controller of Emigrant Labour with some staff and possibly one or more Deputy Controlers for supervising the general administration of the system which the Act seeks to establish. The charges for this establishment are to be met from an annual cess called the Emigrants Labour Cess which is to be levied at such rate not exceeding Rs. 9 per emigrant as the Central Government may determine for each year of levy. The cess is collected by the Controller by the sale of certificates of emigration. Every assisted emigrant has to be provided by the employing interest on whose behalf he was recruited with such a certificate. All particulars about the emigrant together with a running record of the details of his employment in Assam are given on it. Failure to provide a certificate is punishable with a fine which may extend to Rs. 500. The rate of cess was reduced by the Government of India from Rs. 5 to Rs. 3 from 1st October 1938. It was subsequently raised to Rs. 4 for the year commencing 1st October 1939 which rate continues for the current year. The provisions of this Act were intended, in the first instance, to apply only to emigration for work on tea plantations in eight specified districts in Assam, but power is retained to extend its application to other industries and to other districts in Assam if necessary.

SHOPS LEGISLATION IN INDIA.

The first Province in India to enact legislation for the regulation of hours of work and conditions of employment in shops and commercial establishments was Bombay where the Legislative Assembly passed the Bombay Shops and Establishments Act on the 30th October 1939. Three other Provinces in India—Bengal, the Punjab and Sind—enacted similar laws during the year 1940. The Punjab Act was extensively amended by virtue of the Punjab Trade Employees (Amendment) Act, 1943. The Sind Act was amended in 1944. The Bombay Act was brought into effect from 15th November 1940. The Punjab Trade Employees' Act came into force with effect from 1st March 1941, the Bengal Shops and Establishment Act from 1st April 1941 and the Sind Act from 20th November 1941. The question of framing Central legislation for the grant of a weekly holiday to shop workers in those Provinces which have no legislation on this subject was discussed at the Second Session of the Labour Ministers' Conference and the Conference decided that such legislation was necessary. The Government of India drew up a Bill on the subject and this was passed by the Central Legislature with the title of the Weekly Holidays Act, 1942, early in that year. The option for the application of this Act in any Province which has no Shops' Legislation rests with the Government of that Province.

We shall first proceed to describe The Bombay Shops and Establishments Act in some detail and we shall then give a brief outline of the manner in which the Bengal, the Punjab and the Sind Acts differ from the Bombay prototype. The Bombay Act deals with three main types of establishments: shops; commercial establishments; and restaurants, eating houses, theatres and other places of amusement or entertainment.

Application of the Bombay Act:—This Act covers commercial establishments, shops, theatres or any other places of public amusement or entertainment, restaurants or eating houses. Government Offices and Offices of Local Authorities; clubs and residential hotels; bazaars or fairs for the sale of work for charitable or other purposes from which no profit is derived; hospitals, nursing homes and dispensaries; stalls and refreshment rooms at wharves and docks; chemists' and druggists' shops as are approved by the Provincial Government by a general or special order; and persons exclusively employed in the collection, delivery or conveyance of goods *are excluded* from the operation of the Act. The Act does not apply to persons occupying positions of management or employed in a confidential capacity; persons whose work is inherently intermittent such as that of travellers, canvassers, watchmen and caretakers; and persons exclusively engaged in preparatory or complementary work, such as clearing or forwarding clerks or messengers.

Shops:—Section 7 of the Act prescribes the maximum hours of work of persons employed in shops at 9½ per day. This is half an hour longer than the ordinary factory day. Every person employed in a shop is to be given at least one day in a week as a holiday with pay and no person can be employed for more than five continuous hours unless he has had an interval of rest for at least half an hour. The Act makes

it compulsory that every shop shall be closed not later than 9 p.m., provided, however, that any customer who was being served or was waiting to be served at 9 p.m. at any shop may be served in such shop during the quarter of an hour immediately following such hour. Power has been given to the Provincial Government to grant exemptions in the case of certain types of shops, such as chemists and druggists' shops, etc. In order, however, that compulsory closure may not affect adversely the interests of shop-keepers, it is necessary to prevent street trading after the shop closing hour, and provision has therefore been made to prevent any person from carrying on the sale of any goods after 9 p.m. in or adjacent to a street or public place. This does not, however, apply to the sale of newspapers. The maximum spread-over has been fixed at 12 hours a day, but in order to cover the cases of shops which deal in perishable goods and whose busiest periods are early in the morning and late at night provision has been made for the extension of the spread-over to 14 hours, provided such shops close for not less than three hours between the opening and the closing time.

Commercial Establishments :—As far as these are concerned, there are days in a week or a month or a quarter, when longer hours are worked than usual, and the same applies to the various exchanges where settlement days often give rise to abnormal working hours. It was, therefore, considered that it would not be advisable to fix the daily limit of hours in the case of such establishments and the Act, therefore, provides that the total number of hours that can be worked in any one month should be restricted to 208. Taking 26 as the number of working days in any one month, this works out at an average of 8 hours per day. No overtime is permitted in the case of shops, but in commercial establishments overtime to the extent of 120 hours per year is permitted so as to enable banks and other large establishments to deal with the pressure of work involved in the preparation of balance sheets, stock-taking, etc. The provision for holidays is on the same basis as in shops, but the periods of work and intervals of rest of persons employed in commercial establishments are so arranged that they shall not together be spread over more than 12 hours in a day. The Provincial Government is, however, empowered to grant exemptions from this requirement for not more than six days in every calendar year for each person who may be required to work on account of stock-taking, making of accounts, settlements or on other prescribed occasions.

Restaurants and Places of Amusement :—For these establishments, a ten hour day has been prescribed with a spread-over of 14 hours. These establishments have necessarily to keep open for long hours, but the intensity of the trade done varies and the spread-over of 14 hours gives the employers an opportunity of regulating the hours of work of their employees in accordance with the requirements of the trade. No closing is prescribed for these places because they are already subject to regulation by the police or excise departments.

Miscellaneous Provisions :—No special provision has been made in the Act for the hours of work of women employees, and as the Act stands, there is nothing to prevent the employment of women in the types of establishments to be covered by it at night. But, no child who has not completed his twelfth year is allowed to work at all in the establishments covered by the Act. The hours of work in the case of young persons between the ages of thirteen and seventeen years are restricted to 42 per week and to 8 per day and no young person is permitted to work in any establishment covered by the Act between the hours of seven in the evening and six in the morning. All overtime work is to be paid for at the rate of a time and a quarter. Enforcement of the Act is in the hands of the local authorities subject to such supervision of the Provincial Government as may be prescribed. Employers who contravene any of the provisions of the Act are liable, on conviction, to a fine which may extend to Rs. 25 for the first offence and upto Rs. 250 for every subsequent offence. The Act in the first instance was made applicable to the City of Bombay, the Ahmedabad Municipal Borough and Cantonment, the Poona City and Suburban Municipal Borough and Cantonment, and the Sholapur and Hubli Municipal Boroughs. The Act was extended to Barsi in 1943.

Main Differences between the four Shops Acts in India :—The Sind Act is applicable to almost the same classes of establishments as are covered by the Bombay Act. The Bengal Act grants exemption from the provisions of the Act relating to restrictions in hours of sale, *viz.*, those for the closing of shops for one and a half days in the week and after 8 o'clock each night to shops dealing in perishable commodities like meat, vegetable, flowers, etc; shops dealing in articles required for obsequial ceremonies; and to shops dealing in tobacco, *pan*, newspapers, etc. and such seasonal commercial establishments and the clerical establishments of such seasonal factories as may be exempted by Government. The exemption granted under Section 5 (1) of the Bengal Act to hair dressing saloons and barber's shops was withdrawn. The Punjab Act, has a somewhat wider application than any of the three other Acts; but, shops dealing in perishables, medicines and newspapers; all places of public entertainment; clubs and residential hotels; barbers and hair-dressers; stalls at railway stations; and caretakers, porters, travellrs, canvassers, domestic servants, etc., are exempted only from the operation of the sections dealing with opening and closing hours and the 'close day'. By virtue of the amending Act of 1943, all Government and Railway Offices, essential services, refreshment rooms and stalls at railway stations and dining cars, offices of lawyers, auditors or registerd accountants, hospitals and dispensaries and factories are exempted from the operation of any of the provisions of the Punjab Act.

Whereas the Bombay Act prescribes 9 p.m. as the closing hour for shops, the Bengal Act prescribes 8 p.m., while in the Punjab this varies with the seasons of the year—not later than 10 p.m. in the summer, and 9-30 p.m. in the winter. In Sind, the 1944 Amending Act altered the closing hour of shops from 9 p.m. to 10 p.m. In actual practice, however, this is made effective only during the summer months, *viz.*, from March to October. During the

winter months of November to February the closing hour is altered to 9 p.m. by Government notification. The Punjab is the only Province which provides for opening hours—6 a.m. in summer and 9-30 a.m. in winter and the Punjab Act, therefore makes no provision for limiting the spread-over as the other Acts do. As far as hours of work are concerned, the Bombay Act places a daily limit in respect of shops and places of amusement and a monthly limit in respect of commercial establishments. In contradistinction to this, the Sind Act prescribes a maximum of 54 hours per week for persons employed in commercial establishments, the Bengal Act 56 hours a week for shops and the Punjab Act 54 hours a week for shops and commercial establishments. The Bengal Act does not place any limitations on hours of work—daily, weekly or monthly—in commercial establishments but places a maximum limit of ten hours per day for work in shops and in places of amusement. The Punjab Act prescribes a uniform ten hour day as the maximum that may be worked in any establishment covered by it.

The Punjab Act endeavours to restrict dual employment by providing that the hours worked by an individual employee with two or more employers should all be taken into account for purposes of recording. Whereas payment for overtime beyond the permissible daily hours is to be made at a time and a quarter in Bombay, Bengal and Sind, the Punjab Act requires overtime in excess of daily hours to be paid for at double rates.

While the Bombay, Punjab and Sind Acts provide that all the employees covered by these Acts should get one holiday every week; the Bengal Act goes much further and prescribes that all employees should get one and a half holidays in each week. The Bengal and the Punjab Acts, moreover, prescribe that every shop shall also be closed for at least one and a half days and one day respectively in each week.

As far as employment of children is concerned the Bombay and the Sind Acts provide that no child below the age of twelve years shall be employed in any establishment covered by the Act. The Bengal Act has no provisions with regard to the non-employment of children whereas the Punjab Act prescribes a minimum age limit of fourteen years. The Punjab Act also prohibits the employment of any young person in any shop or commercial establishment to which the Act applies before 8 a.m. or after 7 p.m. Hours of work are not to exceed seven per day or 42 per week and no young person is to be asked to work for more than 3½ hours at one stretch without an interval for rest.

Whereas the Bombay and the Sind Acts make no provision for the prompt payment of wages, the Bengal Act prescribes that all wages must be paid within ten days of the end of the period for which they are due and the Punjab Act prescribes a fortnight for this purpose.

The Bombay Act makes no provision for leave with pay: all the three other Acts do; Sind—15 days' leave with pay during every year of service to lapse if not availed of within two months at the end of the year; Bengal—14 days' privilege leave with full pay after every twelve months continuous employment with right to accumulate up to 28 days and, in addition, casual leave on half pay for ten days in every year; and Punjab—14 days for a year's or 7 days for six months' continuous employment.

Two provisions which are to be found in the Punjab Act but not in the Bombay, Bengal and Sind Acts deserve special mention: (1) no employer may fine any employee to an extent greater than three pies in the rupee of his monthly wages; and (2) One month's notice or one month's pay in lieu of notice to be given by the employer for termination of service.

The Central Weekly Holidays Act is a very simple measure as compared with the four Provincial prototypes which we have dealt with above. As its title implies it is merely confined to making provision for the grant of a weekly holiday in certain classes of establishments. Every shop must remain entirely closed on one day of the week. All persons employed otherwise then in a confidential capacity or in a position of management in any shop, restaurant or theatre must be allowed a holiday of one whole day in each week. Provincial Governments are empowered, if they so desire, to close shops for an additional half-day in the week or to permit employees in theatres and restaurants to enjoy an additional half-day holiday in every week. No deduction or abatement is to be made from wages in respect of any holiday that may be granted under this Act. No provision is made in the Central Act for employees in banks and offices. The Act contains the usual provisions for inspection, penalties, rule-making power and enforcement. The Weekly Holidays Act was brought into operation in the N. W. F. Province, in the Province of Bihar, in British Baluchistan and in Ajmer-Merwara during the year 1943.

The Sind and the Bombay Act have placed the duty of enforcement of these acts on the Local Authorities, whereas the Bengal and the Punjab Acts leave enforcement with the Provincial Governments. It has been estimated that the Bombay Act applies to sixty to seventy thousand concerns in Bombay City alone. The Bombay Municipality has appointed one Chief Inspector (G. R. PRABHAN, Ph.D.) and five senior and eleven junior Inspectors for the inspection work in the Municipal limits of the City. The Government of India have published an excellent review on the working of Shops Legislation in India at pages 293 to 301 of the March 1945 issue of the *Indian Labour Gazette*.

THE INDUSTRIAL STATISTICS ACT, 1942.

The collection of statistics regarding wages, conditions of employment and other matters relating to industry in India had hitherto been effected through the goodwill and voluntary effort of the industrial units concerned. This method was not considered satisfactory. As a matter of fact, the Government of Bombay had introduced a Bill for the Collection of Statistics in the local Legislative Council as early as in 1924 but that Bill was dropped owing to the strong opposition put up by employers' interests against the adoption of such a measure. Practi-

cally every Commission and Committee appointed in connexion with matters relating directly or indirectly to industry in India has stressed the necessity for the passing of a Statistics Act. The subject was discussed at the Eleventh Session of the Industries Conference held in 1939 and again at the Second Conference of Labour Ministers held in 1941 and it was decided that such a measure should be adopted. The Government of India introduced a Bill on the subject in the Central Legislative Assembly on the 27th February 1942 and this was passed into law at the same Session with the title of The Industrial Statistics Act, 1942.

This Act is permissive, that is to say, the decision to apply it to any particular Province rests with the Government of that Province. The Act permits the collection of statistics with regard to any of the following matters : (1) prices of commodities ; (2) attendance ; (3) living conditions including housing, water supply and sanitation ; (4) indebtedness ; (5) rents ; (6) wages and earnings ; (7) provident and other funds provided for labour ; (8) benefits and amenities provided for labour ; (9) hours of work ; (10) employment and unemployment ; and (11) industrial and labour disputes. Penalties are provided for persons refusing to supply information or failing to furnish the required returns. Provincial Governments are empowered to appoint an officer to be the Statistics Authority for the purposes of the collection of any statistics under the Act and that Authority, when once appointed, has the power to call upon employers to furnish the information required. Penalties are also provided for in the Act for improper disclosure of information or returns by persons engaged in the collection of the information or the tabulation of the data.

The Industrial Statistics Act was brought into force in Bombay with effect from the 1st March 1943 and in Bengal with effect from the 15th March 1943. The Labour Commissioner, Bengal, has been appointed the Statistics Authority for the purpose of collection of statistics relating to prices of commodities; living conditions, including housing, water supply and sanitation ; indebtedness ; rents of dwelling houses ; and wages and other earnings in so far as they relate to welfare and conditions of labour. The Government of the Central Provinces and Berar have published Rules in connexion with the introduction of this Act in the Province.

DEMAND FOR UNIFORM LABOUR LAWS IN INDIA.

In the first Chapter of this Section we referred to the widespread schemes for new labour legislation initiated by many Provincial Governments in India. It might have been expected that a certain measure of uniformity both with regard to the scope of the contemplated labour laws and the pace at which they were to be enacted would be observed at least in those Provinces where Congress Governments were in power. But, whereas the Congress Government in Bombay had placed two important enactments such as the Bombay Industrial Disputes Act, 1938, and the Bombay Shops and Establishments Act, 1939, on the Statute Book, no similar legislation had been passed in such other important industrial Provinces where Congress Ministries had been functioning as Madras, the United Provinces, Bihar, and Central Provinces and Berar. The impetus towards enacting measures to improve the lot of the working classes, as a result, differed in intensity from one Province to another and there were wide gaps between labour amenities in different parts of India. These disparities, it was recognised, must inevitably tend to weaken the competing power of those Provinces where labour laws placed greater restrictions and imposed heavier financial burdens on the employers. Responsible spokesmen of industrial interests in the country, therefore, gave frequent expression to their sense of perturbation at the lack of uniformity and consistency in the labour policies which were being pursued by the different Provincial Governments and all Associations of Employers in the country suggested to the Government of India the desirability of some action to ensure co-ordinated action in respect of labour laws.

In the words of the Hon'ble Dr. B. R. Ambedkar, Labour Member of the Government of India : "So long as the Government of India was a unitary Government, uniformity in labour legislation was not difficult to obtain. But the federal constitution created by the Government of India Act of 1935 by including Labour Legislation in the concurrent legislative list had created a very serious situation. It was feared that if there was no Central legislation each Province might make a particular law specially suited to itself, but different from that of its neighbour by allowing Provincial considerations to dominate over considerations of general and national importance." With a view to supplying 'a most necessary corrective to this tendency and to foster among Provincial Governments a regard for the wholesome principle of uniformity in Labour Legislation,' the Government of India convened a Conference of Labour Ministers from the Provincial and the State Administrations at New Delhi in January 1940. The agenda consisted of an examination of both the defects and the shortcomings of the existing labour laws and also of proposals for new legislation. Following this Conference, employers felt that it would be highly desirable that there should be a measure of unanimity in the opinions expressed at similar Conferences by the various employers' associations in the country. With this object in view a joint Conference of Industrialists was convened at Bombay in September 1940 under the auspices of The Employers' Federation of India and the All-India Organisation of Industrial Employers. The Second Labour Ministers' Conference which was held at New Delhi in January 1941 was preceded by separate Conferences between the Labour Member of the Government of India and the representatives of the two Federations of Employers' Associations and the All-India Trade Union Congress at Calcutta at the beginning of the year. A similar procedure of separate conversations with the representatives of Capital and Labour was followed prior to the third session of the Conference of Labour Ministers which was held at New Delhi on the 30th and 31st January, 1942. The Hon'ble Sir Firoz Khan Noon who presided at the Third Conference emphasized that there was no time in the history of India when a speedy settlement of labour problems was more urgent than at present: If war production was to go forward unhampered

we must, he said, avoid strikes and lockouts at all costs and we must handle all problems of labour and industrial development with sympathy and foresight.

One of the most important recommendations made by the Royal Commission on Labour in India in its report which was published in 1931 was for the setting up of an Industrial Council for India on the lines of tripartite representation of Governments, Employers and Employees. It was not possible for the Government of India to give effect to this recommendation for many reasons but at the Third Conference of Labour Ministers, Sir Firoz Khan Noon said that it was for the consideration of the Conference whether for the future it would not be healthier to develop the practice of having joint meetings of employers, workmen and representatives of Governments. The Reports of the Proceedings of the three Conferences of Labour Ministers have been published as Bulletins of Indian Industries and Labour and copies are obtainable from The Manager, Government Publications, New Delhi.

Establishment of a Tripartite Conference.

The Government of India gave quick effect to the proposal made by the Hon'ble Sir Firoz Khan Noon at the Third Conference of Labour Ministers for greater collaboration between employers, workers and Governments and they convened a Plenary Conference of all these interests to meet in New Delhi on 7th August 1942 to decide upon the following matters:—

(1) The desirability of establishing a Labour Conference as a permanent organization to meet at least once a year;

(2) The desirability of instituting a Standing Advisory Committee of this Conference which would meet whenever Government thought it necessary to invite them to meet and to advise Government on matters placed before it; and

(3) Defining in general terms the procedure for the constitution of these bodies.

The Conference decided that a collaborative machinery composed of the representatives of Governments, employers and workers in India should be established forthwith for the consideration of all questions relating to the conditions of labour and resolved that the constitution of the Plenary Conference should be as follows: Chairman—The Hon'ble the Labour Member of the Government of India; Members—(1) Three representatives of the Government of India including one representative to represent Minor Administrations; (2) Eleven representatives of Provinces; (3) Six representatives of industrially important States; (4) Two representatives of the Chamber of Princes to represent other States; (5) Eleven representatives of employers to be nominated by Government, four each in agreement with the Employers Federation of India and the All-India Organization of Industrial Employers respectively and the remaining three to represent other classes of employers; and (6) Eleven representatives of employees to be nominated by Government, four each in agreement with the All-India Trade Union Congress and the Indian Federation of Labour respectively and the remaining three to represent other employees' interests. It also decided that a Standing Labour Committee composed of the following members should be constituted: (1) Two representatives of the Government of India of whom one—the Hon'ble the Labour Member—would be the Chairman; (2) One representative each of the Governments of Bengal, Bombay and the United Provinces to be selected by the Governments of these Provinces; (3) Three representatives of the remaining Provinces, one each to represent (*a*) Madras and the Central Provinces and Berar, (*b*) Assam, Bihar and Orissa, and (*c*) Punjab, Sind and the North-West Frontier Provinces to be selected by agreement between the Governments of these Provinces preferably by a system of rotation; (4) Three representatives of Indian States including one representing the Chamber of Princes; and (5) Five representatives each of Employers and Employees, four from each group being nominated by the Government of India in agreement with the two leading All-India Associations of Employers and the two main Associations of Employees, the fifth Member in each group being nominated by the Hon'ble The Labour Member. The second and the third sessions of the Tripartite Labour Conference were held at new Delhi on the 6th and 7th September, 1943 and on the 27th and 28th October, 1944, respectively.

The main function of the Standing Labour Committee is to consider and examine such questions as might be referred to it by the Plenary Conference or by the Central Government taking also into account suggestions made by Provincial Governments, States, the Chamber of Princes and representative organizations of Employers and Workers. The Committee is competent to report to the Plenary Conference on matters referred to it by that body and to advise the Central Government on matters referred to it by the Government of India. The Plenary Conference also acts in an advisory capacity. Whereas the Plenary Conference is to meet at least once in every year, the Standing Labour Committee is to meet as often as it might be convened by the Central Government for the consideration of questions that may be before it. By the time we went to Press for this issue (July 1945) six meetings of the Standing Labour Committee were held—four at New Delhi on the 30th November and 1st December 1942, on the 25th January, 1943, on the 27th June, 1944 and on the 17th March, 1945, respectively; one at Bombay, on the 7th and 8th May, 1943 and another at Lucknow on the 25th and 26th January, 1944. The agenda and proceedings of the Standing Labour Committee have covered a wide range of subjects which want of space prevents us from dealing with here. Mention may, however, be made that the only item discussed at the 6th meeting of the Standing Labour Committee was the note prepared by Messrs. M. Stack and R. Rao of the International Labour Office on Professor Adarkar's Report on Health Insurance for Industrial Workers in India. This note has been published at pages 329 to 339 of the April 1945 issue of the *Indian Labour Gazette*. The note recommends the adoption of one comprehensive scheme of sickness and workmen's compensation insurance and maternity benefits for workers in all perennial factories in India. Want of space prevents us from giving full details of the scheme here.

WAGES, HOURS OF WORK AND CONDITIONS OF EMPLOYMENT.

Although some associations of employers such as the Indian Jute Mills Association and the Millowner's Association, Bombay, have made efforts during the last few years to secure a certain measure of standardization in wage rates and conditions in the concerns controlled by their members, conditions of work and employment in Indian industry vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry and in the same centre. These variations have been considerably accentuated since the advent of the second world war. At the best, therefore, it can only be possible to give broad generalisations for the more important industries and indications as to where further information can be found. As far as conditions in factories are concerned, the various provincial annual factory administration reports and the summaries compiled by the Government of India on the basis of these reports, when published, used to give valuable information on hours of work, etc. Information on conditions in Indian mines used to be similarly contained in the annual all-India mines administration reports. The four Reports on a Wage Census in the perennial factories in the Bombay Presidency issued by the Bombay Labour Office and some of the Reports issued by the Labour Investigation Committee, however, contain detailed and comprehensive information relating to wages and earnings in principal industries in India.

WAGE RATES AND EARNINGS.

Certain important facts govern all discussions on wages and wage rates in India. There is as yet no wage fixing machinery in the country although the question of setting up such machinery has recently been under the consideration of the Government of India; and with a few exceptions, there are no trade agreements or union rates. One important exception is the cotton textile industry in Ahmedabad where the Textile Labour Association and the Ahmedabad Millowners' Association have been able to reach agreements with regard to the rates to be paid to siders, doffers and weavers. This and a list of the minimum rates of wages to be paid in time rated unrationalised occupations in cotton mills in Bombay City drawn up by the Millowner's Association, Bombay, in 1934 are the only attempts which have been made so far at standardisation of wages in the country. Except in the case of a very few firms like General Motors (India), Ltd., time rates of wages are not hourly rates, as in the West, but are daily or monthly rates or, where wages are paid weekly or fortnightly, daily and weekly or fortnightly rates. The skilled engineering trades like fitting, machining, etc., are often divided into several grades and sub-grades. Each individual Administration or unit has its own arbitrary method of grading but railway workshops and Government Ordnance factories lay down standards for each grade and for the trade tests the passing of which alone entitles an individual workman to promotion. The Government of India have been recently engaged in standardising sub-occupations in the principal Engineering trades and Committees with the Chairmen of the National Service Labour Tribunals as Chairmen have been appointed for this purpose.

Personal competence and efficiency supply and demand and bargaining power are the main factors which determine the wage an individual should get in the vast majority of concerns where no grades have been fixed. Where monthly rates of wages are paid the "month" has a widely varying meaning. It may be the calendar month or the number of working days in the month, or a month of 26 or 27 working days, or the Hindu month or a "book" month—a month of so many complete weeks, or a month of so many hours, as in the case of the G. I. P. Railway where monthly rates are for a month of 208 hours. Before the Payment of Wages Act was passed employers resorted to various devices to deprive a worker of his dues by attaching various conditions which would entitle him to secure the hypothetical pay for a Sunday or closed day, *e.g.*, presence on the Saturday or Monday or both. Section 9 of that Act prescribes that the amount of deduction made from a monthly rate for absence from duty shall in no case bear to the wages payable a larger proportion than that which the period of absence bears to the number of working days in the wage period.

Practically no industrial unit in India today pays a consolidated rate. During the World War of 1914-18 and for a few years later, dearness or war or grain allowances were given in addition to a "basic" wage. "Basic" did not mean some fixed or prearranged amount universally paid at any particular moment; it applied to the amount of wage an individual received at the time when the allowance was given to him. A new comer to industry would not necessarily get the same "basic" wage and allowance given to his predecessor: he might get the same but he would generally get a lower "basic" wage and the allowance or a consolidated rate. The dearness allowances granted to industrial workers in India during the last war were never completely taken away. The few years preceding the commencement of the present war were characterised by insistent demands by Labour for the consolidation of these allowances with "basic" rates of pay. With the advent of the Second World War, however, dearness allowances were again reintroduced in almost all industries in India as a separate item except in the Jute Mill industry where an increase in the basic wage was granted and subsequently an allowance called "amenity allowance" given.

It would be of interest to observe that certain industrial concerns in India have adopted the Halsey Weir or Bedaux point systems of wage payment. The International Bedaux Company

of New York and Amsterdam which is the largest organisation of industrial consultants in the world extended its activities to India in 1936. The Indian branch of the Company is known as The Eastern Bedaux Company and its address is Construction House, Ballard Estate, Bombay.

Rates of Wages.

In view of what has been stated above it must be obvious that the rates of wages paid in Indian industries must vary widely. They do: not only as between industry and industry but also as between centre and centre, and unit and unit in the same centre in any one industry. As pointed out already, the only reliable and satisfactory data in connection with wage rates and earnings of industrial workers in India are those contained in the reports of enquiries conducted by the Labour Office of the Government of Bombay and in the *ad hoc* reports issued by the Labour Investigation Committee in the year 1946, for the Province of Bombay. Wage data relating to agricultural labour is contained in a series of reports of quinquennial censuses conducted in certain provinces into agricultural wages. The reports of Courts of Inquiry appointed under the Indian Trade Disputes Act and the reports of Provincial Committees appointed by certain Provincial Governments to enquire into wages and conditions of employment of workers in certain industries also contain information relating to wages. Some of the annual factory administration reports published by the Provincial Governments in India used to contain remarks about prevalent wage rates. The annual Mines' administration reports also contained figures for daily earnings for certain main occupations in representative mines. The lack of accurate and reliable statistics of wages in India has been adversely commented upon and regretted by almost every Commission and Committee appointed in the country since the beginning of the century and notably by the Royal Commission on Indian Labour.

The blame for the lack of information about wages in India cannot lie entirely at the doors of the Central and Provincial Governments. The collection of satisfactory wage statistics is always an exceedingly difficult matter and more particularly so in India where conditions vary so markedly and widely. Moreover, as will be seen from the observations which follow under the heading of "Pay Periods" there are wide variations in the periods and methods of wage payment. The situation is further complicated by the fact that the nomenclature adopted for designating occupations also varies widely between district and district and concern and concern in the same district owing to the use of a host of vernacular and arbitrary terms and of nicknames. Even in concerns which use standard English occupational terms, the position is rendered more difficult owing to the existence of the gradings which have been referred to above. The necessary preliminaries to the conduct of any satisfactory enquiry into wages in India, therefore, must be (1) the establishment of a uniformity of method, (2) the standardisation of occupational terms (as pointed out above, this is now being attempted) and (3) the thorough education and instruction of the clerical staffs of the units to be covered in the proper use of the standardised designations and in the accurate filling up of the required returns. In view of what has been stated it is obvious that no Government in India can undertake a comprehensive enquiry into industrial wages unless it has at its disposal an adequate and thoroughly trained and experienced staff for the purpose.

Since its establishment in 1921, the Labour Office of the Government of Bombay has conducted five enquiries in the years 1921, 1923, 1926, 1933 and 1937 into the wages of cotton textile mill workers in the Province of Bombay, an enquiry into agricultural wages covering a period of twenty-three years from 1900 to 1922; an enquiry into the wages of peons in Government and commercial offices in 1922; enquiries into the wages of all municipal employees in the Province in 1924, of clerical employees in Railway and Commercial offices in Bombay City in 1925, of printing press workers in Bombay City in 1929, of workers employed in the building trade in Bombay City in 1935, and of all employees in the retail trade in various important towns in the Province in the same year. In 1934 the Labour Office conducted a general wage census covering all workers in all working perennial factories in the Province including cotton mill operatives. The second part of this census covering seasonal factories was conducted in the winter of 1935-36. The results of the special enquiry which that Office conducted into wages in cotton textile Mills in 1937 expressly for the Bombay Textile Labour Inquiry Committee have been published in the Committee's Report. The results of all the other enquiries have been published either in special reports or in articles in the *Labour Gazette*.

Information regarding wage rates can only be of value if accurate data are available to show the frequency distribution of the numbers of workers getting the same rate in different occupations in different industries in different centres. Furthermore it is impossible to give any rates of wages which will be found to be generally applicable to any particular industry in any particular centre.

Earnings.

Whilst full and accurate information with regard to wage rates may be of great value for purposes of wage fixation, statistics of earnings alone are of value for the proper assessment and appreciation of the well-being of the workers, provided however that the term "earnings" has one uniform meaning in its computation and application. In practice, the connotation of the term varies widely for it is commonly applied to one of three different values: (1) gross earnings; (2) net earnings; or (3) the amount which a workman receives in his pay envelope.

When all the Reports of the Labour Investigation Committee are published it would be possible to arrive at a correct idea of the gross and net earnings of the workers employed in several industries in the country. In the meanwhile however, the only data which are available are those published in the *Indian Labour Gazette*. These are reproduced overleaf.

AVERAGE EARNINGS OF FACTORY WORKERS IN BRITISH INDIA.

	Average annual earnings in rupees during			Increase in 1944 over (in rupees.)		Percentage increase in 1944 over	
	1944	1943	1939	1943	1939	1943	1939

Miscellaneous	513·8	392·0	281·2	121·8	232·6	31·1	82·7

PAY PERIODS.

There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various branches of industry in India. In scarcely any industry is there a single period of payment. Different systems are found in establishments belonging to the same industry and in the same district; and within the same establishment different classes of workers are often paid for different pay periods. If generalisations may be attempted, the jute industry in Bengal, coal mines, tea plantations, seasonal factories, oil mills, rice and flour mills and certain classes and groups of workers in Government establishments such as the Security Printing Press at Nasik pay wages for periods of a week. Payments on a fortnightly basis range between payments for *haptas* or wage periods of fourteen and sixteen days for weavers and spinners respectively in the cotton mills in Ahmedabad to bimonthly payments for periods from the 1st to the 15th and from the 16th to the end of the month in textile mills in Broach and various other centres in India. The month is the accepted wage period for the railways (including railway workshops), cotton textile mills in Bombay, Sholapur and several other centres, engineering workshops, dockyards, printing presses and for the persons employed in the mechanical and maintenance departments of almost all concerns which pay wages to process operatives weekly or fortnightly. Wages are calculated on both the monthly and the fortnightly bases in sugar mills and tanneries. In the Tata Iron and Steel Works at Tatanagar where over 50,000 workers are employed wages are paid weekly to men on daily rates and monthly to those on monthly rates. The most general system of payment in the case of casual labour is that of daily payment. Supervisory and clerical staffs in all industrial establishments are paid on a monthly basis.

The question of shortening the wage period universally in India by law to a week or a fortnight has been considered by the Government of India, in consultation with the Provincial Governments and interested persons and bodies, on three different occasions within the last twenty years. Attempts were also made to amend the Payment of Wages Act in such a way as to achieve this object. The position, however, has still remained unchanged.

HOURS OF WORK.

The existing restrictions on hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described in the sections dealing with those Acts. The most important happening during the current year in regard to hours of work in factories is the reduction of the weekly hours of work from 54 to 48 in perennial factories and from 60 to 54 in seasonal factories. This reduction was effected from the point of view of two considerations: (1) it was felt that 9 hours of work in a factory per day was somewhat too long; and (2) the reduction of hours of work might lead to employment of more persons. Actually, in many industries in this country during the war when three shifts were being worked, the hours of work were not in excess of 8 per day. In the coal-mines in Bihar and Bengal the workers seldom work for more than five to six hours in the day or for more than four to five days in the week. The weekly hours of work in Indian mines vary widely and range from 38 to 51 hours per week. The cotton textile industry in almost all centres normally works a uniform 9 hour day except in a few concerns which work a 9½ or 10 hour day from Mondays to Fridays and a 5½ hour or 4 hour day on Saturdays. A recent development in the cotton textile industry is to work shifts on the basis of what is known as *The Relay System*. By this system a unit does not stop work during the noon recess and continues working throughout a whole shift, different batches of workers being given rest intervals by turns and the remainder being asked to do double substitute work for the time being. Messrs. E. D. Sassoon & Co., Ltd., in certain of their cotton mills in Bombay City, have been working three shifts of seven hours each for the last seven or eight years; but conditions in these mills are highly rationalised: that is to say

more machines are allotted to each worker, siders being asked to mind two sides and weavers six looms as against the normal of one side and two looms. Most of the Jute mills in India are members of the Indian Jute Mills Association. The hours of work in member mills are regulated according to the recommendation of the Association. The weekly hours of work in jute mills in Bengal vary considerably from year to year and recent investigations show that mills with more than 220 looms were permitted to work 66 hours a week. Those with a smaller number of looms than 220 could work 72 hours per week. Some mills work 60 hours in some departments and 66 in others in order to build up a sufficient store of yarn. During, however, periods of coal shortage, many of the mills were found to be working for only 54 hours per week. Unlike the Cotton Mill Industry, work in jute mills start fairly early in the morning generally at 5.30 and goes on till 10.30 or 11. Thereafter, there is a recess period of about 2½ hours. Work recommences at 1 or 1.30 p.m. and continues till 6.30 or 7.30 p.m. Some of the mills also allow short interval of 10 to 15 minutes during working hours which the workers take in rotation.

All the dockyards, many of the larger engineering and almost all the railway workshops work a 48 hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in many of the mechanic shops of textile mills and in the larger non-engineering factories are usually half an hour to an hour less than those for process workers and approximate more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories Act as also do oil and sugar mills. Almost all seasonal factories work a uniform 10 hour day for all the days in the week except on the compulsory rest day which is not always on a Sunday especially in the districts where factory owners endeavour, as far as possible to close on the local bazaar day. Most factories engaged in the production of munitions of war now work the maximum weekly hours permitted by the Factories Act and exemptions absolving factories from observing the Statutory regulations have been granted by all Provincial Governments to many factories. Early in November 1941, the Government of India issued a Press Note stating that owing to a curtailment of imports of cotton textiles into India owing to difficulties of securing adequate transport there had been a large increase in the demand for the output of cloth from Indian cotton mills and that unless the production of Indian Mills was increased, the poorer classes of India might find it difficult to obtain their necessary supplies of cloth at reasonable prices The Government of India after having given careful consideration to the question in consultation with the Provincial Governments, decided that all Provincial Governments should permit cotton spinning and weaving mills throughout India to work a 60-hour week provided that the six additional hours over the 54 hours per week permitted by Statute were paid for at overtime rates. All Provincial Governments which had cotton textile mills within their territories issued the necessary notifications in the matter but not many mills were able to take advantage of this relaxation owing to Labour opposition. The period of six months lapsed at the beginning of May 1942 but many Provincial Governments have extended the relaxation for further periods of six months at a time.

In all cases where continuous production is necessary such as in electricity generating plants and certain water pumping stations, cement factories, etc., work is arranged on a system of three shifts—the different shifts changing over every week or fortnight. The change-over is so arranged that every workman gets a rest period of at least twenty-four continuous hours once in one week. A system of change-over of shifts has been widely adopted in cotton textile mills in the City of Bombay but very little progress in this matter has been made in other centres of the industry owing mainly to the opposition of the day shift workers whose services had been engaged prior to the introduction of night work.

As far as railways are concerned, hours of work in railway workshops are controlled by the Indian Factories Act. Most of the larger running sheds have also recently been classified as factories and work in these large sheds is arranged on the basis of three shifts of eight hours each. In the smaller sheds where work is of a fairly intermittent character, systems of two shifts of twelve hours each obtain but the work of the individual is so arranged as not to work each operative for more than 8 hours. As far as the hours of work of other classes of Railway servants are concerned, the Indian Railways Act, 1890, was so amended in 1929 as to empower the Governor-General in Council to make rules for the limitation of hours of work and of grants of a periodical rest to certain classes of railway servants. Under the new powers, the Railway Servants Hours of Employment Rules, 1931, were promulgated and put into effect. These provide a 60-hour week for persons engaged in continuous work and an 84-hour week for employees whose work is of an essentially intermittent character. Persons in positions of supervision and management or who are already subject to the limitations imposed by other Acts such as in railway workshops, running staffs and watchmen, watermen, sweepers and gatekeepers whose work is both intermittent and of a specially light character are excluded from the operation of the Rules. The Supervisor of Railway Labour takes prompt measures to rectify any irregularities that are brought to his notice. The most important matter in which there are frequent differences of opinion between the Supervisor of Railway Labour and the Railway administrations is the classification of staff.

There is at present no legal restriction on the hours of work of dock labourers in India and the Royal Commission who examined the question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day, overtime being paid for at 33⅓ per cent. over ordinary rates. On circulation of these proposals by the Government of India, most of the provincial Governments affected were of opinion that under the existing organisation of dock labour in India, legislation for the control of

hours was not practicable owing to the insurmountable difficulties which would be experienced in enforcement. The authority of the Karachi Port were thereupon advised to try out an improvised method of decasualisation which would involve registration of all dock workers. Stevedore labourers have however, as a result of considerable agitation by their unions, succeeded in securing a reduction in their hours of work from 12 to 14 hours per day to nine to eleven hours per day.

Speaking generally, in the dry docks and workshops attached to Ports two to three shifts of 8 hours each are worked. Only in the Madras Port is there a system of weekly change-over of shifts among dock workers. During the War, overtime was a regular feature in the major ports due to increased activities created by war conditions.

In the major municipalities in India the hours of work vary from department to department but are generally 8 to 10 per day. In the Water Works Department, the Pumping Station and Distribution Department in Madras, there is a regular system of change-over of shifts but such a system is not to be found in other municipalities. Speaking generally, municipal workers get a weekly holiday. Although those in the conservancy department get only half a day off per week, there is a certain amount of discontent among the conservancy staff for not getting a weekly holiday but since they are engaged on essential work most of the municipalities find it difficult to grant such a holiday.

As far as the industries not specifically dealt with here are concerned, the hours of work in the case of certain individual units may, by the standards of to-day, be considered excessive but the existing regulation of the hours of a large percentage of industrial labour in India had a very salutary effect in bringing about a general reduction to more normal standards in the case of the non-regulated industries and concerns. Conditions regarding hours of work have, however, worsened somewhat in view of the regular overtime which has to be worked in almost all industrial concerns in India in order to maintain war production.

RECRUITMENT.

Up to about ten years ago, recruitment of labour in almost all industrial undertakings in India, with the possible exception of Railway workshops, was effected through the medium of a recruiting agent, a *Sardar*, a *Mukkadam* or a jobber. As a result, however, of the recommendations made on the subject by various Committees—notably the Royal Commission on Indian Labour and the Bombay Textile Labour Inquiry Committee which have condemned this method of recruitment owing to the abuses which have come to be associated with it—many of the larger and more progressive concerns have appointed Labour Officers who are directly responsible for all new recruitment. The old method is, however, still largely prevalent in the majority of the industrial concerns in the country.

There are various forms in which a recruiting agent is remunerated. He may be a salaried employee with a commission for every recruit he brings in, or he may receive a lump sum payment for each recruit or a gang of recruits, or he may be paid a recurring sum for each man he places in employment as long as that man continues in employment. Whatever be the method by which an employer remunerates the recruiting agent, it is fairly well known that the agent keeps a continuous hold and grip on the recruit he places in employment and extracts from him recurring sums of money whilst he continues in that employment under pain of his losing his job.

The evils in connection with recruitment were most marked in the case of casual or substitute labour. The Millowners' Association, Bombay, have dealt with the problem by establishing what is known as the "Badli Control System." The daily number of absentees in a cotton mill in Bombay are averaged and an additional percentage is added. Each mill issues *badli* or substitute cards to this number of workers. Daily casual vacancies are filled only from such card holders and whenever there is a permanent vacancy it is filled from these card holders. The evil influence of the jobber is thus eliminated. The system has been highly commended by the Textile Labour Inquiry Committee and the Government of Bombay have recommended its adoption by all mills in the other centres of the cotton textile industry of the Province.

No reference to the appointment of Labour Officers in industrial concerns in India would be complete without mentioning the lead given in this matter by the Millowners' Association, Bombay, and the excellent work done by its own Labour Officer, Mr. R. G. Gokhale. The Association, through Mr. Gokhale, conducts special classes for the training of Mill Labour Officers and actively supervises and controls the work done by all such Officers where they have been appointed through the Association. Following the example of the Millowners' Association, Bombay, the University of Calcutta, in co-operation with the Indian Jute Mills Association, has recently inaugurated a special course of social work for giving suitable training to labour welfare officers engaged in jute mills. The course covers both theoretical training and intensive practical work in the field, *i.e.*, the jute mills themselves. The Indore Christian College has also recently started a course for the training of Labour Officers.

The Indian Jute Mills Association which has appointed a large number of Labour Officers, created a special post of a Senior Labour Officer in 1944 and they have been successful in procuring the services of Mr. John Lee, M.A. (Oxon.), who has had a large experience of Personnel management in the United Kingdom to fill it.

In this connection mention might also be made of the Employment Exchange started by the Northern India Employers' Association in Cawnpore. Some of the progressive cotton mills in the South have opened special Labour offices through which only recruitment is made. Some of the worst evils in regard to the recruitment of labour are to be found in Indian Coal Mines.

MEASURES FOR ENFORCING DISCIPLINE.

The measures adopted by industrial employers in India for enforcing discipline have engaged the earnest attention of both the Central and the Provincial Governments in this country for the last fifteen years. Early in 1926, the Government of India instituted a country-wide inquiry into the extent of the deductions made by employers from the wages of their workpeople in respect of fines and other matters. The subject was partly examined by the Bombay Strike Enquiry Committee (Fawcett Committee) in 1928-29 and again more fully by the Royal Commission on Indian Labour in 1929-30 and both these bodies made a series of most important recommendations in the matter. The Payment of Wages Act was passed in 1936 in order to implement these recommendations.

The two matters with regard to the discipline of their workmen which Indian industrial employers complain of most are the large extent of labour turnover and the high degree of absenteeism. That both high labour turnover and high absenteeism are to be found in several Indian industries cannot be denied; but, few, if any, employers have taken the trouble to examine the root causes for them. The investigations conducted by the Labour Office of the Government of Bombay go to show that both labour turnover and absenteeism are highest in concerns and industries in which wages are lowest and where conditions of employment are least attractive and that they are lowest in concerns and industries in which wages are comparatively high and where other conditions of employment are attractive. For example, the Bombay Labour Office compiles monthly figures of percentage absenteeism in cotton textile mills in Bombay, Ahmedabad and Sholapur. Textile wages are highest in Ahmedabad and lowest in Sholapur. The annual averages of percentage absenteeism in these three centres for the year 1944 were: Ahmedabad 5.70, Bombay 11.35, and Sholapur 15.34—figures which tell their own story.

Under the Payment of Wages Act, every employer is required to draw up lists specifying the acts or omissions for which fines will be inflicted. These lists have to be approved by such authority as a Provincial Government may prescribe and are required to be prominently displayed in all places where the employees concerned are working. Apart from this employers were not required to draw up any Standing Orders or rules of conduct governing the conditions of employment between them and their employees. The Bombay Industrial Disputes Act, 1938, however, requires every employer in an industry to which the Act has been made applicable to submit a draft for the Standing Orders which he proposes to adopt for regulating the relations between him and his employees to the Commissioner of Labour within two months of the date of the application of the Act to any industry; and the Commissioner of Labour is empowered to "settle" such standing orders after he has consulted all the interests concerned in the industry. Appeal against the orders of the Commissioner of Labour lies with the Industrial Court constituted under the Act. In accordance with these provisions, the Commissioner of Labour, Bombay, settled the Standing Orders for Cotton mill operatives in Bombay, Ahmedabad, Sholapur and other centres in the Province of Bombay in September and October 1939. Appeals against most of these Orders were filed with the Industrial Court both by individual employers and associations of employers and by Trade Unions and individual workers. These appeals were heard by the Industrial Court in November 1939 and the Court, after hearing the parties, settled a new set of Standing Orders which it directed should come into force on and from 12th December 1939. Copies of these Standing Orders can be obtained from the Secretary, The Industrial Court, High Court, Bombay. Since the beginning of 1940 many employers all over India have drawn up Standing Orders for their operatives on the lines laid down by the Industrial Court, Bombay.

In pursuance of a resolution adopted on the subject at the Second Session of the Tripartite Conference held at New Delhi on the 6th and 7th September, 1943, the Government of India have addressed all Provincial Governments on the desirability of all industrial concerns in India employing 250 persons or more to draw up standing orders for their operatives on the lines laid down in Section 26 of the Bombay Industrial Disputes Act, 1938. In accordance with these instructions, the Indian Jute Mills' Association and the Employers' Association of Northern India have drawn up Draft Standing Orders for adoption in their member Mills.

SUPERANNUATION BENEFITS AND FINANCIAL AID.

The subjects which we deal with under this section are pensions, gratuities, profit sharing, provident funds, co-operative societies, grain and cloth shops, advances and loans.

Pensions.—All monthly and time-rated workmen in the industrial establishments of Government are entitled to pensions on retirement provided that a minimum of nine years' service has been put in. The amount of the pension due is arrived at by multiplying the average monthly pay for the three years preceding retirement by the actual period of active service less one year and dividing the product by 48. Where permanent monthly paid workers on piece rates are admitted, the average monthly pay is arrived at on the basis of the earnings for 72 months and the divisor in the above formula is 72. Commutation up to 50 per cent. of the amount of the monthly pension is permitted in certain cases. Outside Government concerns, pensions on retirement are almost non-existent although many concerns give small pensions to old employees who have put in long periods of trusted and faithful service but these are mostly *ex gratia* and cannot be claimed as of right. The Government of Bengal have under contemplation the introduction of a system of pensions for jute mill workers.

Gratuities.—All railway employees and the employees of local and public bodies and a few of the larger public companies receive gratuities on retirement. Gratuities are also paid to non-pensionable workers who have put in not less

than thirty years' service in Government concerns. In all cases specified periods of qualifying service have to be put in before gratuities can be earned. The rules of individual administrations vary widely but the most generally accepted principle is half a month's pay for each year of service limited to fifteen months' pay in all. Permanent Government servants who have put in less than nine years' active service are entitled to gratuity if they are compelled to retire on medical certificate. A few large industrial establishments in India such as Messrs. Lever Bros. (India), Ltd. and others have started Retirement Benefit schemes where an account is opened for every individual worker to which a fortnight's or 13 days' pay is credited every year: interest is allowed and the amount standing at a worker's credit is paid to him on retirement. The Tata Iron and Steel Company has instituted a gratuity scheme under which every permanent employee who has put in 20 years' service and whose salary does not exceed Rs. 500 per month is eligible for gratuity equal to half a month's pay for every completed year of service subject to a maximum of 12 months' pay. In certain specified cases, employees with less than 20 years' service also become eligible for gratuity.

Provident Funds.—These are of two kinds: (1) contributory, where both the employer and the employee subscribe to them; and (2) non-contributory where the employee alone subscribes to them. The Provident Fund Rules of different Provincial Governments in India are by no means uniform. The Government of Bombay, by a notification dated 20th March 1941, made it compulsory for all Government Servants in receipt of a monthly income of Rs. 50 per month who joined Government service before that date or of Rs. 25 per month who joined after that date to subscribe to the Government Provident Fund. Pensionable Government servants can only join the non-contributory section of the Fund. State Railways and Ordnance factories have their own rules. Whereas it is obligatory for most categories of permanent non-workshop railway staffs with monthly pay over specified limits to join the provident fund, workshop employees with monthly and daily rates over specified limits are permitted to exercise an option. Once the option to join has been exercised, no withdrawal is permitted.

Compulsory contributory schemes are provided for all permanent workmen in the factories owned by certain public bodies such as the Bombay Port Trust; whilst both compulsory and optional non-contributory and contributory schemes obtain for permanent workmen in the factories owned by most municipalities. Most of the larger public utility companies and corporations such as the Tata electricity generating and distributing plants, the Bombay Electric Supply and Tramways Company, Ltd., and the Burma-Shell Corporation, to mention only a few of many, provide contributory schemes for the benefit of the majority of their workmen. Several others have schemes for their supervisory and clerical establishments but not for their workmen. The most usual amount of deduction from pay is one-twelfth of the monthly pay but the amount contributed by employers varies from 50 per cent. to 100 per cent. of the amount put in by the employee. The rate of interest may be fixed or it may fluctuate with the rate at which Government or the employer borrows money. All provident fund rules make provision for loans to subscribers from the balances standing at the credit of their accounts in respect of their own subscriptions, and for the compulsory repayment of these loans. Subscribers are entitled to withdraw their own subscriptions at any time on retirement or on relinquishing their posts but the payment of that share of a contributory provident fund account which represents the employer's subscriptions depends on the putting in of specified periods of qualifying service—periods which show considerable variation.

The Government of India have drawn up a set of Model Rules for Provident Funds for industrial employees in India. These Rules were considered at the Fourth Meeting of the Standing Labour Committee of the Tripartite Conference held at Lucknow in January, 1944. The Central Government hope to release these Model Rules for publication in the near future.

Profit Sharing.—Profit sharing had so far been unknown in India but some go ahead concerns are adopting this in their plants. The Tata Iron and Steel Company has adopted a scheme which provides that when the amount paid to the shareholders as dividend exceeds Rs. 1 crore during a financial year, every employee who had been in the continuous employ of the Company throughout the year is to receive a half month's pay, plus an additional half a month's pay for every 25 lakhs in excess of Rs. 1 crore paid as dividend.

Co-operative Societies.—The co-operative movement has made very rapid progress in industrial establishments all over India during recent years, and a very fair percentage of concerns employing 500 or more workers have co-operative credit societies for their employees. Almost all railway systems in India have co-operative banks and savings banks in addition to credit societies and full information on the whole subject is available in the different annual administration reports of Registrars of Co-operative Societies in the various provinces.

Cheap Grain and Cloth Shops.—Employers' grain and cloth shops were very common in India during the period of the first world war, but with the subsequent fall in prices, the majority of these shops disappeared. Truck legislation in England was primarily aimed at Employers' shops (known as "Tommy Shops") purchase at which was compulsory and where fantastically high prices were charged. The Payment of Wages Act, 1936, prohibits employers from making deductions from wages or from receiving payments from their employees for purchases from employers' shops. Most Provincial Governments in India had, however, notified cheap grain and cloth shops as "amenities" in respect of purchases from which employers may make deductions from wages. In all such cases both the qualities of the articles sold in such shops and the prices charged for them are controlled by a 'prescribed authority' who is generally the Chief Inspector of Factories. As a result of the outbreak of the Second World War, all Provincial Governments in India have not only notified cheap grain and cloth shops as "amenities" for the purposes of the Payment of Wages Act but have opened

such shops of their own and have also encouraged employers to do likewise. The articles sold at these shops are bought at wholesale prices and are sold without any profit except for a small addition to cover working expenses of the shops. The only statistics available with regard to grain shops established by employers in India for the benefit of their employees are those contained in the excellent Annual Reviews published by The Millowners' Association, Bombay, of the Labour Situation in the Bombay Cotton Mill Industry. With the introduction of Rationing of certain food grains in Bombay in May, 1943 and with the extension of rationing to other cities and areas in India, arrangements have been made between Government Rationing Departments and large employers of labour for the establishment of Government controlled grain shops in hundreds of industrial plants in the country. Sales from these shops are largely on credit, recoveries being effected from pay. Today (July, 1945) it may be safely asserted that almost every large employer and labour employing organization in India has provided a cheap grain shop for its workers.

Loans and Advances.—Speaking generally most industrial concerns in India do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. 'Advances'—applying the term to the small sums of money advanced against earned wages—on the other hand, are more widely prevalent. The Payment of Wages Act empowers Provincial Governments to frame rules for the regulation of these advances but no interest on such advances is now permitted.

INDUSTRIAL SAFETY.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for workpeople and for employers to report accidents more frequently than in the past. But, the increase in the number of serious accidents suggests that the problem is a more serious one; and, that in spite of the statutory requirements which factory and mine owners and firms engaged in the loading and unloading of ships have to comply with in the matter of the fencing of dangerous machinery, an organised "safety-first" campaign for the better education of the workers in the matter of accident prevention is both necessary and desirable. All railways in India have undertaken extensive schemes of safety-first propaganda including the putting up of safety posters and safeguards both in English and in the vernaculars at all prominent points and places; the free issue of illustrated booklets on accident prevention; publication of special articles with photographs in railway magazines; addresses and magic-lantern lectures; and the organisation of special safety-first committees in the larger workshops. The Millowners' Association, Bombay, has done a considerable mount of good work of a pioneering character in connection with Safety-First measures. In conjunction with the Factory Department and the Bombay Millowners' Mutual Insurance Association it has posted attractive safety-first posters in all cotton mills in Bombay City. In conjunction with the St. John's Ambulance Association it started classes in 1931 for first aid training. These are attended by large numbers of workers from many cotton mills in the city. Working in conjunction with the Safety-first Association of India, the Association drew up a Safety Code for the Cotton Textile Industry and this Code was published and put into operation from August 1940. In co-operation with the Labour Welfare Department of the Government of Bombay and the officials of the Khatau Makanji Mills, a safety film for the textile industry was prepared and this has been exhibited in the various Government welfare centres and in some mills in Bombay. The Safety-first Association is conducting special courses to train persons in Air Raid Precaution. In the Central Provinces and Berar fire drills are being systematically carried out in many large concerns. Many large labour employing organisations such as His Majesty's Indian Naval Dockyard, the Calcutta and the Bombay Port Trusts and The Tata Iron and Steel Works at Jamshedpur, to mention only a few, are with railways, pioneers in the field of organisation of 'safety-first' measures. It is of interest to note that most cotton mills in Ahmedabad had also established safety-first committees by the end of the year 1939. Factory Departments in all Provinces in India do all they possibly can in improving safety measures in factories. Since the beginning of the present war special attention has been paid to ordnance works consequent on the employment of workers not ordinarily used to machine shop hazards.

The provisions contained in the Indian Factories and Mines Acts and in the Indian Dock Labourers Act, 1934, and the rules made under these Acts in connection with the guarding and fencing of machinery are of a too technical character to be dealt with here. It may, however, be of interest if a brief summary were given in connection with the reporting of accidents. The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious (i.e., accidents which prevent a person returning to work for 21 days or more) and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the police station in addition. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has

been notified in this behalf by a Provincial Government, even though no injury may have resulted therefrom to any person. The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat similar to those contained in the Factories Act but with the difference that every accident which occurs in a mine has to be recorded in a special register to be kept for the purpose. Section 32 (*b*) of the Factories Act, 1934 makes it obligatory on all factory owners to maintain stores of first aid appliances and to provide for their custody in accordance with rules to be framed by Provincial Governments in the matter.

As far as the statistics of accidents in factories are concerned, a table published at page 298 of the May, 1944 issue of the *Indian Labour Gazette* shows that the number of recorded accidents increased from 48,736 in 1941 to 54,174 in 1942. Fatal accidents rose from 271 in 1941 to 323 in 1942 and serious accidents from 8,374 to 9,111 over the same period. The remaining accidents were minor. The average number of accidents per 100,000 operatives employed was 2,374 in 1942 as against 2,260 in the previous year. The increase has been variously attributed to better reporting, big expansion in industrial activity especially in the production of munitions of war, longer working hours with the attendant fatigue and longer exposure to risk and employment of persons unused to the hazards of their work. It is of interest to observe that detailed inquiries made by the Factories Department of the Province of Bombay into the causes of accidents have shown that although the "rates for all accidents have varied considerably in the textile industry, the serious accident rate due to purely textile machinery has remained approximately constant for the last ten years: also that the increase in the rate for this industry has been mainly through minor accidents not due to machinery but to causes largely within the control of the workers themselves. Similar remarks could be made with regard to the engineering industry in which accident rates generally are much higher than in the textile. The number of accidents in factories in British India during 1943 was as follows:—

Fatal	361
Serious	10,016
Minor	48,799

HOUSING AND FACTORY AMENITIES.

The general policy adopted by Government in providing quarters for the labour employed in their industrial establishments is to do so when funds permit but usually only where conditions are such that private enterprise does not adequately meet the demand for housing, or where it is necessary for special reasons to provide quarters for certain classes of staff near to their work places. These principles appear to be generally followed by private companies and concerns as well, especially by coal mine owners in Bihar and Orissa, sugarcane growers and by tea planters in Assam. All the collieries in the Jharia coalfield are amply and efficiently equipped with approved types of houses whose design, construction, ventilation and general amenities are controlled by the Jharia Mines Board of Health. Every house in the coalfields has to be licensed and licenses are not granted unless the standards are complied with. If labourers are found in occupation of unlicensed houses the management is liable to prosecution. In Assam, all residential employees on tea estates are provided with rent-free quarters in barracks or 'lines' as they are called. These are regularly inspected by district and sub-divisional officers and every endeavour is made to maintain as high a degree of sanitation as is possible. Almost all sugar factories provide housing for their employees because the factories are located near large sugarcane plantations. Large slum clearance programmes have been drawn up by Municipalities and Improvement Trusts in almost all the larger towns and cities in India and much useful work has been done in the last eight years by acquisition and demolition.

The pioneer work in the field of industrial housing has been done by the railways which have spent nearly 50 crores of rupees to date in providing adequate residential quarters for different classes of their employees, and by the Government of Bombay who have built 207 chawls with nearly 17,000 tenements for industrial labour in Bombay City. The latter is a part of a gigantic scheme launched in 1920 by the late Lord Lloyd, then Governor of Bombay, for the construction of 625 chawls having 50,000 tenements in all. The rents of the tenements in these chawls vary from Rs. 5 to Rs. 8 per month. The chawls are situated at Naigaum, Worli, Sewri and at DeLisle Road. The Municipalities of Calcutta, Bombay, Cawnpore, Madras and Karachi, the Calcutta and Bombay Port Trusts and the Improvement Trust in Bombay have done much to house their own labour and also to supply low-rented tenements for other classes of industrial workers. Perhaps the most magnificent schemes of industrial housing conceived in India by private employers are those launched by the Tata Iron and Steel Company Ltd. at Jamshedpur and by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. The Tata Iron and Steel Company has laid out the town of Jamshedpur on Garden City lines, and had, up to June, 1945 constructed 8,428 houses of different types for its employees, and has now a further extensive programme of housing construction in hand as soon as the difficult conditions created by the war are removed. The plans provide for the building of 5,000 quarters during the next five years. The capital cost of town buildings put up by the Company up to 31st March 1945 was about Rs. 143 lakhs. The Company has furnished all quarters carrying a rent of Rs. 15 a month and above with electric lights and fans and the work of electrification of the lowest rented quarters is in hand. The Company grants loans on liberal terms to its employees for building houses on land leased to them. In 1923, the Empress Mills, Nagpur, obtained from the Government on lease for 27 years extensive land in a locality known as Indora and constructed a Model Village with up-to-date sanitary and other conveniences for its operatives where each worker could own or rent a cottage for himself. Two sizes of plots each measuring 53' × 36' and 53' × 45' are allotted

and not more than one-third of the area is allowed to be built upon. Two types of model houses have been built by the mills, houses on the smaller plots costing about Rs. 960 each and those on the larger plots Rs. 1,500 each, on valuations and cost of construction before the war. Most houses are provided with their own flushed latrines and water taps are laid on in all the houses. Some of the houses built by the Mills have been sold to the workers who pay the cost by easy instalments covering a period of 6 to 7 years while some have been rented to them. Many houses have been built by the workers themselves on plots of land sub-leased to them with moneys advanced to them on easy terms. A large number of houses have their own gardens and a big garden has been provided in the middle of the Settlement. The settlement has been provided with good roads, street lights and playgrounds which are equipped with swings, shoots, etc., for children. Many of the jute mills in Bengal and cotton mills in Bombay City and other centres have provided housing for fair percentages of their total staffs but the majority of textile workers in India are not housed by their employers.

It is of interest to observe that the Government of India, following the recommendation made by the Royal Commission on Indian Labour in the matter, amended the Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers' dwellings.

Epidemics of cholera which invariably cause large numbers of deaths have been found to originate in congregations of labourers employed in canal areas in connection with the crushing, etc., of sugar-cane. Labourers' housing conditions in these areas including those of some sugar factories are incompatible with decent sanitation. The temporary huts often consist of brush-wood, thatch or bamboo matting without any plinth, and with no windows or other means of ventilation except one small opening which serves as a door. Inside the huts no person can stand upright. Often no adequate provision is made for supply of drinking water. Too frequently, it is obtained from the nearest nulla or irrigation channel or stagnant pool of percolation water, all of which sources are normally polluted by human and animal excreta and by manures from crops which are washed down into the water. Latrines are seldom provided, and the banks of irrigation channels and of other water-supplies are resorted to for the purposes of nature. It is obvious that such conditions afford an ideal field for the rapid extension of cholera and similar diseases in epidemic form. The Government of Bombay, finding it desirable to take powers to control such labour housing and sanitation in areas outside municipal and cantonment limits, and to make orders which would ensure that employers of labour provide reasonable sanitary conditions and open provisions shops for their labour in such areas enacted the Bombay Non-urban Labour Housing Sanitation and Provision Shops Act, 1944 in the month of April, 1944.

Under the above Act, Government have the power to make regulations in respect of any non-municipal or non-cantonment area or any employer in respect of the following matters: (1) the provision of plinths for and adequate ventilation and lighting in quarters; (2) provision of adequate open spaces; (3) prevention of overcrowding; (4) prescription of adequate floor area per person; (5) provision of proper drainage and sanitation; (6) adequate supply of water; (7) provision of grain and grocery shops; (8) lighting; (9) medical aid; (10) prevention of fouling of water-supplies; and (11) segregation of infected persons. Controlling Officers, to be appointed by Govt., who have been given wide powers to call upon employers to carry out such matters as they may order, will be responsible for the administration of the Act.

Rest Shelters, Dining Rooms and Canteens.— Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments in India did provide tiffin rooms and rest shelters for their workmen. Most concerns had also permitted the establishment of tea stalls on the premises but apart from this, little effort had been made to run co-operative canteens on the lines of those which are associated with most of the large factories in the West. Pioneer work in this direction had been done by Messrs. E. D. Sassoon & Co. in Bombay. This Company had established large canteens in all their mills. The management in each case bore the salaries of staff and the on-cost for equipment; and hot meals were supplied to the workmen at actual cost. The Company had also established a hostel for boarding and lodging its poor women workers.

In May, 1939, the Millowners' Association, Bombay, recommended to all its member mills that they should establish canteens with the help of the Indian Tea Market Expansion Board. The suggestion was adopted by a number of mills and permission to make deductions from the wages of workers on account of canteen coupons sold to them was granted by the Chief Inspector of Factories, Bombay, on the understanding that the canteens were run on a non-profit basis. A large number of mills in Bombay have started such canteens and substantial surpluses are being built up especially in those mills where no rents or interest on loans are charged. The Association decided that after certain charges for depreciation and reasonable rent had been met, the surpluses realised should be spent for general welfare work, *e.g.*, provision of milk and biscuits for children in creches, installation of cold drinking water facilities in the departments, health exhibitions, recreation, club equipment including books, journals, a radio set, etc. The Tata Iron and Steel Company maintain a number of restaurants inside their works at Jamshedpur which ensure wholesome meals and refreshments to the workmen at cost price. The Company has its own plant for the manufacture of ice and soda which are provided free of charge to the employees in the works. A women's Rest House has also been provided where women employees can wash and change and leave their babies to be looked after in their absence, these babies being served with milk and biscuits free of charge. Communal factors such as the religious prohibition of Hindus to eat their food

in the company of members of other communities, want of space and the constructional layout of the majority of the smaller industrial establishments were among the reasons given by the managements who do not provide rest shelters and/or tiffin rooms for their workmen.

About the middle of the year 1943, the Govt. of India recommended to all employers, through the Employers' Federation of India and the All-India Organisation of Industrial Employers the opening up of more canteens for workers. Government had previously recommended the institution of canteens in periods of emergency but they stressed the following advantages of canteens in the present circumstances:

(1) Provision of food at cheap rates would be of great assistance to workers separated from their families, as they would otherwise be forced to purchase at high rates in a restaurant;

(2) Communal feeding secures real and substantial economy in the use of foodstuffs while ensuring at the same time adequate nutritive value;

(3) Canteens are particularly useful in times of emergency when normal arrangements for the supply of food may be dislocated.

The Defence of India Rules give the Govt. of India and the Provincial Governments statutory powers to enforce the provision of canteens similar to those in the United Kingdom. The Govt. of India, however decided not to place any legal responsibility on employers in this matter in the initial stages as voluntary effort was expected to obtain satisfactory results. In October 1943, the Central Board of Revenue issued instructions to all Income-Tax authorities stating that any loss incurred by employers in running canteens for workers should be allowed as a revenue loss in assessing income and excess profits tax while cost of building and equipment of canteens would be chargeable as capital expenditure. An article on 'Canteens for Industrial Workers' published at pages 219 and 220 of the March, 1944 issue of the *Indian Labour Gazette* gives the most recent statistics available on the subject.

The Indian Tea Market Expansion Board which maintains five working Centres in India at Bombay, Calcutta, Madras, Lahore and Cawnpore organises new canteens in industrial establishments. It has a large trained staff for this purpose. The canteens are started and run by the Board until such time as they run smoothly and to the satisfaction of the workers when they are handed over as going concerns to the managements concerned. The expenses of the actual canteen staff are met from the sales of prepared tea and eatables but the whole of the cost of the Inspecting Staff which supervises the proper running of the canteens started by the Board is met by the Board. Up to the beginning of June, 1945 the Board had opened over 200 canteens in industrial establishments in India of which over 50 were in Bombay. The Superintendent of the Bombay Division of the Board is Mr. N.C. Gupta who has his office in the Bombay Mutual Annexe Building, Gunbow Street, Fort, Bombay (Telephone No. 27165).

INDUSTRIAL HEALTH.

Such statistics of health and mortality as are collected and published in India relate to the whole community and no statistics are compiled separately for industrial workers alone. In the absence of such data it is not possible to generalise about these matters. The problems associated with health are always difficult; they are much more so in a country like India where the solution of the problems associated with physical health and social environment is complicated by the evils of ignorance and poverty to which is commonly added a fatalistic outlook arising, it may be, from the low standard of living which has been the experience of so many generations past. Climatic conditions, highly insanitary housing conditions and the illiteracy of the people also contribute to recurring outbreaks of such deadly tropical diseases as cholera and small-pox in epidemic form. The wide-spread prevalence of malaria in certain congested areas of the Provinces of Bengal, Bombay and Madras is responsible for a considerable undermining of the health and the vitality of the poorer classes who cannot afford to sleep under mosquito nets; and although the more advanced municipalities are doing all they can to combat the disease by filling up wells and surface-treating small ponds and pools of stagnant water, malaria still continues to take a big toll of human life. *Beri-beri* and tuberculosis in Bihar and Orissa, *kala-azar* among the jute workers in Bengal, ankylostomiasis in South India and tuberculosis in the Punjab are some of the many diseases which are widely prevalent in certain tracts.

The maintenance of the good health of town and city populations is in the hands of the municipalities and although all provincial Governments appoint health officers for groups of districts to supervise and co-ordinate the work of the municipalities, the interference and control of Governments in these matters is of a somewhat nominal character. But wherever control is possible, Government have done much to make for an improvement in sanitary and hygienic conditions. For example, following the recommendations of the Royal Commission on Indian Labour in the matter, several provisions for the maintenance of the good health of factory workers have been incorporated in the Indian Factories Act, 1934. These include the maintenance of cleanliness in accordance with rules to be framed by local Governments with regard to lime or colour washing, painting, deodorising and disinfecting; the provision of proper standards of ventilation and the adoption of adequate measures to prevent the inhalation of gas, dust and other impurities generated in the course of work; the installation of apparatus for cooling the air in factories in which the humidity of the air is artificially increased; the prohibition of overcrowding by laying down the standards of cubic feet of space to be provided for each worker; the provision of suitable and sufficient lighting; the provision of adequate

supplies and sources of water both for drinking and for washing; and for the maintenance of sufficient latrine accommodation separately for male and female workers. Remarkable progress has been recorded during the last five years with regard to the installation of air conditioning and cooling plants: progress in this direction was hitherto confined mostly to spinning and weaving sheds but since 1939 expansions have been made in other departments as well by installing large hoods and trunks harnessed to powerful exhaust fans, to enable the steam to be drawn away from sizing cylinders. Attempts are also being made to reduce dirt to a minimum and many cotton mills have installed special plants to carry the dust away.

As in most things connected with the welfare of labour, Indian railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified surgeons, physicians and nursing staffs at suitable centres in addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them. As all the industrial workers of Government have free access to Government hospitals and dispensaries, the provision of separate medical establishments attached to large Government establishments has not been considered necessary in the case of concerns under the control of the Provincial Governments but the Government of India have provided adequate medical facilities in most of their own establishments such as His Majesty's Indian Naval Dockyard and their various Ordnance and Ammunition Factories. Several of the larger municipalities and public bodies such as the Port Trusts also maintain their own hospitals and dispensaries for the benefit of their workers. Following the lead of Government and public and local bodies in the matter, almost all the large labour employing establishments in India—cotton and jute mills, mines, engineering workshops, tea plantations, etc. maintain fully equipped dispensaries in charge of whole or parttime qualified medical officers. The Tata Iron and Steel Company conducts a large hospital with special surgical, maternity and gynæcological wards in addition to six dispensaries and two first aid stations at Jamshedpur both for its own employees and for the public. All employees of the Company and their families receive free treatment.

Now that Germany has been totally defeated and victory for Great Britain and her Allies in the Second World War seems certain, all the Allied countries for the last year or two, have been giving considerable thought and attention to all kinds of schemes of post-war reconstruction. Various Commissions and Committees to deal with different sets of problems have been appointed. India has not lagged behind. "A drive to improve health conditions must necessarily be in the forefront of any programme directed towards improving the standard of living in the post war period. If dissipation of financial resources and administrative effort is to be avoided, plans for the improvement of health organisation must be based on a comprehensive review of the health problem as a whole which will take account of, and place in their proper perspective, all the various factors affecting the health of the community with which health administration is concerned." The Government of India, believing that a broad survey of the whole health field would be of considerable assistance to Governments in preparing their post-war programmes and that the time had come when, in spite of the difficulties arising from war conditions, a review must be undertaken, appointed, in the month of October 1943, an exceptionally strong committee consisting of 24 members including Sir Joseph Bhore, K.C.S.I., K.C.I.E., C.B.E., as Chairman, "to make a broad survey of the present position in regard to health conditions and health organisation in British India and to make recommendations for future development." The members of the Committee include persons with practical experience of preventive public health work, medical relief, medical and public health education, industrial health conditions and other aspects of the health problem. The Committee was given power to appoint sub-committees to make preliminary inquiries into particular aspects of the problems with which it would have to deal. One such subcommittee to be appointed with the Hon'ble Pandit P. N. Sapru, member of the Central Advisory Board of Health, as Chairman was asked to deal specifically with the question of industrial health. The Committee has now published its Report which is under the consideration of Government. It has proposed a most ambitious scheme for medical relief and improvement of the health of the general population. It has also made certain specific recommendations in regard to the health of the industrial workers.

HOLIDAYS WITH PAY.

In India, holidays with pay have hitherto been enjoyed by a very small percentage of the population and most leave, wherever it has been granted, has been without pay. Exceptions were: workmen in Government and railway factories and in the industrial establishments of local bodies, public utility companies and in the factories of petroleum and kerosene installations and some go-ahead concerns like General Motors India, Ltd., Ford Motors India, Ltd., Messrs Lever Bros. (India), Ltd., and Godrej and Boyce Manufacturing Co., Ltd., to mention a few.

All permanent monthly rated employees in Government factories in all industries are entitled to leave with pay—in the case of the concerns under the Government of India, according to the Fundamental Rules; and for the factories owned and controlled by the Provincial Governments according to the Civil Service Regulations in force at the time in the different provinces. Daily rated employees and certain categories of menials and piece-rated workers are governed by special orders suited to each case. According to the rules which are in operation at present, the minimum period of leave with pay which can be earned by all permanent Government servants is more than one month for every eleven months of duty plus ten to twenty days casual leave in every calendar year. To cite an example of special leave rules

for certain categories, reference may be made to daily rated workmen and piece workers in all ordnance and clothing factories of the Army Department of the Government of India who since 1931 get 10, 15 or 20 days' leave with pay every year according to whether they have put in three to ten, ten to twenty or over twenty years' service.

The leave rules for railway workshop men who joined before the 1st September 1928 vary not only between railway and railway but also according to the dates when the men were first engaged; but all leave rules of State owned Railways have now been standardised. As far as the workmen who joined after 1st September 1928 are concerned, all railway systems appear to have accepted the principle of a standardisation of conditions on the basis of those laid down by the Army Department. Leave rules for those employees who joined before the date mentioned are more liberal.

Perhaps the most liberal leave rules in any private industrial undertaking in India are those to be found in the Tata Iron and Steel Works in Jamshedpur where all monthly rated workers receive one month's leave with full pay for every year of service with the right to accumulate leave up to three months and five days' casual leave and two days' festival leave with pay. In addition, monthly rated employees drawing Rs. 30 and over get six months' furlough on half pay or three months' furlough with full pay after every seven years' service. Daily rated workers paid monthly get two festival days leave and fourteen days privilege leave with pay for every year of service which can be accumulated up to a maximum of six weeks; and daily rated workers paid weekly get five days casual leave with pay. One day off with full pay is given to all workers on Founder's Day.

LABOUR WELFARE.

Except for the information contained in the written memoranda submitted to the Royal Commission on Labour in India and that collected by the Government of Bombay during the General Wage Census of 1934, no effort has been made in India to collect accurate data regarding the welfare activities conducted by individual employers in industry. Except for the special reports issued by a few Mills such as the Delhi Cloth Mills and the Buckingham and Carnatic Mills in Madras and the notes occasionally published on the subject in the *Indian Textile Journal*, there is no recent information on the subject at all but it is well known that certain large organizations such as the Tata Iron and Steel Company at Jamshedpur, the Railways, the Buckingham and Carnatic Mills in Madras, the Elgin Mills in Cawnpore, the Empress Mills in Nagpur, Messrs. E. D. Sassoon & Co., Ltd., in Bombay, the British India Corporation in the United Provinces and some others have devised wide welfare schemes for the benefit of their employees. In most cases these schemes are controlled by expert and experienced Welfare Officers specially trained for the job. All this is, however, but a drop in the ocean and the vast majority of employees in India have no welfare schemes of any kind at all. It is obviously not possible for us to give even the briefest outline of the different schemes that are in existence in India within the compass of a work such as this.

Welfare work for labour employed in Indian industries has, since the advent of Provincial Autonomy, been taken over by Government. Pioneering work in this direction was done by that great and zealous friend of Indian Labours Mr. Gulzari Lal Nanda, the present Minister for Labour, Bombay. He knew that employers as a whole were doing little or nothing for the welfare of labour and that no amount of persuasion would yield tangible results. He also knew that legislation to enforce welfare measures would not create that personal enthusiasm which is so vital for the success of any welfare scheme that might be launched. He persuaded his Cabinet to set aside a sum of Rs. 1,20,000 in the budget estimates for the year 1938-39 for "Industrial welfare" and he then started looking for a benevolent person or persons who would donate the necessary buildings and equipment for the purpose. He found such a person in Mr. Ramnath Podar, Managing Director of the Toyo Podar Mill in Bombay who contributed a sum of Rs. 15,000 for the building of a recreation centre at DeLisle Road in Bombay City. The lead given in the matter by Bombay has been successively taken up by the Governments of the United Provinces, Bengal, Sind, the Central Provinces and Berar and Bihar. The Central Government too have recognised the value of Governmental effort in the field of Labour Welfare and in May 1942 they appointed Mr. R. S. Nimbkar, the prominent Labour Leader of Bombay who for many years was the Secretary of the Girni Kamgar Union (Red Flag), Bombay, as Central Adviser on Labour Welfare to the Government of India. Assistant Labour Welfare Advisers have also been appointed by the Government of India in different Provinces. Acting under the advice of Mr. Nimbkar, the Government of India have launched wide schemes of Labour Welfare in all Government Ordnance, Ammunition and War factories and these schemes have been placed in charge of expert Welfare Officers.

The total sum provided by the Government of Bombay for "Industrial Welfare" in the Budget Estimates for the current financial year (1945-46) amounts to nearly two and a half lakhs of rupees. The other Provincial Governments who have gone in for this type of work are not spending as much but still their activities in this direction are showing a tangible widening year by year. For example the funds allotted by the Government of the United Provinces for its Labour Welfare Scheme for the year 1945-46 amount to Rs. 1,57,600. It is not necessary for the purposes of this note to give an account of the manner in which Government activities in this direction have grown during recent years We are, however, giving a fairly full account of the scheme as it stands in the Province of Bombay today for purposes of guidance to other Governments, employers and welfare workers who might like to know as to what is being and what can be done in this field.

Government Welfare Centres in the Province of Bombay are divided into four types: "A", "B", "C" and "D" according to the type and the extent of the activities provided and the

times at which they are open. The scope of the work in the "A" type centres is of a very comprehensive character and covers almost all forms of outdoor and indoor recreational activities; periodic cinema and dramatic performances and *bhajan* parties; the running of libraries, and reading rooms; the organization of debates, magic lanterns and other lectures and many types of educational classes; the provision of nursery schools, medical aid and advice on maternity and health; radios and add-a-grams etc. These centres are open from 8-30 to 11 in the mornings and from 5 to 9-30 in the evenings for men and boys and from 1 to 5 in the afternoons for women and girls but the nursery school section supervised by a full-time lady teacher is open at each "A" type centre from 9-30 a.m. to 5 p.m. The "C" type centres are open from 7-30 to 10-30 a.m. and from 6 to 9 p.m. for men and boys and literacy and sewing classes and indoor games for women are conducted from 1 to 4 p.m. Boys under 16 years of age are debarred from attending at any of the centres after 7 p.m. The activities in the "C" type centres mainly cover indoor recreation and reading rooms. The "D" type centres only cover outdoor recreation. The Municipality of Bombay has placed several open spaces in Bombay City at the disposal of Government for this purpose.

An "A" type centre was erected at DeLisle Road out of the contribution of Rs. 15,000 given to Government by Mr. Ramnath Podar and this started functioning in March 1939. Two additional full fledged "A" type centres were started at Worli and Naigam with effect from 1st June 1940. At the moment of writing (June 1945) there are three "A" type centres in Bombay and one in Ahmedabad. One is in the process of completion at Sholapur. There are eight "C" type centres in Bombay, four at Ahmedabad, five at Sholapur and one at Hubli and there are four "D" type centres in Bombay. Plans for Post-War Planning and Reconstruction in the Province of Bombay provide for 3 "B" type and 6 more "C" type centres for Bombay; one additional "A" type and six more "C" type centres for Ahmedabad; one additional "A" type and 3 more "C" type centres for Sholapur; and the establishment of one "B" type centre each at Viramgaum, Broach, Surat, Jalgaon, Nadiad, Amalner, Dhulia, Barsi and Hubli.

The Industrial Welfare Scheme of the Government of Bombay also covers an Industrial Training Workshop at Ahmedabad which was established to impart instruction in elementary engineering work to apprentices. The primary aim of the workshop is to afford help in solving the problem of industrial unemployment. It is also intended to raise the standard of skill and efficiency of operatives in the cotton textile industry. A sum of Rs. 65,000 was earmarked in the budget estimates for the year 1941-42 from the Development Fund for the purchase of machinery for the workshop at Ahmedabad, for constructional alterations in the existing "A" type centres and for starting circulating libraries. Storeys have been put up at the three "A" type centres in Bombay and these have also been supplied with water taps and shower baths. Circulating libraries have been established in Bombay, Ahmedabad, Sholapur and Hubli. The books are circulated in such a way that they reach all *mohollas* (localities) consisting of ten or more chawls. Each Moholla has a Committee of 5 or 6 members and the Anti-Drink Propaganda Inspector, where one exists, acts as the Secretary of the Committee. Social welfare institutions and well organized labour unions are also to be used as agencies for circulating the books.

Until about the end of the year 1941, the whole of the Labour Welfare Department of the Government of Bombay was under the control and direction of Mr. Gulzari Lal Nanda under the designation of Honorary Commissioner for Amenities to Industrial Labour. Consequent on his resignation, the control of this Department was transferred to the Commissioner of Labour with effect from 15th December 1941, and again from the Commissioner of Labour to the Labour Officer, Bombay, with effect from the date on which Mr. N. A. Mehrban, M.B.E., F.S.S., J.P., was appointed to this post, i.e., the 29th January 1943.

Following the lead given by the Government of Bombay in the field of Labour Welfare, the Governments of the United Provinces and Bengal have also decided to expand their activities in this field. In January 1943, the Government of the United Provinces decided to establish 24 Labour Welfare Centres in all in the Province distributed as follows: Cawnpore—three "A", four "B" and six "C" type centres; Agra—one "A" type centre; Bareilly, Firozabad Hathras and Saharanpur—one "B" and one "C" type centre each; and Aligarh and Mirzapore—one "B" type centre each. Since then one more "C" type centre has been started at Aligarh and a "B" type centre at Lucknow. The activities at the "A" type centres cover outdoor and indoor recreation, medical aid, child welfare, adult education and welfare of women. The "B" type centres cover all the activities of the "A" type centres but on a smaller scale. The "C" type centres are intended to be in the nature of working men's clubs and as "feeder" centres to the "A" and "B" type centres. The manner in which Provincial Governments in India are recognising the value of welfare work for the working classes can be better appreciated from the fact that the Government of the United Provinces decided to put its Labour Welfare Department on a permanent footing with effect from 1st April 1944. The total number of Labour Welfare Centres opened by the Government of Bengal in the industrial areas of Calcutta, Burdwan, Midnapore and Dacca was 41 in May 1945. Almost all these centres have had radio sets installed in them. Local Advisory Committees have been established to assist the Labour Department with the work of administration of the centres.

The Government of India have set up a Welfare Committee with Sir B. Rama Rao as Chairman, for the purpose of improving the welfare and amenities for Indian seamen at Bombay. A similar Committee has also been appointed for looking after the welfare of British and Allied seamen. Under the auspices of the Bureau of Research and Publications of the Tata Institute of Social Sciences, Bombay,

a research project was undertaken during the summer months of 1944 on 'Labour Welfare in Indian Industries'. Personal visits were paid to big industrial centres in India to see what welfare work was actually being done and material of the programme of welfare activities carried on in different parts of India was collected. The Institute proposes to publish the findings along with constructive suggestions for the promotion of labour welfare.

COST OF LIVING AND STANDARD OF LIFE

COST OF LIVING.

Bombay was the first Province in India to complete and publish a price series intended for measuring changes in the cost of living. A monthly cost of living index number for working classes in Bombay City compiled on the aggregate consumption method and with July 1914 as the base period was regularly published in the Bombay *Labour Gazette* from September 1921 to June 1937 when this series was replaced by another. The scope and the method of the compilation of the old index were described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. A table giving the figures from that index for the months of January, April, July and October in each year from 1918 to 1936 and for the months of January and April 1937 was given at page 572 of the 1941-42 edition of this publication. These figures are now of purely historical interest but it would be useful to reproduce the annual averages for the years 1918 to 1936 in order to show the general tread of prices: 1918—154; 1919—175; 1920—183; 1921—173; 1922—164 1923—154; 1924—157; 1925 and 1926—155; 1927—154; 1928—147; 1929—149; 1930—137; 1931—110; 1932—109; 1933—103; 1934—97; 1935—101; and 1936—102.

The old Bombay Cost of Living Index series was considered to be somewhat defective as the weights used for its compilation were not based on any family budget enquiry. The Labour Office of the Government of Bombay, therefore, conducted a comprehensive family budget inquiry in Bombay City between Sept. 1932 and June 1933 and taking the weights based on the results of that inquiry it compiled a new cost of living index series on the price relative method with the average prices for the year ended June 1934 equated to 100. A full note on the method used in the compilation of this index number has been given at pages 370-72 of the issue of the *Labour Gazette* for January 1940. This new index was made as comprehensive as possible by expanding the list of commodities covered and by adding a new group for "miscellaneous expenditure" which did not find a place in the old index. The method of compilation of the index number for the cereals sub-groups was readjusted with effect from the index for the month ending 15th May 1943 owing to rationing of certain cereals like *jowar* and *patni* and owing to difficulties in securing continuity of prices for the particular qualities included in the index. The annual averages of the index numbers in the new series for the years 1934 to 1944 were as follows: 1934 (six months)—99; 1935—100; 1936—101; 1937—106; 1938—106; 1939—106; 1940—121; 1941—122; 1942—157; 1943—229 and 1944—136. As this is the most important cost of living index series compiled in India we are reproducing in the table below the monthly movement of the index since January 1940.

Bombay Cost of Living Index.
(1933-34—100.)

Month.*	1940.	1941.	1942.	1943.	1944.	1945.
January ..	114	117	137	203	238	229
February	112	119	135	205	230	229
March ..	110	119	137	208	226	225
April ..	110	121	138	225	231	226
May ..	111	122	142	227	235	230
June ..	111	122	152	232	236	235
July ..	113	126	168	235	241	240
August ..	114	131	168	236	250	243
September	112	129	170	238	239	240
October ..	113	125	172	245	239	242
November	113	126	178	248	242	242
December	115	129	188	247	236	242

* The figures for June 1943 and onwards are for the calendar month. Prior to that they are for the month ending on the 15th in each month.

In addition to the cost of living index series which the Labour Office of the Government of Bombay compiles for working classes in Bombay City, it also compiles similar cost of living index series for three other centres in the Province of Bombay: (1) Ahmedabad; (2) Sholapur; and (3) Jalgaon. Those for Ahmedabad and Sholapur are published regularly in the *Labour Gazette* along with that for Bombay City. The average prices for the year ended July 1927 have been adopted as the basis for the Ahmedabad series while the one for Sholapur is based on the average prices for the year ended January 1928. Details regarding the scope and the method of compilation of the Ahmedabad and Sholapur series have been published in the issues of the *Labour Gazette* for January 1930 and for February 1931 respectively. The introduction of price control and rationing have necessitated changes in the compilation of the group index figures for cereals and pulses in a similar way to that adopted for the cost of living index figure for Bombay.

Other Provinces in India which compile cost of living index series for working classes are Madras, the Central Provinces and Berar, the United Provinces, Bihar, the Punjab and Orissa. Mysore was the first Indian State to start the

compilation of a cost of Living Index for the City of Bangalore in 1942. The Government of Madras compiles nine series in all: one for Madras City with the average prices for the year ended June 1936 equated to 100 and eight other series for low paid employees at Vizagapatam, Ellore, Bellary, Cuddalore, Coimbatore, Madura, Trichinopoly and Calicut with the average prices for the twelve months from July 1935 to June 1936 as base. The Government of the Central Provinces and Berar compiles two series for Nagpur and Jubbulpore with prices in January 1927 as base and six other series for Mofussil textile centres in the Province. Since April 1942 the base period for the indexes for Nagpur and Jubbulpore has been changed to August 1939. In the United Provinces, one series with August 1939 as the base is compiled for working classes in Cawnpore and five other series with prices at 31st July 1939 equal to 100 are specially compiled for low paid Government employees at Lucknow, Benares, Bareilly, Meerut and Gorakhpur. The Government of Bihar compiles cost of living index numbers with the average prices for the five years ending December 1914 as the base for the following six centres in the Province: Patna, Muzaffarpur, Monghyr, Jamshedpur, Jharia and Ranchi. Average prices for five years are also the base for cost of living indexes for Lahore, Sialkot, Multan, Ludhiana and Rohtak in the Punjab but the base period in the Punjab is the quinquennium ending December 1935. The Government of Orissa compiles a cost of living series for its headquarters town of Cuttack on the same method and base as those adopted by the Government of Bihar and another with average prices during the year 1939-40 as base, for Berhampur.

Owing to the variations in the method of compilation of these indices, they are not strictly comparable but the table below shows the movement of cost of living index numbers in selected centres for the year 1945 with August 1939 as the base:—

1945.	Bombay.				United Provinces.	Central Provinces.		Punjab.	Madras.
	Bombay.	Ahmedabad.	Sholapur.	Jalgaon.	Cawnpore.	Nagpur.	Jubbulpore.	Lahore.	Madras.
January ..	218	282	270	282	301	249	287	283	217
February ..	218	267	267	288	301	249	282	285	230
March ..	214	256	267	281	302	247	281	303	229
April ..	215	256	266	277	311	248	277	302	224
May ..	219	262	268	282	294	252	275	292	227
June ..	224	263	271	293	302	257	282	291	227
July ..	229	267	275	304	307	262	286	299	227
August ..	231	275	286	303	315	263	286	293	229

October ..	230	297	284	293	318	269	282	284	230
November ..	230	277	282	294	317	270	284	291	230
December ..	230	281	279	301	310	272	286	293	229

The Royal Commission on Indian Labour had commented on the unsatisfactory character of the cost of living index numbers published in India and the Rau Court of Enquiry were also greatly handicapped in their investigations owing to the paucity of reliable data in regard to the cost of living index numbers for industrial workers. The Government of India, therefore, in consultation with the Provincial Governments, decided to launch upon an All-India Scheme for the preparation and maintenance of working class cost of living index numbers for selected centres in British India. This scheme was started in the year 1942 and is now nearing completion. Over 25,000 family budgets have been collected in some 28 selected centres in British India. The data collected in the course of this investigation have now been tabulated and it is expected that the Family Budget Reports for all these centres will shortly be ready. It is further understood that, after receiving the approval of the Provincial Governments, the Government of India will publish cost of living index numbers for all these centres on base January to December 1944 equal to 100.

STANDARD OF LIFE.

The results of family budget enquiries conducted by what is known as the 'extensive method' from the most satisfactory basis of determining the standard of life of any particular class or community. A higher standard of life means better opportunities to satiate wants and desires other than the primary human needs. A larger percentage expenditure on clothing, housing and miscellaneous items such as education, recreation, etc., is therefore a sure indication of an improved standard of living. The Bombay Labour Office carried out two family budget enquiries for working classes in Bombay City, one in 1921-22 and the other in 1932-33 and the results were published in the years 1923 and 1935 respectively. As has already been mentioned, similar enquiries have also been conducted in Ahmedabad and Sholapur cities and the results of both these enquiries were published in the year 1928. In Burma, the Labour Statistics Bureau, Rangoon, published in the same year the results of an extensive enquiry conducted by the Bureau into the standard and cost of living of four different classes of industrial workers in Rangoon. In Madras, the Director of Industries published in 1938 the results of an inquiry into the family budgets of industrial workers in organized and unorganized industries in Madras City conducted under the direction of the Commissioner of Labour. A number of family budgets were also collected at Cawnpore in the United Provinces and at Nagpur and Jubbulpore in the Central Provinces with the object of compiling cost of living indexes.

The following comparative data regarding the distribution of expenditure will serve to indicate the standards of life of working classes at certain different centres in India in the years given in brackets below each centre :—

Percentage Distribution of Expenditure.

Groups.	Bombay (1932-33).	Ahmedabad (1933-35).	Sholapur. (1925).	Nagpur (1927).	Jubbulpore (1927).	Rangoon (1928).	Madras (1938).
Food	46.60	49.31	49.25	64.10	66.00	52.7	52.63
Fuel and light ..	7.11	6.65	9.60	9.62	7.95	5.2	6.67
Clothing	7.75	9.12	11.86	10.70	10.86	10.6	4.50
House rent ..	12.81	10.97	6.27	1.92	1.44	13.9	11.14
Miscellaneous ..	25.73	23.95	23.02	13.66	13.75	17.6	25.06
Total ..	100.00	100.00	100.00	100.00	100.00	100.0	100.00

NOTE.—The figures are not *strictly comparable* due to differences in the items included in the different groups. But they nevertheless serve to show the variations in the distribution of expenditure in a general way.

The standard of life is more often than not conditioned by the size of the family and its income. The following figures are of interest in this connection :—

——	Bombay.	Ahmedabad.	Sholapur.	Nagpur.	Jubbulpore.	Rangoon (Burmese).	Madras.
Average size (of the family in persons) ..	3.70	4.05	4.57	4.33	3.76	3.01	6.03

It will be seen that the 'miscellaneous' group of expenditure accounts for a comparatively large percentage of the expenditure of the average working class family. In this group is included such items as interest on loans and instalments of debts repaid. Delays in the receipt of earned wages lead to indebtedness of the worker in many cases. The Royal Commission on Labour made certain important recommendations with a view to lessening the burden of indebtedness of the worker and also to prevent its accumulation. The Payment of Wages Act, 1936, was intended to secure to the workmen prompter payments of earned wages so that they may not be put to the necessity of incurring or accumulating debts.

The Government of India have had under consideration certain other pieces of legislation which were also designed to improve the lot of the industrial worker. Following the recommendations of the Labour Commission, the Government of India have amended the Civil Procedure Code with a view to exempting salaries below a defined limit from attachment. Another recommendation of the Labour Commission was that at least so far as industrial workers in receipt of wages or salary amounting to less than Rs. 100 per month are concerned, arrest and imprisonment for debt should be abolished except when the debtor has been proved to be both able and unwilling to pay. The Government of India after consulting the provincial Governments decided to undertake legislation on the recommendation on an experimental scale restricted to the province of Delhi in the first instance. A third recommendation of the Whitley Commission was made with a view to protect workers from harassment for debts. After consulting public opinion and the views of the various Provincial Governments on this question, the Government of India came to the conclusion that Central legislation on the subject was not called for. The Government of Bengal, at the suggestion of the Government of India, passed a Workmen's Protection Act in 1934 which makes besetting of industrial establishments for the purpose of collecting debts a criminal and cognizable offence. Some other provinces are also contemplating similar legislation. The Bombay Moneylenders' Bill introduced by a non-official member in the Bombay Legislative Council in March 1934 was an effort in this direction. But, unfortunately, the motion for the reference of the Bill to a Select Committee was lost.

GROWTH OF THE TRADE UNION MOVEMENT IN INDIA

The earliest known trade unions in India were (1) the Bombay Millhands' Association, a loose organisation formed in 1890 for the purpose of memorialising Government for improvements in factory law and which soon became moribund after the passing of the 1891 Act; (2) the Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Domiciled Europeans employed on railways, more as a friendly society than a combination for securing concessions; (3) a Printers' Union started in Calcutta in 1905; and (4) the Bombay Postal Union which was formed in 1907. The Kamgar Hitwardhak Sabha, Bombay, which came into existence in 1910, was a body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited, the trade union movement, as this is known in the West, did not begin in India till almost after the end of the first World War.

The decade following the end of that War witnessed rapid developments in the field of trade unionism in India, but it must be regretfully admitted that even today organised association of the workers in the country is far below the stage of development which it has reached in Great Britain and in many other countries of the world. The reason for this can be put in a nutshell: lack of a will to organize as far as the workers are concerned and the absence of efficient leadership. Some labour leaders were men who had the good and welfare of labour genuinely at heart. But quite a few went into the movement merely for the opportunities which it would give them for coming into the limelight. Whereas the former went about affairs with a measure of considered moderation, the latter were mere propagandists and mischief-makers who strung together all kinds of impossible and preposterous demands in the hope that by doing so they would transport Indian industrial labour at once into an Arcadia. Both these types of leaders together with some of the more intelligent of the workers at first constituted themselves into strike committees. Many of these committees secured a considerable measure of success in so far as concessions in wage rates were concerned; but, whereas most of them fell into a state of inanition on the conclusion of a dispute, a good few of them, emboldened with the success they had met with, set themselves to the task of creating permanent associations or trade unions of the workers. These were the beginnings of the trade union movement in India, and within a period of five years (1919 to 1923) scores of unions were formed in all parts of the country. As there are no official records to show the names of and the memberships claimed by these earlier bodies, nothing definite can be stated with regard either to their number or to their total membership; but it can be safely asserted that the movement had made a fair penetration on the railways, in postal and telegraph departments, among seamen and in the textile industry in Ahmedabad City, and in some other centres.

The pressing need for a co-ordination of the activities of the individual unions was recognised at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the Annual Sessions of the International Labour Conference. Thus, the All-India Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All-India Railwaymen's Federation, co-ordinating all unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and

central federations of unions of postal and telegraph employees. The latter bodies received a very generous measure of recognition both from the Railway Board and the Director-General of Posts and Telegraphs in India. In the former case, half-yearly conferences are held between the representatives of the Railway Board and the Railwaymen's Federation and at these conferences all the more important questions connected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

Although there are a few unions of jute mills workers in Bengal and nine or ten unions of cotton textile mill workers in Bombay City, the trade union movement has not made any appreciable progress in the two chief centres of these two important industries in India. The main reason for this is that the leaders at the head of these unions hold widely diverging views and cannot compose their differences sufficiently enough to enable them to meet on a common platform.

If employers in Indian industry had had the sagacity and the foresight towards the end and immediately after the close of the Great War to have taken the trouble to adjust wage rates to the increases in the levels of prices and so to balance real wages, the history of industrial strife in India round about and during the third decade of the present century might have been entirely different. To a limited measure, the history of the trade union movement in India too might have been somewhat different. Trade unionism was bound to come. The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical International Conferences had laid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representatives of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to the task of forming trade unions in the country. This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to combat trade unionism. It is unfortunately too true that many employers in India have looked and even today look askance at the growth of organisation among their workers and that employees who take part in trade union activities are victimised. The trade union movement, therefore, instead of getting its most important support from within the ranks of labour itself, was thrown by Indian employers into the waiting hands of the outside agitator; and, unfortunately for Indian trade unionism, no body of outsiders versed in proper trade union methods and principles was available. Such outsiders as could collect some of the hot-heads among the workers in particular units or industries, formed unions in those units or industries; but with the exception of Ahmedabad where a strong trade union had been formed of the workers in cotton textile mills under the leadership of Mr. M. K. Gandhi and also of certain sections of railways which were manned by a more intelligent and literate type of persons, these unions were hardly representative of the workmen in the organisations concerned owing to the smallness of their membership as compared with the total number of workers employed.

As far as recognition by the employers was concerned, trade unions were faced with a three-edged weapon. On one side workmen taking interest in trade union activities were victimised; on another, the majority of the employers refused to recognise unions whose executives were composed of outsiders and on the third, an amendment passed in the Indian Penal Code in 1913 for the purpose of dealing with criminal conspiracies was such as to make trade unions doing the only kind of work for which they are generally formed illegal bodies in the eyes of the law. We have already dealt with the first two of these three questions. As far as the third is concerned, the matter was brought to a head by the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the strike committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. This was a bolt from the blue for the trade union movement in the country. Trade union leaders suddenly discovered that they were liable to prosecution and imprisonment for *bona fide* union activities and it was at once apparent that some legislation for the protection of trade unions was necessary. In March 1921, the Legislative Assembly of the Government of India, on the motion of Mr. N. M. Joshi, then General Secretary of the All-India Trade Union Congress, passed a resolution recommending that Government should introduce legislation for the registration and protection of trade unions. Opposition to such a measure from associations of employers was, however, so great that it was five years before the necessary legislation could be placed on the Statute Book.

The height of the trade union movement in India was reached in 1928-29 when communists sat on the top of the world of Indian labour. Communist leaders had captured almost every important union in India except the textile union in Ahmedabad and they had succeeded in securing a membership of over 50,000 textile workers in Bombay City for their Bombay Girni Kamgar Union. The membership figures of the various other unions which they controlled also showed remarkable increases. The success which they had met with as the result of the general cotton textile strike of 1928 in Bombay was, as subsequent events have proved, purely adventitious. The doctrines they had preached to the masses during that and the oil strike of the winter of that year were responsible for rioting in Bombay City on a scale previously unknown. Thirty-one of the ring-leaders of the movement were arrested early in 1929 on charges of organised conspiracy and were taken to Meerut for trial. Such of the communists as remained unarrested engineered the general cotton textile strike in Bombay of the year 1929. This lasted for more than three months and was called off only after the publication of the report of a Court of Enquiry appointed by Government and which allocated the

whole of the blame for this unwarranted strike to the Bombay Girni Kamgar Union. The publication of this report and the effects of the 1929 strike dealt a blow to the trade union movement from which it took ten years to recover.

The communists made a successful attempt in 1929 either to capture or to break the All-India Trade Union Congress. They affiliated the Bombay Girni Kamgar Union with a membership of 54,000 and the G.I.P. Railway Workers' Union with a membership of 41,000 to that body during the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them, they captured both the Congress and its Executive Committee at The Tenth Session of the Congress which was held in Nagpur in that year. Resolutions were adopted favouring the affiliation of the Congress to international communist organisations and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Round Table Conferences on Indian Reforms. Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seceded from the Congress and formed a new organisation called the Indian Trades Union Federation. The All-India Railwaymen's Federation which was till then affiliated to the Trade Union Congress left that body in 1929 and remained outside till 1935.

At the eleventh session of the All-India Trade Union Congress held at Calcutta in July 1931, a further split occurred in its ranks and the extreme left wing under the leadership of Messrs. S. V. Deshpande and B. T. Randive broke away to form the All-India Red Trade Union Congress. By this time, however, trade unionism in India was at a thoroughly low ebb and none of the three national organisations could by any manner or means make a claim to speak on behalf of Indian labour; but, as the Congress had already decided to boycott the International Labour Conference, the Government of India accepted the Indian Trades Union Federation as the body competent to recommend delegates for the International Labour Conference.

With a view to bring about unity in the ranks of Indian labour, a committee called the Trade Union Unity Committee was appointed at a representative conference held in Bombay on the 10th May 1931 under the auspices of the All-India Railwaymen's Federation. This Committee found that three different and distinct sections of labour were in existence in India—(1) the communist group; (2) the liberal group; and (3) the rest—and that the gulf which divided the communists from the other sections was not bridgeable. The Committee, therefore, recommended a platform of unity for the remaining sections of labour in India. It was proposed to organise and unite all unions which accepted this 'platform of unity' under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federation of Labour held at Calcutta in April 1933, the two federations were amalgamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Conference but subject to certain modifications and the new amalgamation was named the National Trades Union Federation. In 1935, the two sections of the All-India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in India. In the month of February of the same year an agreement was reached between the representatives of the All-India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation of Labour and the All-India Congress Socialist Party for joint action on specific political and economic issues. At the end of the year 1937, the National Trades Union Federation had a membership of 83,000 with 62 affiliated unions and the All-India Trade Union Congress had a membership of 46,000 with 98 affiliated unions. It is interesting, however, to note that the labour unions of Ahmedabad which draw their inspiration from Mr. Gandhi have throughout remained aloof from both these bodies.

At a special joint session of the All-India Trade Union Congress and the National Trade Union Federation held at Nagpur on the 17th April 1938, it was decided to combine these two bodies into one central organisation. The principal terms of the agreement approved by the executives of both these bodies were that the basis of representation on the joint General Council of the new combined Trade Union Congress be fifty-fifty—44 members from each group—and that the Trade Union Congress accept the constitution of the National Trade Union Federation *in toto*. The General Council was to act for the combined body with the one limitation that questions relating to general strikes and affiliation with international bodies should be decided by a three-fourth's majority. If this scheme worked well, the task of unification should be pushed further and the two bodies merged into one. The Provisional Affiliation entered into at Nagpur in April 1938 was formally ratified at the Eighteenth Session of The All-India Trade Union Congress held at Bombay on the 28th and 29th September 1940.

This very same Session, however, was responsible for yet another split in the Congress. The Session adopted a resolution of neutrality in connexion with the War Effort but certain elements headed by Dr. Aftab Ali, President of The Seamen's Union at Calcutta desired to support the War Effort. The Trade Union Congress while adhering to the principle of neutrality, however, gave a free hand to such of their affiliated members as desired to support the War Effort. This attitude of luke-warmness did not satisfy Mr. Aftab Ali and he disaffiliated his Union from the Congress. Another section, headed by Mr. M. N. Roy and known as the

Royists with Mr. Jamnadas M. Mehta, Barrister-at-Law, formed a new central organisation known as The Indian Federation of Labour with its head office at Delhi. Mr. Jamnadas M. Mehta was appointed its President and Mr. M. N. Roy its General Secretary. Two hundred trade Unions in India with a total Membership of over a quarter of a million have affiliated themselves to the new Federation which was carrying on a country-wide campaign and propaganda for all-out support by Indian Labour for the War Effort.

The last Session of the All-India Trade Union Congress was the Twenty-first Session which was held at Madras in January, 1945. The following office-bearers were appointed: President—Mr. Mrinal Kanti Bose; Vice-Presidents—Messrs. S. A. Dange, Chakkarai Chettiar, S. S. Mirajkar, P. C. Bose and Juggun Khan; Treasurer—Mr. R. A. Khedgikar; General Secretary—Mr. N. M. Joshi; and Assistant Secretaries—Miss Shanta Bhalerao and Messrs. N. V. Phadke and Manek Gandhi.

The All-India Trade Union Congress, at the moment is made up of three distinct groups: (1) the Communists; (2) the Nationalists (including the Indian National Congress and the Congress Socialist Party); and (3) the pure Trade Unionists. There are, however, two important groups outside the Trade Union Congress. One is the Royists. The other is the Hindustan Mazdoor Seva Sangh which is the permanent offspring of the Labour Sub-committee set up by the Gandhi Seva Sangh in 1937 to organise labour on the principles set up by Mahatma Gandhi—principles which have been followed by the Textile Labour Association, Ahmedabad, since its inception in 1921. The original Sub-Committee established a training school in Ahmedabad to educate interested persons in trade union work. After completing a course of training in this school, the trainees are sent out to different centres to organise and conduct *bona fide* trade unions. The Sangh acts as an Advisory Body and is not a federation of unions. In politics, its policy is the same as that of the Indian National Congress but it does not organise or conduct trade unions of workers on political lines. According to an enquiry recently made by the Government of India, it has been found that the most representative workers' organization in India is the All-India Trade-Union Congress.

STATISTICS OF TRADE UNIONS.

One of the Annual Reports which the Government of India have stopped publishing for the duration of the War is that relating to the administration of the Indian Trade Unions Act. Those reports used to contain statistics regarding number of registered unions and their membership. No Province except Bombay has maintained any records for both registered and unregistered unions. The Labour Office of the Government of Bombay has collected full and complete information regarding all trade unions in the Province of Bombay since the year 1922. The following Table shows the progress of the trade union movement in that Province during the last twenty-two years:

Growth of Trade Unions in the Province of Bombay.

Year.	Average number of Unions during the year.	Average Membership during the year.
1923	18	41,030
1926	52	62,772
1929	91	191,937
1932	86	104,458
1935	103	103,429
1936	103	97,392
1937	105	93,453
1938	140	126,455
1939	170	159,026
1940	177	191,942
1941	174	184,517
1942	183	183,864
1943	214	221,029
1944	261	266,042

If the figures contained in the above table for the year 1943 (1st December) are analysed by industries, the results are as set out below:

Distribution of Membership of Bombay Unions.

Class of Industry.	Number of Unions.	Membership.	Percentage to total Membership.
Textiles	46	114,802	40·06
Railways	9	36,794	12·84
Seamen	3	22,091	7·71
Posts and Telegraphs	35	9,679	3·38
Municipal ..	21	15,992	5·58
Miscellaneous ..	163	87,206	30·43
Total ..	277	286,564	100·00

Out of the 46 unions of cotton textile workers in the Province of Bombay, ten with a total membership of 26,385 are in Bombay City and eleven with a total membership of 70,862 are in Ahmedabad.

REPRESENTATION OF LABOUR INTERESTS IN THE PROVINCIAL LEGISLATURES.

The question of representation of Labour in the Central and Provincial Legislatures has in recent years assumed considerable importance owing to the growing interest taken by the public in matters connected with Labour. We have given a fairly detailed account of the extent of this representation prior to the advent of Provincial Autonomy and also in the New Legislatures which came into being by virtue of the Government of India Act, 1935, at pages 592 and 593 of the 1941-42 Edition of this publication. Recently fresh elections have been held in this country and in some cases there has been a change in the representatives of labour to the Provincial Assemblies.

THE FUTURE OF TRADE UNIONISM IN INDIA.

The proposals of the Indian Delimitation Committee with regard to the formation of certain constituencies for the return of representatives of labour to the Provincial Legislative Assemblies on the basis of registered trade unions have had considerable effect both on the formation of new unions and on the registration of such of those as had not registered under the Indian Trade Unions Act. Since Provincial Autonomy has come into existence registered unions have been making better endeavours than they had hitherto done in maintaining proper books of accounts and registers of members in view of their compulsory examination by officials of Government for the purposes of preparing electoral rolls. As far as the workmen in Indian industries are concerned, however, trade unionism has not taken on anywhere near to the extent which it has with workmen in the West: the fear of victimisation is still strongly entrenched in the minds of the workers to enable them to enter into combinations promoted to safeguard their interests but things are showing a marked improvement during the last year or two. One great difficulty experienced by trade union workers is the collection of subscriptions from members. The experience of the last fifteen years shows that most of the unions which became defunct went to the wall owing mainly to the fact that their officials were not able to collect subscriptions for the reason that the Indian workman will not part with money for a purely problematic advantage. He wants a return for his outlay in the form of an increase in his wages and if he does not get this within a reasonable period he pays no union subscriptions. The Ahmedabad Textile Labour Union is, happily, in a somewhat different position because it provides a host of welfare schemes in the form of hospitals and dispensaries, education and facilities for recreation, co-operative stores and cheap grain shops, etc., and its members get more than value for their money. The office of the union with its hundred or more clerks is a beehive of industry.

Unfortunately for the trade union movement in India, there are few, if any, unions which are run on the model of the Ahmedabad Textile Labour Union. The vast majority of those which have been kept alive through the zeal of interested outsiders are hollow structures with no funds and bolstered figures of membership—bolstered in order to convince the employers concerned re. their bona fides for recognition. No trade union movement can stand on foundations such as these. It is possible, however, that with the spread of education and literacy, Indian industries will attract a more educated type of workman who will be able to persuade his fellows of the advantages of organised combination and that a healthier movement built on more solid foundations will take the place of the weak structure which exists to-day.

THE INTERNATIONAL LABOUR ORGANIZATION.

Reference has already been made in the preliminary sections of this note to the creation, by the Treaty of Versailles, of an International Labour Organisation and to the work of the International Labour Conference. Since the holding of the first session of the Conference in Washington in 1919, twenty-five further sessions were held till the end of the year 1939 and a total of sixty-seven Conventions were adopted. The 26th Session of the Conference was held in April-May, 1944 at Philadelphia at which post-war reconstruction problems were considered but no conventions were adopted. We give below, in serial order, the year and the place at which each of the twenty-six sessions of the Conference was held, the composition of the delegation from India, and the titles of the different Conventions which were adopted at each session. In the notes on the composition of the delegation Government Delegates are represented by the capital letter "G", Employers' Delegates by the letter "E" and Workers' Delegates by the letter "W". The names of the technical advisers to the Government, Employers' and Workers' Delegates have been omitted in all cases. Symbols (full meanings and explanations of which are given at the end of this section) are placed beside the titles of the Conventions with regard to which action has already been taken by the Government of India. In all cases where no symbols appear alongside the titles, no action has been taken.

1st Session (Washington, 1919): Indian Delegation.—Government—Sir Atul Chatterjee and Sir Louis Kershaw; Employers—Sir Alexander Murray; Workers—Mr. N. M. Joshi.

Conventions.

1. Hours of Work (Industry)—(AB).
2. Unemployment—(C).
3. Childbirth.
4. Night Work (Women)—(AB).
5. Minimum Age (Industry)—(D).
6. Night Work (Young Persons)—(AB).
   White Phosphorus—(D).

2nd Session (Geneva, 1920): G—Sir Louis Kershaw and Capt. D. F. Vines; Seamen's Delegate—Mr. A. M. Mazarello.

Conventions.

7. Minimum Age (Sea)—(E).
8. Unemployment Indemnity (Shipwreck)—(E).
9. Placing of Seamen.

3rd Session (Geneva, 1921): G—Sir Atul Chatterjee and Mr. I. N. Gupta; E—Sir Nowroji Saklatvala; W—Mr. N. M. Joshi; Secretary—Mr. A. G. Clow.

Conventions.

10. Minimum Age (Agriculture).
11. Right of Association (Agriculture)—(AC).
12. Workmen's Compensation (Agriculture).
13. White Lead (Painting).
14. Weekly Rest (Industry)—(AB).
15. Minimum Age (Trimmers and Stokers)—(AB).
16. Medical Examination of Young Persons (Sea)—(AB).

4th Session (Geneva, 1922): G—Sir Bhupendra Basu and Sir Louis Kershaw; E—Sir Alfred Pickford; W—Mr. N. M. Joshi; Secretary—Mr. C. H. Silver.

5th Session (Geneva, 1923): G—Sir Dadiba M. Dalal and Sir Louis Kershaw; E—Sir Joseph Kay; W—Mr. K. C. Roy Chowdhury.

6th Session (Geneva, 1924): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Alexander Murray; W—Mr. Joseph Baptista.

7th Session (Geneva, 1925): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Thomas Smith; W—Mr. N. M. Joshi; Secretary—Mr. R. N. Gilchrist.

Conventions.

17. Workmen's Compensation (Accidents).
18. Workmen's Compensation (Occupational Disease)—(AC).
19. Equality of Treatment (Accident Compensation)—(AB).
20. Night Work (Bakeries).

8th Session (Geneva, 1926): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froom; W—Mr. Lajpat Rai; Secretary—Mr. R. N. Gilchrist.

Conventions.

21. Inspection of Emigrants—(AC).

9th Session (Geneva, 1926): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froom; W—Mr. M. Daud; Secretary—Mr. R. N. Gilchrist.

Conventions.

22. Seamen's Articles of Agreement—(AB).
23. Repatriation of Seamen.

10th Session (Geneva, 1927): G—Sir Atul Chatterjee, Sir Louis Kershaw and Dr. R. P. Paranjpe (Substitute); E—Mr. G. D. Birla; W—Mr. V. V. Giri; Secretary—Mr S. Lall.

Conventions.

24. Sickness Insurance (Industry, etc.).
25. Sickness Insurance (Agriculture).

11th Session (Geneva, 1928): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe, and Mr. J. C. Walton (Substitute); E—Mr. Narottam Morarjee; W—Mr. Diwan Chaman Lall; Secretary—Dr. R. C. Rawlley.

Conventions.

26. Minimum Wage Fixing Machinery.

12th Session (Geneva, 1929): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe, and Mr. A. G. Clow (Substitute); E—Mr. Kasturbhai Lalbhai; W—Mr. N. M. Joshi; Secretary—Mr. A. Dibdin.

Conventions.

27. Marking of Weight (Packages Transported by Vessels)—(AB).
28. Protection against Accidents (Dockers).

13th Session (Geneva, 1930): G—Sir Atul Chatterjee and Sir Geoffrey Corbett, and Mr. C. W. A. Turner (Substitute); E—Mr. Jadunath Roy; W—Mr. M. Daud; Secretary—Mr. C. W. A. Turner.

14th Session (Geneva, 1930): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe, and Mr. A. Latiff (Substitute); E—Mr. A. L. Ojha; W—Mr. S. C. Joshi; Secretary—Mr. G. Graham Dixon.

Conventions.

29. Forced Labour.
30. Hours of Work (Commerce and Offices).

15th Session (Geneva, 1931): G—Sir Atul Chatterjee and Mr. A. G. Clow; E—Mr. Walchand Hirachand; W—Mr. R. R. Bakhale; Secretary—Mr. N. A. Mehrban.

Conventions.

31. Hours of Work (Coal mines).

16th Session (Geneva, 1932): G—Sir Bhupendra Nath Mitra and Sir Atul Chatterjee; E—Mr. Shanmukham Chetti; W—Mr. Diwan Chaman Lall; Secretary—Mr. K. R. Menon.

Conventions.

32. Protection Against Accidents (Dockers) (Revised, 1932)—(D).
33. Minimum Age (Non-Industrial Employment).

17th Session (Geneva, 1933): G—Sir Atul Chatterjee and Mr. J. E. Jennings; E—Sir Phiroze C. Sethna; W—Mr. Aftab Ali; Secretary—Mr. K. R. Menon.

Conventions.

34. Fee-Charging Employment Agencies.
35. Old-Age Insurance (Industry, etc.).
36. Old-Age Insurance (Agriculture).
37. Invalidity Insurance (Industry, etc.).
38. Invalidity Insurance (Agriculture).
39. Survivors' Insurance (Industry, etc.).
40. Survivors' Insurance (Agriculture).

18th Session (Geneva, 1934): G—Sir Bhupendra Nath Mitra and Mr. A. G. Clow; E—Seth Kasturbhai Lalbhai; W—Mr. Jamnadas M. Mehta; Secretary—Mr. A. Dibdin.

Conventions.

41. Night Work (Women) (Revised)—(AB).
42. Workmen's Compensation (Occupational Diseases) (Revised).
43. Sheet-Glass Works.
44. Unemployment Provision.

19th Session (Geneva, 1935): G—Sir Bhupendra Nath Mitra and Sir Joseph Bhore; E—Mr. H. A. Lalljee; W—Mr. V. M. Ramaswami Mudaliar; Secretary—Mr. S. R. Zaman.

Conventions.

45. Underground Work (Women)—(A).
46. Hours of Work (Coal Mines) (Revised).
47. Forty-Hour Week.
48. Maintenance of Migrants, Pension rights.
49. Reduction of Hours of Work (Glass-Bottle Works).

20th Session (Geneva, 1936): G—Sir Bhupendra Nath Mitra and Mr. S. N. Roy; E—Sir H. M. Mehta; W—Rao Sahib R. W. Fulay; Secretary—Mr. S. R. Zaman.

Conventions.

50. Recruiting of Indigenous Workers.
51. Reduction of Hours of Work (Public Works).
52. Holidays with Pay.

21st Session (Geneva, 1936): G—Sir Firoz Khan Noon and Mr. A. Dibdin; E—Mr. M. A. Master; W—Mr. Aftab Ali; Secretary—Mr. A. F. Morley.

Conventions.

53. Officers' Competency Certificates.
54. Holidays with Pay (Sea).
55. Shipowners' Liability (Sick and Injured Seamen).
56. Sickness Insurance (Sea).
57. Hours of Work and Manning (Sea).

22nd Session (Geneva, 1936): Same Delegation as at the *21st Session*.

Conventions.

58. Minimum Age (Sea).

23rd Session (Geneva, 1937): G.—Sir Firoz Khan Noon and Sir Frank Noyce; E—Sir Hormusjee P. Mody; W—Mr. S. C. Sen; Secretary—Mr. S. R. Zaman.

Conventions.

59. Minimum Age (Industry) (Revised).
60. Minimum Age (Non-Industrial Employment) (Revised).
61. Reduction of Hours of Work (Textiles).
62. Safety Provisions (Building).

24th Session (Geneva, 1938): G.—Sir Firoz Khan Noon and Sir Frank Noyce; E—Lala Shri Ram; W—Mr. S. V. Parulekar, M.L.A. (Bombay); Secretary—Mr. M. Ikramullah.

Conventions.

63. Convention concerning statistics of wages and hours of work in the principal mining and manufacturing industries, including building and construction, and in agriculture.

25th Session (Geneva, 1939): G.—Sir Firoz Khan Noon and Sir Frank Noyce; E.—Mr. M. L. Dahanukar; W.—Mr. R. S. Nimbkar; Secretary—Mr. M. Ikramullah.

Conventions.

64. Convention concerning the regulation of written contracts of employment of indigenous workers.

65. Convention concerning penal sanctions for breaches of contracts of employment by indigenous workers.

66. Convention concerning the recruitment, placing and conditions of labour of migrants for employment.

67. Convention concerning the regulation of hours of work and rest periods in road transport.

26th Session (Philadelphia, 1944): G.—Sir Samuel Ranganadhan and Mr. H. C. Prior; E.—Mr. D. G. Mulherkar; W.—Mr. Jamnadas Mehta; Secretary—Mr. W. B. England.

A = Unconditional ratification.

B = Legislative or other measures passed since the adoption of the Convention.

C = Legislative or other measures anterior to the adoption of the Convention by the Conference.

D = Legislation passed.

E = Legislation in progress or in preparation.

India has ratified the following Conventions unconditionally: Hours of Work (Industry); (2) Night Work (Women); (3) Night Work (Young Persons); (4) Right of Association (Agriculture); (5) Weekly Rest (Industry); (6) Minimum Age (Trimmers and Stokers); (7) Medical Examination of Young Persons (Sea); (8) Workmen's Compensation (Occupational Diseases); (9) Equality of Treatment (Accident Compensation); (10) Inspection of Emigrants; (11) Seamen's Articles of Agreement; (12) Marking of Weight (Packages transported by Vessels); (13) Night Work (Women) (Revised); and (14) Underground Work (Women). In 1938, India denounced the Unemployment Convention which it had ratified in 1921. Legislative or other measures have been adopted in India with reference to the following Conventions: (1) Hours of Work (Industry); (2) Unemployment; (3) Night Work (Women); (4) Minimum Age (Industry); (5) Night Work (Young Persons); (6) Right of Association (Agriculture); (7) Weekly Rest (Industry); (8) Minimum Age (Trimmers and Stokers); (9) Medical Examination of Young Persons (Sea); (10) Workmen's Compensation (Occupational Diseases); (11) Equality of Treatment (Accident Compensation); (12) Inspection of Emigrants; (13) Seamen's Articles of Agreement; (14) Marking of Weight (Packages transported by Vessels); (15) Protection against Accidents (Dockers) (Revised 1932); (16) Night Work (Women) (Revised); and (17) Underground Work (Women). In addition, legislation is either in progress or under preparation in connection with the following Conventions: (1) Minimum Age (Sea); (2) Unemployment Indemnity (Shipwreck); and Holidays with Pay. In March 1943, the Government of India appointed a Special Officer to study the subject of sickness insurance (Convention No. 24, Tenth Session, 1927) with a view to drafting suitable legislation on the subject. The Report of the Special Officer which is a confidential document is now under the consideration of the Government of India.

The outbreak of the Second World War found the International Labour Office prepared to continue its work and to carry out its constitutional obligations. So far back as February 1939, the Governing Body had decided to appoint an Emergency Committee with a tripartite and representative character from its membership which could meet more rapidly in times of crisis. The Committee set forth two important principles: first, that the I.L.O. must continue to function as effectively and as completely as possible in case of war; and, second, that the continued existence of the Organization as an instrument of co-operation between Governments, employers and workers would be of unusual importance in such circumstances.

The Twenty-Sixth Session of the International Labour Conference fixed to begin on 3rd June 1940 had to be postponed *sine die* on account of the War: Several Committee Meetings had also to be cancelled. By July 1940, Swiss territory was almost completely surrounded by German Occupation Forces and it became increasingly difficult to envisage the continuance in Geneva of an international organization which depended for its effectiveness upon regular communications with its Member States. It became necessary, therefore, to establish a working centre outside Geneva and to transfer to it the staff required in order to carry out the obligations of the Organization to its members. In August 1940, the Government of Canada officially indicated its willingness for the temporary transfer to the Dominion of the personnel necessary to maintain the essential services of the Organization. Montreal was chosen as the most suitable and convenient site for its location and the McGill University very generously agreed to provide the necessary office accommodation and library facilities. The transfer from Geneva to Montreal necessitated drastic administrative changes and reduction in personnel. The work of collection and distribution of information regarding labour and social conditions throughout the world is now being continued from Montreal and plans have been made for carrying on unimpaired, as far as conditions permit, all the manifold activities of the Organization from that centre.

In furtherance of this programme, a Conference of the International Labour Organisation was held at New York from 27th October to 5th November 1941 and on 6th November 1941 at the White House, Washington. Technically, the Conference was not a Session of the International Labour Conference and it, therefore, had no powers to adopt Conventions and Recommendations in the manner provided for in the Constitution of the International Labour Organization, but ample evidence of the value of its work is furnished by the influence exercised by its debates and by the action taken by various Governments to implement the more important of the resolutions which it adopted. Further, this Conference has a particular importance attaching to it as the first general international meeting held in the world since the outbreak of the War. Thirty-four States Members of the Organization were represented, twenty-two of them by delegations including representatives of Governments, employers and workers. Major C. R. Attlee, Deputy Prime Minister, represented the Government of Great Britain while the Government of India was represented by Sir Shanmukham Chetty and Mr. H. S. Malik, I.C.S. The agenda consisted of two items: (1) consideration of the report submitted by the Director of the International Labour Office under the title of "The I.L.O. and Reconstruction" and (2) the question of "Methods of Collaboration between Public Authorities, Workers' Organizations and Employers' Organizations."

Some twelve Resolutions were adopted by the Conference. The most important of these was that on post-war emergency and reconstruction measures. The resolution requested the Governing Body of the I.L.O. (*a*) to call the attention of Governments to the desirability of associating the International Labour Office with the planning and application of measures of reconstruction and to ask that the International Labour Organization should be represented in any peace or reconstruction conference which may be held after the end of the War; (*b*) to suggest to Governments that they should, if they had not already done so, set up representative agencies for the study of the social and economic needs of the post-war world and that such agencies should consult with the appropriate organs of the I.L.O.; (*c*) to set up from its own membership a small tripartite committee, instructed to study and prepare both measures of reconstruction and emergency measures to deal with unemployment, in co-operation, where necessary, with governmental, inter-governmental and private agencies; (*d*) to make full use of the existing organs of the I.L.O. and set up such new agencies as may be needed in order to meet the responsibilities implied in the Resolution; (*e*) to direct the programme of the I.L.O. to fulfil the purposes of the Resolution; and (*f*) to report on the subject-matter of the Resolution to the next and subsequent meetings of the International Labour Conference so that the I.L.O. should be in a position to give authoritative expression to the social objectives confided to it in the rebuilding of a peaceful world upon the basis of improved labour standards, economic advancement and social security. A second resolution endorsed the social and economic principles of the Atlantic Charter and urged that the fullest use be made of the machinery and experience of the I.L.O. in giving effect to these principles. Another resolution provided for the continuation of the work of the World Textile Conference held by the I.L.O. in 1937 and requested the Director to begin immediately the preparation of a definite scheme for the establishment, under the ægis of the I.L.O., of a World Textile Office, based on the tripartite principle, to be responsible for the international organization of measures to secure prosperity and social justice in the textile industry. The leading resolution on Government-employer-worker collaboration declared that real collaboration is possible only "within the framework of democratic political institutions which guarantee the freedom of association of workers and employers" and if in law and in fact the right of industrial organizations to represent workers and employers is recognised by the State.

In addressing the Conference on the part to be played by the International Labour Organization in the winning of the War and of the peace at the concluding Session held at White House, the late President Roosevelt said: "In the planning of such international action the International Labour Organization, with its representation of labour and management, its technical knowledge and experience, will be an invaluable instrument for peace. Your organization will have an essential part to play in building up a stable international system of social justice for all peoples everywhere."

The meeting of the Emergency Committee held in London in April 1942 succeeded in taking a number of valuable preliminary steps towards the accomplishment of the New York programme. The New York programme resulted from the belief that permanent international co-operation, especially in the economic and social fields, is imperative. It was inspired by the conviction that economic democracy between the nations,

devoted to the organisation of an economy of abundance in the common interest of Europe and the Americas, Asia and Africa, and Australia is the only practicable alternative to the recurrence of world-wide wars. It contemplates vigorous national action within the framework of a better organised international order in pursuit of constantly broadening social objectives.

In London several preliminary practical steps in furtherance of this programme were taken. The financial arrangements necessary to permit of the effective development of the reconstruction work of the International Labour Office were approved. The machinery necessary to equip the organisation to handle more effectively some of the interactions of economic and social policy was established in the form of the Committee of Economic Statesmen which is to advise the Governing Body. New programmes of study, relating in the first instance primarily to public works policy, migration, agriculture, and textiles were sanctioned. The Emergency Committee also decided to address to Governments suggestions for national preparatory action regarding public works policy and migration. It requested the International Labour Office to suggest to countries which have not yet done so that they should take measures within the general framework of their post-war reconstruction planning to prepare public works programmes in advance and to invite countries which are disposed to accept immigrants after the war to prepare as part of their programme of reconstruction or economic development as close estimates as possible of their immigration requirements. Arrangements designed to enable the Organisation to act as a co-ordinating centre between national reconstruction agencies and to secure full co-operation with other international agencies were also advanced a stage at the meeting.

The valuable work of the International Labour Office in the difficult sphere of post-war reconstruction is receiving increased recognition, and it is significant to recall in this connection that, speaking on the 2nd December 1942 in the House of Commons, Mr. Anthony Eden, the then British Foreign Secretary, suggested that "the International Labour Office might be developed as the main instrument for giving effect to Article 5 of the Atlantic Charter" (ensurance of the fullest collaboration between all nations in the economic field with the object of securing for all improved labour standards, economic advancement and social security).

The change for the better in the war situation and the beginning of concerted international action through, for example, the Food Conference at Hot Springs and the U.N.R.R.A. Conference at Atlantic City, suggested the need for considering the general principles of the Social policy which should be followed in the post-war period and the future policy and programme of the I.L.O. itself. With this end in view, the Twenty-sixth Session of the International Labour Conference was convened at Philadelphia on the 20th April 1944. The items on the Agenda of the Conference were: (1) future policy, programme and status of the I.L.O.; (2) Recommendations for present and post-war "social policy; (3) the organisation of employment in the transition from war to peace; (4) Social Security: Principles and Problems arising out of the War; and (5) Minimum Standards of Social Policy in Dependent Territories. The Conference had reports prepared by the I.L.O. on these items, on the basis of which the Conference was invited to adopt decisions. No draft Conventions were adopted at this session, but three Recommendations were adopted dealing with Social Security, one with Social policy in dependant territories, and three dealing with employment problems. Twenty-three Resolutions were also adopted concerning various aspects of the I.L.O.'s work of which special reference may be made to the holding of regional conferences for the Near and Middle East, and for South East Asia, and the setting up of Committees for the special study of the world's major industries.

The most outstanding feature of the Philadelphia conference was the adoption of the PHILADELPHIA CHARTER—an official declaration by the forty-one nations represented on the conference redefining the aims and purposes of the International Labour Office in the context of the present world situation. The Charter reaffirms that poverty anywhere constitutes a danger to prosperity everywhere and that the war against want should be carried on both nationally and internationally by the workers, employers and Governments acting unitedly; that the attainment of a state of affairs in which all human beings can pursue their material well-being and spiritual development in conditions of freedom and dignity, of economic security and equal opportunity, must constitute the central aim of public policy; and that it is a responsibility of the I.L.O. to examine and consider all international economic and financial policies in the light of this fundamental objective. The Charter recognises that it is the solemn obligation of the I.L.O. to further full employment and the raising of standards of living; to provide facilities for the training and transfer of labour, including migration; to ensure a just share of the fruits of progress to all and a minimum living wage to all employed and in need of such protection; to speed up the extension of social security measures, of child welfare and maternity protection, of adequate nutrition, housing and cultural facilities, and of equality of educational and vocational opportunity. The I.L.O. is further to co-operate with all bodies as are engaged in the fuller and broader utilisation of the world's productive resources, to avoid severe economic fluctuations, to promote the advancement of the less developed regions, to assure greater stability in world prices of primary products, to promote a high and steady volume of international trade; and, in general, to promote the health, education and well-being of all peoples. The principles in the Charter are stated as fully applicable to all peoples everywhere, and their progressive application to dependant peoples as well as to those who have already attained self-government, is declared a matter of concern to the whole civilised world.

India and the International Labour Office: India has played a notable part in the International Labour Organisation from its inception. Its contribution to the funds of the organisation is among the largest. As one of the eight countries of chief industrial importance it occupies a permanent seat on the Governing Body of the

International Labour Office. In 1927 the International Labour Conference elected an Indian—Sir Atul Chatterjee—as its President, and in 1932 he was elected by the Governing Body as its Chairman. Others who have represented the Government of India have also made a substantial contribution to the proceedings at different meetings of the organisation. Employers' and workers' representatives, who have been included in the Indian Delegations to the regular ordinary Sessions of the Conference without exception, have been no less prominent; they have also been elected to the Governing Body on different occasions. An appreciable number of Indians who have been connected with the International Labour Organization in one way or another are at the present time prominent in public life in India.

Recently the I.L.O. deputed to India, at the request of Government of India, three of its officers to advise on questions relating to social insurance.

The Indian Branch of the International Labour Office of which Dr. P. P. Pillai, Ph.D., is the Director, maintains its activities unimpaired and continues to function from its office at New Delhi.

GOVERNMENT ADMINISTRATION OF LABOUR QUESTIONS.

Prior to the year 1920 there was little co-ordination between the Centre and the Provinces in matters connected with Labour. It would not be wrong to say that, prior to that year, Provincial Governments in India took little interest in Labour matters. The participation by India in the First Session of the International Labour Conference held at Washington in 1919 and the increasing interest taken by the Indian public in questions connected with labour made it necessary, however, both for the Government of India and the Governments of the more industrialised Provinces not only to consider the question of the representation of labour in the Central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions. The Government of India established a Labour Bureau in the year 1920 which instituted inquiries into certain phases of factory work and published some reports in a series known as "Bulletins of Indian Industries and Labour." The Bureau was however abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The Department of Labour of the Central Government had, however, endeavoured to carry on as much as possible of the work initiated by that Bureau but owing to limitations in staff and personnel it was not in a position to initiate and conduct all-India inquiries into wages and conditions of employment in Indian Industries. Since the advent of the War and the creation of the Tripartite Labour Conference the Department of Labour of the Government of India has considerably expanded its staff and it now deals with a much wider range of subjects than it did before the War. It is possible that a Central Labour Bureau will again be established very shortly.

The Government of Bengal, in 1920, invested a Deputy Secretary in the Commerce Department with the additional work of a Labour Intelligence Officer whose duty would be to keep a record of industrial disputes in the Province as well as of labour organizations. It was intended that this officer should conduct special inquiries from time to time as circumstances required but owing to financial stringency, the Provincial Government could not provide him with adequate staff for the purpose. A full-time appointment of a Labour Commissioner was created in 1939 and this officer has now been supplied with a full staff. The Government of Madras appointed a Labour Commissioner in the year 1920. This Officer's duties were, however, primarily confined to the organization and the control of the operations for the betterment of the condition of the Depressed Classes in the Province with special regard to provision of water supply, assignment of lands, acquisition of house sites, education through special schools and the grant of assistance in the form of scholarships and boarding grants and to the administration of Criminal Tribes Settlements. He was also to watch and study the conditions of labour, particularly industrial labour, throughout the Province and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The duty of settling labour disputes through negotiation and conciliation has only been placed upon him during recent years.

The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by the late Lord Lloyd, then Governor of Bombay, who created a Labour Office for the Bombay Presidency in 1921. In the Government resolution announcing the establishment of this office the following were declared to be its functions :—

"(1) *Labour Statistics and Intelligence.*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lock-outs, and similar matters;

"(2) *Industrial Disputes.*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise.

"(3) *Legislation and other matters relating to Labour.*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws."

When the Labour Office was first started it was placed under the charge of a full-time Director. This post was abolished in 1926 and the Office was placed under the charge of the then Director of Information whose designation was changed to Director of Information and Labour Intelligence. This designation was again altered in 1933 to Commissioner of Labour and Director of Information. In 1939, on the retirement of Mr. J. F. Gennings, C.I.E., C.B.E., who had held the post of Director of Information since 1921,

the two posts were again separated and the Commissioner of Labour has since then dealt only with matters connected with labour.

Consequent on the introduction of Provincial Autonomy in India with effect from 1st April, 1937, Sind was separated from the Presidency of Bombay and made into a separate Province. The new Government of Sind modelled its administration of all labour questions on Bombay and created a Labour Office with a special Commissioner of Labour. Since the year 1937, the Governments of the United Provinces, Assam, the Central Provinces and Berar and Bihar have also created special appointments of Commissioners of Labour; but, whereas the appointments in the United Provinces is a full-time one those in the Central Provinces and Berar, Bihar and Assam have been coupled with other posts. In the Punjab, administrative matters connected with Labour are in the hands of the Director of Industries. Labour conditions in Orissa and in the North-West Frontier Province are not considered such as to justify the creation of special appointments of Labour Commissioners.

The Central Government is setting up a separate organisation under its control to look after labour relations matters in "Central Sphere" undertakings, namely, Federal Railways, Mines, oil-fields, Major Ports and undertakings owned or controlled by the Central Government. The Chief Labour Commissioner (Central) who is the head of this organisation was appointed in February, 1945. He will have under him three Regional Labour Commissioners nine labour Inspectors and 24 Conciliation Officers at different centres in the country.

When the Workmen's Compensation Act was passed in 1923, the Governments of Bengal and Bombay created special full-time appointments of Commissioners of Workmen's Compensation. In the other Provinces, Judges of Small Causes Courts in Provincial Headquarters towns and District Magistrates, District Judges or Sub-Judges in the mofussil were appointed ex-officio Commissioners and the administration of the Act was decentralised. Even in those Provinces where Special Commissioners of Workmen's Compensation were appointed, the jurisdiction of these Officers, except in Bengal, was limited to one or two cities of chief industrial importance. Thus, the jurisdiction of the Bombay Commissioner extended to Bombay City and the Ahmedabad and the Bombay Suburban Districts, the railway system of the G.I.P. and the B.B. & C.I. Railways in the Province, the electricity generating plants conducted by Messrs. Tata Sons (Ltd.) and he was also Commissioner for non-contested matters from the whole of the Province which could be disposed of in Bombay. The special post of Commissioner for Workmen's Compensation in Bombay was abolished in April 1928 and the duties attaching to this post were transferred to the Director of Information and Labour Intelligence, and later to the Commissioner of Labour; but owing to a heavy increase of work in the Bombay Labour Office, the two posts have again been separated with effect from November, 1943.

Under the Indian Trade Unions Act, 1926, every Provincial Government was required to appoint a Registrar of Trade Unions. In those Provinces where special appointments for administering matters connected with labour already existed the officers holding those appointments were entrusted with the duties of Registrars of Trade Unions, *e.g.*, as in Bombay, Madras and Bengal and later, in Sind. In others such as the Central Provinces and Berar and in the Punjab, the Director of Industries was appointed the Registrar. Today most Commissioners of Labour in the Provinces where such posts have been created are Registrars of Trade Unions as well. In addition, Commissioners of Labour have also been appointed as the Authority under the Payment of Wages Act, 1936.

The appointment of Government Labour Officers in India dates from the year 1934 when Mr. W. B. Gilligan, I.C.S., was appointed Labour Officer, Bombay, under The Bombay Trade Disputes Conciliation Act which was passed in that year. That Act was replaced in the year 1938 by the Bombay Industrial Disputes Act. The latter Act necessitated the appointment of three additional Labour Officers in the Province of Bombay with their headquarters stations at Ahmedabad, Sholapur and Jalgaon. Since the advent of the war, several other Provincial Governments have also appointed Government Labour Officers. Whilst the Govt. Labour Officers in the Province of Bombay have specific duties under the Bombay Industrial Disputes Act and deal with the work of complaints from the workers in the industries to which that Act has been applied, the functions of these Officers in the other Provinces where they have been appointed are not very clearly defined and they act mostly as Conciliators.

Upto the end of June 1943 only two Provincial Governments in India published journals similar to "The Labour Gazette" which is published monthly by the British Ministry of Labour: (1) Bombay, where the "Labour Gazette" has been published every month since September, 1921; and (2) the United Provinces, where the "Labour Bulletin," modelled on the lines of the sister publication in Bombay, was published monthly between January, 1941 and the middle of 1942 when, owing to shortage of paper, it was converted into a quarterly publication. The Government of India started publishing a similar journal with the title of the *Indian Labour Gazette* with effect from July 1943. The Bombay "Labour Gazette" is intended to supply complete and up-to-date information on Indian labour conditions and especially on the conditions existing in the Province of Bombay and to supply to local readers the greatest possible amount of information regarding labour laws and labour conditions in the outside world. Its contents include statistics and discussions regarding the cost of living index series which the Labour Office of the Government of Bombay regularly compiles for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay, retail food prices for five important centres in the Province, statistics of industrial disputes and workmen's compensation, full information regarding all industrial disputes in India, statistics of absenteeism with notes on the employment situation in five important industrial centres and information regarding prosecutions under the Factories Act. Since 1939, when the Bombay Industrial Disputes Act, 1938, was first applied to the cotton textile industry in the Province, the full proceedings

of the Industrial Court and the reports on settlements reached in conciliation under the Act have been regularly reproduced in this publication. The "Labour Gazette" also gives, once in every six months, complete information with regard to all known trade unions in the Province. The only Province in India, which maintains a first-class and up-to-date library of books and periodicals on all kinds of matters connected with Labour is Bombay.

THE CENTRAL GOVERNMENT.

The work of the Labour Department of the Government of India has increased considerably since the outbreak of the present War. As a matter of fact, recently this Department has been split into two different departments, one styled the Labour Department and the other Works, Mines and Power Department. Apart from dealing with labour legislation and labour conditions and attempting and bringing about uniformity of standards in the different Provinces, this Department has recently undertaken very great additional responsibilities for the placement of civil and military demobilized personnel. It administers and controls all matters in connection with the work of the National Services Tribunal, the Technical Training Scheme, the Bevin Scheme and the system of Employment Exchanges. It has continued active co-operation with organized employers and labour organizations through the Tripartite Labour Conference and Standing Labour Committee. In the year 1944 it appointed a Labour Investigation Committee to collect factual data relating to conditions of work and wages of employees engaged in different industries in the country with a view to obtaining the necessary material for arriving at plans of Social Security. The Committee has now submitted more than 30 *ad hoc* Reports on various industries some of which have been published. The industries covered by the enquiry contain Plantations, Textiles, Mica, Manganese, Iron Ore, Carpet Weaving, etc. to cite a few among others. A Special Officer, Prof. B. P. Adarkar, was also appointed to investigate into problems of Sickness Insurance and the Report of this Officer has already been published.

One of the extensions of the activities of this Department has been in the field of the collection of necessary data for compiling cost of living index numbers for selected centres in India on uniform lines. Accordingly, an Officer styled Director, Cost of Living Index Scheme, was appointed in the year 1942 and it is understood that he has now collected some 27,000 family budgets in about 28 selected centres in British India. The data have now been tabulated and within a short time it may be possible to have in this country, for the first time, scientifically compiled cost of living index numbers for principal centres in British India.

The Central Government, in the Labour Department, have also now appointed a Chief Labour Commissioner (Central). This officer is in charge of industrial relations and conciliation, labour welfare operation of labour laws, and maintenance of information regarding wage rates and conditions of work. There are a number of deputies working under him known as Regional Commissioners. Among the functions of the Office of the Chief Commissioner of Labour, is to look after the welfare of the employees employed in concerns belonging to the Central Government, including mines. The Chief Commissioner of Labour and his deputies also intervene in disputes arising between Government and employees in the various mines and factories.

BENGAL.

The Bengal Trade Union Regulations have been so amended as to empower the Registrar of Trade Unions to exercise greater control over registered trade unions with a view to the prevention of mal-administration of their affairs. It is hoped that many undesirable features in the administration of trade unions will disappear when the staff of the Registrar is sufficiently augmented to enable the work of inspection to be carried out efficiently.

No Court of Inquiry or Board of Conciliation was appointed in Bengal under the Trade Disputes Act, 1929, during the year ending 31st March 1945 but it is of great interest to observe that the Officers attached to the Labour Department dealt with 1,820 conciliation cases during that year. A large number of disputes were referred to adjudication under Rule 81A of the Defence of India Rules.

During the last three years many requests have been received by the Labour Commissioner, Bengal, from factories situated in Calcutta and other places, considered to be danger zones, for assistance in the formation of fire-fighting parties and rescue and demolition squads from among their workers. Such assistance was readily given by deputing the Labour Officers to address propaganda meetings where the object and functions of the organisations were fully explained. Very encouraging response was received from workers to the appeals made to them by the Labour Officers to join the A.R.P. Organization. Slit trenches and covered shelters have been provided in all factories under the supervision of the Factories Department. The personnel of the Bengal Government connected with Labour matters consists of the :

Labour Commissioner and Registrar of Trade Unions;

Deputy Labour Commissioner and Chief Inspector, Shops and Establishments, Bengal;

Commissioner for Workmen's Compensation and Authority under the Payment of Wages Act; Assistant Labour Commissioners; Labour Officers and the Chief Inspector of Factories.

During the last two years the office of the Commissioner of Labour, Bengal has carried out a number of statistical and socio-economic enquiries into labour conditions such as family budget enquiries, wage censuses, etc. This work was undertaken either in connection with the Government of India's scheme for the preparation of cost of living index numbers on uniform lives or on behalf of the Labour Investigation Committee. We have now thus available for the first time a large body of statistical and other data relating to the conditions of work and wages in the principal industries in Bengal such as Jute, Cotton, Paper, etc.

BOMBAY.

Of all the Provincial Governments in India, the Government of Bombay have always maintained a progressive lead in their solicitude for the welfare of the industrial labour employed in the Province; and the real pioneer work in the field of labour information and statistics in India during the last twenty-five years has been done by the Bombay Labour Office. The Government resolution creating this Office and its various activities have been already dealt with in the prefatory paragraphs of this Chapter. The principal work of the Labour Office during the year was to secure for workers by timely intervention adequate dearness allowances and bonuses to enable them to maintain their pre-war standard of living and partly to share in the large profits of some of the industries. The administration of the Bombay Industrial Disputes Act, 1938, has resulted in a heavy strain on the Labour Organization of the Government. Commissioner of Labour, Chief Conciliator, Bombay Industrial Disputes Act, and Registrar of Trade Unions; Assistant Commissioners of Labour; Labour Officer, Bombay and Officer-in-Charge, Labour Welfare Department; District and Assistant Labour Officers; Commissioner for Workmen's Compensation; Chief Inspector of Factories and the Labour Welfare Officer, Bombay.

MADRAS.

The Commissioner of Labour in Madras is also the Chief Inspector of Factories but for the administration of the Factories Act he is assisted by a Deputy Chief Inspector of Factories at headquarters, in charge of the Madras Factories Circle. Three additional Factories Circles, each in charge of an Asst. Inspector of Factories have been sanctioned for 1945-46. The Labour Commissioner in Madras has no special statistical office to deal with labour statistics, and no reports have been published of any special inquiries into questions connected with industrial labour in the Province. The conduct of the Quinquennial Census into Agricultural Wages has, however, been placed in his hands and, with a view to the proper administration of the Payment of Wages Act a beginning has been made for a more accurate collection of industrial wages statistics information regarding which is included in the Annual Reports on the Administration of the Factories Act.

In view of the large increase of work resulting from war conditions, the Govt. of Madras sanctioned the creation of a post of Assistant Commissioner of Labour in September, 1943. In February 1944, this Officer was appointed an Additional Commissioner for Workmen's Compensation. An additional post of a Labour Conciliation Officer for the Madura, Ramnad and Tinnevelly Districts with headquarters at Madura was created in 1945. The personnel of the Madras Government connected with Labour matters consists of the Commissioner of Labour, Commissioner for Workmen's Compensation, Registrar of Trade Unions, Chief Inspector of Factories and the Authority under the Payment of Wages Act; Deputy Chief Inspector of Factories; Asst. Commissioner of Labour and Additional Commissioner for Workmen's Compensation and the Labour Conciliation officers.

CENTRAL PROVINCES AND BERAR.

Prior to January 1942 when the Government of the Central Provinces and Berar created the post of a Commissioner of Labour, matters in connexion with the administration of questions connected with Labour were dealt with by the Director of Industries. The new Labour Office in Nagpur has been modelled on lines similar to that in Bombay and it is to be responsible for the collection of statistics relating to the cost of living, industrial disputes and trade unions. The Commissioner of Labour is assisted by a Labour Officer and Assistant Labour Officers. The Commissioner and the Labour Officer have been appointed Conciliators under the Trade Disputes Act, 1929.

As a result of prolonged strikes in the Empress and in the Model Mills at Nagpur in May 1941, the Government of the Central Provinces and Berar appointed a Textile Labour Inquiry Committee to make a survey of wages, dearness allowances and industrial strife in textile mills in the Province and to make recommendations. The Committee was composed of Mr. T. C. S. Jayaratnam, C.I.E., I.C.S., as Chairman; Messrs. R. W. Fulay, C. B. Parakh and K. D. Guha (Director of Industries) as members; and Messrs. S. H. Batliwalla, G. Mohota, R. S. Rulkar and J. N. Mujumdar as Associate Members. Mr. Guha was also Secretary to the Committee. This Committee submitted its Report to Government in October, 1941. It recommended restoration of wages to the levels of 1931-32, extended with modifications the recommendations of the Mahalanobis Committee regarding the payment of dearness allowances to all out-station cotton mills in the Province, and advised legislation for the recognition, by employers, of registered trade unions. Among other important recommendations were the creation of a Labour Office, institution of provident funds for industrial workers, payment of a regularity bonus, etc.

UNITED PROVINCES.

Following the recommendations of the Cawnpore Labour Inquiry Committee, the Government of the United Provinces sanctioned the post of a wholetime Labour Commissioner in March 1940. This Officer, like the Commissioner of Labour in Bombay, was to hold all the statutory appointments connected with Labour and he was provided with a permanent staff with effect from 1st April 1941. The main functions of the Labour Department are: 1(*a*) Prevention and settlement of industrial disputes. (*b*) Disposal of individual complaints received from workmen or their organisations. 2(*a*) Labour Intelligence. (*b*) Collection, compilation and publication of accurate statistics of labour conditions and welfare. 3. Organisation, superintendence, direction and control of Labour Welfare Work. 4. Registration of Trade Unions. 5(*a*) Labour Regulation. (*b*) Administration of Labour Acts. (*c*) Supervision and control of the office of the Chief Inspector of Factories and

Boilers, U.P., and 6. Miscellaneous work connected with Labour, *viz.*, (*a*) Emigration and (*b*) Preparation of Electoral Rolls, etc.

The Labour Department of the United Provinces began an inquiry into Rents and Density of Population in Workers' Dwellings at Cawnpore about the middle of the year 1943. This has now been completed and tabulations are under way. Further inquiries into the conditions in the Brassware Industry at Moradabad and the Scissors Industry at Meerut have also been completed. It has also agreed to conduct a Family Budget Inquiry at Cawnpore under the Govt. of India's centrally controlled cost of living index scheme. For this purpose the staff of the Office of the Commissioner of Labour has been considerably strengthened by the appointment of an Asst. Labour Officer, a Senior Investigator and five Investigators. The personnel of the United Provinces Government dealing with Labour matters consists of the Labour Commissioner, Commissioner for Workmen's Compensation, Registrar of Trade Unions, and Chairman, Sugar Commission, United Provinces and Bihar; Labour Officers and the Chief Inspector of Factories.

BIHAR.

In pursuance of the recommendations of the Bihar Labour Inquiry Committee, a Department of Labour on the lines of the Bombay Labour Office was brought into existence in Bihar with effect from 1st July 1942. This was established on a permanent basis with effect from the 15th March, 1944. The Factory and the Boiler Inspection Departments have been placed under the Commissioner of Labour since September, 1944. The Commissioner of Labour has been appointed ex-officio Inspector under the Factories Act, the Payment of Wages Act and the Employment of Children Act. The Commissioner and his two Assistants have also been appointed Conciliators under the Trade Disputes Act 1929. The Employment Bureau which was created in 1935 and was attached since then to the Director of Industries was transferred permanently to the office of the Commissioner of Labour with effect from 1st January, 1945. The Commissioner of Labour is a Commissioner for Workmen's Compensation only in contested cases. Other cases are taken up by District Magistrates who are ex-officio Commissioners for the purposes of the Workmen's Compensation Act. The newly formed Labour Department has been engaged in the settlement of industrial disputes and in the examination of the recommendations contained in the Report of the Bihar Labour Inquiry Committee. The personnel of the Government of Bihar dealing with Labour matters is as follows:

Commissioner of Labour and Employment Conciliation Officer, Registrar of Trade Unions and Chairman, National Service Labour Tribunal; Assistant Commissioners of Labour; and the Chief Inspector of Factories.

SIND.

In July 1940, the Government of Sind constituted an Advisory Board of Labour consisting of persons interested in labour matters for promoting better relations between employers and employees and to advise Government on labour matters in general. The Honourable Minister holding the Labour Portfolio is the Chairman and the Commissioner of Labour is the Secretary. This Board was reconstituted in 1944 on the basis of equal representation for employers and labour. It now has 23 members. The functions of the Board are to examine labour problems and to conduct surveys on all questions connected with Labour, to devise schemes for the development of better relations between employers and employees and to offer expert opinion and advice to Government on all important matters concerning Labour. In March 1941, the Government of Sind opened a Government Labour Exchange in Karachi and appointed the Commissioner of Labour as Labour Exchange Officer but with the opening of an Employment Exchange by the Central Government, the Provincial Exchange has been wound up.

It is of interest to observe that the Commissioner of Labour in Sind has been appointed as an Arbitrator in a number of industrial disputes. The Government of Sind has now constituted a panel of two Adjudicators for settlement of trade disputes. The personnel of the Government of Sind dealing with Labour matters is as follows:

Commissioner of Labour, Registrar of Trade Unions, Labour Exchange Officer, Chief Inspector of Shops, and Conciliator, Trade Disputes Act; Assistant Commissioner of Labour and the Chief Inspector of Factories and Boilers.

PUNJAB.

Punjab is the only Major Province in India which has so far not appointed a Commissioner of Labour. The administration of labour matters in the Province is in the hands of the Director of Industries, who is also the Registrar of Trade Unions. The personnel of the administrative staff of the Government of Punjab dealing with matters connected with Labour is as follows:

Director of Industries and Registrar of Trade Unions; Chief Inspector of Factories; Labour Officer; and the Chief Inspector of Shops and Commercial Establishments, Punjab.

OTHER PROVINCES.

In Assam the main question connected with labour is that concerning the recruitment of labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the Provincial Government are not very actively interested in the special consideration of other labour questions. Notwithstanding this however, the Government of Assam have obtained the approval of the Government of India and the vote of the Legislature for appointing the Controller of Emigrant Labour as part-time Labour Commissioner, with a whole-time Assistant. The only important event of interest that has occurred in the field of labour in Assam during 1943-44 is the creation of the Workmen's Compensation Deposit Scheme. Labour conditions in Orissa and the North-West Frontier Province are not considered such as to justify the appointment of Labour Commissioners. In Orissa, the Director of Development is the Labour Commissioner; and the Revenue Commissioner is the Registrar of Trade Unions. In the North-West Frontier Province, the Secretary to Government in the Legislative Department

has been entrusted with the work of industrial and labour disputes. In Ajmer-Merwara, the Extra Officer, Ajmer-Merwara, is Registrar of Trade Unions.

Ajmer Merwara constitutes quite an important industrial area with its cotton Mills and railway workshops. So far, however, there has not been any administrative machinery to look into the various problems of labour in that area. The Central Government have, therefore, recently, decided to form an organisation with a Labour Officer at its head to look after the welfare and various other problems relating to labour in Ajmer.

INDIAN STATES.

The rapid industrialisation witnessed in India especially since the advent of the Second World War in 1939 has not been confined to British India alone but has also extended to the Indian States as well. After the end of the First World War, there was a slight tendency for industry in British India to migrate to the States owing to the absence of labour laws and restrictive conditions of work but most of the progressive States such as Hyderabad, Baroda, Mysore, Gwalior, Indore, Travancore, Cochin, etc. have endeavoured during recent years, to bring their labour legislation into line with the Labour Laws in British India with the result that industrial workers in these States are now assured of conditions very similar to those obtaining in British India. The participation by some States in the three Conferences of Labour Ministers convened by the Government of India in the years 1941, 1942 and 1943 and their representation in the Tripartite Labour Conference and in the Standing Labour Committee created in 1942 have given an added impetus to planned industrialisation and the levelling up of conditions of work in the States with those obtaining in British India. Mysore shows the most notable advance in recent years in the field of labour legislation and one of the measures adopted in the last year or two in that State show an advance even as compared with British India. We conclude this chapter by giving below a few interesting details regarding the extent of industrialisation and the measures adopted in the administration of matters connected with labour in a few States which have supplied the necessary information on the subject.

MYSORE.

Prior to 1941, Mysore had a Factories Act, a Mines Act, a Workmen's Compensation Act and a Maternity Benefit Act. Labour problems in Mysore have, however, been brought into considerable prominence as a result of rapid industrialisation in the last few years. In addition to 28 new plants, 25 large industrial concerns of which 17 were State-aided and eight State-owned were established in the State during the decade ending 1941. The total number of large industrial undertakings stood at 330 by the end of 1943 and these gave employment to an average of nearly 86,000 workers. An amendment made to the Mysore Factories Act in 1942 extends the scope of the Act to all factories employing ten or more persons instead of 20 as before thus bringing almost all factories in the State within its purview. The Mysore Workmen's Compensation Act was considerably liberalised and the operation of the Mysore Maternity Benefit Act was extended to women employed in mines in the same year. The Code of Civil Procedure was also amended in such a way as to ensure the exemption of the wages of workers from attachment.

The most advanced piece of labour legislation in Indian States today is the Mysore Labour (Emergency) Act enacted in 1941 and placed permanently on the Statute Book in January 1942. This Act creates machinery for the peaceful and speedy settlement of industrial disputes and seeks generally to promote the welfare of labour. Among its many provisions are those relating to the setting up of a Department of Labour with a Commissioner and three Assistant Commissioners of Labour and a Court of Industrial Arbitration; the framing by the Commissioner of Labour, of Standing Orders for workmen; and the conferring of the rights of association on all labour employed in the State. The Court of Industrial Arbitration, consisting of a Judge of the High Court as its Chairman and two independent members decides industrial disputes referred to it by Government or by agreement between the parties and decides appeals from the Orders of the Commissioner of Labour regarding Standing Orders. The creation of rival unions of workers is avoided by prescribing a single Association each for industrial undertakings employing not less than 100 persons and by conferring statutory recognition on each Association immediately it is registered. By the beginning of June 1944, 52 unions with a total membership of 31,260 workers in 74 industrial undertakings covered by the Act were registered in order that war production might not be interfered with as a result of disputes between masters and men. Under the guidance of the Asst. Commissioners of Labour, the Labour Unions formed and registered under the Mysore Labour Act are reported to be directing their activities wisely for the promotion of labour welfare and the establishment of happy relationships with the managements concerned. The Government of Mysore has framed Rules for the compulsory arbitration of all industrial disputes in concerns engaged on war work.

The Government of Mysore has recently appointed a Committee consisting of representatives of employers and employees with a retired Judge of the High Court as Chairman for reviewing the labour laws in the State. The terms of reference to the Committee include introduction of legislation for employment of children in factories and an insurance scheme against unemployment of industrial workers. The Government of Mysore have also sanctioned the establishment of an Employment Exchange as an adjunct to the Labour Department to deal with the placement of unemployed industrial workers.

Mysore has been accorded one seat on the Plenary Sessions of the Tripartite Labour conference and also on the Standing Labour Committee for the year 1944-45 during which the Labour Commissioner, Mysore represents, on the system of rotation, the States of Hyderabad, Travancore and Mysore.

Uniform Work Service Rules providing for annual leave with pay, provident funds, gratuity or bonus to those not entitled to the benefits of a provident fund have been framed for all Government industrial establishments in the State. These are being liberalised and added to from

time to time. Generous rates of dearness allowances fluctuating with changes in the cost of living have been sanctioned. These benefits have been extended to State-aided undertakings and several private employers have fallen into line. Two Labour Welfare Centres modelled on the lines of those run by the Government of Bombay and the United Provinces in Bombay and Cawnpore have been started in Bangalore City. A Labour Welfare Board consisting of representatives of employers, unions of workers and local bodies entrusted in labour welfare with the Commissioner of Labour in Mysore as Chairman was constituted in December 1942 with a wide range of functions covering all matters relating to labour welfare, labour legislation, collection of statistics and dissemination of labour intelligence. The personnel of the staff of His Highness the Maharaja of Mysore's Government dealing with matters connected with labour is as follows :—

Commissioner of Labour and Chief Inspector of Factories; Assistant Commissioners of Labour; Chief Conciliator and Registrar of Associations and the Chairman Court of Arbitration.

HYDERABAD.

On the 1st April 1944, there were 668 industrial concerns subject to the Hyderabad Factories Act employing 53,295 operatives of whom 37,627 were men, 12,255 were women and 1,413 were children. In addition to the Factories Act which embodies provisions for the health and safety of labourers, there is a Mines Act (1320F.), a Boiler and Machinery Act, The Hyderabad Labour Compensation Act (1349F.), and a Maternity Benefit Act. Recent legislation includes a Payment of Wages Regulation, an Employment of Children Regulations, a Trade Disputes Order for the appointment of an Industrial Court and Conciliation Boards and a Trade Unions Act. Debt Conciliation, Land Mortgage and Money-Lenders Regulations have been framed for the protection of agriculturists and agricultural labour. Hours of work in the majority of the factories do not exceed 54 or 60 per week and in Government concerns are limited to 7 to 8 per day. Strikes and lockouts have been made illegal unless 21 days' notice has been given.

H. E. H. The Nizam's Government have appointed a Committee with Mr. Justice K. C. Naik as Chairman with the same terms of reference and objects as the Labour Investigation Committee appointed by the Government of India to make inquiries into Measures of Social Security. In the new scheme of reforms which has been drawn up, the Government has reserved two seats for labour representatives in the Legislative Council and has decided to form a Board for safeguarding the interests of the labouring classes. A departmental Employment Bureau has been created for solving the problem of unemployment. A Statistics Act, much wider in scope than the Industrial Statistics Act of British India has also been enacted. The Department of Statistics (Director: MAZHAR HUSAIN) has instituted quinquennial inquiries into wages and conditions of employment of agricultural and industrial labourers since the year 1920 and the first printed Report on the Labour Census was published in 1935. The Second Report on Labour Wages Census (Rural and Urban) 1940 has also been published. A scheme for Inquiries into Family Budgets and the compilation of Cost of Living Indexes in several industrial centres of the Dominions, Hyderabad City (including Secunderabad), Warangal, Nalzamabad, Nander, Aurangabad and Gulbarga is in progress of completion. A collection of Statistics Act was adopted early in the year 1945. This is the most advanced piece of legislation of its kind yet adopted in India and is much wider in scope than the Industrial Statistics Act, 1942. It is expected that cost of living indexes for all these centres will be worked out by the end of the year 1945. The personnel of the staff of H. E. H. The Nizam of Hyderabad's Government dealing with matters connected with Labour is as follows :—

Minister in charge of Labour; Secretary for Labour; Commissioner of Labour; Labour Officer and the Labour Welfare Inspectors.

BARODA.

The total number of registered factories in the Baroda State on the 31st July, 1944 was 170 of which 80 were perennial and 90 seasonal. The total number of persons employed in all factories employing more than 20 persons was 41,771. Baroda was one of the first states in India to enact a Mines Act. The Baroda Mines Act, 1908 contains provisions in regard to health and safety of workmen employed in the Mines. As far as other Labour Laws are concerned the Government of H.H. The Maharaja Gaikwar of Baroda has adopted, with certain changes to suit local conditions, the Indian Factories Act, 1934, the Workmen's Compensation Act, 1923; the Trade Disputes Act, 1929; the Trade Unions Act, 1926; the Payment of Wages Act, 1936; and the Bombay Maternity Benefit Act, 1929. Under the Baroda Factories Act, the maximum permissible weekly hours of work are 60 for perennial factories and 66 for seasonal factories as against 54 and 60 respectively in the Indian Act. The Baroda Act makes no provision for weekly holidays but it provides for at least 52 holidays in a year and a minimum of four holidays in a month is obligatory. Sections 78 and 79 of the Indian Act have been omitted. The Workmen's Compensation Act and the Rules framed thereunder have been adopted *in toto*. In the Baroda Maternity Benefits Act, the benefit is to be at the rate of six annas a day as against 8 annas a day as in the Bombay Act. Sections 66(3) and 18A (relating to the appointment of Conciliators) have been omitted from the application of the Trade Disputes Act, 1929. The Baroda Trade Unions Act has important variations from the British India Act on which it has been modelled; (1) No Associations or Unions of Government Servants, whatever be their objects, are permitted; (2) the forming, by Unions, of political funds is not recognised; (3) the proportion of persons connected with an industry which is covered by a Union to outsiders on its executive has been fixed at 66⅔ and 33⅓ per cent. respectively; and (4) Section 30 of the British Indian Act has been omitted. Under the Baroda Payment of Wages Act, all wages have to be paid before the expiry of the tenth day following the period for which they fall due. In the application of Rule 81A of the Defence of India Rules, the period of notice required for the declaration of a strike or a lock-out is six weeks.

A Labour Officer whose main duty was to endeavour to bring about settlements in labour disputes was appointed in the year 1938. In addition to conciliation work he is entrusted, as Special Registrar of Co-operative Societies for Workers, with the work of organising co-operative Societies and other welfare Schemes with the help of employers. In the year 1943, the Government of Baroda State instituted an inquiry into the general financial condition of the cotton mills in the State and the conditions of labour employed in them with special reference to recruitment, wages, hours of work, labour welfare and efficiency.

With a view that the increased earnings accruing to industrial workers in the State as a result of war conditions might not be frittered away in drink, etc., the Baroda Government decided to start Co-operative Thrift Societies for the workers. The Government have guaranteed the security of all deposits made in such Societies. By the end of February, 1945 twenty such Societies with a membership of 24,301 workers had been established in the State. The total amount of savings as at the same date amounted to Rs. 2,19,962. The personnel of the Government of Baroda dealing with administrative matters connected with Labour is as follows:

Director of Labour and Registrar of Trade Unions; Labour Officer, Inspector of Factories under the Payment of Wages Act and Special Registrar of Co-operative Societies for Labour and the Inspector of Factories.

INDORE.

In October 1943, Indore was the fifth largest centre of the cotton textile industry in India with seven mills having 213,446 spindles and 6,301 looms. The total number of factories on the register on 1st October 1944 was 485 of which 322 were perennial and 163 seasonal. These provided employment for 30,297 workers in all of whom 26,377 were employed in cotton mills Labour legislation in Indore is almost parallel to that in British India and includes Factories, Workmen's Compensation, Trade Unions' and Maternity Benefit Acts. The Indore Trade Disputes Act provides for the appointment of Courts of Inquiry and Boards of Conciliation to deal with disputes and also for a Labour Officer to secure the maintenance of harmonious relations between the workers and their employers. Standardisation of wages has been secured in cotton textile mills and labour has been decasualised by the introduction of the *Badli* Control System on the lines adopted by the Millowners' Association, Bombay. Safety Committees to prevent accidents in factories have also been established. MUSAHIB-I-KHAS BAHADUR CAPT. H.C. DHANDA, B.A.Hons. (Oxon.), Bar-at-Law, Commerce Minister, Holkar State, is the Minister in charge of Labour; K. S. SRIKANTAN, M.A., F.R.E.S. (Lond.), Director for Labour and Information; R. S. DATE, B.A., LL.B., Government Labour Officer; RAI RATAN V. N. SHERLEKAR, L.M.E.A. M.Tech.I., is Registrar of Trade Unions and Inspector of Factories.

COCHIN.

Unlike Mysore, Baroda and Indore, the large industrial population of Cochin State is organised on a cottage basis. The number of concerns on the Factory Register at the end of the last official year (18th August 1944) was 103 employing 12,806 persons. Today Cochin State has all the labour laws which have been enacted in Indore with a Dock Labourers' Act in addition. Recent additions include an Employment of Children Act and the Employee's Liability Act. The administration of labour matters is generally in the hands of the Director of Industries and Commerce who is also the Labour Commissioner, the Registrar of Trade Unions and Conciliator, under the Trade Disputes Act. The Factories Act and the Workmen's Compensation Act are, however, under the immediate administrative control of the Chief Engineer, Public Works Department and the District Magistrate of the State respectively.

THE FUTURE

The year 1946 has once again witnessed the coming into power of Popular Ministries in all Provinces of India. At the time of writing, India is also on the eve of getting independence. Thus, a new era is dawning in this country and this consciousness has not left labour unaffected.

Just as during its regime in 1937-39 the Popular Ministries all over the country displayed great enthusiasm in bringing about the amelioration of the conditions of industrial labour within a few months of their coming into power they have shown similar enthusiasm once again. In this respect, Bombay seems to have taken the lead again. The Ministry in Bombay has a large and ambitious programme for the amelioration of the conditions of labour. The Bombay Industrial Disputes Act, it is understood, is being revised and a Special Officer has been appointed to improve the provisions of the Shops Act. Madras proposes to eliminate as much as possible any industrial strife and the Ministries in most of the Provinces are taking every possible opportunity to see to it that production and the earnings of the workers are not allowed to suffer because of protracted strikes and are anxious to intervene at the earliest possible opportunity.

Despite the efforts that are being made to intervene in disputes, the country is faced today with tremendous industrial unrest in several industries including Government concerns such as Railways, the Postal Department, etc. This is a tendency noticeable not only in this country but in many parts of the World including the U.S.A. Because of the changed outlook on labour unrest we have fortunately been able to avert in this country a complete deadlock of our communications and the threatened All-India Railway Strike has been amicably settled. In spite of the early intervention of the Government, however, and the appointment of an Adjudicator, the citizens of this country had to undergo untold suffering on account of the somewhat protracted strike of Postal workers.

To meet post-war conditions of work and wages, the Government of India, have recently appointed a pay commission, consisting mainly of popular representatives. The commission is charged with the duty of making recommendations relating to pay and conditions of service of Government employees—both manual and others. Its recommendations are likely to have important repercussions on the employees of private industries as well.

CIVIL AVIATION.

The development of internal air services in India was first essayed by Lord (then Sir George) Lloyd during his Governorship of Bombay (1918-23). The first air service was organised by the Government of India between Karachi and Bombay and was operated by the Royal Air Force. It was purely a Government venture and was established as a temporary and experimental measure during the fair-weather season of 1920, with the object of testing the extent to which an airmail service was likely to be used by the public. It was closed down as sufficient data as to running expenses had been collected and its continuance as a purely commercial concern was not advocated.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general development of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aviation enterprise gradually increased. The inauguration of French and Dutch air services across India, as well as the institution of a regular weekly service between England and Karachi, and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to India, stimulated both Government and public opinion. India had become a party to the International Air Convention and under this she was under a moral obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for some time strongly pressed Government to institute a practical system for the training of young Indians in civil aviation. They foresaw that the development of civil aviation in India was only a matter of time.

The reflection of this foresight is mirrored today in the organisation of the trunk air lines of India. The aerodromes and landing grounds on the main air routes are controlled by Indian Aerodrome Officers who are responsible for their safe operation, while the flying personnel on the internal air routes is 90 per cent. Indian. On the engineering side Indians are now taking their places not only as Assistant but as Chief Ground Engineers to internal operating companies and are already finding their way to responsible positions as Aircraft Inspectors with the Directorate of Civil Aviation.

Owing to war, flying had to be confined to war work. But the war has saved India two generations of gradual progress, since numerous aerodromes built for defence are now at hand, as also facilities, including wireless and meteorology. The developments as a result of the war have provided, in addition to routes traversed before the war, daily services from Peshawar to Madras *via* Lahore, Delhi, Nagpur and Hyderabad, and from Bombay to Calcutta, Bangalore and Delhi, from Madras to Calcutta, and from Delhi to Calcutta.

Development of Indian Air Services.—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal air services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was, on 30th December, 1929, extended to New Delhi, mails from and for Europe being carried to and fro each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Government of India and that British Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but technically the service from Karachi eastwards belonged not to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with British Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mail. Passengers were also carried by this service. This, like the earlier special arrangement with British Airways, was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment pending the development of a permanent scheme. Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade-work carried out by Col. Shelmerdine before he resigned his appointment as D.C.A. in order to take up the corresponding post in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by British Airways Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind, they would have been unable to prevent British Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either through the development of private enterprise or through the institution of Government owned services.

The acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi-Calcutta service in 1931. Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Countess of Willingdon, who had newly arrived in India on the appointment of the Earl to be

Viceroy. The machine continued in Their Excellencies' service until 1934, when a new up-to-date aeroplane was purchased for their use and their old one was retained for the use of senior Government officials.

Efforts to attain the desired result were revived successfully in 1933. Arrangements were made with the British Government and British Airways, Ltd., for the extension of the London-Karachi air service across India from Karachi to Singapore, as a link in the England-Australia air service. A private company called The Indian Trans-Continental Airways, Ltd., was formed with a rupee capital and a majority of Indian Directors, in which British Airways, Ltd., held 51% of the shares, Indian National Airways, Ltd. 25 per cent. and the Government of India 24 per cent. This Company then operated jointly with British Airways a weekly service from Karachi to Singapore, where it connected with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways, Ltd. was established largely through the efforts of Mr. R. E. Grant Govan, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways, and to develop feeder and other internal air services in North India. They opened a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten year contract with the Government of India they also instituted a weekly service from Lahore to Karachi, to link with British Airways' London-Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935, owing to lack of public support.

Before all these developments, however, the first move had taken place in Western India. Through the enterprise of Tata Sons Ltd., under a ten year contract with the Government of India, a feeder service was started in 1932 between Karachi, Bombay and Madras, connecting at Karachi with the London-Karachi servic. From the beginning of 1935, British Airways London-Karachi service, and with it the Trans-India service to Calcutta and the feeder services, Karachi-Lahore and Karachi-Bombay-Madras, were operated twice weekly. The second trans-India service was extended to Australia in 1936.

Empire Air Mail Scheme.—The initiative in this development was taken by His Majesty's Government. In September 1936 an agreement was reached with the Government of India and the Government of India simultaneously negotiated with the Government of Ceylon for the extension of the Karachi-Madras service to Colombo. The new services were inaugurated on the 28th February 1938, with four services a week each way from London to Calcutta. The frequency of the two feeder air mail services in India, viz., Karachi-Madras-Colombo and Karachi-Lahore was simultaneously increased to four, each service maintaining connection with the easterly and westerly flights of the main trunk service. The frequency was increased to five when the services in the Australian section were augmented at the end of July, 1938, and all first class mails to Empire participating countries were conveyed by air. On the empire system of air services, Imperial Airways and its associated companies, including Indian Trans-Continental Airways, Ltd., flew a total distance of approximately 7,000,000 miles in 1938 as against 4,300,000 in 1937 and the total load carried rose from 6,315,400 to 12,392,000 ton-miles. In the early months of 1939, 550 tons of mail consisting of 50,000,000 letters were carried, each letter travelling on an average 4,750 miles.

The Empire Air Mail scheme was suspended in September, 1939, on the outbreak of the War with Germany, but a restricted service was maintained until June, 1940, when, on Italy's entry into the war, air mails to the United Kingdom were totally suspended. In December 1940, the possibilities of introducing a direct air link between Britain and Durban were investigated and a "short circuiting" route was inspected by Major J. R. McCrindle, Deputy Director-General of the British Overseas Airways. Air Service to England was renewed in August 1945.

India-England Airgraph Service.—This new service was inaugurated on February 2, 1942. The airgraphs were photographed at Bombay on a miniature film measuring about half an inch square. The films were sent throughout by air from India to the United Kingdom, where a photograph facsimile, measuring about five inches by four inches, of the original letter, was made from the film and delivered to the addressee by the British Post Office enclosed in a cover. The rate of postage originally fixed at fourteen annas was reduced to eight annas on March 2. The airgraph service was discontinued in July 1945.

Internal air services.—In 1937 Messrs. Tata Sons, Ltd., established a service between Bombay and Delhi, calling at Indore, Bhopal and Gwalior. This service operated twice weekly during the Delhi season. It was, however, suspended in 1943. From 1st January 1946 Tata Airlines resumed commercial operations on this route on daily frequency substituting Ahmedabad for Indore, Bhopal and Gwalior.

The Air Services of India Ltd., Bombay, inaugurated in November, 1937, an air service from Bombay to Bhavnagar, Rajkot, Jamnagar and Porbandar in the Kathiawar States. The service was terminated in 1940. The twice weekly Bombay Poona Kolhapur Line was also terminated due to War in 1940. Air Services of India have again commenced operations under new management since early 1946, and are now operating a daily service Bombay to Karachi *via* Bhuj and Jamnagar and a twice weekly service from Bombay to Lucknow *via* Bhopal and Cawnpore.

Indian National Airways are now running the following services on the frequencies noted against each of them:

1.	Delhi-Karachi *via* Jodhpur ..	Daily.
2.	Delhi-Calcutta *via* Cawnpore and Allahabad	Daily.
3.	Delhi-Peshawar	Three times weekly.
4.	Delhi-Ahmedabad *via* Lahore, Bikaner and Jodhpur ..	Twice weekly.
5.	Delhi-Lucknow *via* Bareilly ..	Daily.

The K. L. M. were operating once a week between Lydda (Palestine) and Sydney (Australia). They suspended their services across

India in view of the international situation. After the entry of Italy into the war, Lydda, in Palestine, became the westbound terminus of the service.

During the period of the war Messrs. Tata Sons Ltd. under the title of Tata Air Lines and Indian National Airways Ltd. entered into an agreement with the Government of India for the operation of various internal air routes for the benefit of the War Department. The entire capacity on these services, was placed at the disposal of the War Department who met the entire cost of operations from Defence estimates. Civilian traffic was carried only when space became available after meeting the demands of the military traffic. Operation on a commercial basis was resumed by their lines from the 15th of January 1946.

The Air Transport Licensing Board.—The Air Transport Licensing Board has been established under the Chairmanship of Mr Justice Din Mohammad and has begun the examination of applications for licences.

Aeronautical Technical Institute.—Since 1937 the Air Services of India, Limited, run the Aeronautical Technical Institute at Jamnagar which has provision for training a limited number of students as ground Engineers according to the course prescribed for 'A' and 'C' licences and also for 'B' and 'D' licences issued by the Government of India.

Indian Air Races.—The first Indian Air-race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willingdon) and the Countess of Willingdon, of a Challenge Trophy for such a race.

There was no race in 1934. One was programmed for December 1934, to be flown from Calcutta to Bombay with a halt for one night at Cawnpore. Six months' notice was given and substantial cash prizes, in addition to the Viceroy's Challenge Trophy, were offered, but only six entries were received. The Aero Club Committee in their announcement to this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added, "Air racing, like every other form of racing, costs money and can only be encouraged by the patronage of wealthy sportsmen and in India this has been the exception rather than the rule up to now." The only funds regularly available for the purpose are the interest on one lakh of rupees given by Sir V. Sassoon to form an Irwin Flying Fund for flying sport prizes. The fund is held by a Trust the members of which are the Director of Civil Aviation and the Chairman of the Aero Club.

The club held in February, 1936, a two-day race from Madras, *via* Bombay to New Delhi. Entries were received not only from different parts of India but from abroad. The race was a great success. It was won by an Indian amateur competitor and was regarded as having contributed in an important degree to general air-mindedness in India.

All-India Air Rally.—On the 5th and 6th December 1938, an All-India Rally was held at Karachi on the occasion of opening of the newly constructed Air Port Building. His Excellency the Governor of Sind performed the opening ceremony and gave away the prizes to the winners.

All flying clubs in India affiliated to the Aero Club of India and Burma participated. The Viceroy's Cup given for the best aggregate results obtained by one of the competing clubs was won by the Karachi Aero Club. The Sir Victor Sassoon Challenge Trophy given for the best all round progress during the year was awarded to the Karachi Aero Club.

International Flights.—In 1938 there were 21 international flights to, from or across India by non-Indian Aircraft and one flight to India by an Indian Aircraft.

Two Royal Air Force aeroplanes succeeded in flying non-stop from Ismailia (Egypt) to Darwin (Australia), a distance of 7,126 miles, which was flown in just over 48 hours at an average speed of 149 miles per hour. A third machine landed owing to lack of fuel only a few hundred miles short of its destination. These flights were aided by the aeronautical wireless and meteorological services in India.

A non stop flight in an Arado light aeroplane from Benghazi (Tripoli) to Gaya was made at the beginning of January 1939 by the German pilots, Lieutenants Pulkowski and Jennet. The distance covered was approximately 4,000 miles and the feat was claimed to be a record for light aeroplanes. Lieutenant Pulkowski unfortunately met his death in an accident to the aeroplane at Madras.

Two French military aeroplanes crossed India in January, 1939, on their way to Indo-China.

Record flights were made in March, 1938, by Flying Officer A. E. Clouston and Mr. V. Ricketts from England to New Zealand and back, and in April 1938 by Mr. H. F. Broadbent from Australia to England.

Flying by Private Owners.—While no flights by Indian private owners were noteworthy from a record-breaking point of view, three of them deserve mention. A private owner in a two-seater Hornet Moth flew with a passenger from Calcutta to Batavia and back. Inclusive of two days' sight-seeing in Batavia and a day's halt at Singapore, only 14 days were spent on the round journey. The same return trip by boat takes about one month.

The second flight was from Lahore to Srinagar and back. The pilot claimed to be the first private owner to take a single engined aeroplane into Kashmir. In order to get above the clouds over the Pir Panjal Range he found it necessary to fly as high as 19,000 feet.

A third private owner flew his two-seater Miles Hawk on a business trip from North Bihar to Rangoon and back. His flying time to Rangoon was 8½ hours as against 4 days by train and boat. He stated that his actual expenses

in fuel worked out to Rs. 130 for the double journey. As he and his passenger shared the expenses it cost them Rs. 65 each as against a fare by train and boat of Rs. 450.

Night Lighting Equipment.—The lighting installations continued to give excellent service and were used with increasing frequency. At Karachi for example, the number of arrivals and departures between sunset and sunrise on regular air services increased from 163 in 1937 to 743 in 1938. Revenue from the extra fees charged for night landings at all lighted aerodromes amounted to Rs. 3,581 in 1938 as against Rs. 3,041 in 1937. The value of the free facilities given to air mail contractors in respect of such fees was Rs. 4,053 and Rs. 2,643 respectively. The Electrical and Mechanical staff which was responsible for operation and maintenance was recruited up to full strength and the entire work of maintaining ground lighting installations was undertaken departmentally. With the exception of temporary breakdowns of the beacons installed at Larkhana and Nawabshah on the Karachi Lahore route, there were no instances of failure of lighting equipment.

Several improvements were made to lighting systems. At Dum Dum and Allahabad flood-lights were resited to conform with other improvements effected to the aerodrome approaches. At Delhi, Allahabad, Cawnpore, Bombay and Hyderabad (Sind) the substitution of red for orange boundary lights on sections of the aerodrome boundary which were unfavourable for take-off and landing was completed.

Arrangements were made with the Chief Inspector of Lighthouses for trials to be made at Karachi to determine the effectiveness of the Manora marine light as an air beacon. Karachi Airport was already provided with a location beacon of Neon type affording guidance to pilots within a range of 25 miles, when flying at a height above the beam of the Manora light.

On the Karachi-Jacobabad route, the ground lighting installations at Jacobabad and Pad Idan were completed and the airway beacons at Nawabshah and Larkhana have been operating regularly. Indian National Airways found these beacons very useful during the short days of the cold weather season when early departures and late arrivals at Karachi have necessitated a certain amount of night flying. Lighting equipment on the Karachi-Bombay route is also completed.

Most of the Civil Aerodromes were placed at the disposal of the Air Forces during the war. These are now being gradually taken over. The R. A. F. are however still incharge of Flying Control at most of the Civil Aerodromes and the night landing facilities are, therefore, on R. A. F. standards. The recommendations made by the Provisional International Civil Aviation Organisation will be given effect to as soon as finally approved.

Aerodrome and Route Traffic Control.—Prior to the outbreak of hostilities in 1939, the progress of development of Air Routes and Aerodromes had been comparatively slow. There were 12 Aerodromes in all with staff and other facilities. For Air Navigation during the night, there were 14 Beacons along the outes.

The demands of the war brought about a complete change in the picture. The development of Aerodromes was rapid and improvements in facilities remarkable with the result that at the end of the war, India had several hundreds of Aerodromes, many of them with 2,000 yards concrete runways. Under the present plans, Aerodromes have been classified into 4 categories, International, Major, Intermediate and Minor. When the post-war plans of the Government of India fully mature, there will be 4 International, 10 Major, 32 Intermediate and 57 Minor Aerodromes in India. The International Aerodromes—Karachi, Delhi, Calcutta and Bombay—will be in a position to cater for all types of International traffic.

Air Traffic Control.—The demands of the present Air Traffic Control are so exacting that Air Traffic Control is fast developing into a highly specialised organisation with elaborate equipment and highly trained staff.

During the war, many of the Civil Aviation Officers joined the Air Forces and worked in Flying Control at R. A. F. Aerodromes. These Officers have now returned and form the nucleus of the post-war Flying Control organisation.

Trans-India Sea-plane Route Organisation.—There has been a change in the site of Sea-plane base at Karachi. Korangi Creek which is only a few miles from Karachi Harbour has been selected as the site for this new sea-plane base. There was some doubt about the suitability of this site during monsoons. Operations during this year have not offered any difficulty and it is expected that Korangi Creek will prove to be a suitable base for all the year round sea-plane operations.

At Allahabad also, a seasonal change of site has been found necessary, due to the lack of enough water in the river during the summer months, but on the whole the Allahabad Flying Boat base has given satisfactory service.

Communications Services.—The Civil Aeronautical Communication Service now comprises fifteen radio stations, namely, Ahmedabad, Allahabad, Bangalore, Bombay, Calcutta, Chittagong, Delhi, Gaya, Hyderabad, Jharsaguda, Jodhpur, Karachi, Lahore, Madras and Nagpur. In addition, there are two stations at Gwalior and Raj Samand which are at present maintained and operated on behalf of the Ministry of Civil Aviation and two stations at Bhuj and Jamnagar maintained and operated under arrangement with the State authorities. These stations provide communication facilities for aircraft and also carry out point-to-point services. Direction finding facilities on the international aeronautical frequency of 335 Kc's are provided at all the stations above mentioned with the exception of Jharsaguda, Bhuj and Jamnagar. High Frequency direction finding facilities are also provided at Ahmedabad and Jharsaguda and a medium frequency four course radio range at Karachi.

Under the Civil Aviation post-war plan, aircraft and point-to-point communication facilities and navigational aids will be installed at approximately 50 aerodromes in India. These will cover international trunk routes and internal routes and will be equipped with

modern type equipment. Radar navigational aids will be installed at the international aerodromes, i.e., Karachi, Delhi, Calcutta and Bombay.

Meteorological Services.—Further improvements were effected by the India Meteorological Department in the Meteorological arrangements for aviation. New double-flight pilot balloon observatories were established at Raj Samand and Gwalior to meet the requirements of the flying boat service. The pilot balloon and current weather observatory at Gwadur was transferred to Jiwani; the pilot balloon and current weather observatories at Allahabad and Alipore (Calcutta) were moved to the aerodromes; and a temporary observer was posted at the sea-plane base at Calcutta for the issue of special reports, particularly regarding visibility for the benefit of the flying boat service. On the Karachi-Colombo route, the observatories at Bhuj, Nalegaon and Hyderabad (Begumpet) began taking regular afternoon pilot balloon observations and arrangements were made for an additional pilot balloon ascent at Ahmedabad in the early morning. The observatory at Bangalore also commenced an additional daily pilot balloon observation in the afternoon.

A new aviation section has been set up at the Upper Air Office, Agra, which will be later transferred with the upper Air Office to Delhi. This aviation section will be responsible for the organisation of the meteorological service on air routes, and, when transferred to Delhi, will maintain liaison with the Civil Aviation Department.

The International codes have been adopted for all current weather reports, including reports of dangerous phenomena and improvement thereof. New editions of the pamphlet on meteorological organisation for airmen and of the Aviation Weather Codes (Pocket Card) were issued.

On the Trans-India air route, the routine arrangements for the issue of forecasts, upper wind and current weather reports by W/T to all main aerodromes and to aircraft in flight were continued. Airmen are able to refer to the latest report on Weather Notice Boards at aerodromes or to get reports by W/T while in the air at routine times and at other times on requisition. On other routes weather reports are prepared by the Meteorological Office to suit the time-table and needs of the air services.

Arrangements have been made for the routine distribution of pilot balloon and current weather reports along the Karachi-Colombo route and the system is working satisfactorily.

Aeronautical Maps.—The preparation of a series of aeronautical maps for India on the scale of 1/1,000,000 has been undertaken by the Survey of India. Hitherto, there have been two series of general maps on this scale, namely the "Carte Internationale" series and the "India and Adjacent Countries" series. In order to facilitate the work of keeping the maps up-to-date, it has been decided to concentrate in future on one series only. The "Carte Internationale" has been selected and this will be the basis of the new aeronautical maps. As an essential first step the map sheets are being completely revised and reprinted in turn. As each sheet is completed a special edition will be prepared on which will be surprinted air information conforming so far as possible with the recommendations for the International Local Aeronautical Map of Annexe F of the International Convention.

The Aeronautical Information comprises details of aerodromes and landing grounds, wireless and meteorological facilities, obstructions to air navigation such as high factory chimneys and power lines, air and marine lights, prohibited areas, etc.

A total of 23 accidents occurred in the calendar year 1941, 21 of which were flying accidents and 2 ground accidents. The corresponding totals for 1939 and 1940 were 27 (26 flying accidents) and 17 (16 flying accidents) respectively.

The total hours flown in 1941 by Indian commercial aircraft amounted to 32,928 hours, equivalent to 31,55,457 miles. Of this, 10,515 hours were flown in regular air transport with only one accident.

Aircraft Manufacture.—The demand for aircraft caused by the war led to the exploration of possibilities of aircraft manufacture in India and two Indian industrial concerns evinced interest in the project. The matter was taken up seriously by Mr. Walchand Hirachand. As a result, The Hindustan Aircraft Company with a capital of Rs. 40 lakhs was floated in December, 1940. The Company decided to establish a factory in Bangalore. The choice of Bangalore was prompted by the availability of cheap electricity and high grade steel from the Bhadravathi Iron and Steel Works. Subsequently, the issued share capital of Rs. 40 lakhs, of which one-half was subscribed by the Mysore Government, was raised to Rs. 75 lakhs and instead of only two parties, the Mysore Government and Mr. Walchand Hirachand, Government of India also subscribed to the Company's capital. Latterly, however, the Government of India took over the Company for the duration of the War.

India's first plane came out for test flight in July, 1941. The aircraft assembled in India was the Harlow, an up-to-date type of aircraft having the same characteristics as modern fighters and bombers. It was a low-wing single-engined monoplane with constant speed propeller, flaps and retractable undercarriage.

Aircraft Industry.—In March 1946 the United Kingdom Aircraft Mission visited India and in accordance with their recommendation the Government of India decided to establish a national aircraft industry in India, with a 20-year target of complete self-sufficiency, for building aircraft needed for the Royal Indian Air Force as well as for civil aviation.

The Mission which consisted of Mr. J. V. Connolly and Mr. L. R. Barrett from H. M. G.'s Ministry of Supply and Aircraft Production and Mr. J. D. North and Mr. S. P. Woodley of the Society of British Aircraft Constructors, made an intensive survey of the potentialities for the manufacture of aircraft and its ancillary products. They visited the aircraft repair and maintenance factories at Barrackpore, Poona and Bangalore as well as the Ordnance factories at Cawnpore, Cossipore and Jubbulpore.

After examining the three sites at which aircraft repair and maintenance had been carried on during the war—at Barrackpore, Poona and Bangalore—the Mission recommended that aircraft production should, initially be started in the Bangalore factory, as it is the only one which is still a working aircraft unit, has the longest experience of aircraft work and the greatest number of staff and operatives experienced in working as a team on aircraft production. It has to its credit the design, execution and successful flight of an entirely original prototype glider. Moveover, research and training facilities are available close by at the Indian Institute of Science at Bangalore.

Due to the comparatively small initial demand for aircraft, only one factory was recommended in the first instance; but at a later stage of development, production might be started at other centres.

Dealing with the probable costs, the Mission reported that the scheme for this industry was in a state which prevented accurate estimates being made until the final programme of production was decided upon. They considered however, having regard to the assets already available in the Bangalore factory and the probable production programme, that an extra expenditure of Rs. 13 lakhs should meet all the requirements for plant for the next five years.

This does not include capital expenditure on engine development which is likely to be heavy. But on this aspect of the industry, the Mission did not consider themselves fully qualified to report and the matter is being separately pursued. The Mission on the basis of their present calculations did not consider that the running cost to the taxpayer of the scheme suggested by them for the first quinquennial period need exceed Rs. 130 lakhs. This will be the net additional cost over and above what India would have paid if the aircraft were purchased overseas. As against this must be set off the fact that India would have the nucleus of an aircraft industry including trainers, technicians, and designers.

On the Mission's recommendations Government decided that a Board of Directors should be reconstituted and should include three Technical Expert Directors, namely, a Managing Director, a Technical Director, and a Works Director from the U. K. and a Finance Director from India as whole-time executives, as no qualified Indians for the first three posts were at present available.

An important part of the general plan for the development of the industry will, however, be to train Indians for filling such posts. The other Directors will be part-time officers and will consist of the Director-General of Civil Aviation or other expert representative of Government's aviation interests, a representative of the Industries and Supplies Department, a nominee of the Mysore Government (if they still retain a financial interest in the factory) and two Indian industrialists.

The Mission stressed the advantage of having two non-official Directors on the Board, even though the Company would be one entirely financed by Government. They felt that the association in this manner of private industrialists who have rendered important services during the war would be in the wider national interest.

The Mission attached particular importance even at the initial stage to the designing of aircraft, as only by this means would the necessary confidence and skill be obtained by Indian staff. The Government have accordingly decided that the design of an original prototype aeroplane specifically suited to Indian conditions should be taken up immediately.

The Mission gave a detailed report on some aspects of technical training including that available at the Indian Institute of Science, Bangalore, and also on labour training. They considered the facilities available at Bangalore promising and suggested ways and means for their development and co-ordination with the requirements of the industry.

Trainer Aircraft.—Government have decided that steps should be taken forthwith for the production of trainer aircraft required for the R.I.A.F. It is anticipated that the first aircraft will come out of the Indian factory in less than 18 months from now.

The size of Hindustan Aircraft Ltd., makes some complementary manufacture side by side with aircraft production desirable during the first quinquennium. One such is the manufacture of railway coaches and the Railway Department have agreed to place orders for coaches for the next five years subject to the type and price being found satisfactory. Their first order will be for 100 coaches, which will probably be the maximum yearly capacity of the factory.

Parachute Manufacture.—The possibility of making complete parachutes in India was investigated at the instance of the Supply Department, Government of India. The Department asked the Controllers of Supplies in the provinces to investigate the availability of materials and facilities for their manufacture. The findings being favourable, a special factory for the fabrication of parachutes was put up about the middle of 1942. It is already in full production.

India's filature silk reeling capacity in two provinces—Madras including Mysore and Bengal—is also being multiplied by a Rs. 18,50,000-scheme at the cost of His Majesty's Government to effect a change-over from hand-reeling to machine-reeling methods. In Madras the scheme will be primarily Government-worked and controlled. In Mysore, where it is in large part a village industry, the scheme will be partly State-controlled and partly in the hands of private enterprise, while in Bengal private parties will be helped by loans. The installation of a Test House and a silk conditioning house are part of the scheme for increased production in future years.

The biggest order yet for silk yarn for parachute cloth was successfully negotiated, as also orders for other components, such as tape and light and heavy threads. Several thousands of parachutes were involved and the recent orders for components placed with the trade in India with a substantial portion of war requirements.

A. *Trans-Continental Air Routes Across India.*—Air services operating from Europe to and across India to the East were as follows:—

(1) British Airways and Indian Trans-Continental Airways Limited.

Until September, 1939, the two companies abovementioned operated five services each way per week between India and England. Of these, three services were operated by British Airways Limited with 'C' Class Flying Boats between Southampton and Sydney. The other two were operated jointly by British Airways and Indian Trans-Continental Airways Limited between England and Calcutta. The England-Australia air service was suspended in June, 1940, on Italy's entry into the war, but a weekly service was established between South Africa and Australia *via* Egypt. A Government *communique* from Simla, issued on July 11, 1940 announced that arrangements had been made for the transmission of mails by air to the United Kingdom and European countries with which communication was still maintained, by the Sydney-Durban service up to Durban and by sea the rest of the way.

(2) K.L.M. and Air France.

K.L.M. (Dutch) operated a regular service thrice per week from Amsterdam to Bandoeng, and Air France once weekly from Paris to Hanoi. Both the services operated to a 24 day schedule from Europe to Karachi and their route across India was from Karachi *via* Jodhpur and Allahabad to Calcutta. K.L.M. operated a weekly service between Lydda (Palestine) and Sydney (Australia). Both these services have now been suspended.

B. *Indian Air Services*:—There are three companies operating scheduled air lines in India. They are:—

(1) *Tata Air Lines, Bombay*, commenced operating a weekly air mail service between Karachi and Madras in 1932, connecting at Karachi with British Airways' service. The service was duplicated from January 1935.

With the introduction of the Empire Air Mail Scheme the service was extended to Colombo and increased in frequency to four times per week. The frequency was further increased to five times per week from the end of July 1938, and later reduced to four. The route is from Karachi *via* Bhuj, Ahmedabad, Bombay, Hyderabad, Madras and Trichinopoly to Colombo. In 1935, Tata Sons established a weekly service to Trivandrum from Bombay *via* Goa and Cannanore connecting at Bombay with one of the Karachi-Madras services. This service has since been extended from Trivandrum to Trichinopoly connecting there with one of the Karachi-Colombo services. From November 1937, the Company began a bi-weekly service from Bombay *via* Indore, Bhopal and Gwalior to Delhi. The Bombay-Trivandrum-Trichinopoly and the Bombay-Delhi services which used to be operated only during the fair season have, however, been suspended for the duration. Passengers, freight and mails are carried on all these services.

(2) *Indian National Airways Limited, New Delhi.*—This company began operations in December 1934 and operated the following services:—Delhi-Lahore-Karachi, every Tuesday: Karachi-Calcutta, *via* Lahore and Delhi, Sundays and Mondays; Calcutta-Karachi, *via* Delhi and Lahore, Thursdays and Fridays. The services between Karachi, Lahore and Delhi were, however, discontinued in January 1942. These have now again been resumed.

They are the principal agents in India for the British Overseas Airways Corporation and Indian Trans-Continental Airways, Ltd., and maintain a fleet of large and small aircraft for charters.

(3) *Air Services of India, Limited, Bombay.*—This company was formed during 1936 and opened a regular service from Bombay to the Kathiawar States in November 1937. It was further extended to Cutch in January 1940. This extension was inaugurated by Shreemant Maharajkumar Vijayrajji Saheb of Cutch. The service has now been suspended.

(4) *Nizam's Airways* inaugurated a permanent air service between Hyderabad, Bangalore and Madras in 1940. The first aeroplane flew on this route on April 9.

(5) *Amreli Air Service* began operation in April 1940 and runs a bi-weekly service between Baroda and Amreli.

Calcutta-Chungking Air Service.

On January 18, 1941, the China National Airways Corporation sent a machine on the first trial trip to India. All the negotiations now being complete, the Corporation has established a regular service between Calcutta and Chungking. At the present time the Corporation runs three inward and three outward services each week.

Bombay-Calcutta Air Service.

A preliminary survey of the Bombay-Calcutta air route was first undertaken by Sir Frederick Tymms, Director-General of Civil Aviation, India, in April 1940. The survey was completed by October. About the same time, the Bombay-Cochin section of the Bombay-Ceylon Trans-India line was also sanctioned. Work on the Bombay-Calcutta route was decided to be undertaken on completion of the Bombay-Cochin route. Suitable sites were, however, selected for aerodromes at Nagpur and Jubbulpore. The scheme, estimated to cost over two crores, has been postponed and will be taken up after the war.

Post-War Plans.

A network of 111 aerodromes and landing grounds is part of the Government of India's 10-year Rs. 15½ crore plan of post-war aerodrome and air route construction, which has been generally approved by the Reconstruction (Policy) Committee for Posts and Aviation. Of the 111 aerodromes proposed, 91 are already in existence and 24 are to be constructed, while such of the existing R.A.F. aerodromes as can be made available will be taken over. 78 of the total number will be equipped with night flying equipment.

Sub-Stratosphere Flights.

The Director-General of the British Overseas Airways, Mr. Leslie Runciman, who recently returned to London after escaping from Thailand foreshadows sub-stratosphere flights bringing all parts of the world closer to Britain. He considers it possible to reach India, South Africa and Australia in 20, 30 and 50 hours respectively. On the India-Australia route stops would be in Cairo, Karachi, Calcutta, Singapore, Darwin and Sydney with not more than two hours' wait at each halt.

THE SUEZ CANAL.

Opened formally in 1869, the Suez Canal constitutes an artificial waterway about 105 miles long, linking Port Said on the Mediterranean with Suez on the Red Sea. The Canal shortens the route from England to Calcutta and Bombay by 3,660 and 4,500 miles respectively, also, of course, substantially reducing the distance to Australia. Using the Canal, the Mediterranean fleet could reach the Singapore base in less than three weeks. The alternative route round the Cape lengthens Britain's lines of communications by about 4,000 miles.

Control and Finance.

The Suez Canal is controlled by a company, whose property, valued in the market at £120,000,000, (before the war) passes to the Egyptian Government when the concession expires on November 17, 1968. This is of course in default of other arrangements. The British Government owns 44 per cent. of the shares, thanks to Disraeli's celebrated coup in 1875 when for £4,000,000 he bought the majority of the bankrupt Khedive's holdings. The shares before the war were valued at £84,000,000 and the profits amounted to about £3,500,000 a year. Most of the remaining shares are held in France, but not by the French Government, which does not own a share. The Board comprises 21 Frenchmen, 10 Britishers, a Dutchman and an Egyptian. Only three of the British directors represent the British Government; the remaining seven represent British shipping and commercial interests. Incidentally, nearly 60 per cent. of the total tonnage passing through the Canal is British. The enterprise is managed in Egypt.

Development.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no Eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. Today, the Canal is on an average, 45 feet deep and 70 yards broad. It can be traversed in just under thirteen hours. About 15 ships can pass in the 24 hours. One ship has, however, still to tie up to let a second pass, though there is plenty of room for both. The biggest vessel yet to navigate "The Cut" was of 27,000 tons.

Neutrality.

Absolute neutrality is the law of the Company, guaranteed by an international Convention of 29th October, 1888. The provisions of the Convention are that subject only to exercise of the right of the legitimate self-defence and to action to injure the safety of the canal there can be no restriction, provided that the rules are observed, on the free use of the Canal.

The Suez Canal was closed by enemy action for 76 days at various times during World War II. There were 20 bombing attacks and 17 mining operations against the channel itself. Other attacks were made on the Canal's ports. Underwater debris forced draft requirements to be reduced from 34 to 30 feet, and a bridge was built across the waterway for the first time since World War I. The canal proved its value in supporting the allied armies that smashed Rommel at El Alamein.

Travel in India.

Fifty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheaf of letters of introduction. Nowadays travel in India is easy and is no more expensive than travel in other countries. The Indian railways provide facilities on the trunk lines which eliminate at any rate reduce—changes to a minimum and the Indian hotels have improved very considerably in the last few years.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and *via* Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn, the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every school boy knows the stories of the Mahratta campaigns and the bright anecdotes of Rajput courage and chivalry, but Rajputs and Mahrattas are not all that India has. They are only a few of the tribes and clans that inhabit this vast sub-continent. One of the greatest attractions of India for the visitor is the great diversity to be found in every respect, mode of living, dress, food, language and religion. In fact a traveller can never get bored. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the 'muezzin' announcing that God is Almighty and Mohammed is his Prophet and the song of the Pandit consisting of the character-sketch of 'Rama' or 'Krishna.' The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken

in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects, of bygone days, of diverse races, of absorbing subjects for study and observation such as the customs, religions, philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give; the tiger in the forest, the great mahseer in many rivers, the wily snipe on the jheels, the strong winged duck, the jinking pig and many another kind. Jungle life in its enchanting reality still calls the visitor to the Sunder Bans (the Pretty Jungle) in Bengal.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed. Nanda Devi and Mount Everest still provide thrills to many.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G.I.P. Railway *via* the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B.B. & C.I. Railway *via* Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Fergusson as "the most remarkable and interesting example of a Hindu palace of an early age in India." Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the Taj Mahal. Generations have come and gone since that far day when that most splendid of emperors Shahjehan, bowed his head before his wife's coffin in the vault of the finished Taj.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, Itmad-ud-Daulah's Tomb, Akbar's Tomb, 5 miles from Agra, and Fatehpur Sikri, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace, crowns its red bastions with so wondrous a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan, who was largely responsible for the delicate clay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1569 A.D. on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi, the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthrall him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghal period at his zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, the Kashmir Gate beneath which some still salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbar.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height, erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled [illegible], Darwin, while on the fluting is carved an in[illegible] hours' wait in which are introduced verses fr

In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firozabad, Purana Qila and Shahjahanabad, the present-day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay *via* Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at **Udaipur** is there, in its perfection, the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-West Frontier Province whence a large number of the recruits for the Indian Army come. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British engineers have harnessed the waters of the Punjab, "the Land of the Five Rivers", which formerly ran to waste, and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of **Amritsar** is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babar, the founder of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to-day in the pleasure gardens, tombs, mosques and pavilions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway is known as) through the almost impregnable for more th rrier of the North-West Frontier, trade of rical association and has from time en the route by which conquering hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as "an emerald set in pearls" is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow-capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the bear in his native haunts and the mountain does on the hill-tops.

For those who have arrived at Delhi *via* Bombay an interesting return trip can be made *via* Benares and Calcutta. Many visitors, however, enter India *via* Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock; it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines, particularly the 'Kali Temple', are all worthy of attention.

Before winding your way towards Delhi, trips should be made to Darjeeling and to Puri. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoom station to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchanjungha in the centre are spread out before you.

Darjeeling is one of the nicest hill stations in India and is unequalled for its snow views. From anywhere in the town you see the awe-inspiring Kanchanjungha. The sheer grandeur of the Kanchanjungha snows give Darjeeling a high place in the list of hill stations.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully worked things in India with a tiny figure of the Dawn on its capitol. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Krishna is carried in procession upon the

famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road, stands the unique chariot temple at Konarak, the temple of Surya (the Sun God).

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budh Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama, afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation: "Happy is the Hindu who dies in Benares, for he is transported at once to Siva's Himalayan Paradise on Mount Kailasa, north of Lake Manasa, where the great three-eyed ascetic seeing the past, the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recall to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreathe in solemn devotion the emblem of Siva's divinity.

About 6 miles away from Benares lies Sarnath, where Buddha preached his first sermon after obtaining divine wisdom at Gaya, and in the adjoining Deer Park is a Museum of Archæology of vivid interest. The Mahabodhi Society (The Central Organisation of the Buddhists) have their headquarters here and in their grounds is included a Buddhist temple with marvellous frescoes on its walls.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice; its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama, the mythological hero of the Ramayana, the epic poem of the Hindus; but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

Visitors wend their way to the Residency and pay homage to the gallant band who held it during the Mutiny against terrific odds until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known. (Sir Henry Havelock is buried in Alam Bagh, Garden of the World, which is about 4 miles from the Residency).

Among the historic monuments of Lucknow are the Great Imambara, (Machi Bhawan) the Small Imambara (Palace of Lights), and Shah Najaf built by Nawab Haidar Ali as a Masoleum. An old institution of note is the La Martinier College built by General Claude Martin for the education of European and Anglo-Indian boys and girls, though latterly children of Indian gentlemen are also being admitted. Claude Martin is buried in one of the vaults in the building. Fifty boys from the college helped in the defence of the Residency during the Mutiny. Other places of interest are the Dilkusha Gardens, Sikandra Bagh (now Government Horticultural Gardens) and Victoria Park. Life-size portraits of the Nawabs of Oudh are hung in a building situated in the last named resort. Two huge masoleums rise on Hazratganj Road—the main business centre—which are the tombs of Wajid Ali Shah, the last Nawab of Oudh, and his Begum.

Like Delhi, Lucknow is replete with historical lore and a visit to this town will greatly interest the visitor. Lucknow also boasts of an up-to-date museum and in the Harcourt Butler Zoological gardens, the animals live as near as possible in their natural surroundings.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India are, however, not the only interesting parts of India and the South can show you sights unlike those in any other part of the world. South India is a land of temples, full of the most wonderful carving, while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India, which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahishasura, a minotaur or buffalo-headed monster, by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The capital, which [illegible] the same name as the State, is a city [illegible] fine buildings and a visitor to India should [illegible] hours' walk to see the working of an up-to-[illegible] State situated among wonderful [illegible]

do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison is found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam, famous as the capital of Tippu Sultan and about nine miles from Mysore, is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged *via* Mysore.

At **Madura** and Trichinopoly will be found examples of some of the best and most interesting work in South India.

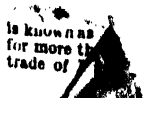
Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in the Hall (Mandapam as it is called in the Vernacular and Sanskrit) of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu, the Lord of Creation.

Travancore, the most beautiful and fertile region in all southern India has many charms to offer the traveller within its domains. It has scenery ranging from a countryside of lakes, creeks and canals, to low hills, undulating land, rice fields and forests of cocoanut and areca palms, with a heavy undergrowth of pepper vines and tapioca. The dominant note in Travancore is one of luxuriance in vegetation and picturesque waterways. It has a wonderful highland zone with mountains touching heights of from 5,000 feet to over 8,000 feet, and hills covered with the densest of virgin jungle, the home of great herds of wild elephants and bison, tiger, bear, black panther and wild boar, and where lies the lovely Periyar Lake over which one may cruise in comfort and see wild life in its natural habitat.

Trivandrum, the capital, is also accessible by well-kept roads from British India, and is connected by air with Bombay, Madras and Colombo, except during the monsoon.



About seven miles south of Trivandrum is Kovalam, a pleasant seaside resort with good facilities for bathing. Cape Comorin, the Land's End of India, is the southernmost point of Travancore, where the sunrise and sunset are magnificent sights. It is a sacred spot to Hindus and a place of pilgrimage as the reputed abode of Kanyakumari, the virgin Goddess to whom the temple there is dedicated.

North of Trivandrum is the ancient town of Quilon and to the north of this, a pleasant trip by boat along delightful backwaters or by car along a good motor road, is the busy seaport of Alleppey.

No one visiting India should miss the opportunity of seeing **Burma** for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery, you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet again you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India, speaking broadly, has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India; Simla, the summer capital of India, Darjeeling the delightful, or one of the many others situated among the hills of India.

HOTELS IN INDIA AND CEYLON.

AGRA.—Cecil, Imperial, Empress, Lawries.
AMRITSAR.—The Amritsar.
AURANGABAD.—State Railway Hotel.
BANGALORE.—The West End, Lavender's, Central.
BARODA.—State Guest House, near Railway Station (For Europeans and Indians).
BENARES.—Clarke's, Cecil, Civil.
BOMBAY.—The Taj Mahal, Green's, Majestic, Ritz, Grand, Pyrkes Apollo.
CALCUTTA.—Grand, Great Eastern, Spence's, Continental.
CAPE COMORIN.—The Cape Hotel.
CAWNPORE.—Berkeley House, Bellevue Hotel.
COONOOR.—Hill Grove, Hampton.
DARJEELING.—Bellevue, Mount Everest, Alice Villa and Carlton, New Elgin.
DELHI.—Imperial (New Delhi), Maidens, Cecil, Swiss Marina, York, Woodlands.
ERNAKULAM.—Malabar Hotel.
GWALIOR.—Hotel de Gwalior.
HYDERABAD (Dn.), AND SECUNDERABAD.—Perry's, Percy's, Montgomery's, Viccajee's, John's.
JAIPUR.—Jaipur State, Kaiser-i-Hind, New Hotel.
JODHPUR.—The State Hotel.
KALIMPONG.—Himalayan.
KARACHI.—Killarney, Bristol, Carlton, Central, North Western Stanyon's.
KURSEONG.—Woodhill.
LAHORE.—Falett's, Nedou's, Sunny View, Braganza's.
LUCKNOW.—Carlton, Royal, Barlington.
MADRAS.—Connemara, Spencers, Bosotto.
MAHABLESHWAR.—Granville, De Russe, Frederick.
MORMUGAO HARBOUR.—Antigo Palacio, Mr. Lobo's.
MOUNT ABU.—The "Rajputana Hotel."
MUSSOORIE.—Charleville, Hakman's, Grand, Savoy.
MUTTRA.—Royal.
MYSORE.—Metropole, Savoy, Carlton.
NAINITAL.—Metropole, Royal.
OOTACAMUND.—Ooty Club, Savoy, Willingdon House, Cecil, Firgrove.
PESHAWAR.—Dean's.
POONA.—Napier, Wellesly, Royal.
PURI.—B. N. Railway, The "Lodge."
RANCHI.—B. N. R. Hotel, Claytons, Silver Oaks.
SHILLONG.—Pinewood, Ferndale, Stonylands, Hermitage.
SIMLA.—Cecil, Clarke's, Corstorphans, Grand, Metropole, Central.
SRINAGAR (Kashmir).—Nedou's.
TRIVANDRUM.—Mascot.
UDAIPUR.—Udaipur Hotel, Lake View Hotel.
WALTAIR.—Sea View, Beach, Grand.

Ceylon.

ANURADHAPURA.—Grand.
BANDARAWELA.—Bandarawela.
COLOMBO.—Bristol, Dominion, Galle Face, Globe, Grand Oriental, Metropole Isabel Court, Victoria.
GALLE.—New Oriental.
HAPUTALE.—Buona Vista.
HATTON.—Addam's Peak.
KANDY.—Suisse, Queen's.
MOUNT LAVINIA.—Grand.
NUWARA ELIYA.—Carlton, Grand, Grosvenor, Maysland, St. Andrew's.
TRINCOMALEE.—Maysland, Welcombe.
TALAWAKELE.—Coronation.

ADDRESSES OF FOREIGN CONSULATES IN BOMBAY.

Afghanistan.—115, Walkeshwar Road, Malabar Hill.
Belgium.—11, Carmichael Road, Cumballa Hill.
Brazil.—Asian Building, Nicol Road, Ballard Estate.
China.—Co-operative Building, Sir Phirozshaw Mehta Road, Bombay.
Cuba.—Readymoney Mansion, Churchgate Street.
Czechoslovakia.—124, Wodehouse Road, Colaba.
Denmark.—Indian Mercantile Chambers, Nicol Road, Ballard Estate.
Egypt.—42, Queen's Road.
Finland.—Finnish interests are looked after by the Consul General for Sweden at Bombay.
France.—"Cleardine," 87-B, Nepean Sea Road.
Germany.—German interests are looked after by the Consul General for Switzerland at Bombay.
Greece.—17, Ravelin Street, Fort.
Hungary.—Hungarian interests are looked after by the Consul General for Sweden at Bombay.
Iran.—45-G, Navroji Gamadia Road off Warden Road.
Iraq.—"Panorama," 203, Walkeshwar Road, Malabar Hill.
Italy.—Italian interests are looked after by the Consul for Switzerland at Bombay.
Japan.—Japanese interests are looked after by the Consul General for Sweden at Bombay.
Luxemburg.—Haroon House, Bazargate Street, Fort, Bombay.
Monaco.—39, Pydhownie Road.
Netherlands.—314, Hornby Road, Fort.
Nicaragua.—Alice Building, Hornby Road, Fort.
Norway.—Imperial Chambers, Wilson Road, Ballard Estate.
Poland.—Closed on 30-9-45.
Portugal.—17, Cuffe Parade, Colaba.
Roumania.—Roumanian interests are looked after by the Consul for Sweden at [illegible] and
Spain.—"Oceana", Marine Drive, Churchgate Reclamation, Bombay.
Sweden.—Indian Mercantile Chambers, Nicol Road.
Switzerland.—Maneckjee Wadia Building, 125, Esplanade Road.
Turkey.—Firdaus, 56, Marine Drive.
United States of America.—Indian Construction House, Nicol Road, Ballard

States having Consulates in Calcutta but not in Bombay.

Argentine Republic.—5, Fairlie Place (c/o Hoare Miller & Co.).
Bolivia.—Wellesley House, 7, Wellesley Place.
Columbia.—*Vacant.*
Dominican Republic.—102 and 104, Savabazar Street.
Ecuador.—6, Lyons Range (c/o Messrs. Turner Morrison & Co.).
France.—26, Park Mansions, Park Street.
Hayti.—2, Cornwallis St.
Panama.—Vacant.

N.B.—There are at present no Consuls for Costa Rica, Liberia, Salvador and Mexico at Calcutta. The Consulates for Guatemala and Chile have been abolished.

Foreign Consular Officers in India.

Corrected up to July 1945.

Name.	Appointment.	Station.
Afghanistan.		
Monsieur Sardar Ghulam Mohammed Khan	Consul-General	Delhi.
Abdur Rahman Raouf	Consul	Bombay.
Monsieur Muhammad Yunus Khan	Do.	Karachi.
Argentine Republic.		
*J. E. Jurnbull	Vice-Consul	Calcutta.
Belgium.		
Monsieur A. Jacquet (Chancellor in charge Consulate-General)	Consul-General	Bombay.
Monsieur A. Hupperts	Do.	Calcutta.
E. J. Pakes	Consul	Karachi.
*K. H. Chambers	Do.	Madras.
Bolivia.		
*B. Matthews	Consul-General	Calcutta.
Brazil.		
*Vacant	Consul	Bombay.
*Senhor Jaime N. Heredia (in charge of the Consulate)	Vice-Consul	Do.
China.		
C. P. Chen	Consul-General	Calcutta.
Shen Tsee-tseng	Consul	Do.
Tsai Wei-Ping	Do.	Do.
Chen Yi-Yuan	Vice-Consul	Do.
Ho Mei Shan	Do.	Do.
Mrs. H[illegible]ng Chieh Yuan Yeh	Do.	Do.
[illegible]orges Lo	Consul	Bombay.
Professor Olivi[illegible]en	Vice-Consul	Do.
[illegible]g	Do.	Do.
	Chancellor	Do.

Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order:—

COONOOR.

An ideal health resort. It is 12 miles from Ootacamund by rail and stands on the lower ridge of the main plateau at an altitude of 6,000 feet. The town has a good water-supply and natural drainage facilities and is claimed to be one of the cleanliest towns in South India. The climate is best described as "mild and genial," neither hot in summer nor cold in winter, the keenness of the air not being biting as that of Ootacamund. The mean day temperature is 64 degrees. The north-east monsoon sets in about the middle of October and lasts for about two months but even during this period, a day rarely passes without a few hours' brilliant sunshine. To those who have spent a long time on the plains, the climate is especially recommended.

There are many places in and around Coonoor which are the favourite haunts of picnic parties owing to their beautiful scenery; The Droog, Sims Park, The Dolfin Nose, The Lamb's Rock, Laz Falls, Kateri Falls, Lady Canning Seat, The Ralliah Dam and Catherine Falls. Mount Pleasant, near the railway station, which contains several Indian residential quarters is on an elevation and commands a fine prospect of the country around.

Like its sister station Ootacamund, Coonoor has equal facilities for visitors in the way of hotels and shops while the easy journey by rail lends itself to an exchange of amenities.

Hotel.—Hill Grove.

DARJEELING.

(8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round; that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor in about 3 hours or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Bellevue, and the Windmare Hotel.

KANGRA VALLEY.

The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaula Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmsala and Kangra. The best hotels at Dalhousie are Stiffle's, Grand View and the Arraumoor; and at Dharmsala the Switzes's.

KASHMIR.

Perhaps the most famous beauty spot in the world can be reached by taking train (either G.I.P. or B.B. & C.I.) from Bombay to Rawalpindi or Jammu (Tawi)—about 48 hours—whence the remainder of the journey to Srinagar the capital city of Kashmir, about 200 miles by either route, is accomplished by motor. Maximum temperature of the place is 98° Fahr. and the average height of the valley about 6,000 ft.; it is entirely surrounded by the snow-covered lofty, outer-ranges of the Karakoram and the Himalayas. The valley covers an area of 85 miles north to south, and 30 miles east to west. The river Jhelum gliding gracefully, south to north, connects with the lake area near Srinagar by a canal and grazes the outskirts of the Wular Lake near Banyar and Sopore. Visitors usually stay at Srinagar, Gulmarg, Achhabal and Pahalgam in boarding houses and bungalows rented through agencies. The Sind, Bringhi and Ledar valleys are also frequented, where camping arrangements can reliably be entrusted to one of the numerous agencies in Srinagar. Or one can hire a houseboat which is always available and live in the lake area near Srinagar at Nagin Bagh, Nasim Bagh, Sadrakhun and Gagribal; or on the river Jhelum at Chinar Bagh, Shaltenz, Shadipore, Ganderbal and Ningli. At Gulmarg Nedou's is the only Hotel but boarding houses are also available, besides a sufficiently large number of well furnished wooden huts. People also live in tents as at Pahalgam, Sonemarg and Kokarnag or when on trekking, trout fishing and shooting.

KODAIKANAL.

Kodaikanal was discovered about 182[illegible] and became popular with the advent of the American Missionaries from Madura who founded a colony in the Hills. Successive Collectors of the district chose the hills as a summer habitation and to these must be attributed the many improvements that were undertaken. In particular Mr. Vere Levinge, who was Collector of Madura in 186[illegible] planned the lake, constructed several roads and bridlepaths and introduced European fruits and flowers.

Kodaikanal, one of the healthiest hill stations in India, stands on the southern crest of the upper Palni Hills at an elevation of about 7,000 feet above sea-level. It is within three hours reach from the railway station at Kodaikanal Road. Until about 30 years ago when the first car ascended the hill travellers had to undergo wearisome journey by bullock carts and dhollies and the more adventurous on horseback. The journey occupied nearly forty-eight hours, and though the wooded hills and the mountain air rendered the prospect cheerful, it was a fatiguing attempt not undertaken by all. Now there is an excellent motor road. An enterprising firm once made attempts to construct a tramway to the hills, but the project was finally abandoned and all attention was concentrated on perfecting the road. There is now a regular bus service between the hill station and the plains. Kodaikanal is within fifteen hours journey from Madras.

The station has a mean annual rainfall of about 65 inches, a major portion falling in the months of October, November and December. Pleasant showers are experienced during April, May and June, the season months, and help to keep the station dust-free for parties and picnics. Neither hot nor cold, Kodaikanal ever accords a warm welcome to every visitor seeking a holiday, a haven of ease and comfort to recoup and rejuvenate, free from the heat of the plains. Kodaikanal is the delight of the gardener. Flowers bloom all the year round.

Water-Supply.—The town enjoys the benefit of an excellent water-supply from the Pambar stream which was dammed and converted into a reservoir in 1914.

Amenities.—Kodaikanal affords a variety of exhilarating amusements to the tired visitor. The lake is the chief attraction and is skirted by a three-mile road which provides excellent walks. Overlooking the lake are the several residences. The excellent golf course is popular during the season. The many waterfalls make for ideal picnic resorts. The "Fairy-falls" just below the Observatory, "Silver Cascades" on the Law Ghat Road, "Bear Shola Falls" extremely pretty and a good place for picnics and "Glen Falls" on the way to Vilpatti, are some of the popular sights.

Coaker's Walk (so named after a Lieutenant who was on duty in the district from 1870 to 1872) is a semi-circular footpath, by the side of the English Church, which runs along the southern brink overlooking the plains. The view from here is considered by many as unrivalled. On Coaker's Walk the visitor is alone with nature in its varied profusion. Away in the hazy distance lies the ancient city of Madura and on the right the rugged face of the cliff known as the Dolphins Nose.

"The Pillar Rocks" are three masses of granite, some 400 feet high, which stand on the edge of the same side of the plateau as Coaker's Walk but about three miles farther on. They are reached by a fine road which runs through beautiful scenery, well wooded with pines and eucalyptus and form a favourite rendezvous for picnic parties. Between and below them are several caves and chasms into which the more adventurous can descend.

Solar Observatory.—Crowning the heights of the Palni Hills, and 850 feet higher than the lake is the Government Solar Observatory surrounded by beautiful fir plantations. It is a long pull and a strong pull from the lake bund though only two miles in distance.

Sport.—The adventurous can find big game within a few miles of Kodaikanal. Riding is not popular on the hills for lack of facilities. Hiking finds many votaries. The station is well equipped with the ordinary amenities of life.

Kodaikanal Club is open to visitors. There are also the Boat Club, an Indian Club and a Ladies' Club. Hotels and travellers' bungalows are available. The Municipal authorities publish annually a list of bungalows available for renting and are willing to help visitors during their stay at the station.

The latest addition to the roads on the hills is the Goschen Road popularly known as the "Forty-Miles-Round" leaving the municipal limits at Pillar Rocks to the Berijam lake and thence to Mannavanur and back to Kodaikanal. The scenery throughout is of pleasing downs in contrast to the wooded areas in the vicinity of Kodaikanal.

KOTAGIRI.

It is about 14 miles from Coonoor and 18 miles from Ootacamund. Motor buses run from Coonoor railway station daily in connection with the Mail trains and the road journey does not occupy more than an hour. The bus fare is about ten to twelve annas per passenger for a single journey. Cars are also available at about Rs. 7 per trip or Rs. 10 to and fro.

Kotagiri stands, similar to Coonoor, on the lower ridge of the main plateau, but 500 feet higher than Coonoor and 800 feet below Ootacamund Ooty; it thus enjoys a climate half-way between that of Coonoor and Ootacamund—the mean day temperature being 62 degrees. It is also visited by the north-east monsoon and its rainfall is identical with that of Coonoor.

There are not naturally the same facilities as at Coonoor or Ootacamund, but the natural surroundings are even more beautiful, and to those who seek rest and seclusion in a mild form it is an ideal resort.

Hotel.—Blue Mountain.

KULU VALLEY.

Kulu.—A sub-division of the Kangra District of the Punjab—is situated north of Simla and east of Kangra. "Valley of the Gods" is an apt designation as, in addition to several important deities like Raghunathji at Sultanpur and Jamlu of Malana, every village has its own particular godling to which the inhabitants pay homage.

Amritsar is the main line junction for Kulu. A broad gauge branch line runs from Amritsar to Pathankot and a narrow-gauge from Pathankote to Nagrota, the present rail head. Bus services to Kulu are available from Pathankote and Nagrota. This main motor route has seen considerable improvement during recent years and two-way traffic now extends to Jogindernagar, headworks of the Mandi Hydro-Electric scheme. Beyond this point one-way traffic only is permitted with crossing stations at Urla, Drang, Mandi and Aut- all in Mandi State. Kulu can also be reached by trekking from Simla, on the Jalori and Easleo Passes, and from Mandi by way of the Bhabu and Dulchi Passes; also by several other lesser known routes all of which are rather difficult.

From the foot of the hills, a few miles beyond Pathankote, the motor road provides a variety of scenery and features of historical interest unequalled by any other hill road in the Punjab. The rich cultivation of the Kangra valley; the extensive tea gardens surrounding Palampur and Baijnath the majestic snow-capped mountains of the Dhaula Dhar range standing out in bold relief against the sky line, the ancient temples of Baijnath the long climb from Jogindernagar to Ghatasni and the winding descent into Mandi City. This city, capital of the State, affords a pleasant halting place for travellers, and provides comfortable accommodation at its commodious dak-bungalow, located on a small hill overlooking the quaint old town. After leaving Mandi the road enters the narrow confines of the Mandi-Larji gorge where, in places, it has been blasted through solid rock and occa-

sionally juts out over built-up galleries which overhang the turbulent river far below. Beyond Aut the valley opens out and the final stretch through the lovely Kulu valley, mainly along the left bank of the Beas, offers an entirely different type of scenic effects. The motor road ends at Manali, but a trade route, suitable for pack traffic, continues over the Rohtang and Baralacha Passes (13,500 and 16,500 feet respectively) to Lahoul, Ladakh, 'Spiti, Yarkand and other remote countries in Central Asia.

The main centres in Kulu Valley are:

Kulu (Sultanpur).—4,000 feet. The principal town in the Sub-division and the main shopping centre for stores and provisions. Tehsil, sub-Treasury, Police Station, Hospital, Dak-bungalow, Serai and departmental Rest-houses are all located on the large deodar-fringed *maidan* at the entrance to the town.

Raison.—4,600 feet, eight miles from Sultanpur. Accommodation for visitors at "Mayflower" and "The Shacks". Rough golf, tennis and swimming available.

Katrain.—4,800 feet, twelve miles from Sultanpur, in the widest part of the Kulu Valley. Accommodation for visitors at "Riverview", adjacent to the main road. Trout hatcheries and stock ponds within half-a-mile.

Naggar.—*5,800 feet, on the opposite side of* the valley to Katrain and summer headquarters of the Sub-divisional and Forest Officers. Departmental Rest-house and Serai, but no hotels.

Manali.—6,000 feet, head of the valley and terminus of the motor road, twenty-three miles from Sultanpur is situated amid typical Alpine scenery and within easy distance of the Rohtang Pass. Accommodation for visitors at Sunshine Orchards. Departmental Rest-houses and Mission Hospital.

A number of furnished cottages at Raison, Katrain, Naggar and Manali are also available for visitors to the Valley.

Climate of Kulu.—Climatically the best seasons in Kulu are from March to May then again from the beginning of September to the end of November. June, July and early August are usually warm, but never uncomfortably so, especially at the upper end of the Valley. With the exception of Manali, the road to which may occasionally be closed by heavy snow in winter, the Valley is open the whole year.

Road Transport.—The Kulu Valley Transport, Ltd., and the Mandi Transport Co. Ltd., run direct bus services from Pathankot and Nagrota to Kulu. As these company's buses run on alternate days it is advisable, when making reservations, to write to both, whose addresses are Mandi City, Mandi State, Punjab.

MATHERAN.

(2,500 ft.)—The nearest hill station to Bombay, ideal for walkers and anybody wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay, to Neral (about 1½ hours) whence Matheran may be reached by hill railway (1½ hours) or by pony, rickshaw, or on foot by a good walker.

Though Matheran is no more than 2,650 feet high there are few stations in India, even though their height is far greater, which yield such magnificent views. The reason for this is that the plain from which hills rise is itself several hundred feet above sea-level. Matheran looks on to the sea, and the coastal plain rises imperceptibly until it reaches the steep ascent of the Ghats.

In his walk round the eighteen miles circumference of Matheran Hill, the visitor can reach no fewer than twenty points. Each has its own character and at almost every one of them the visitor will find comfortable seats, shady trees and fine views. At least six Points call for special notice—Garbut, Panorama, Porcupine, Louisa, Chowk and Alexander Points.

Hotels.—Rugby, Cecil, Lord.

MAHABLESHWAR.

(4,500 ft.)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahableshwar. Mahableshwar is noted for its delightful vegetation: orchids and lilies bloom in April and May.

Hotels:—Frederick, Race View and Fountain.

MOUNT ABU.

(4,500 ft.)—An ideal place for combining the *pleasures of a mountaineering holiday with the* interests of an archæological excursion. Reached by B. B. & C. I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There are local libraries and picture houses and also a Dak Bungalow, containing furnished rooms, permission to use which must be obtained from the Assistant Engineer, P.W.D., Mount Abu. There are excellent gold links and the Station is electrified and has waterworks with public utility taps.

MURREE.

(7,000 ft.)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecil, the Viewforth and the Brightlands.

MUSSOORIE.

(7,500 ft.) Much frequented on account of its exceptionally fine climate. Reached from Bombay by G. I. P. or B. B. & C. I. trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later.

Mussoorie has an excellent water-supply, electric lighting system, hospitals, Nursing Homes, churches, banks and some of the best schools in India, both for boys and for girls.

What it particularly boasts of, however, are the number of interesting and beautiful walks and places for excursions.

The leading hotels are the Charleville, Hackman's and the Savoy.

NAINI TAL.

(6,500 ft.)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. B. & C. I. train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours)

The second route which takes about 5 hours longer is to take G. I. P. train to Lucknow and then change over to the metre-gauge railway. The Manor House, Metropole and Royal are the best hotels.

OOTACAMUND.

Familiarly known as Ooty, is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees.

In no month is the day temperature less than 54.33 degrees, or more than 61.66 degrees. The nights are, however, cold and, during the winter months, the thermometer touches freezing point.

One of the main features that distinguish Ootacamund from other hill stations is the length of motorable roads it has. The town itself has the appearance of a vast park with its broad well-kept roads which traversed country of beautiful gardens and extensive stretches of turf studded with ornamental trees. The Botanical gardens in the centre, the Race Course, the palaces of the several noblemen, the Assembly rooms and the Government House help to make the town attractive and cheerful. The hydro-electric head works at Pykara is within 18 miles of Ootacamund and is worth a visit.

Ootacamund is the administrative centre of the District and the seat of the Government of Madras for three months of the year from April to July. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours, or by taking train to Mettupalayam *Via* Madras and thence by hill railway of Ootacamund.

Ootacamund is a Sportsman's paradise where plenty of shooting is available. Trout fishing is a special attraction. It possesses one of the best holiday golf courses in East India and tournaments are held in May and September.

The principal hotels are the Savoy and Cecil.

PACHMARHI.

(3,500 ft.)—Situated on a plateau in the Mahadeo Hills of Satpura range of which the highest peak is Dhupgarh range, is the summer quarters of the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G.I.P. railway to Pipariya Via Jubbulpore or Itarsi, and a two hours' motor journey. It has 18 links Golf course and numerous picnic points. The bazar of Pachmarhi is in the Cantonment area.

SIMLA.

The summer headquarters of the Government of the Punjab is situated on several small spurs of the lower Himalayas at a mean elevation of 7,100 feet above sea-level.

From the beginning of October to about the middle of December, Simla enjoys the best climate in the world and throughout the year it is very equable there being a variation of about 10 degrees between night and day temperatures. The mean rainfall approximates 64 inches. Mean maximum temperature 60 degrees, mean minimum 50 degrees. Kalka, which is 2,100 feet above sea-level, is the terminus for the Broad-gauge railway system and from thence onwards the metre-gauge takes its place, meandering to Simla through over 100 tunnels. For those who prefer a more luxurious mode of travel, rail motors are run by the railway and *en route* the scenery is superb with luxuriant foliage, chiefly of conifers, oak and rhododendron. At Kalka motor cars are available for those who would prefer to travel by road and the journey is completed within 3½ hours. For cheaper travel there is now a bus service to and from Simla.

There are several excellent hotels in Simla, The Cecil, Corstorphans, Clarkes, Grand and for orthodox Indians, Hindu and Muslim and Taj Hotels. In Mashobra, 7 miles out of Simla, there are The Gables and Wild Flower. Boarding houses are in the minority, the best known are Talbot House and Baynston. The Y.W.C.A. and the Y.M.C.A. hostles are open for the greater portion of the year. The United Service Club is also residential for Military Officers and Civil Servants.

The climate of Simla may be divided into four seasons of about three months each. The first quarter beginning with January, rough, snowy, stormy and raw. The second dry and sunny with gradually increasing dust and heat. The third rainy, damp and relaxing. The fourth bright, clear and bracing. In May and June the average maximum temperature is about 73 degrees. In January and February the average minimum temperature is about 36 degrees.

There is a very good road into the interior and hikers to Narkunda, Kotgarh and Rampur Bushahr are lodged in rest-houses that line the road. From Simla there are 2 routes to Mussoorie a distance of 145 miles and little difficulty is experienced for accommodation *en route*; permission to occupy Dak bungalows and Forest Rest Houses must be obtained from the officials concerned. A regular motor bus service now runs to Narkunda and Kotgarh and holiday makers leave at 9 a.m. and are back in Simla by evening or they can stay over-night in the Dak Bungalows that line the route.

There are also direct routes to Tibbet, Srinagar, (Kashmir) and Dalhousie, and motor vehicles are permitted to ply by the Municipality on a pass as far as Narkunda. The scenery *en route* is lovely.

Simla is well provided with a number of excellent Schools, Bishop Corton and Saint Edward's for the boys and Auckland House, Tara Hall, Jesus and Mary Convent (now about to be rebuilt after the recent conflagration which almost destroyed it) and Mayo School for the girls.

CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 ft. and of these only two, Kamet (25,447 ft.) and Nanda Devi (25,660 ft.) have been scaled, whilst there are innumerable lesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measurements is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pioneer Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlagintweit brothers, who in 1855 reached a height of 22,329 ft. on the Eastern Ibi Gamin, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft. in the same district. Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and made attempts to climb Kangchenjau, 22,700 ft. and Pauhunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Lord Conway who, in 1892, made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakorams and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the "nineties", and a bold attempt was made by A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshfield made the first circuit of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase.—Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Bhotias were trained for mountaineering and, with the advent of first-class porterage, Himalayan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakorams and W. W. Graham made a number of remarkable ascents, with Swiss guides, including an ascent of Kabru, 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas, who got within a few feet of that top.

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kangchenjau, Pauhunri and Chomiomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft. on Kamet.

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal, Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft. which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Slingby also attempted Kamet at this time.

Attempts on Kanchenjunga.—The first attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut. Pache and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 24,000 ft. was reached on the north-east spur before bad weather forced the party to retreat.

In 1930 a fourth attempt was made by an International expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepal side, but were repulsed by an ice avalanche which killed one of the porters. Subsequently, they ascended a number of peaks including the Ramthang Peak, 23,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of **Mount Kamet** (25,447 ft.), the first peak over 25,000 ft. to be climbed.

Mount Everest.—There have been six Expeditions to Mount Everest of which those in 1921 and 1935 were reconnaissances and those in 1922, 1924, 1933, 1936 and 1938 attempts to reach the summit.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen. the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G.

Bruce succeeded with the help of oxygen in reaching the height of 27,300 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig.-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28,100 feet. Then a final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. E. Odel and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 26,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 26,800 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. R. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An **Everest Committee** was formed under the aegis of the Royal Geographical Society and the Alpine Club, and Mr. Hugh Ruttledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in it as members were Mr. F.S. Smythe, leader of the successful Kamet Expedition of 1931, and Capt. E. St. J. Birnie, E. E. Shipton and Dr. C. R. Greene who climbed with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

The 1933 expedition established its base in the Rongbuk Valley on April 17th and on April 21st. Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col. 23,000 ft. prolonged and arduous work. Camp IV, 22,800 ft. was not established until the middle of May after a 40 feet ice wall on the North Col. slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling, one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col. by field telephone so that messages could be received up to 23,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd. But it was pitched at 25,500 ft. several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft. and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darjeeling.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young airman. Having penetrated Tibet in disguise he marched to Everest and with a few porters went on in reaching 21,000 feet. He then succeeded alone and nothing more was heard of him, until his body was discovered near the site of Camp III, 21,000 feet, by Mr. E. E. Shipton's party in 1935.

Early in 1935 the Tibetan Government granted permission for a further attempt to take place from June 1935 to June 1936 inclusive.

As there was no time to organise an attempt on the summit it was decided to send out a small party under the leadership of Mr. E. E. Shipton. This had as its objects: Collection of data as to monsoon snow and weather conditions; examination of alternative routes from the west, the trying out of new men for the summit attempt; physiological observations; a stereophotogrammetric survey; examination of ice formations on the North Col.

This expedition proved that Everest cannot be ascended during the monsoon and that the only hope of an ascent is during the period immediately before the monsoon.

Conditions during the monsoon are extremely dangerous and the party had a narrow escape from an enormous avalanche that fell from the slopes of the North Col.

During the course of this reconnaissance two dozen peaks over 20,000 feet high were ascended.

The 1936 expedition was led by Mr. Hugh Ruttledge and included three of the 1933 climbers Messrs. Shipton, Smythe and Wyn Harris, and one of the 1933 Signals Officers Lieut. Smith Windham. It encountered exceptionally bad

weather and unusual conditions. Before the monsoon, snowstorms rendered the mountain unclimbable and the usual pre-monsoon north-west wind was lacking to clear the snow away. However, Camp IV on the North Col. was established to schedule and the party were in position to attack the summit when the weather broke and two feet of snow forced them to retreat down the dangerous slopes of the North Col. To cap their discomfiture the monsoon arrived on the exceptionally early date of May 24th. Two attempts were made to re-open the route to the North Col. but on both occasions the party were in great danger and the attempt had to be abandoned when Shipton and Wyn Harris were carried down by an avalanche and nearly lost their lives. Subsequently reconnaissance parties ascended the main Rongbuk glacier and examined the west side of the North Col. which, in spite of Mallory's unfavourable verdict, was found to be not only practicable but less dangerous in monsoon conditions than the east side.

The 1938 expedition consisted of seven climbers, H. W. Tilman, E. E. Shipton, F. S. Smythe, N. E. Odell, Dr. C. B. M. Warren, P. Lloyd and Capt. P. R. Oliver and was led by Mr. Tilman. It was considerably smaller than previous expeditions owing to economic reasons and because experience has shown that the small light expedition has as good and perhaps better chance of achieving its object than a large cumbersome expedition rendered comparatively immobile by its transport and tied down to a fixed plan. Though the expedition failed to reach the summit of Mount Everest it fully justified these beliefs and cost only £2,500 as against the £10,000 or more of previous Everest expeditions.

The expedition reached Rongbuk on April 6th and established Camp 3 on April 26th. Wind and cold made further advance impossible and the party descended to the Kharta valley for a rest and to recuperate from influenza, chills and sore throats. They returned in the middle of May during the commencement of the monsoon which broke on the unprecedented date of May 5th, one month to six weeks earlier than usual. The route up the North Col. was forced in dangerous snow conditions and the party had a narrow escape from an avalanche. Camp 4 was established on May 24th but snowstorms drove the party down. It was then decided to regain the North Col. from the west via the Main Rongbuk Glacier and Camp 4 was re-established after a difficult ice climb on June 5th. On June 8th Camp 6 was established by Shipton and Smythe with seven porters and the following day an attempt was made to reach the summit. Conditions, however, proved impossible owing to deep monsoon snow, and the party was forced t oretreat after reaching a height of 27,300 ft. A further attempt by Tilman and Lloyd on June 11th met with no more success and the expedition had to be abandoned.

Aerial Expedition.—An interesting side to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale chief pilot, Flt. Lt. A. McIntyre second pilot and Major P. T. Etherton, its London manager. Two specially equipped aeroplanes, adaptations of the well-known Wapiti, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April permitted.

An interesting mountainflight of which details were published in 1933 was one from Risalpur to Gilgit and back, undertaken by the R. A. F. at Risalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Risalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles. It was covered in 2 hrs. 20 mins. on the outward flight and in 2 hrs. 5 mins. on the return journey. From Gilgit the machines further proceeded upon flights over the Hunza, Nagar and Rakjot areas. Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken. Such flights are now frequently made by the R.A.F.

The year 1932 saw a well organised expedition to **Mount Nanga Parbat.** It was conducted by Dr. Merkl, of Munich, and included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowlton, of Boston, U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

The Disaster of 1934.—In 1934 Herr Merk returned to the attack with an even stronger party, which included a number of well-known German and Austrian mountaineers and Captains Frier and Sangster of the Indian Army as transport officers. Fatality early overtook the expedition, Herr Drexel dying of pneumonia. Owing to various delays, Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind. Finally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard broke. The party retreated, but owing to the storm and ill-equipped camps retreat became a route during which no fewer than nine lives were lost, Herren Merkl, Welzenbach and Wieland and six Darjeeling porters—men who had accompanied the 1933 Everest Expedition. Of the Europeans only the two Austrians Herren Schneider and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten, one or two spent a week without food or shelter.

In May 1937, another attempt was made to climb **Nanga Parbat** by a German expedition, headed by Dr. Wien. News reached Simla on June 20 that disaster had overtaken the expedition and subsequently it was learned that the entire party of climbers with the exception of one survivor, Dr. Luft, had perished. Eight of the nine members of the expedition were killed along with nine Sherpa porters. Mountaineering experts are of the opinion that the season was not very propitious for the ascent of the peak, which is considered to be more accessible in the autumn.

A further German attempt to climb Nanga Parbat was made in 1938 under the leadership of Dr. Paul Bauer. During the second half of July the party succeeding in reaching a height of over 23,000 ft. but were forced to retreat by bad weather. During the climb the bodies of Herr Willy Merkl and the porter Gay Lay, who perished in 1934 were discovered.

In 1939 another German expedition led by Herr Peter Aufschnaiter explored the Diamirai flank of Nanga Parbat.

Another expedition to the Karakorams took place in 1934 under the leadership of Dr. G. Dyhrenfurth. All four peaks of "Queen Mary" were climbed. The highest of these has been triangulated as 24,350 feet, but the party, state it to be more than 1,000 feet higher.

In 1934 Messrs. E. E. Shipton and H. W. Tilman, by a magnificent piece of exploration and mountaineering, succeeded in penetrating the hitherto impracticable Rishi Ganga to the glacier basin of **Nanda Devi**, thereby solving a problem that had exercised the minds of Himalayan mountaineers for many years and completing the work of pioneers such as Dr. T. G. Longstaff and Mr. Hugh Ruttledge. Messrs. Shipton and Tilman also crossed from Badrinath to Gangotri **via the Satopanth Pass** and explored the head of the Gangotri glacier. Profiting by the discovery of the route to the Nanda Devi basin an Anglo-American party, the leader of which was Mr. H. W. Tilman, successfully scaled Nanda Devi **via** its south-west ridge, Messrs. H. W. Tilman and N. E. Odell being the climbers to reach the summit. This expedition was remarkable in that owing to the sickness of the porters the climbers had to carry their own camps up the mountain. This is the finest and most difficult peak yet climbed in the Himalayas.

In **1939 the first Polish expedition** to visit the Himalayas succeeded in making the ascent of the East Peak of Nanda Devi. Unfortunately an accident led to the death of M. M. A. Karpinski and S. Bernadzikiewicz on Trisul above the Milam Glacier.

Lt.-Col. C. F. Stoehr, R.E., and Lt. D. M. Burn, R.E., lost their lives on 12th August 1932, while climbing on Panjtarni, near Pahlgam in Kashmir.

In 1935 an attempt to scale Peak 3,625,400 feet, in the western Karakorams, was made by Lieut. J. Waller, Lieut. J. Hunt, Dr. J. S. Carslaw and W. R. Brotherhood, R.A.F. A series of blizzards were experienced but the party reached a height estimated as 24,500 feet. There is no great difficulty between this point and the summit.

In the Autumn of 1935 the summit of Kabru was reached by Mr. C. R. Cooke who was accompanied to the foot of the final rocks by Mr. G. Schoberth who was forced to give up owing to a high altitude, cough and the risk of frostbite. This ascent was made on November 18th, an unusually late date and is of great interest as proving that high Himalayan peaks can be climbed in early winter at least.

The 1936 French expedition to the Karakorams, like the Everest expedition, encountered very bad weather and accomplished little.

After Nanda Devi the most remarkable ascent of 1936 was that of Siniolchu, a peak once designated as the "embodiment of inaccessibility", in the Kanchenjunga range. This was made by a small German party under the leadership of Herr Paul Bauer. Siniolchu is one of the most beautiful peaks in the Himalayas.

In 1939, a party of Munich mountaineers, consisting of Herren Grob, Paidar and Schmaderer, made the first ascent of the Tent Peak in the Kangchenjunga range and attempted the Twins Peak but were defeated by bad weather.

Other ascents in Sikkim were made by Mr. Marco Pallis's party who attempted Simvu unsuccessfully and by Mr. C. R. Cooke and Mr. F. Spencer Chapman who ascended several peaks of over 20,000 feet including the Fluted Peak.

During the summer of 1937 a number of peaks were climbed, the most notable being Chomolhari 23,997 ft. by Mr. F. Spencer Chapman with one porter, and the Mana Peak 23,860 ft. by Captain P. R. Oliver and Mr. E. S. Smythe. The latter completing the ascent alone as Capt. Oliver was insufficiently acclimatised. Three other peaks of 21,400 ft., 21,500 ft. and 22,481 ft. were also climbed by Messrs. Oliver and Smythe and attempts made on Nilkanta and Dunagiri which were frustrated by bad weather. They also explored a remarkable plateau above the Banke Glacier, discovered in May 1937 by Lieut. R. A. Gardiner of the Survey of India. In addition, Mr. Smythe with three Tibetan porters climbed seven peaks of the Zaskar Range among them the very difficult peak of Nilgiri Parbat, 21,264 ft. During this expedition Mr. Smythe came upon some remarkable tracks in the snow which the Tibetan porters believed were made by a Mirka or Abominable Snow Man. These tracks were afterwards identified as bear tracks by the Natural History authorities in London. It is believed that there is now enough evidence to explain this strange legend of the Himalayas.

Garhwal was visited in 1939 by a Swiss expedition led by M. Andre Roch and two fine peaks were scaled, Dunagiri and the Wedge Peak.

In 1938 Mr. C. S. Houston led an expedition to the Karakoram during the course of which a bold and determined attempt was made to climb K2, 28,150 ft. After failure to obtain a footing on the N. W. ridge, the party, which included several veteran Sherpa porters, ascended the N. E. ridge to a height of 26,000 ft.

A further attempt on K2 was made by an American party in 1939 but ended in disaster, Mr. Dudley Wolfe, and three Sherpa porters losing their lives in stormy weather high up the mountain.

Another expedition to the Karakorams was that undertaken by Capt. J. B. Harrison, Lieut. J. O. M. Roberts, Mr. R. A. Hodgkin, Dr. T. Graham Brown and Lieut. J. Waller together with Dr. G. A. J. Teasdale and Dr. Elizabeth Teasdale. The principal objective was Masherbrum, 25,660 ft. After establishing Camp 7 at 24,600 ft. Harrison and Hodgkin reached a height of about 25,000 ft. before being forced to retreat by bad weather. In descending to Camp 6 they were overtaken by a blizzard and forced to spend a night in the open as the result of which they were seriously frostbitten. The devotion of the Sherpa porters prevented a more serious disaster.

Further exploration of the Badrinath, Kedarnath ranges at the sources of the Ganges as well as various ascents was made by a German expedition under the leadership of Dr. R. Schwarzgruber in the autumn of 1938.

The Survey of India are now very active and much work has been accomplished during the re-survey of Garhwal and Kumaon under the direction of Major Gordon Osmaston, whilst several thousand square miles of country have been mapped by Messrs. Shipton and Tilman during their expeditions to the Shaksgam in 1937 by Mr. Shipton during his expedition to the Karakoram in 1939.

The Himalayan Club was founded on 17th February 1928, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the late Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E., Assistant Surveyor-General.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfret, authorising him to "open a new Lodge in Bengal." Of his personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol or Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the **United Grand Lodge of England** and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a **District Grand Lodge.**

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766. In 1767 Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1781 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Maiden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798 both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 822) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moira was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which, however, left no

trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who obtained a warrant, on the recommendation of the Parent Lodge from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel, it was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of **Scotland** P.G.M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836 in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to **Scottish Freemasonry** that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 549 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burnes established a Lodge "Rising Star of Western India," at Bombay for the **admission of Indian gentlemen** the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umra has borne fruit resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East a distinguishing, characteristic or Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grant Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first, the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

75 Lodges. Rt. Wor. Bro. A. Barr Pollock, P.G.D., District Grand Master. Dy. D.G.M. S. K. Ghosh, P.A. G.D.C. Asst. D.G.Ms Brigadier H. Williams. P.Dy. G. Swd. B. and J. E. Hudson.

District Grand Steward	,, J. E. Hopkins	1936

The Grand Lodge of Scotland exercises its rule through a Grand Master of All Scottish Freemasonry in India, who is nominated by the Lodges under the jurisdiction subject to confirmation by the Grand Lodge of Scotland. M. W. Bro. Sir Ivon Taunton, Kt., C.I.E., J.P., I.C.S., Grand Master, controls 75 Lodges. Under him the several districts are supervised by the following Grand Superintendents:—

Major G. Bennet Doré, G. Supdt., Northern India.

N. Iredale, G. Supdt., Central India.

Diwan Bahadur D. Srirama Sastri, G. Supdt., Southern India.

H. S. Jamilson, G. Supdt., Eastern India.

The Grand Secretary is R.W. Bro. Khan Bahadur J. C. Mistree, J.P., 17, Mursban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Provinces there being two already, viz., English and Scottish the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St Patrick" and since that year three other Lodges have sprung into being, one of which is now defunct.

The Irish Constitution is governed in India by a Grand Inspector for India. He has two Asst. Grand Inspectors, one for the Bombay Presidency, who is Wor. Bro. A. Eman, and one for Bengal who is Wor. Bro. I. O. Rees.

Eleven Lodges are working in India at the following places:

Bombay.—Nos. 319, 419, 648. *Calcutta*.—Nos. 263, 382, 464, 465, 490 and 567. *Lahore*.—No. 19. *Simla*.—No. 458.

Royal Arch Masonry.—Under England the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The English five Districts are constituted as under:—

Bengal.

31 Chapters. Grand Supdt. Most Ex. Comp. A. Barr-Pollock.

Madras.

21 Chapters. Grand Supdt. Most Excellent Comp. Sir George Boag, K.C.I.E., C.S.I., M.A.

Bombay.

27 Chapters. Most Ex. Comp. Sohrab R. Davar, T.D., Grand Superintendent.

Punjab.

22 Chapters. Most Ex. Comp. Rt. Rev. Lord Bishop of Lahore, C.I.E., O.B.E., V.D., M.A., D.D., Grand Superintendent.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Camp. Sir Shapoorjee B. Billimoria, Kt., M.B.E., J.P., under whom there are 33 Chapters in India. The Grand Secretary of All Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

19 Lodges. Rt. W. Bro. Capt. A. Barr-Pollock, District Grand Master.

Bombay.

18 Lodges. Rt. W. Bro. Sohrab R. Davar, P. G. Ov., District Grand Master.

Madras.

16 Lodges. Rt. Wor. Bro. Sir George Boag, K.C.I.E., C.S.I., M.A., District Grand Master.

Punjab.

12 Lodges. Rt. W. Bro. Rt. Rev. The Lord Bishop of Lahore, C.I.E., O.B.E., V.D., M.A., D.D., District Grand Master.

The Mark degree is incorporated with the Royal Arch degree in Irish Chapters. The Mark degree is worked in some S. C. Lodges, but essentially in R. A. Chapters, in which the Excellent, R.A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. The Mark degree in Scottish Craft Lodges is conferred by the Rt. Wor. Master as the S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Royal Ark Mariner.—The Royal Ark Mariner degree is worked in the English Constitution by Lodge attached to Mark Lodges. Its ruler is the District Grand Mark Master and only Mark Master Masons can take this degree.

There are 10 R. A. M. Lodges under Bengal, 5 under Bombay, 5 under Madras and 4 under Punjab.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

The Red Cross of Constantine has two Conclaves working in India. With them are worked the degrees of K.H.S. and Kt. of St. John. They are governed by the Grand Council in England direct.

The Conclaves working in India are:—

No. 43 Bombay and No. 160, Simla.

The Order of the Secret Monitor has 7 conclaves under Bombay, 7 under Madras, 3 in Calcutta and 1 in Cawnpore.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below :—

D. G. S., Bengal.

Guy D. Robinson, P.A.G.D.C. (Eng.), P.D.G. W. (Bombay), Bengal, 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur K. C. Banaji, P.A.G. D. of C, P.D.G.W., **Freemasons' Hall, Ravelin Street, Fort, Bombay.**

D. G. S., Madras.

Rao Bahadur S. T. Srinivasa Gopala Chari, P. G. D., P. D. G. W., Freemasons' Hall, Kilpauk, Madras.

D. G. S., Punjab.

G. Reeves Brown, P.A.G.D. of C. (Eng.), Freemasons' Hall, Lahore

Scottish Constitution.—It has two Benevolent Funds known as, (1) Scottish Masonic Fund of Benevolence (India), and (2) Scottish Masonic Benevolent Association in India. For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangeer C. Mistree, J.P., 17, Murzban Road, Fort, Bombay, who is Secretary of both Funds.

Office-Bearers of the Grand Lodge A. S. F. I. for the year 1945-46 :—

Sir Ivon Taunton, Kt., C.I.E., J.P., I.C.S., P.M. No. 1041	Grand Master.

1411	Benevolence	Bombay.
1412	Al-Ameen	Bombay.

Scientific Surveys.

Zoological Survey of India.—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for more than 130 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superintendent) of the Indian Museum has been a zoologist, and among the officers who have held the appointment have

been such well-known members as Anderson, Wood-Mason, Alcock and Annandale. Recently Anthropology has been separated from the Zoological Survey of India.

The Survey is unique in that all its officers are Indians. The main functions of the Survey are to Investigate the fauna of India, to maintain the National Zoological collections of India and to arrange and preserve the Zoological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *Memoirs of the Indian Museum*. The headquarters of the Survey are at present temporarily located at Benares Cantt.

Botanical Survey.—The Botanical Survey department of the Government of India was under the control of a Director. The Superintendent of the Royal Botanic Garden, Calcutta was *ex-officio* Director. The Director having retired since December 3, 1939, the Department is awaiting some reorganisation. The duties of the Director are distributed amongst (i) Dr. K. P. Biswas, M.A., D.Sc. (Edin.), F.R.S.E., Superintendent, Royal Botanic Garden, Calcutta and (ii) S. N. Bal, M.Sc., Ph. C., Curator, Industrial Section, Indian Museum. There is a staff at headquarters of one officer for systematic work and at the Indian Museum a Curator who is engaged in the development and maintenance of the Industrial Section.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the vegetable resources of the area it administers, and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, limnology, distribution of plants, ecology and economic botany of plantlife—the work accomplished in pure and applied botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India. The irreplaceable dried plant materials obtained by botanical explorations and preserved for more than one hundred and fifty six years at the Herbarium of the Royal Botanic Garden, Calcutta, and several thousands of indigenous and exotic trees, shrubs and herbs cultivated in the open, prove to be most useful in dealing with such questions of considerable State-importance as naturalisation of useful plants, introduction of new vegetable products into the country, the adaption of raw produce to the requirements of manufacturing industry, land utilisation, preservation of rural areas, provision of national parks, drainage, sanitation and public health.

Survey of India.—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough chart of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennell the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the *relative* accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has avoided the embarrassments caused in other countries where isolated topographical surveys have been started without a rigid framework, with the inevitable result that they could not be fitted together.

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of those which are carried out in India:

Precise levelling for the determination of heights;

Tidal predictions and publication of Tide Tables for thirty-nine ports between Suez and Singapore.

The Magnetic survey;

Observation of the direction and force of gravity;

Astronomical observations to determine latitude, longitude and time;

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed widespread anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India in 1905.

Though revenue survey is primarily a record of individual property boundaries and is unconcerned with the surface features, ground levels and exact geographical position essential to a

topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905, however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1-inch to 1-mile scale as recommended by a commission which sat at that time to consider the existing maps of India.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours and proper classification of communications.

While some of the unsurveyed places are in remote tracts like the Naga hills of Assam and the high Himalayas, most are accessible. Large areas in Eastern Bengal, North Bihar, South Bombay, Gujrat, Sind and Western Rajputana have yet to be mapped on modern lines.

The activities of the Survey of India have gone beyond the borders of India in the past. Nepal, for instance, was surveyed and mapped at the request of the local authorities in 1927.

Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work.

Air Surveys.—The use of air survey has been progressively developed in this department and is now widely used both in support of the topographical survey programme and for special requirements of Irrigation Geology, Town-planning and other development works.

Air survey is in certain types of terrain and for certain purposes, more speedy and more economical than ground survey and can be carried out by the department at almost any normally required standard of accuracy.

Paid for work.—In normal times the department is prepared to undertake or aid local surveys, on payment by those concerned, such as :

Forest and cantonment surveys ;

Riverain, irrigation, railway and city surveys ;

Surveys of tea gardens and mining areas, with such control levelling as is necessary for those operations ;

Administrative assistance is also given, and executive officers lent, in aid of the revenue surveys of various Provinces and States.

Maps.—In addition to topographical maps on scales of 1 inch, ½ inch and ¼ inch to one mile and geographical maps on scale of 16 miles to one inch and smaller scales, the Department produces and holds for sale the following special maps : -

General maps of India, Provincial Maps, City and Town Guide Maps, Cantonment Plans, Manœuvre maps and miscellaneous maps.

All departmental maps published are shown in the 'Survey of India Map Catalogue' which can be obtained for Re. 1 post free from the Director of Map Publication, Dehra Dun.

Administration is in the hands of the Surveyor General under the Agriculture Department of the Government of India.

The Headquarters office is at Delhi under the Deputy Surveyor General and two Assistant Surveyors General.

There are map printing offices at Dehra Dun, Calcutta and Murree, the resources of which may be made use of by Government Departments and the public for printing special maps, illustrations for reports, patents diagrams, etc.

During the war, the Department was almost entirely devoted to work in direct support of the war effort and many of the civil activities outlined above were interrupted or suspended. These activities are now being resumed and intensified particularly in relation to development projects.

Indian Science Congress Association.—The Indian Science Congress Association was founded in 1914 largely through the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen who were Honorary General Secretaries of the Congress till 1921. The general administrative work of the office of the Congress was under the management of the Royal Asiatic Society of Bengal till 1939. The Association at present has its offices at Statistical Laboratory, Presidency College, Calcutta.

The main objective of the Association is the advancement of science in India, and the annual sessions (Indian Science Congress) are organised for the purpose of (1) encouraging research and making the results generally known among science workers in India ; (2) giving opportunities for personal intercourse and scientific companionship in order to overcome to some extent the isolation in this large country of workers in science, and (3) promoting public interest in science.

Membership of the Association is open to all interested in the activities of the Congress. The Association has an average total membership of 1,500. The annual subscription is Rs. 12. There are also Sessional Members at concession rates. The members receive free of cost the proceedings of the annual sessions, which are issued in four parts.

The Congress meets in January each year in one of the principal cities and the proceedings last for six days. The session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different branches of science being usually represented in turn. The work of the Session is divided into thirteen sections : (1) Mathematics, (2) Statistics, (3) Physics, (4) Chemistry, (5) Geology and Geography, (6) Botany, (7) Zoology and Entomology, (8) Anthropology and Archæology (9) Medical and Veterinary Sciences, (10) Agricultural Sciences, (11) Physiology, (12) Psychology and Educational Science, (13) Engineering and Metallurgy. The Sections meet separately, and each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers. Special discussions and symposia are held in the mornings or in the afternoons during the Session. Social functions and visits to places of scientific and industrial interest are arranged in the afternoons by the Local Reception Committee which is formed at the venue of the Congress to arrange for the work of the Session. Popular Lectures by eminent scientists and specialists are delivered in the evenings for the general public and form an important and attractive feature of the programme.

***General Secretaries.*—Prof. P. C. Mahalanobis, F.R.S., Statistical Laboratory, Presidency College, Calcutta; Prof. M. Qureshi, Ph.D., F.N.I., Head of the Dept. of Chemistry, Osmania University, Hyderabad (Dn.).**

The Indian Research Fund Association.— This Association was constituted in 1911 with a sum of Rs. 5,00,000 set aside as an endowment for the prosecution and assistance of research the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. The Association is a pioneer in organised medical research on a large scale.

The control and management of the Association are vested in a Governing Body. Its President is the Member for Education, Health and Agriculture, Govt. of India. This body is assisted by a Scientific Advisory Board of which not less than three members have seats on the Governing Body. The D. G. I. M. S. is the Chairman of the Board and the Public Health Commissioner with the Govt. of India is the Secy. of the Board and of the Governing Body. Membership of the Association is open to non-officials. Every donor of Rs. 5,000 is entitled to become a permanent life member, while every subscriber of Rs. 100 per annum can be a temporary member.

The original Governing Body was composed exclusively of officials until 1929. Raja of Parlakimedi made a donation of Rs. 1,00,000 to the Association and was appointed a life-member. In the same year the Govt. of India, with a view to liberalising the constitution of the Governing Body, decided to enlarge it by including three representatives of the Indian Legislature, two representatives of Medical Faculties of Universities incorporated by law in India and one eminent non-medical scientist to be nominated by the Governor-General. As a result of further representations from the Universities and the Legislature, this Body was again enlarged in 1933 by the addition of a third representative of the Medical Faculties of Indian Universities, whilst it was decided that the non-medical scientist should in future be elected by the Indian Science Congress Association.

A Recruitment and Appointments Board has been formed from amongst the members of the Governing Body of the Association to select and recommend officers for appointment in the Medical Research Department and the All-India Institute of Hygiene and Public Health, Calcutta.

In order to ensure the closest co-operation between workers and to prevent overlapping of efforts, an annual conference of medical research workers and administrative heads of Medical and Public Health Departments used to be convened under the auspices of the Association up to 1938. (In that year it was decided that the Conference should be held biennially in future. No Conference has, however, been held since nor is one to be held in 1946 due to the abnormal travel and food condition prevailing in the country. At this conference free discussions were held on the work accomplished and on proposals for future work. The results of the discussions enabled the members of the Scientific Advisory Board to make their recommendations for the programme for the following year. The Board is assisted by Advisory Committees consisting of workers on more important items of research, *e.g.*, cholera, malaria, plague, leprosy, filariasis, rabies, clinical research and industrial health, nutrition, maternity and child welfare who examine the proposals for research work and make recommendations to the Scientific Advisory Board. The Board has recently appointed a Clinical Research Advisory Committee to draw up a plan for the development of clinical research in India. The Scientific Advisory Board annually publishes a technical report describing the research work done on the various enquiries carried out under the auspices of the Association during each calendar year. This report is obtainable from the office of the Secretary, Governing Body Indian Research Fund Association, Secretariat, New Delhi on payment.

The results of researches carried out under the auspices of the Association are published in the "Indian Journal of Medical Research" and its "Memoirs" and the "Journal of the Malaria Institute of India." Since the inception of the Association a large number of enquiries have been carried out. Enquiries include investigations on cholera, bacteriophage, malaria, nutrition, leprosy, plague, vaccines, tuberculosis, pharmacology, indigenous drugs, maternal mortality, helminthology, medical mycology, dracontiasis and filariasis, protozoal parasites, cancer, epidemic dropsy, kala-azar, dried blood plasma, sandfly fever, typhus bacillary dysentery, snake venoms, fluorosis, clinical problems, etc.

Besides financing investigations which are conducted by workers in its direct employment, the Association gives grants-in-aid to institutions and also to outside workers. The expenditure for the last few years has amounted to between seven and eight lakhs of rupees per annum. The Association maintained the Research Sections of the Malaria Institute at Delhi as well as its Southern India Branch at Coonoor until March, 1946 when they were taken over by the Government of India.

The Association maintains the Nutrition Laboratories at Coonoor, which carry out investigations which have a direct bearing on the problem of nutrition in India. The diet surveys undertaken by the laboratories have provided very valuable information as to food requirements. The publication of Health Bulletin No. 23 "The Nutritive value of Indian Foods and the planning of satisfactory diets" has made available to the public useful knowledge about Indian foodstuffs. Besides carrying out experiments in nutrition, annual classes are held at which candidates from all over India are trained in the problems of nutrition. The nutrition advisory committee of the Association has been recognised by the Government of India as the National Advisory Nutrition Committee for India.

Research work at the Nutrition Research Laboratories, Coonoor, brought to light the high value of dried amla powder as an anti-scorbutic. As a result of this, and at the request of the Medical Stores Department, the Association's laboratories at Coonoor have manufactured large quantities of amla powder for army purposes.

The Association have set up Nutrition Research Units at the Seth G. S. Medical College, Bombay and at Dacca University, Dacca. They have also set up a Clinical Research Unit at the Tata Memorial Hospital, Bombay.

The Association awards biennially five research fellowships of the value of Rs. 250 p.m. each tenable for 2 years. Four of these fellowships are reserved for Medical Graduates and one is open to a person holding a masters degree in science. The Association also awards 4 research fellowships of the value of Rs. 100 p.m. each tenable on a yearly basis. The fellowships are intended to encourage young science graduates to take up research on nutrition.

Geological Survey.—The Geological Survey of India is one of the oldest Geological Surveys in the World. The present department, now under the Government of India, Department of Works, Mines and Power, was founded in 1851. Its primary function is the preparation of a geological map of India, the basis on which all geological work, including an appraisal of the mineral deposits of the country, must rest.

Up to the beginning of the present century, most of the geological maps prepared were on the small scale of 1" = 4 miles, many of the surveys being rather in the nature of geological reconnaissances with the object of obtaining a broad view of the geology of the country as a whole. During the last 40-50 years, mapping has, wherever possible, been on a standard scale of 1" = 1 mile, and in certain areas of special economic importance on larger scales.

The importance of geological work in connection with India's industrial development is now widely realised and, to meet enhanced demands, the gazetted cadre of the Department is being increased as rapidly as possible. The present sanctioned strength is the Director, 1 States Liaison Officer, 10 Superintending Geologists (including 2 Deputy Directors), 30 Geologists, 1 Petroleum Geologist, 55 Assistant Geologists, 2 Geophysicists, 1 Chemist, 9 Assistant Chemists, 1 Mining Engineer, 1 Deputy Mining Engineer, 1 Supervisory Field Officer, 1 Driller and 1 Registrar. This staff is divided into (i) Headquarters Division, and (ii) Field Staff. The Headquarters Division, with its office in Calcutta, includes 2 Deputy Directors (one in-charge of General Administration, Publications, and Records and the other in-charge of Mineral Development and Technical Administration), 1 Petrologist and 1 Curator with assistants who identify rocks and minerals submitted for examination by outsiders and superintend the Museum collections, 1 Palæontologist with assistants who are responsible for the identification of fossils and supervision of the fossil collections, and a chemical staff working in the Headquarters Laboratory. The office sections include, in addition to the general administrative sections, a Library section Information and Statistics sections, a Publication section and Drawing office, including map and process sections. Geological maps are prepared in the Drawing office and smaller maps are also printed there. The departmental Library is well-equipped with books and publications on geological and allied subjects. These may be consulted by the general public and in certain circumstances may be issued on loan.

The Field Staff, who spend about half of the year on geological fieldwork in any part of India and the remaining 6 months at headquarters, are grouped into the Mapping Division and the Development Division, the former consisting at present of 4 Mapping Circles and the latter of one Mineral Development Circle and one Engineering Geology Circle. Each Circle is under the supervision of a Superintending Geologist. The individual Mapping Circles embrace one to several provinces while the activities of the two specialised circles cover the whole of India. The object of the Mapping Circles is to continue the detailed geological mapping of India. Officers in these Circles carry out preliminary investigations on such mineral occurrences as are found during the course of mapping, and also undertake the simpler types of engineering geology and water-supply investigations. They will also supply the geological guidance necessary in any geophysical work which may be carried out in their areas. Officers of the Mineral Development Circle are men who have specialised in the study of certain minerals, such as coal, mica, manganese, clays, gypsum, etc. Their work is of an all-India character, and they will operate and give advice to provinces wherever their specialised knowledge will be advantageous. Similarly, the work of the Engineering Geology Circle is of an all-India character, the members being highly specialised in the geological investigation of dam-sites, water-supply or any geological problems related to engineering. With the present small staff, this Circle can take on only a limited number of investigations but it is hoped to expand it to the cadre proposed above as quickly as possible. Ultimately, the Engineering Geology Circle is likely to expand into more than one Circle of highly specialised officers as investigations are extended to cover problems not included previously on account of shortage of staff. The Engineering Geology Circle is expected to work in close co-operation with the Public Works Department of the various Provincial Governments. In addition to the staff of the above Circles, a small geophysical staff is being appointed and equipped. Their work in the immediate future is likely to be mainly on water-supply and engineering geology problems. For testing mineral deposits, exploring dam-sites and underground water resources, drilling equipment is being purchased.

Every year, before the programme of the field surveys is decided upon, the Provincial Governments are asked to give details of geological investigations, mineral surveys or engineering enquiries which they desire to have carried out. Such definite programmes of fieldwork may also cover the Indian States, and may be carried out free of charge. If, however, any special problem has to be dealt with which does not come under the regular programme of the Department (*e.g.*,

a mineral survey of a particular area, an enquiry connected with a particular engineering project, or short-term investigations involving specialised geological knowledge), a charge may be made for the services of the officers deputed for such work.

The results of the investigations and researches of the Department are published in—

(*i*) *Records* of the Geological Survey of India, which include the Annual Reports, Annual Mineral Review, and short papers. One volume of 4 parts is published annually. Every 5 years, a Quinquennial Review of the Mineral Production of India, is published as a separate volume of the *Records*.

(*ii*) *Memoirs* of the Geological Survey of India; in general each volume deals in detail with a *particular area*.

(*iii*) *Palæontologia Indica*, which deals entirely with palæontological matters.

As a part of the *Records*, a series of Bulletins on particular minerals have been published in recent years. These Bulletins are intended to summarise the geological information available in India on commercial minerals. As each edition goes out of print, these Bulletins are revised and reprinted.

Thus to cater for the Mineral Industry, the Geological Survey of India publishes:

(*a*) An Annual Review of Mineral Production, the contents of which are mainly production statistics relating to the previous year.

(*b*) A Quinquennial Review of the Mineral Production of India, giving a review of the trend of the industry during the past 5 years.

(*c*) Bulletins, summarising geological knowledge on mineral occurrences – the Bulletins are of longer term interest than (*a*) and (*b*).

During the War, the publication of the *Records* (except Bulletins) and *Memoirs* was suspended, but this has now been resumed.

The advice of the Geological Survey of India is taken by the Central Government and others on all questions of mineral policy. To encourage and assist the teaching of geology in classes and colleges, the Department presents collections of minerals, rocks and fossils and gives lectures to students and at times to the public with a view to popularising the study of geology.

The geological functions of the Mineral Utilisation Branch of the Department, which was established as a War measure, have been taken over by the Mineral Development Circle.

The Strategic Branch, which was formed during the War with a view to providing geological information and advice for the Allied Forces, has been dissolved.

PROVING OF WILLS.

In British India if a person has been appointed executor of the Will of a deceased person, it is always advisable to prove the Will as early as possible. If the Will is in a vernacular, it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the Will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. Values must be shewn as at the date of the Petition and Probate Fees will be calculated on such value. The Values of immoveable properties are usually assessed at 16⅔ years' purchase on the nett Municipal assessment, in the absence of a report from a competent architect.

Scale of Probate Duty.—Up to Rs. 1,000– Nil.

For the next Rs. 9,000 (*i.e.* upto Rs. 10,000), 2 per cent.; for the next Rs. 40,000 (*i.e.* upto Rs. 50,000) 3 per cent.; for the next Rs. 50,000 (*i.e.* upto Rs. 1,00,000) 4 per cent; for the next Rs. 1,00,000 (*i.e.* upto Rs. 2,00,000) 4½ per cent; for the next Rs. 50,000 (*i.e.* upto Rs. 2,50,000) 5 per cent; for the next Rs. 50,000 (*i.e.* upto Rs. 3,00,000) 5½ per cent; for the next Rs. 1,00,000 (*i.e.* upto Rs. 4,00,000) 6 per cent; for the next Rs. 1,00,000 (*i.e.* upto Rs. 5,00,000) 6½ per cent.; for amounts exceeding Rs.5,00,000 (or the portion over Rs. 5,00,000) 7 per cent. In addition to this Probate Duty there is, at present, a surcharge of 25%.

Exemptions from Probate Duty.—In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:

1. Debts left by the deceased including mortgage encumbrances.
2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

In addition, there is general exemption for service personnel killed in action or dying on service in certain circumstances.

Procedure.—The particulars of the property of the deceased and the particulars of all items allowed by law to be deducted have to be shown in separate schedules. It is the practice of the High Court to send a copy of these schedules to the Revenue Authorities and if the properties, particularly immoveable properties, have not been properly valued, the High Court issues a notice to the petitioner requiring him to amend the schedule of property accordingly. In certain cases the Court requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within the time mentioned in the citation to the effect that nothing should be done in the matter of the petition for probate without notice to the person objecting or to use the technical language the caveator, and if the Will is shown to have been properly executed, probate is ordered to be granted. If an objection or caveat is filed the petition for probate is converted into a suit in which the petitioner is plaintiff and the caveator is the defendant.

Probate Codicil, etc.—Probate has effect over all the property and estate moveable or immoveable of the deceased throughout the province in which the same is granted

and is conclusive as to the representative title of the person to whom the probate is granted against all debtors of the deceased and all persons holding property which belongs to the deceased and will afford full indemnity to all debtors paying their debts and all persons delivering up such property to the person to whom such probate is granted. Probate can only be granted to an executor appointed by the Will and the appointment may be express or by necessary implication. Probate cannot be granted to any person who is a minor or is of unsound mind. Where several executors are appointed probate may be granted to them simultaneously or at different times. If a codicil is discovered after the grant of probate a separate probate of that codicil may be granted to the executor if it in no way repeals the appointment of executors made by the Will. If different executors are appointed by the codicil, probate of the Will will be revoked and a new probate granted of the Will and codicil together. When probate has been granted to several executors and one of them dies, the entire representation of the testator accrues to the surviving executor or executors. Probate of a Will when granted establishes the Will from the death of the testator and renders valid all intermediate acts of the executor as such. When a person appointed an executor has not renounced the executorship, letters of administration will not be granted to any other person until a citation has been issued calling upon the executor to accept or renounce the executorship, but when one or more of several executors have proved the Will, the Court may, on the death of the survivor of those who have proved, grant letters of administration without citing those who have not proved. The renunciation may be made orally in the presence of the Judge or by a writing signed by the person renouncing and when made will preclude him from ever thereafter applying for probate of the Will appointing him executor. If an executor renounces or fails to accept an executorship within the time limited for the acceptance or refusal thereof, the Will may be proved and letters of administration with a copy of the Will annexed may be granted to the person who would be entitled to administration in case of intestacy.

Residuary Legatee.—When no executor has been appointed by a deceased in his Will or when the deceased has appointed an executor who is legally incapable or refuses to act or who has died before the testator or before he has proved the Will or when an executor dies after having proved the Will but before he has administered all the estate of the deceased, a universal or a residuary legatee may be admitted to prove the Will and Letters of Administration with the Will annexed may be granted to him of the whole estate or so much of it as may be unadministered.

After any grant of Probate or Letters of Administration with Will annexed, no other than the person to whom the same may have been granted has the power to sue or prosecute any suit or otherwise act as representative of the deceased until such Probate or Letters of Administration has or have been recalled or revoked.

SMALL ESTATES.

Administrator General's Certificate.—In cases where the value of the estate is Rs. 2,000/- or less, an Administrator General's Certificate can be obtained. The procedure for obtaining this Certificate is simple and less expensive. A fee of 3% on the value of the estate is payable. The value of the estate has, however, to be taken as at the date of the death of the deceased. These Certificates are equivalent to Letters of Administration.

Earthquakes.

Physical divisions of India and their relation to Earthquakes.—The Indian continent is divided geologically and therefore physiographically into three distinct and well-defined units. The northernmost unit consisting of sedimentary and crystalline rocks comprises the great mountain ranges of the Himalayas that were upraised, geologically speaking, in comparatively recent times, and are believed to be still undergoing elevation. They constitute India's most unstable region and are therefore the seat of the most violent earthquakes. The north-south running mountains of Burma are components of the same mountain system, the Andaman and Nicobar Islands being their southern continuation, and Burma likewise pays the same penalty for their instability.

The southward push of these mountains caused a sinking of the Himalayan foreland—the region of the Indo-Gangetic basin, now filled with alluvium. This constitutes the second unit, and on account of its proximity to the restless mountains in the north, it shares, though in a lesser degree, the effects of the Himalayan earthquakes. But it also makes its own independent contribution of such catastrophies, as we know from our recent experience of the Bihar earthquake (January 1934).

The triangular portion of the Peninsula proper constitutes a stable landmass—a Horst—as the geologists call it—and is the third and most stable region in India, being comparatively free from severe earthquakes. Only one earthquake which did any considerable damage has been recorded from this region (April 1843). From the apex of the Peninsula to Madras, however, runs a region of minor shocks, probably connected with some dislocation in the earth's crust, though there is no direct evidence of this. These three units, then, constitute regions of decreasing intensity of earthquakes as we travel from north to south. They are indicated on the accompanying map, which is essentially the same as the one prepared by W. D. West of the Geological Survey of India.

Causes.—It will be unnecessary to go into the origin of the individual earthquakes, but a few remarks on the main causes of these phenomena will be illuminating. While minor earthquakes may be due to volcanic activity, the major ones are almost invariably the result of movement along dislocations in the earth's crust or "faults" as the geologists call them, and thrust planes. In the case of thrust planes certain sets of rocks override others, instead of being merely dislocated. The epicentre, that is the place of

maximum intensity, frequently coincides with these faults or thrust planes, which proves that a close relationship exists between earthquakes and the dislocations. A number of important faults run close to the southern edge of the Himalayas and the Himalayan foot is therefore a very unstable region. A similar fault runs along the foot of the Shan Plateau in Burma while the Kyaukkyan fault runs north and south in the Northern Shan States, and has probably given rise to earthquakes. It may, however, be pointed out that it is only such 'faults' as are still active that give rise to earthquakes. Thus the faults in the Peninsular area appear to be inert and therefore few earthquakes occur there. Although the immediate cause of the shocks may be movement along a fault or faults, the ultimate cause is often the rapid denudation of steep ranges, which upsets the equilibrium of the earth (Kangra, 1905) in the readjustment of which these movements occur. There is, however, no consensus of opinion on this point for in Norway, where the steep mountain ranges are subject to rapid denudation, there are no earthquakes. The cause may be more deep-seated as, for example differential cooling and contraction of the earth's interior. The same result is achieved by the slipping of large alluvial masses in deltaic areas or their uplift owing to tectonic forces (Rangoon Dec. 1927). The regions where mountain ranges take sharp bends, being highly folded, are naturally areas of pent-up strains seeking relief and are therefore zones of great danger. The violent Quetta earthquake of 1935 and the earlier ones of Mach and Sharigh (1931) were of this nature, for these places lie near sharp bends in the Sulelman, Bugti or Kirthar ranges.

Frequently more than one cause contributes to these earthquakes and the results are then even more disastrous.

Factors Controlling Damage and Loss of Life.—The intensity of the earthquake is not the only factor upon which the extent of damage and loss of life depends. Much depends upon the time of shock, the nature of the buildings, the habits of the people, etc. Thus the amount of damage done is often greater in India, where *pucca* houses are more common, than in Burma, where houses are mostly wooden, though the latter may suffer more from fire, as happened in the case of the Pegu earthquake (5th May, 1930).

The time at which the earthquake occurs makes a considerable difference to loss of life, for an earthquake occurring at night takes people unawares. (Kangra, 20,000 lives lost; Quetta, toll of life 25,000). Had the Bihar earthquake, in which 10,000 lives were lost, occurred at night the toll of life would have been unthinkable. Dr. A. M. Heron, Director, Geological Survey, makes certain observations in the case of the Baluchistan earthquake of 1909. He remarks that certain communities suffered more heavily than others because more of their number slept indoors and, being better off, lived in two-storyed houses, which naturally suffered more damage. The fact to be emphasised is that the loss of life, etc., does not entirely depend upon the severity of the shock, but upon the time of occurrence and various other factors.

Sources of Information.—Very little is known of the Indian earthquakes previous to the year 892 A.D. and accounts of the earlier of the recorded earthquakes are necessarily incomplete. T. Oldham has recorded the different sources of information of the earlier Indian earthquakes in his catalogue. Among the works in which records of Indian earthquakes later than 892 A.D. occur are the *Tárikhul Khulafá* (History of the Caliphs), the *Alkámil-fi-l Tárikh* by Ibnulathír—a historical work of the Arabians, the *Mir-át-ul-'Alam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, *Baddoní* (Bibliotheca Indica), Bábar's memoirs.

With one or two exceptions no really severe earthquakes took place in the Indian region between January 1943 and March 1945. However, a number of shocks of slight to moderate intensity were felt in different parts of the continent.

Two shocks of slight intensity were felt at Srinagar in Kashmir and at Drosh in Chitral, on Feb. 6, 1943, at intervals of 30 seconds. On Feb. 9, an earthquake of slight intensity was felt in parts of Assam. Slight shocks were felt over a wide area—Rawalpindi, Muzaffarabad, D. I. Khan, Gauhati, Gulmarg and Srinagar on 9th Sept. 1943, at 10-36 I.S.T. The epicentre of this earthquake was near the Hindu Kush Mountains. An earthquake of great intensity with epicentre in Assam was felt in parts of Assam and North Bengal, on Oct. 23 at 23. 54. I.S.T. Slight shocks were felt at D. I. Khan on Nov. 27 at 15.15 I.S.T.

On Feb. 29, 1944, an earthquake of great intensity, with epicentre in the Maldive Islands, was felt in the Ceylon region at 22·58 I.S.T. An earthquake of moderate intensity with epicentre near the Andaman Islands, was recorded on Sept. 27, 1944. During 1944 further shocks were felt in different parts of India—Kashmir, Bihar, Assam—but none of them is of much importance.

Between Jan. 1945 and March. 1945. The reported shocks are all of small intensity and occurred in Nepal and Assam.

Khafi Khán *Muntakhabullabáb*, etc. Much information is gleaned from the Journals of the *Royal Asiatic Society of Bengal*, the *Philosophical Transactions*, etc. Accounts of the later earthquakes appear in detail in the records and memoirs of the Geological Survey of India, from which much of the information here given is drawn.

Historical Review.—The chronological occurrence of the more important earthquakes may now be given.

The earliest earthquake authentically recorded in India took place about the close of the year 893 A.D. or early in 894 A.D., when Daibul or Daipul an important town on the coast of the Indian Ocean was severely shaken and about 150,000 persons lost their lives. As noted by Oldham a record of this earthquake appears both in the *Tárikhul Khulafá* (History of the Caliphs) and in *Alkámil-fi-l Tárikh*. According to him both these works mention the month of Shawwál (Hijra 280) as the date of occurrence. Since the month of Shawwal commenced 90 days before the 13th of March 894 A.D. that is the 14th December 893, the date of this earthquake is fixed by Oldham about the close of A.D. 893 or early 894 A.D.

6th July 1505.—This earthquake affected Afghanistan and Northern India. It is recorded that great fissures appeared in many

parts and there were extensive landslips causing much damage and loss of life. In one day as many as thirty-three shocks were felt and continued for a whole month. Oldham mentions that this earthquake is recorded in the *Mir-át-ul-'Alam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, in *Baddoni* (Bibliotheca Indica Vol. I, p. 319) in the Memoirs of Bábar (Erskines edition, p. 170) in *Firishtah* (Lucknow edition, p. 183) and its date is therefore authentically recorded.

The Province of Kashmir was shaken by an earthquake in 1552, but no details are available.

Several earthquakes of less intensity took place between the years 1618 and 1664. On the 26th of May, 1618, Bombay experienced an earthquake in which nearly two thousand lives were lost. The accompanying hurricane resulted in the destruction of several vessels. Lakhugar in Assam suffered an earthquake on the 7th February 1663. Shocks were felt in certain parts of eastern Bengal for a period of thirty-two days during the year 1668.

The next earthquake of great intensity which affected India occurred in 1668, between the dates 2nd—11th May. Its effect was so serious that Samáji or Samáwáni—a town of 30,000 inhabitants sank into the ground. A record of this appears in the *Mu'asir-i' Alamgiri* (Edit. Bibl. Indica, p. 74).

Following this terrible catastrophe there was a period of comparative quiescence of about 50 years. Upper India was however shaken by an earthquake on the '14 Muharam of Aurangzib's 12th year' (Mir-át-ul-'Alam, an unpublished work of Bakhtiwar Khan) that is, the 4th of June 1669. This earthquake was accompanied by a big shower of meteors, which, it is reported, falling into a lake caused its waters to overflow.

Kashmir and Attock were affected by shocks on 22nd June 1669 and 23rd June 1669 respectively, but not much damage appears to have been done.

A severe earthquake shook Delhi on Friday, the 17th of July 1720, at about mid-day and was accompanied by considerable damage to the fortress, Fatehpur Mosque and other property, as well as loss of life. It is reported that comparatively severe shocks continued for more than a month, so much so that the population of Delhi had to sleep out of doors during this period!

A violent earthquake accompanied by a hurricane of great intensity occurred in Calcutta and the delta of the Ganges in October 1737. It is reported that 20,000 craft plying on the Ganges were cast away, the steeple of a church sank completely into the ground, and 300,000 people lost their lives. It is further reported that 60 ton barques were blown two leagues up the river.

Bengal, Burma and the Arakan coast were affected on 2nd April 1762. In fact it is reported that the emergence of the Arakan coast from the sea is due to this earthquake, but that is an obvious exaggeration, though partial elevation of the coastal strip probably occurred. It is stated that oysters were found attached to rocks forty feet above ground level. Near Chittagong 60 square miles of land sank permanently under water.

Several shocks of varying intensity occurred in different parts of India—Calcutta, Kashmir, Ongole and the upper reaches of the Ganges between 13th July 1762 and 22nd May 1803, but they were not of much importance.

A violent earthquake took place on 1st Sept. 1803, affecting Mathura, Calcutta, Garhwal, Kumaon and Delhi. At Mathura the domes of several mosques erected by Ghazi Khan sank into the ground. Several villages were swallowed up in Garhwal.

This earthquake is noted for the fact that the upper portion of the famous Qutab Minar fell as a result of it, though it is stated that the Minar was also struck by lightning.

16th June 1819.—This was one of the worst earthquakes experienced in India. Its effect was the severest in Cutch, the chief town of which—Bhuj—was completely ruined and 2,000 persons perished. Ahmedabad, Broach, Surat and Poona were all affected.

In the western region of Cutch the town of Sindree and the neighbouring area was submerged as a result of tidal waves. A tract 15 miles wide was raised in front of a branch of the Indus and the river had to cut a fresh channel across it. This ridge is known to the local inhabitants as Allah Band, or God's Embankment.

One very severe shock followed by minor ones occurred on 29th October 1826 and resulted in several houses falling in Khatmandu and Patan, in Nepal.

1827 *Sept.* (*before 26th Sept.* 1827).—The fort of Kolitaran, near Lahore, was destroyed and about 1,000 persons lost their lives. It is stated that a hill falling into the river Ravi resulted in extensive floods.

6th June 1828.—There is record of at least eighty earthquakes affecting the Indian region between the aforementioned date and the year 1839, but of these only two are worth mention, namely, the one that shook the vale of Kashmir on 6th June 1828 and the other that affected Nepal and the eastern and central region, Northern India. In Kashmir alone over a thousand persons lost their lives and for at least two months following the earthquake the number of shocks was as high as one to two hundred per day.

26th August 1833.—Felt in Khatmandu (Nepal) and North Bihar. In Khatmandu alone 100 houses were levelled to the ground and a similar fate overtook other places. There was continuous agitation for full 24 hours.

An earthquake of great intensity affected Burma, more particularly Amarapura and Ava, on 23rd March 1839. It is reported that shocks continued for four or five days, every fifteen to thirty minutes. 200—400 lives were lost and pagodas and other buildings in Ava, Amarapura and Sagaing suffered heavily.

19th February 1842.—Lasted for about three minutes in Kabul and affected Peshawar, Jallalabad, etc. It was very destructive at Peshawar and one-third of the town of Jallalabad was destroyed. Hot springs at Sonah became cold and the amount of water also diminished. The area affected was about 216,000 square miles. The epicentral area was probably near Jallalabad.

Numerous later earthquakes which occurred in different parts of the Indian region do not call for much attention as they were of minor im-

portance. Two earthquakes which affected the Deccan in March and April 1843 may be here recorded, for the Deccan, being a stable landmass, is rarely affected by earthquakes of any intensity. Sholapur, Maktal, Singrurgarh, Bellary, Kurnool, Belgaum were all affected and much damage was done. This is the only earthquake known in the Deccan which caused considerable damage. The epicentre was near Bellary.

Severe shocks, local in their effect, occurred in Upper Sind on 24th January 1852. Fort Kahan was completely ruined and about 350 persons were killed.

24th August 1858.—Burma was affected, but the shocks were not of great intensity. False Island situated south-east of Cheduba Island (18° 38′ N : 93° 55½′ E) disappeared entirely under the Ocean. The same earthquake affected the Punjab and Bengal, but very little damage was done.

10th January 1869.—Experienced in Assam (Cachar), total area where shocks were felt was 250,000 square miles.

A severe earthquake occurred in the Bay of Bengal on the morning of 31st December 1881. The radius of the area affected was about 800 miles, and the total area over which the shock was felt was in the neighbourhood of 2,000,000 square miles, most of it being sea. It was felt at Gaya, Hazaribagh, Agra, Ootacamund and Calicut in India, and in Burma at Akyab where it was followed by the eruption of a mud volcano in Ramri. The northernmost point affected was near Monghyr.

30th May 1885.—This earthquake, although comparatively not so severe, resulted in heavy loss of life and about 3,000 persons perished in Kashmir. The epicentre was a few miles west of Srinagar. The radius of felt area was 300-450 miles, the total area affected being about 110,000 square miles.

14th July 1885.—The epicentre of this earthquake was north-west of Dacca. It was felt violently throughout Bengal, but extended also into Chota Nagpur, Bihar, Sikkim, Bhutan and Assam. The area affected was approximately 230,400 square miles.

20th December 1892.—This was felt over the greater part of Baluchistan, and was connected with an old fault line that runs along the foot of the Kojak range in a N.N.E. direction. The foot of the range is marked by a depression and numerous springs which are indicative of the fault. It is interesting to note that as a result of this earthquake the area west of the fault subsided about one foot and moved southward about 2½ feet! The earthquake was, however, local in its effects.

The worst earthquake which has affected Assam and probably the greatest within historic times occurred on 12th June 1897. Stone buildings in Shillong, Goalpara, Gauhati, Nowgong and Sylhet were almost entirely destroyed everywhere and Calcutta was seriously affected. Over 1,600 lives were lost and the earthquake was felt in an area of 1,730,000 square miles. The earthquake was caused by a "movement along a thrust-plane or thrust-planes, and along secondary thrust and fault-planes, which had a maximum length of about 200 miles and a maximum width of about 50 miles." This movement was due to the relief of differential strains set up in the interior of the earth.

The district of Kangra in the Punjab suffered heavily on 4th April 1905, more particularly because the shocks occurred early in the morning when people were still asleep. There was heavy loss of life—20,000 persons having perished. The area affected was 1,625,000 square miles. Kangra and Dharamsala were completely destroyed. The main shock was from north to south, followed by an equally severe one from south to north. The earthquake is ascribed to movement along one of the reverse faults of the Himalayas.

21st October 1909.—This earthquake affected the Kachhi plain, Baluchistan. Considerable damage was done and over 200 lives were lost. The radius of the felt area was about 15-45 miles. The elongated epicentre was N.W.-S.E. in direction. The earthquake was presumably due to the presence of a fault, though, the area being covered with alluvium, this is more or less conjectural.

A violent earthquake occurred over the greater part of the Northern and Southern Shan States on 21st May 1912, and was felt practically over the whole of Burma, Siam and Yunnan. An area of 125,000 square miles was affected. Shocks continued the following day and were followed on the 23rd May by a severe shock which was felt over an area of 375,000 square miles. Numerous after shocks continued in May, June, July and August, when they finally ceased. The epicentre was close to the great Kyaukkyan fault in the Northern Shan States.

No severe earthquake is recorded during the six years following the last earthquake in Burma, but a violent shock was felt on 8th July 1918 and affected Eastern Bengal, Assam, Burma, North-west India as far as Lahore. It was most strongly felt in Srimangal (Assam) where many tea-estates were ruined. The total area over which it was felt was 800,000 square miles. This earthquake was due to subsidence along a fault. It was accompanied by pouring out of sand, mud and water from fissures created in the ground.

17th December 1927.—Was experienced in Rangoon, but very little damage was done. Affecting as it did a big commercial city like Rangoon its importance cannot be denied. Investigation appears to show that the shock was due to "forces of uplift causing movement along lines of weakness below the deltaic alluvium." Although the area is covered with alluvium and direct observations are not possible, the probability of such a zone of weakness existing in the neighbourhood of the town must be accepted.

The areas around Rawalpindi, Peshawar and Attock are regarded as very unstable, as one big fault and numerous smaller ones are located in this region. The earthquake on 1st February 1929 in the North-West Himalayas was at first thought to be connected with these faults. But it has been shown that the focus of this earthquake lay at a considerable depth—160 *kms.* Which is a point of interest, for it shows that the shocks were not connected with any surface features such as faults. The epicentre was situated about 25 miles north-west of Abbottabad. Some damage was done to property and a few lives were lost.

8th August 1929.—This earthquake, which affected the small town of Swa in Burma, was connected with several of the later earthquakes that occurred in different parts of Burma—the Pegu earthquake of 5th May 1930, the Podo earthquakes of July to December 1930 and the Pyu disaster of 4th December 1930. The epicentral area was quite small and lay about 6 miles to the north-west of Swa. Damage was done to railway lines and bridges. Loaded trucks were lifted off the track and thrown to one side. The shocks were due to movement along a fault in the Tertiary rocks, more or less parallel to the great fault which is known as the Boundary Fault.

A violent shock occurred at about 8-15 p.m. on 5th May 1930, and practically levelled the whole town of Pegu. About 550 lives were lost and considerable damage was done to property in Rangoon as well. The actual area affected was about 220,000 square miles. This earthquake came without any preliminary warning and lasted only 30 seconds. The earlier Burmese earthquake previously mentioned was presumably a forerunner of the present one and did not indicate the dying out of still earlier movements. It is thought that the movement was connected with the boundary faults of the Shan Plateau, which was accentuated by the forward movement of *terra firma* into the gulf of Martaban.

Assam was shaken by a severe earthquake on 3rd July 1930, after about 12 years of comparative quiescence. The total area affected was about 350,000 square miles. The town of Dhubri suffered considerable damage, but fortunately no loss of life occurred. This is probably due to the fact that many houses are built of 'flexible superstructure supporting light, often galvanised iron roofs' and at that time of the year many persons were not sleeping inside their houses. The earthquake was probably due to weakness at the foot of the Assam range, movement along which zone was assisted by the rapid denudation of the mountains, which presumably upset the equilibrium.

3rd 4th December 1930.—Several severe shocks were felt between 10-15 p.m. and 1-22 a.m. in Pyu, Burma. Most of the brick buildings were destroyed and about 30 persons lost their lives. The shocks were felt over an area of approximately 220,000 square miles.

27th August 1931.—This was one of the worst of the Baluchistan earthquakes, and about 200 lives were lost. It was preceded on the 25th by an earlier earthquake the epicentre of which was near Sharigh. The March earthquake was felt over an area of 370,000 square miles. Both these earthquakes were connected with the sharp bends of the Suleiman, Bugti and Kirthar hills for such bends are regions of strain where earth movements are likely to occur.

15th January 1934.—This, the North Bihar earthquake, is still fresh in our minds. It was one of the most violent earthquakes that have affected India. It is estimated that over 10,000 lives were lost and several crores worth of property was damaged. Sitarmarhi, Madhubani, Monghyr, Patna, Jamalpur, Muzaffarpur, Darjeeling, *etc.*, and the Nepal valley suffered heavily. The epicentre of this earthquake ran from near Motihari through Sitamarhi to Madhubani. The total area over which it was felt was 1,900,000 square miles. The earthquake is attributed to faults underlying the alluvium. It is fortunate that it occurred in the afternoon (about 2-15 p.m.), for had it occurred at night it would have been one of the worst of such disasters experienced upon the earth.

31st May 1935.—The Quetta earthquake is one of the latest of the more violent catastrophies that have overtaken the Indian region. This can be estimated from the fact that 25,000 lives perished and damage to private property, Railway lines, etc., ran into several crores. The town of Quetta was practically destroyed and the area affected was about 100,000 square miles. The causesleading to these earthquakes are unknown, but the focus was probably shallow. The earthquake is probably connected with the sharp bend in the hill ranges near Quetta.

The frequency of aftershocks of the Quetta earthquake of May 1935, according to the Geological Survey of India, appears to be considerably diminished, but several sharp shocks were felt during the year in the Assam seismic area, including those of 16th January at about 18.45 hours and of 21st March at 21.45 hours, Indian standard time.

The last severe earthquake to be experienced in India occurred in the Hindu Kush on 14th November 1937, and was felt throughout the North-West Frontier Province, Kashmir, as well as largely over the Punjab, United Provinces, northern Sind and Baluchistan. Severe shocks were felt at Lahore, Rawalpindi, Peshawar, Kangra, Chitral and Drosh, and considerable damage was done. No loss of life was reported.

Although minor earthquakes have been reported from different parts of India later than November 1937, none of these has caused damage or loss of life. Details of some of these are given below.

5th January 1938.—Two shocks were felt at Drosh in the Chitral District, North-West Frontier Province. Another shock of the same intensity was felt on the 7th January, but there was no damage or loss of life.

14th April 1938.—An earthquake shock was felt at Monywa in the Lower Chindwin district, Burma, at 7·47 a.m. Cracks appeared in the walls of several buildings, but there was no loss of life.

3rd May 1938.—Two shocks were felt at intervals of about five seconds at Shillong in Assam, at 10-21 p.m. The shocks lasted for about 40 seconds. There was very little damage to property and no loss of life.

16th August 1938.—Shocks were experienced in the Upper Chindwin district, Burma, and were felt over a fairly wide area. The shocks, which lasted about 30 seconds, seem to have been severe at Kalemyo. *Pucca* buildings and Pagodas tumbled down, but there was no loss of life. Smaller shocks were also felt at Mawlaik, Paungbyin, Mingin, Indaw, Kalewa, Homalin, Tabyin, etc.

7th February 1939.—Two shocks were felt at Drosh in Chitral at intervals of two seconds, but there was neither material damage nor loss of life.

Reports received by the Geological Survey of India from various parts of India and Burma show that 82 earthquake shocks were felt in 1937 in India. With the exception of the rather severe shock of 14th November, which originated in the Hindu Kush region and affected a considerable tract of north-west India, the rest were of slight intensity, unattended by any damage to buildings or persons.

Regionally the shocks were distributed as follows :—

Burma, 28; north-eastern India, including Sikkim, Nepal and Tibet, 31; north-western India, including Kashmir, Chitral and Baluchistan, 21; and Peninsular India, 2.

The epicentre of the shock of 14th November 1937 has been located in the Hindu Kush mountains, north-west of Drosh, in Chitral. This has been deduced from observers' reports and from seismographic records available from the Meteorological Observatories at Bombay, Agra, Calcutta and Kodaikanal. This shock was felt at such distant places as Kabul, Dehra-Dun, Simla, Multan, Dera Ismail Khan and Roorkee.

At least sixty earthquake shocks were felt in India during the year 1939. Fortunately all these shocks, without exception, were of slight intensity and caused neither loss of life nor serious damage to property.

About twenty of these shocks affected the unstable Assam region, of which four were felt at Dhubri, six at Gauhati and a like number at Shillong. Kashmir, Drosh (Chitral State), Quetta, Rawalpindi, Gilgit, Lahore, Shikarpur (Cutch), Peshawar, Begumpet (Hyderabad State) and many other towns experienced shocks during the year.

It is unnecessary to give details of the large number of shocks felt during 1939 for most of these were of minor importance. Mention must, however, be made of the earthquake of 21st November, 1939, which was felt at Jammu, Mianwali, Dehra Ismail Khan, Peshawar, Rawalpindi, Srinagar, Dalhousie, Kabul, Gilgit, Skardu, etc. Its epicentre was in the Hindu Kush range, being situated at 36° N 75.5° E. Its focal depth was 200 KM.

The intensity of this earthquake at Srinagar and Gilgit was VII on the Mercali scale. At Srinagar three shocks were felt at intervals of 10 seconds each. Cracks developed in the walls of the Observatory and other buildings in the city. At Gilgit, which suffered three shocks at intervals of 2 seconds each, boulders slipped down from the surrounding mountains and dust spread all over the valley.

During 1940 earthquake shocks were felt at Gulmarg in Kashmir, at Barmer (Rajputana) and at Bhuj and Radhanpur in the Western Indian States.

At Gulmarg two shocks of moderate intensity were felt on the 3rd August at 14.45 (I.S.T.) and cracked walls of *kutcha* houses. Shocks of moderate intensity were also felt on 8th August and 21st September, 1940, but apart from cracks in *kutcha* houses no damage was done. Barmer and Bhuj experienced a slight shock on 31st October while Bhuj had another shock on 13th November, 1940.

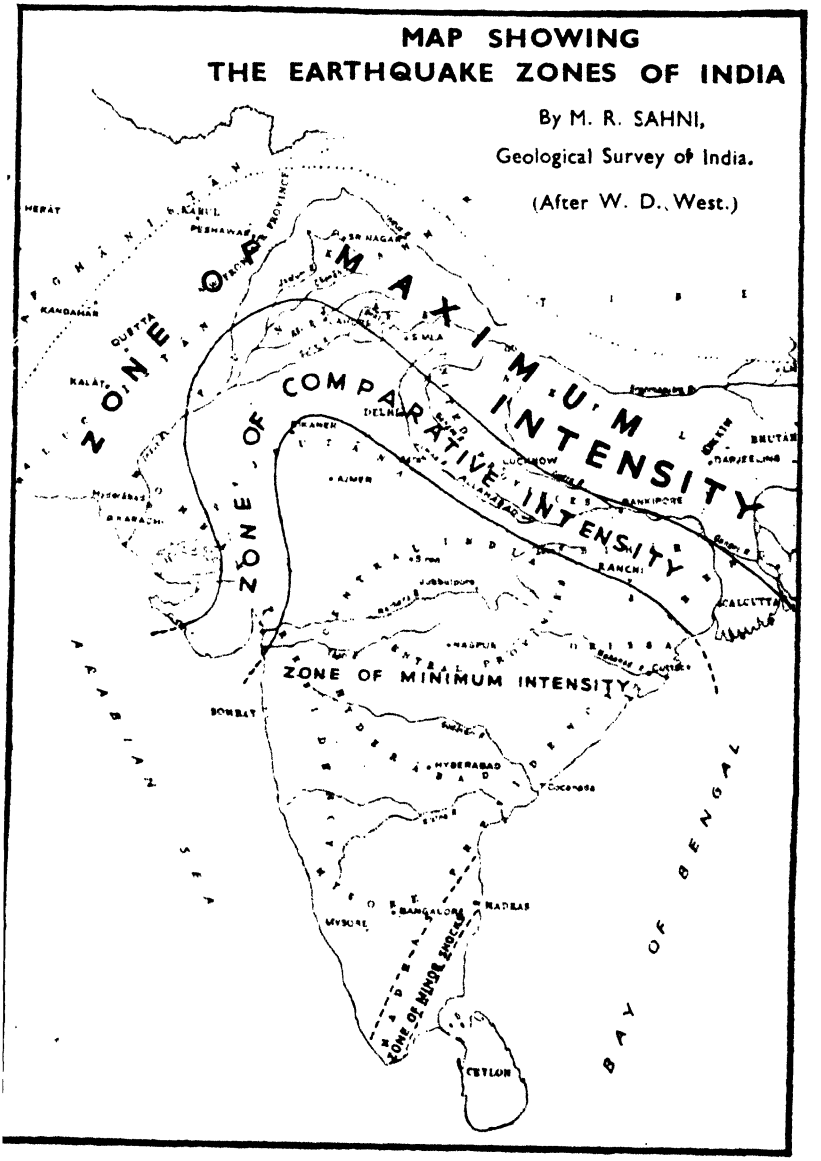
There was no loss of life or serious damage to property during any of these earthquakes.

A large number of earthquake shocks occurred in India during the year 1941. It is unnecessary to give details of all these but particulars of three or four of the more important ones may be given.

An earthquake of moderate intensity took place on the 21st of January 1941 at 18-16 hours (I.S.T.) with its epicentre to the north of Assam. The shocks lasted for about one minute but no damage was caused.

Another earthquake occurred on the 26th June at 17-27 hours (I.S.T.) This earthquake whose epicentre lay in the neighbourhood of Nicobar Islands, was of very great intensity and was felt in Madras, Chittagong, Chandwadi, Colombo, etc. Extensive damage to buildings occurred in Port Blair where 4 persons were killed and 4 seriously injured. The duration of the shock was less than half a minute.

On the 30th of June at 23 58 hours (I.S.T.) a shock of moderate intensity was felt at Port Blair. Its epicentre lay in the neighbourhood of north Andaman.



Another earthquake occurred on the 29th of September at 8 5 hours (I.S.T.) at Quetta. The shocks lasted for about 35 seconds and caused damage to *kaccha* buildings and mud houses in Quetta.

Three earthquakes of slight to moderate intensity were recorded during the year 1942. An earthquake of slight intensity with its epicentre in Assam was felt at 16-17 hours (I.S.T.) on 22nd February in parts of Bengal and Assam. No loss of life or damage was reported. On 22nd March a quake of moderate intensity was felt at 7 38 hours at Lahore, Rawalpindi and Simla. The epicentre was in the Hindukush mountains. A third earthquake of slight intensity was felt in parts of India on the 15th of May 1942 at 22-25 hours (I.S.T.). The epicentre lay in the Hindu Kush. There was no loss of life or damage to property.

Although a large number of earthquakes have occurred during 1944-45, with the exception of one they were all of comparatively small intensity. An earthquake of moderate intensity was felt on the 25th December, 1944, at Silchar, Shillong and Calcutta, at about 9-25 p.m., Indian Standard Time. At Silchar shocks were felt over a period of 3 minutes and several houses suffered damage. No damage was, however, reported from either Shillong or Calcutta.

Another earthquake of slight intensity was felt at Patna, Bihar district, at 10-25 p.m. on the 18th February, 1944. Though the shocks felt were fairly sharp no damage to property or loss of life took place.

A severe earthquake took place on the 28th November, 1945, and shocks were felt intermittently for a period of two hours, commencing at 3 hours 31 minutes, over a wide area in north western India. This earthquake was due to a submarine land slide. A characteristic feature of this earthquake was the high tide which swept the coastal region fo Mekran and neighbouring areas, causing heavy floods, damage to property and loss of life. A lasting visible effect of this earthquake was the appearance of two small islands about 10 miles into the sea, off the Mekran coast.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of Posts & Air of the Government of India. For financial and budget matters there is a Financial Adviser, Communications. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General, Postal Services, one Assistant Deputy Director-General, War, two Assistant Directors-General, Establishments, one Assistant Director-General, Postal Services, one Assistant Director-General, Planning, one Assistant Director-General, Pay and Allowances and seven Assistant Dy. Directors-General.

For postal purposes, India is divided into nine circles, namely, Bengal and Assam, Bihar and Orissa, Bombay, Central, Madras, Punjab and North-West Frontier, United Provinces, Sind and Baluchistan and Assam. Each of the first seven is in charge of a Postmaster-General and the Assam and Sind and Baluchistan Circles are each controlled by a Director, Posts and Telegraphs The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Heads of Circles are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways, inland steamers, and air services. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General while in the Sind and Baluchistan and Assam Circles the Director is assisted by Assistant Directors. The nine Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Presidency Postmasters of the Calcutta, Bombay and Madras General Post Offices, the Chief Postmaster of the Delhi General Post Office and Postmasters of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters have one or more Inspecting Postmasters subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself, a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shop-keepers, land-holders or cultivators who perform their postal duties in return for a small remuneration.

The audit and accounts work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Indian Audit Department and is not subordinate to the Director-General The Accountant-General is assisted by Deputy Accountant-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit and accounts work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known as combined offices The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph branches of sub-post offices.

The Inland Tariff (which is applicable to Aden, Nepal, Ceylon and Portuguese India except as indicated below) is as follows:—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
Letters.	Anna. Pies.		
Not exceeding one tola	1 6		
And every additional tola	1 0		
Book and pattern packets.			
For the first five tolas or fraction thereof	0 9	Double the pre-paid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).
For every additional two and a half tolas, or fraction thereof, in excess of five tolas	0 3		

Postcards.

Single .. .. .. 6 pies.

Reply .. .. .. 1 anna.

(The postage on cards of private manufacture must be prepaid in full. Reply postcards cannot be sent to Nepal.)

Parcels (prepayment compulsory).

Parcels not exceeding 12½ seers (1,000 tolas) in weight:—

	Rs.	a.
Not exceeding 40 tolas	0	6
For every additional 40 tolas or part of that weight	0	6

Registration is compulsory in the case of parcels weighing over 440 tolas.

All parcels to Aden should be registered. There is no parcel service to Nepal. These rates are not applicable to parcels for Ceylon and Portuguese India.

Registration fee.	Rs.	a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0	3

Ordinary Money Order fees.

For every sum of Rs 10 or fraction thereof	0	2

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable. There is no money order service to Nepal.

Telegraphic money order fees.—The same as the fees for ordinary money orders *plus* a telegraph charge calculated at the rates for inland (the cost of the telegraphic advice to Aden and Ceylon in respect of those countries) telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each telegraphic money order.

There is no telegraphic money order service to Nepal or Portuguese India. In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2-8 0 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1-4-0 for the first 12 words and 2 annas for each additional word.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.	Rs.	a.
Where the value insured does not exceed Rs. 100	0	4
Where the value insured exceeds Rs. 100 but does not exceed Rs. 200	0	5½
Where the value insured exceeds Rs. 200 but does not exceed Rs. 300	0	8
For every additional Rs. 100 or fraction thereof over Rs. 300 and upto Rs. 1,000	0	2
For every additional Rs. 100 or fraction thereof over Rs. 1,000	0	1

As regards Aden, Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Aden, to Ceylon, to Nepal or to Portuguese India except as indicated below), is as follows:—

Letters.—To Aden, Ceylon, Nepal and Portuguese India—Indian inland rates. To Burma—2 annas for the first tola and 1 anna for every additional tola or part thereof.

To all other countries. { 3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

Postcards, Single .. .. .. 2 annas.

,, Reply .. .. .. 4 annas.

Postcards to Burma: Single 1 anna and reply .. .. 2 annas.

Printed Papers.—½ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 10 ounces in weight .. .. 3½ annas.

For every additional 2 ounces or part of that weight .. .. ½ anna.

Samples.—1½ annas for first 4 ounces and ½ anna per 2 ounces thereafter.

Printed Papers, Business Papers and Samples.—To Burma, 9 pies for the first five tolas and 6 pies for every additional 5 tolas or part of that weight.

Parcels.

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below:—

(i) Parcels not exceeding 22 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows:—

For parcel	*Via* Gibraltar. Rs.	a.	p.
Not over 3 lbs.	1	8	0
Over 3 lbs but not over 7 lbs. ..	2	12	0
,, 7 ,, ,, 11 ,, ..	3	15	0
,, 11 ,, ,, 22 ,, .	6	2	0

These parcels are delivered by the post office and the postage paid carries them to destination.

Limits of Weight.

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers—To Great Britain and Northern Ireland, and Ireland, British Australasian Colonies, Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—No limit.

To all other destination—4 lbs. 6 oz.

Samples.—To Great Britain and Northern Ireland, and Ireland, Togo (British), the Union of South Africa, Rhodesia, and Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—200 tolas.

To all other destinations—1 lb. 2 oz.

Parcels.—11 lbs.. 20 lbs. or 22 lbs.

Limits of Size.

Letters.—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Printed Papers and Business Papers.—To Aden and Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Note.—Printed papers sent open, *i.e.*, without a cover or wrapper in the form of cards, whether folded or not should not measure less than 4 inches in length and 2½ inches in width.

Samples.—To Great Britain and Northern Ireland, and Ireland, Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions in all cases are 39 inches in length *plus* twice the diameter and 31 inches in any one direction.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

To Aden or Ceylon 2 ft. in length by one foot in width and depth.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows :—

	Rs. a.
On any sum not exceeding Rs. 10 ..	0 3
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 6
On any sum exceeding Rs. 25	0 6

for each complete sum of Rs. 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas.

To countries on which money orders have to be drawn sterling, the rates are as follows :—

	Rs. a.
On any sum not exceeding £1	0 4
,, ,, exceeding £1 but not exceeding £2	0 7
,, ,, ,, £2 ,, ,, £3	0 10
,, ,, ,, £3 ,, ,, £4	0 13
,, ,, ,, £4 ,, ,, £5	1 0
,, ,, ,, £5	1 0

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas.

Registration fee.

For each letter, post-card & packet of printed or business papers and samples .. 3 annas.

Insurance fees (for registered letters and parcels only).

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India—Insurance fees mentioned under "Inland Tariff."

For insurance of letters and parcels to Burma, British Somaliland, Mauritius, Seychelles, and parcels to Portuguese India.

	Annas
Where the value insured does not exceed Rs. 200	5½
For every additional Rs. 200 or fraction thereof	5½

Note.—Insurance service to Burma and British Somaliland has been temporarily suspended.

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available.

	Annas
Where the value insured does not exceed £14	5½
For every additional £14 or fraction thereof	5½

Acknowledgment fee.—3 annas for each registered article, 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India.

Air Mails.—Letters, postcards and packets can be sent by air in the inland post as well as to certain foreign countries on payment of special Air Mail fees. Such letters can be registered. Insured articles cannot be sent by Air Mail except to Burma and Ceylon. The Inland Air fees are as follows :—

(i) For a post-card .. 6 pies *plus* ordinary postage.

(ii) For a letter and packet.. 1 anna for each tola or part thereof *plus* ordinary postage.

For Air fees to foreign countries, *see* the *Post and Telegraph Guide.*

Air Letter Service.—A new light weight "Air Letter" service for use by civilians has been introduced from the 1st December 1944, which is available for writing to most of the Empire countries and H.M.'s Forces overseas. The postage rate is 6 annas per air letter.

A special air letter form is available from post offices at a cost of 6 annas per form. Similar forms of private manufacture, bearing an indication that they have been approved by the Head of a Circle, can also be used, but they should be prepaid with the usual charge of 6 annas each.

Air letters cannot be registered or insured, nor are any enclosures permitted. No other facility, such as express delivery, is available.

Magnitude of Business in the Post Office.—At the close of 1944-45, there were 126,602 permanent and 26,924 temporary, Post & Telegraph officials, 25,860 post offices and 159,000 miles of mail lines. During the year, 1,730 million articles, including 60.1 million registered articles were posted; stamps worth Rs.12.8 crores were sold for postal purposes; about 64.4 million money orders of the total value of Rs. 173 crores were issued; 1,284 thousand Indian Postal orders to the value of Rs. 65 lakhs were sold; a sum of Rs. 24.7 crores was collected for tradesman and others on V.P. articles, about 3.4 million insured articles valued at 147 crores of rupees were handled. Customs duty aggregating over 81 lakhs was realised on parcels and letters from abroad; pensions amounting to about Rs. 203 lakhs were paid to Indian Military pensioners and over 6,000 lbs. of quinine were sold to the public. On the 31st March 1945, there were 3,095,000 Savings Bank Accounts with a total balance of Rs. 80.2 crores and 92,960 Postal Life Insurance Policies with an aggregate assurance of Rs. 18.8 crores.

Telegraphs.

Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Burma and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, now consists on the engineering (including wireless) side of a Chief Engineer, Telegraphs, with one Deputy Director-General Telegraph Staff and Establishments, one Deputy Chief Engineer, one Addl. Deputy Chief Engineer and two Asstt. Chief Engineers. For Engineering Construction work, there is one Addl. Chief Engineer with two Directors of Telegraphs, and some Divisional Engineers, Telegraphs. For traffic work there is a Deputy Director-General with one Controller of Telegraph Traffic and one Assistant Deputy Director-General. To assist in Telephone work there is one Deputy Director-General (Telephones) and two Assistant Deputy Directors-General, Telephones, and in Wireless matters there is one Assistant Dy. Director-General (Wireless). In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was formerly divided up into five Circles, each in charge of a Director. These five Circles were divided into eighteen Divisions each in charge of a Divisional Engineer. In 1922 Sind and Baluchistan Circle was formed with its headquarters at Karachi. This Circle is now under the charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification was gradually extended to other Circles. The fusion was completed in March 1930. This year the Bengal and Assam Circle has been divided into two Circles, namely Bengal Circle and Assam Circle, in charge of a Postmaster-General, and a Director, with headquarters at Calcutta and Shillong respectively. The telegraph traffic and the engineering branches in the Circle are now controlled by the Postmasters-General and the Directors of Posts and Telegraphs, Karachi and Shillong. There is also one Deputy Director of Telegraph Traffic each at Calcutta, Bombay and Madras to look after the speedy disposal of traffic. There are now 24 Engineering Divisions. With effect from 1-7-1939, the Superior Telegraph Engineering and Wireless Branches have been amalgamated into a Single Service, viz.,—Telegraph Engineering Service —Class 1.

There has been much expansion on the Telephones side of the Department consequent on the acquisition of the telephone systems at Bombay, Calcutta, Madras, Karachi and Ahmedabad by Government. Separate Telephone Districts which are quite independent of the respective Postmasters-General were created at Bombay, Calcutta and Madras with effect from 1st April 1943. Karachi and Ahmedabad Telephone systems have been placed under the administrative charge of the Bombay District. The Chief Officers of the Bombay and Calcutta Districts are designated General Managers, Telephones. Recently a new Telephone District has also been formed at Delhi where there has been considerable telephone expansion during the war.

The audit and accounts work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Burma or Ceylon are classed as Inland telegrams. The tariff for Inland telegrams is as follows:—

	For delivery in India. *Private and State.* Express.	Ordinary.
	Rs. a.	Rs. a.
Minimum charge	1 10	0 13
Each additional word over 8 ..	0 2	0 1

	For delivery in Burma. *Private and State.* Express.	Ordinary.
	Rs. a.	Rs. a.
Minimum charge	2 12	1 6
Each additional word over 8	0 4	0 2

	For delivery in Lhasa (Tibet). *Private and State.*		For delivery in Ceylon. *Private and State.*	
	Express.	Ordinary.	Express.	Ordinary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge.	2 0	1 0	2 8	1 4
Each additional word over 12 ..	0 2	0 1	0 3	0 2

The address is charged for.

Additional charges.

Minimum for reply-paid telegram	Minimum charge for an ordinary telegram except in the case of Burma, for which the minimum amount pre-payable is Rs. 2-4-0 for express and Re. 1-2-0 for Ordinary.
Notification of delivery ..	Minimum charge for an ordinary telegram.
Multiple Address telegrams, copying fee for each 100 words or less in each copy beyond the first	.. 4 annas.
Collation	.. One half of the charge for an ordinary telegram of same length.

For acceptance of an Express telegram during the hours when an office is closed.	Rs.
If both the offices of origin and destination are closed ..	2
If only one of the offices is closed.	1
If the telegram has to pass through any closed intermediate office, additional fee in respect of each such office.	1

Boat hire	.. Amount actually necessary.

Press telegrams.	For delivery in India. Express.	Ordinary.	For delivery in Ceylon. Express.
	Rs. a.	Rs. a.	Rs. a.
Minimum charge ..	1 8	0 12	1 8
Each additional 5 words over 40 in respect of India, each additional four words over 32 in respect of Ceylon ..	0 2	0 1	0 2

The address is free.

Greetings Telegrams.—*Inland Greetings telegram service has been suspended as a temporary measure.*

Inland De Luxe Telegrams.—Senders of Greetings telegrams to or from offices in India may use their own phraseology in such telegrams on payment of 2 annas in addition to the charge appropriate to the class of message (Express or Ordinary).

These telegrams will be delivered in specially printed artistic forms and envelopes.

This DE LUXE service is not applicable to telegrams for Burma.

The sender of a DE LUXE telegram should write before the address the special instruction —LX— which will not be charged for.

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America, etc., are as follows:—

Cables are not now accepted to the following enemy or enemy occupied countries:—

Germany, Japan, Japanese possessions, *viz*:—Kara futo, Corea, Manchuria, Kwangtung leased territory, Formosa, Marian or Ladrone Islands, Marshall, Palaos and Caroline Islands, Saghalien, Japanese occupied territories (including Chefoo in China. Wake Island, and such portions of New Guinea as are in enemy occupation.

	Ordy.	Defd.	D.L.T.

Urgent Telegrams—

Rate double of ordinary rate.

Daily Letter Telegrams—

One-third ordinary rate with a minimum charge for 25 words.

Code telegrams (except for the U.S.A. and countries within the British Empire) are accepted at 3/5th of the ordinary rate. Code telegrams for countries within the British Empire and for the U.S.A. are accepted at 2/3rds of the ordinary rate (*Vide clause* 425, *P. & T. Guide*).

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration of abbreviated addresses, Reply Paid, etc.

Full lists published in Post and Telegraph Guide.

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India and transmitted *via* the coast stations at **Bombay**, Calcutta, Karachi or **Madras** the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from offices in India transmitted *to ships at sea* through the coast stations mentioned in the preceding paragraph:—

	Total charge per word. Ordinary. Rs. a.	Code. Rs. a.
(1) All Government or Private Radio-telegrams, excepting those mentioned in (2) and (3) below ..	0 13	0 8
(2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy ..	0 8	0 5
(3) Radio-telegrams to Spanish or Swedish ships ..	0 12	0 7½

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R. P." followed by mention in Rupees and annas of the amount prepaid, *e.g.*, R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted for non-Empire countries and Australasia on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in Daily Letter Telegrams are Reply paid, Poste Restante, Telegraph restante, Multiple addresses, de Luxe and telegraph redirection under orders of the addressee.

The class prefix for Daily Letter Telegrams will be DLT.

NIGHT LETTER TELEGRAMS.

Night Letter Telegrams (NLT) are accepted for all Empire countries, except Australasia, with which the Daily Letter Telegram Service (DLT) remains in force, at the same rates and under the same conditions as prescribed for Daily Letter Telegrams, except as follows:—

(i) They will be delivered on the morning of the day following the day of booking.

(ii) The special instruction and the class prefix for Night Letter Telegrams will be NLT.

EMPIRE SOCIAL TELEGRAMS.

Empire Social Telegrams (GLT) conveying solely greetings, family news or non-commercial personal affairs can be availed of throughout the year at special reduced rates, for all Empire countries except Sudan.

Empire Social Telegrams (GLT) for the purpose of transmission and delivery to a territory or place to which NLT service is available is deferred until the morning of the day following the day of acceptance; where there is no NLT service but a DLT service is available, an Empire Social Telegram is deferred and delivered on the second day following the day of acceptance or as soon as possible thereafter. Minimum charge for an Empire Social Telegram is Rs. 3-6-0 for the first 12 words (excluding the Special Instruction-GLT-which will not be charged) and 4½ annas for every additional word.

The only Special Services admitted in Empire Social Telegrams are "Reply Paid" and "De Luxe."

Foreign De Luxe Telegrams.—Telegrams relating to happy events or greetings may be sent to certain foreign countries for delivery on an artistic form in an envelope of the same

character. A supplementary charge of four annas per telegram in addition to the charge at the appropriate rate according to the class (i.e., Urgent, Ordinary, Code, Deferred, DLT., etc.) is charged for such telegrams. This De Luxe Service is not available with U. K. for the duration of the war.

Greeting Telegrams (Foreign).—Telegrams conveying Christmas and New Year wishes are accepted for most non-empire countries from the 14th of December to the 6th January inclusive at special reduced rates, subject to a minimum charge for 10 words per telegram. To all Empire countries except Sudan, such greetings may be conveyed by means of Empire Social Telegrams.

Growth of Telegraphs:—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable. Compared to this, there were 113,400 miles of line including cable and 1,194,400 miles of wire including conductors on the 31st March 1945. The numbers of departmental telegraph offices were 257 and 89, respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 3,984.

The increase in the number of paid telegrams dealt with is shown by the following figures :—

		1897-98.	1944-45.
Inland ..	Private ..	4,107,270	19,775,768
	State ..	860,382	6,105,449
	Press ..	35,910	433,955
Foreign ..	Private ..	735,679	3,050,198
	State ..	9,896	328,050
	Press ..	5,278	83,663
		5,754,415	29,773,083

The outturn of the workshops during 1944-45 represented a total value of Rs. 2,42,48,000.

Wireless.—The number of messages handled during the year 1944-45 by departmental wireless stations in India was nearly 342,000. This shows a decrease of about 125,000 over the previous year.

Telephones:—With effect from 1-4-43 the Licensed Telephone Systems at Calcutta, Bombay and Madras and with effect from 1-9-43, the Licensed Telephone Systems at Ahmedabad and Karachi were acquired by Govt. on the 31st March 1945, there were about 2,800 exchanges and 125,400 Telephones operated by the Department and licensed system. About 4·2 million trunk telephone calls were handled during the year 1944-45.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1944-45 was Rs. 3,09,79,000 and Rs. 32,04,26,000 respectively. The receipts for the year ended 31st March 1945 amounted to Rs. 29,38,48,000 and charge (including interest on capital outlay) to Rs. 19,13,83,000, the result being a net gain of Rs. 10,24,65,000.

Public Health.

The history of the public health administration in India may be traced back to the appointment of the Royal Commission in 1859, which recommended measures for the amelioration of the health of the army and the civil population in India. In accordance with its suggestions "Commissions of Public Health" were established in the provinces of Madras, Bombay and Bengal in 1864. This led to the appointment of Sanitary Commissioners. In 1888 the Government of India issued a resolution "drawing the attention of local bodies and village unions to their duties in the matter of sanitation." The success achieved by such efforts was negligible except in the larger cities. Owing to the vast number of India's sick the main emphasis was laid on curative medicine; preventive medicine did not receive proper attention. The outbreak of plague in 1896 had a great effect on the people and the Government, awakening them to the need of overhauling the public health machinery in the country. The report of the Plague Commission in 1904 was a landmark in the history of public health administration in India. It recommended the strengthening of public health services and the establishment of laboratories for research and the preparation of vaccines and sera, but the total effect of the measures adopted in pursuance thereof was small. Attention was directed mainly to urban centres while about 90% of the country's population lived in villages. Under the Government of India Act 1919 the health administration was transferred to Provincial Governments making it a subject directly under Ministers responsible to the Legislatures. This position continues under the Government of India Act 1935 and the Provincial Governments are unfettered in the development of health and sanitation in areas under their jurisdiction. The effect of this transfer are summarised by the Health Survey and Development Committee in its report as follows: —

"Ministers were anxious to promote the growth of Education, medical relief and preventive health measures as far as funds permitted. The establishment of trained public health staffs for rural and urban areas which the "Commissions of Public Health" had recommended in the sixties of the last century was taken up in earnest and, after the introduction of the Reforms of the 1919 Government of India Act, the organisation of such services was a marked feature in a number of provinces. Indeed, there has been, since that time, far greater public health activity in the provinces than ever before."

The Health Survey and Development Committee has made far-reaching recommendations and it is to be hoped that action that may be taken on these will go a long way in improving the health of the people.

VITAL STATISTICS.

India's population growth is characterised by high levels of fertility and mortality. Interconnected with this feature is the high infantile mortality. Thus, her birth rate, death rate and infantile mortality rate are much higher than those of Western countries where population shows a decreasing rate of growth or actual decline at low levels of fertility and mortality in the process of industrialisation and urbanisation. In the quinquennium preceding the War, the birth rate of British India varied round 35 per mille. In 1940 and 1941 it came down to 32 per mille, in 1942 it was 29 per mille and in 1943 and 1944 it went down further to 26 per mille. This lowering of birth rate was shown by practically every province. In Bihar, Orissa, Bengal, Madras, United Provinces, Assam, Coorg and N.W.F.P. the fall was more marked. On the other hand, the rise in death rate during the quinquennium was not so uniform. In fact, in the quinquennium preceding the war, the rate for British India varied between 22 and 24 per mille and it was 21 per mille in 1940 and 1942 and 22 per mille in 1941. It was only in 1943 and 1944 that it increased to 24 per mille. The provinces which showed a marked increase in death rate in 1943 and 1944 were Bengal, Orissa, Delhi and Madras. Bihar and Bombay had a higher death rate in 1944 only. Infantile mortality rate for British India had come down from 164 per 1,000 live births in 1935 to the figure of 156 in 1939 but from 1940 there was an upward swing. In 1940 it was 160 per 1,000 live births and 158, 163, 165 and 169 in the succeeding years from 1941 to 1944. Here again Bengal, Orissa, and Madras showed a more marked adverse trend than the Punjab.

From the trends pointed out above it is almost certain that the rate of increase of population after the census, has slowed down very considerably, mainly due to the lowering of birth rate. Although the point is of very great interest, it is difficult to say anything about the real factors behind this without an elaborate analysis. It appears too optimistic to believe that this is due to a real decline in fertility rates or a change in the age—sex composition of the population. It seems more reasonable to attribute it to wartime strains on public life which may be in the form of breaking up of family life due to recruitment in the army or migration of labour to industrial centres or of food scarcity and temporary lowering of vitality. Unfortunately there are no fertility statistics relating to India which can throw light on the subject. The Government of India appointed a Population Data Committee in 1944. Its report has been published. It has made certain proposals to cover up lacunae in the population data.

Except in the cases of cholera, smallpox and plague morbidity statistics for the general population are as a rule not collected in India. Whatever information in this direction can be gathered is restricted to the Hospital and Dispensary statistics. Mortality statistics relating to the general population, however, are collected in several details, *e.g.* by age, sex and community. Deaths by different causes are also recorded but there is not much uniformity in the details adopted by the various provinces, as for instance deaths from tuberculosis or malaria are not recorded separately for rural areas by a number of provinces. These statis-

tics of deaths by couses besides suffering from all the shortcomings common to the Indian vital statistics are collected under the further difficulty of lack of facilities for proper diagnosis.

Statistics of cholera, smallpox, and plague are collected throughout India and as their symptoms are understood by the general public we have comparatively reliable figures for these diseases. However, all these three diseases usually do not account for more than 5% of the total mortality in any province. Owing to the general unreliability of the classification of causes of death, the Public Health Commissioner with the Government of India presents the Indian mortality statistics other than those relating to cholera, smallpox and plague under the broad groupings of fevers, dysentery and diarrhoea, respiratory diseases and "all other causes." Of these the most important group is that of fevers under which is shown 50% to 75% of the total mortality in most of the provinces. This group includes a variety of heterogenous diseases and a large number of unclassified conditions which for want of proper facilities for diagnosis are catalogued by the persons, usually illiterate, actually reporting the death. Owing to the unsatisfactory manner of collection of vital statistics, the health administrator in India is handicapped by the lack of precise knowledge of the extent and nature of his problems.

LEPROSY IN INDIA.

Leprosy has been prevalent in India for many centuries, being recognised and described by ancient Hindu physicians. The *Susharate Samhita* written 2,500 years ago describes the different forms of leprosy, and its treatment with chaulmoogra oil, the mainstay in its present-day treatment.

The 1931 census report recorded 150,000 persons suffering from leprosy. Investigations carried out by expert leprosy workers indicate that at a conservative estimate the number of cases is about 1 million (10 lakhs). About three-fourths of these cases are of the mild type and are not infective. The disease is found throughout India, but is most prevalent in parts of Assam, Bengal, Bihar, Orissa, Central Provinces, Madras, Hyderabad and Travancore.

Leprosy relief work has been going on in India for a long time. Apart from the Central and Provincial Governments, and some local organisations, the Mission to Lepers and the Indian Council of the British Empire Leprosy Relief Association have played an important role in this field.

Mission to Lepers.—Founded by the late Mr. Wellesley Bailey, the first asylum was built at Chamba, Punjab, in 1875. The Mission now runs about 30 leper homes with about 10,000 inmates. It has done very noble work and has given a lead in various ways. The Provincial Governments assist the Mission by making grants on a per capita basis.

British Empire Leprosy Relief Association (Indian Council).—The introduction of new methods of treatment of leprosy led to the foundation in the year 1924 of the British Empire Leprosy Relief Association in London followed by the foundation of the Indian Council of the Association in 1925; later, provincial branches were formed in most of the provinces of India. At the inauguration of the Indian Council H.E. Lord Reading, the then Viceroy and Governor-General of India, issued an appeal on behalf of the Association, and collected a sum of over Rs. 20 lakhs, which forms the Capital Fund of the Indian Council.

The work of the Association has greatly stimulated interest in leprosy in the country, resulting in knowledge of the disease, of its prevalence, clinical forms, prognosis, spread and the factors influencing its spread. The medical profession as a whole is now taking a keen interest in the leprosy problem. H.E. the Viceroy is the President of the Indian Council and Colonel E. Cotter, C.I.E., I.M.S., Public Health Commissioner with the Government of India, the Chairman of the Governing Body; Mr. K. Sanjiva Row, C.I.E., and Sardar Bahadur Balwant Singh Puri, O.B.E. the Honorary Treasurer and Secretary respectively. Dr. Dharmendra, an officer of the Medical Research Department, Government of India, is at present the Research Worker of the Association.

The research work of the Association is carried out at, or directed from, the School of Tropical Medicine, Calcutta, and is done in collaboration with the Endowment Fund of the School and the Indian Research Fund Association. The main activities of the Association are:—

(*i*) *Research.*—This includes clinical, histological, bacteriological, therapeutic, epidermiological and immunological studies. Recent studies of the only immunological test the "lepromin test" or the "Mitsuda Reaction" by Dr. Dharmendra at the School of Tropical Medicine, Calcutta, have resulted in a great improvement in the test, and have thrown considerable light on the mechanism of the reaction.

(*ii*) *Post-graduate Training in Leprosy.*—Special post-graduate training classes for training doctors in the diagnosis and treatment of leprosy are arranged annually at the School and over 1,000 doctors from India, and not a few from abroad, have attended these special courses. In addition, lecture-demonstrations in Leprosy are given to the L.T.M. and D.T.M. classes at the School.

(*iii*) *Leprosy Surveys.*—In the early years, an all-India Survey Party carried out rough sample surveys in different parts of India in order to get an idea of the incidence and distribution of leprosy in the country. More recently, intensive surveys of small selected areas have been carried out in different parts of the country in order to collect information about the factors that favour the spread of the disease and in order to study the possibility of evolving suitable methods of isolation of infective cases for the control of the disease.

(*iv*) *Publication and Propaganda.*—"Leprosy in India," a quarterly journal published by the Association, is a record of the study of leprosy and of anti-leprosy work in India and other countries. Recently a new propaganda book entitled "Popular lecture on Leprosy" by Dr. Dharmendra has been published, which gives the main facts about leprosy in simple and non-technical language.

(a) Other activities.—The Association has played an important role in the Conference and Committees, etc. appointed in India to formulate principles of anti-leprosy campaign. Recently it has collaborated in the production of the "Report on Leprosy and its Control in India" and the "Report on Leprosy Survey" by Committees appointed by the Central Advisory Board of Health, Government of India, and the Indian Research Fund Association respectively. The former gives a comprehensive survey of the leprosy problem in India, and will serve as a basis to formulate the principles of anti-leprosy work in India. The report on leprosy surveys deals with the principles of the surveys as well as with the practical outlines of the work.

The treatment of leprosy.—The mainstay in the treatment of leprosy has been injections of chaulmoorga (hydnocarpus) oil or its preparations. Recently encouraging results have been reported by the use of certain sulphone drugs such as "Promin" and "Diasone." It is yet too early to assess the value of this group of drugs in the treatment of leprosy. The treatment with chaulmoorga oil is of value in individual cases. It cannot be expected to control the spread of leprosy with treatment alone.

Control Of Leprosy.—Leprosy can be controlled by raising the general economic and social conditions of the population and, by preventing contact of infective patients with healthy people, specially children. The only sure method of preventing contact with infective cases is the isolation of these cases in leprosy hospitals, sanatoria, or colonies, etc. Great difficulty is experienced in providing institutional accommodation for all the infective cases in the country. The total accommodation in all the institutions in India at present is for about 15,000 patients whereas a rough estimate of infective cases places the figure at 2½ lakhs. So some other methods of isolation are urgently needed to supplement the institutional isolation.

The two alternatives are the isolation of the patient in his home, and the isolation of all the patients of a village or a group of villages in huts made in the outskirts of the village. Home isolation is practicable only in families with sufficient financial resources. Village isolation appears to be specially suited to India, with its big leprosy problem and limited resources. It is desirable that methods of village isolation should be developed in suitable areas and then widely applied. The Leprosy Committee appointed by the Government of the Central Provinces and Berar in 1943 also has emphasised the necessity of organising village isolation centres as part of health units, anti-leprosy work being linked with other public health work and rural reconstruction activities.

MALARIA.

Malaria is India's major public health problem both from the point of view of morbidity and that of mortality. While no province can claim to be free from its ravages, in some the incidence of malaria is extremely high. In Bengal, it is stated that more than two-thirds of the villages are subject to malaria and that "over 60 per cent of the total population actually suffer from it every year. Roughly about 1,000 people die from malaria every day throughout the year." It is unofficially estimated that over India as a whole, upwards of a million people die from malaria every year. Moreover, its incidence is probably three times higher in the rural areas than in the towns, so that it forms a terrible handicap to improved health and a higher standard of living among the rural population.

Malaria can probably be controlled anywhere provided sufficient funds are forthcoming. In urban and industrial areas it can usually be shown clearly that the cost of malaria to the community is greater than the cost of control. The control of malaria in rural areas with isolated groups of houses and a scattered population presents greater difficulties. The development of new insecticides, such as pyrethrum and D.D.T., and of new anti-malaria drugs, however, offer some prospect that methods of malaria control in rural areas may be developed which will not be beyond present financial resources. Controlled experiments in the use of insecticides have been carried out by the Malaria Institute of India and in the few Provinces where there are active anti-malaria organisations promising results have been obtained. Experiments are also being carried out in the use of a new drug, poludrine, which is claimed to be more effective than quinine in malaria treatment and prophylaxis. Most Provincial Governments are creating or developing anti-malaria organisations as part of their reconstruction programmes and the Bombay Government has undertaken a scheme for mosquito control over two whole districts, Kanara and Dharwar, an area of 6,000 square miles with a population of more than one million. This is the most important control scheme yet undertaken in India and if it is successful, it will clearly point the way to large scale control measures in other areas.

PLAGUE.

Plague in India started from Bombay in 1896 and within a short time the disease spread widely throughout the country. Its incidence reached the maximum in 1904 with a total mortality of 964,577 in British India excluding Burma. Since then there has been a gradual decline and now the incidence of the disease has been reduced very considerably. In 1940 the total deaths recorded in British India were 19,799, which figure came down to 11,984 in 1941 and 10,577 in 1942. In 1943 the figure went up to 13,578 and in 1944, it was 21,525. During these five years the N.W.F.P., Orissa, Sind and Bengal were free from the disease and so were the Punjab and Delhi except in 1944 when a few deaths were recorded. The highest number of deaths were recorded in the United Provinces. There was an epidemic outbreak in 1940 and again in 1944. The incidence in Bihar and the Central Province during these years was not very heavy. Bombay had epidemics in 1940 and 1941 and again in 1944 in the last quarter, the total recorded deaths in these years being 5,573, 5,311 and 2,514 respectively. Madras had a severe epidemic in 1943. There are certain endemic centres situated in the cool and moderately damp areas running from the Himalayas in the north through Central and Eastern India to the Deccan and the province of Madras.

However, the history of plague through the centuries is a warning against taking a complacent view of the reduced prevalence of the disease in India. It is known that the disease can smoulder in its endemic homes for long periods, and that on certain occasions, it acquires an increased striking power and spreads far and wide in epidemic waves into distant lands, to retreat again after a while to those areas where it permanently resides. While, therefore, it is gratifying that plague as a public health problem has been of decreasing importance within the past decade, the fact that endemic foci exist makes it imperative that no slacking of effort for its complete eradication should be permitted.

BLINDNESS IN INDIA.

In olden days the blind were generally regarded as incapable of participating in the ordinary activities of life, and were left to depend upon begging for their existance.

Extent of Blindness.—An estimate of India's blind population places it at 2 millions, of whom 50% are totally blind and the remaining blind to the extent of requiring welfare services. The chief causes are inflammatory diseases of the eye, smallpox, venereal diseases, nutritional deficiencies, glaucoma, and cataract.

Treatment of Eye Diseases.—The treatment of eye diseases has, and is, being carried out in the eye wards of Government Hospitals, and Hospitals under the control of Local Authorities in the Provinces and local centres, mission hospitals, a few travelling eye dispensaries, camp eye hospitals and eye fairs, and in small local dispensaries to the limit of their resources.

Existing Schools and Societies for the Blind.—These mostly owe their existence to philanthropic and missionary organisations. There are 24 schools for the blind only, 5 for deaf mutes as well as blind, 1 is in combination with a poor asylum, and 2 are departments of missionary establishments. The majority of them receive a small measure of Government and or municipal aid. They have a total enrolment of 1,212 blind people.

Special Officer Appointed.—In January 1943 the Government of India appointed Lt.-Col. Sir Clutha Mackenzie as a Special Officer "to investigate the extent of blindness in India and its cause, and to carry out a survey of the existing societies for the education of blind children and of means of employing trained blind men and women in sheltered industries, and to prepare a scheme for the creation of a national organisation for the blind of India."

Special Joint Committee.—Later in the year a Special Joint Committee on Blindness was appointed, which comprised of 2 sub-committees the Education Sub-Committee, and the Medical Sub-Committee, for purposes of discussing the technical details of their respective fields. The report and evidence collected by Sir Clutha Mackenzie formed the basis of its deliberations. Their report and recommendations have now been published by the Government of India, under the title "Report on Blindness in India, 1944" and measures are being taken to implement the recommendations.

Recommendations.—The Chief recommendation is that an Indian Council on Blindness should be created at the Centre, representative of the Government, of the philanthropic public and of the blind themselves. There should be two committees, one to deal with Prevention and Treatment, and other with Welfare of the Blind. The Secretary to the first Committee would be the adviser in Ophthalmology, and of the second, the Adviser in Blind Welfare. It is contemplated that similar organisations will be set up by Provincial Governments and by the larger Indian States.

Tasks which lie ahead.—(1) The elimination as far as possible of the causes of blindness. (2) The extension of the facilities for treatment of eye diseases, both in quantity and quality. (3) The rehabilitation of the blind, by providing facilities for education, employment, care and recreation. (St. Dunstan's Institute at Dehra Dun under the able direction of Sir Clutha Mackenzie, an officer blinded in the war of 1914-18 is an outstanding example of what can be done.)

SOCIAL LEGISLATION.

Repeated stress has been laid in the Health Commissioner's reports on the fact that public health cannot be regarded as an entity distinct from the general, social and economic life of the community. It is, therefore, satisfactory that the advent of provincial autonomy and the conferment of extensive powers on Provincial Governments have been followed in many provinces by social legislation which will undoubtedly have far-reaching effects on the economic life and general well-being of the people. Agricultural indebtedness, land tenure and industrial problems, to cite a few examples, are all receiving serious attention and, in so far as legislative and administrative action goes to raise the standard of life, these measures will inevitably help in improving the standard of public health.

In order that there may be no undue feeling of pessimism, it should always be remembered that, less than a century ago, conditions in Great Britain were not much different from those found in India to-day and that, with respect to other countries, reduction of the general death rate below that at present recorded in India dates back to only a few years. There seems no reason why India should not accomplish what has been achieved in other parts of the world, if only organised effort is continued and if public support is given to that effort.

YELLOW FEVER.

All aircraft from the West are required to land at Karachi where an elaborate organization has been set up by the Government of India to deal with them.

ANTI-TUBERCULOSIS CAMPAIGN.

The first co-ordinated effort in Tuberculosis control on an All-India basis, was the inauguration of the King George Thanksgiving (Anti-Tuberculosis) Fund to commemorate the recovery of His late Majesty King George V from a serious illness in 1929. This fund was utilised to stimulate activities in the preventive and

curative aspects of this disease, and in the specialised training of doctors and Health visitors.

In 1937, Lady Linlithgow, the then Vicerene, issued an appeal for the King Emperor's Fund for Tuberculosis. This marked the next step forward, and resulted in the formation in 1939 of the Tuberculosis Association of India, the seventh annual report (1945) of which may be obtained from the Tuberculosis Association of India, New Delhi. This determines the end of a period when the paramount considerations of war necessarily overshadowed all other activities in India.

Of the sum of over Rs. 85 lakhs collected as a result of Lady Linlithgow's appeal, 95% was returned to the various Provinces and States that had contributed, to enable them to proceed with their own Anti-Tuberculosis plans, in co-operation with, and with the advice of the Central Association at New Delhi, the President of which is Her Excellency The Vicountess Wavell, C.I. This Central Association issues its recommendations for the policy to be carried out in the anti-tuberculosis campaign in India. Through its Technical Adviser, expert advice on all aspects of Tuberculosis work is available to all the Branches of the Association in the Provinces and Indian States, and to any official and non-official bodies engaged in such work. It is hoped thereby to facilitate standardization and to prevent waste of effort and money.

Through this Central Committee, in addition to Technical advice, the other aspects of the war against Tuberculosis are brought into prominence. These include Publicity and Propaganda, the training of Tuberculosis workers, the convening of Conference, and the liaison with the work of the 34 affiliated associations in India and similar Associations abroad.

In 1945 there were 124 Tuberculosis clinics and 70 Hospitals and Sanitaria with 4,384 beds in the total number of such Institutes in India. That this is only the beginning of the task which lies before India can be realised when it is stated that the estimated annual deaths from this disease are 500,000 and that there are 2½ million open cases (*i.e.* in an infective stage) in the country.

The third stage of the campaign will come with the adoption of the recommendations of the Health Survey & Development Committee in the post-war period of this country. This report recommends a comprehensive and integrated tuberculosis organisation, which should include—

(1) a domiciliary service to organise a home isolation and treatment scheme.

(2) improvement of housing conditions which entails working hand in hand with local authorities.

(3) increasing the number of tuberculosis clinics.

(4) the development of hospital accommodation to meet the requirements of the country on the five year plan of one 200-bedded tuberculosis hospital for each unit of 10 million population. This will be followed by development on a larger scale.

(5) the establishment of after-care colonies.

(6) the provision of institutions for the care of patients who have passed beyond the curable stages.

(7) the establishment of travelling tuberculosis units for the needs of the remote rural areas.

The Chairman of the Tuberculosis Association of India (Lt. General J. B. Hance, K.C.I.E., O.B.E., I.M.S.) in concluding the annual report for 1945, said "Give us the tools and we will finish the job" an appropriate appeal to a nation whose soldiers have so materially helped to defeat the country's enemies.

CENTRAL ADVISORY BOARD OF HEALTH.

In April, 1937 the Government of India acting under Section 135 of the Government of India Act constituted a Central Advisory Board of Health. The aim of the Board is to ensure co-operation between the centre and the provinces and between province and province in matters related to health which are of common concern. In addition the Board is designed so as to be representative of Indian States. Work is done through standing or *ad hoc* committee which permits the Board to act as a central information bureau. It advises on all matters referred to by the Central or Provincial Governments and makes suggestions to the Central Government on any matter affecting public health in India to which it considers Government's attention should be drawn.

The Public Health Commissioner with the Government of India is Secretary to the Board.

The inaugural meeting was opened by His Excellency the Viceroy at Simla in June 1937 and at this meeting *ad hoc* committees were appointed to report on :

(1) the maternity and child welfare work in India including the training of maternity and child welfare workers and the organisation of schemes in Urban and rural areas.

(2) to examine the question of food adulteration with reference to legislative measures now in force in different provinces and such additions and amendments to these as may be considered advisable.

The Maternity and Child Welfare Committee met in Simla in October 1938 and its report was widely circulated. The Food adulteration Committee produced two reports one on the technical aspect dealing with standards for purity in regard to different foods and the standardisation of the technique to be employed in food analysis, while the other dealt with the legislative aspect of the problem including an examination of the various Acts and Regulations with suggestions for their improvement.

The second meeting of the Central Advisory Board of Health was held in Madras in January 1939 and recommended the appointment of a sub-committee to examine the possibility of introducing a system of compulsory inoculation of pilgrims against cholera. It also appointed an *ad hoc* committee to prepare a report on

leprosy and its control in India. The first of these committees met and reported in June, 1939 and the latter in October, 1941.

The third meeting of the Board was held in Poona in July 1940 and recommended the appointment of a special committee to report on the questions of teaching of hygiene in schools and of the Medical inspection of school children. This special committee met in December, 1941 and reported.

The fourth and the fifth meetings of the Board were held in January 1942 and October 1943. An important outcome of the fifth meeting of the Board was the appointment of a joint committee of the Central Advisory Boards of Education and Health to examine the problem of blindness in India. A report on this subject was published in 1944 and deals with the two main aspects of blindness, *viz.* its prevention and cure and the education, employment and general welfare of the blind.

BHORE COMMITTEE'S PLAN.

A Health Survey and Development Committee was appointed by the Government of India in October 1943 under the chairmanship of Sir Joseph Bhore, K.C.S.I., K.C.I.E., C.B.E., to make a survey of existing health conditions in India and to formulate plans for future health development. The Committee was quite representative in its composition and consisted of 9 officials and 16 non-officials. The former included the Minister of Health, Sind, the Director-General, Indian Medical Service, the Public Health Commissioner with the Government of India, the Surgeon General, Bengal, and the Directors of Public Health of the United Provinces and the Punjab. The non-official group included a number of eminent medical practitioners as well as certain members of the Medical Council of India, of Medical Associations and of the Central Legislature. The Committee had, further, the advantage of discussing its problems with certain distinguished workers in the field of health from the United Kingdom, the United States of America, the U.S.S.R. and Australia, who came to India for this purpose on the invitation of the Government of India.

EXISTING HEALTH CONDITIONS.

The Committee's survey of existing health conditions and of the factors associated with them reveals the following picture. India's rate of mortality is at least double of that of most civilised countries while the infantile death rate is about five times that of Australia and New Zealand, two of the healthiest countries of the world. The factors responsible for this state of the public health are the unhygienic conditions under which people live, malnutrition and under nutrition, inadequacy of existing health services and illiteracy as well as certain social customs such as early marriage and the "pardah." Food production in the country falls short of its requirements by about 20 to 25 per cent in respect of cereals, which form the main article of diet of about 80 to 90 per cent of the population, while the production of other articles such as milk, fruits, vegetables, meat, eggs and fish will have to be increased many times before the needs of the country can be adequately met.

THE COMMITTEE'S RECOMMENDATIONS.

In putting forward its recommendations the Committee kept in view certain objectives. They are :—

(1) the scheme, when fully developed, should provide each individual in the country with adequate medical care, curative and preventive, irrespective of his ability to pay for such services ;

(2) the medical aid made available to the rural is much less than that provided in urban areas. The countryside should therefore receive much more attention than has been given to it in the past ;

(3) the active co-operation of the people should be secured in the development of the health programme partly through intensive health education and partly through the provision of facilities for participation by the people in local health activities.

Taking these objectives into consideration the Committee has drawn up a long-term programme which will provide the country with a modern health service based on the newer and expanding conceptions of modern health practice. The district health organisation will have as its smallest unit of administration a primary unit which will normally serve a population of 10,000 to 20,000. About 15 to 20 such primary units will together constitute a secondary unit and a varying number of the latter (3 to 5) will form the district health unit, the designation suggested by the Committee for the district health organisation. At each of the headquarters of the district, secondary and primary health units will be established a Health Centre from which will radiate the different forms of health activity into the territory covered by each type of unit. The provision made for medical relief and preventive health work at each of these Health Centres will increase in scope and efficiency from the primary unit to the district health unit. The District Health Centre will possess general and special hospitals with a total bed strength of about 2,500 and all the consultant and laboratory services required for the diagnosis and treatment of disease on up-to-date lines. The Secondary Health Centre will have a hospital with 650-beds and the primary unit headquarters a 75-bed hospital. A system of ambulances and telephone connections between these three types of hospitals will help to promote the fullest utilisation of the higher types of service available at the larger institutions by the people living in the remoter parts of the district. These hospitals will also take an active part in the preventive health campaign. They will be linked with the field health organisations in respect of such services as those for tuberculosis, for mothers and children or for venereal diseases in order to ensure that the remedial and preventive health work carried out in the homes of the people receive the full benefit of the treatment and diagnostic facilities available at the hospitals.

The Committee has stressed that preventive and curative health work should be dovetailed into each other in order to produce maximum results. It has therefore suggested extensive changes in the existing training programme for

doctors and has laid emphasis on equipping him for preventive health work. It has also made elaborate proposals for a considerable expansion of training facilities for the different types of other health personnel required for meeting the country's needs.

The Committee has made it plain that no health development plan can produce adequate results unless sufficient measures are taken for the provision of a healthy environment for community life, such as safe water supply, hygienic houses, a satisfactory system of conservancy and proper supervision over the production, distribution and sale of food intended for public consumption. Specific recommendations have been put forward in respect of these.

In order to secure the active support of the people the establishment of a Health Committee in every village has been recommended. Such Committees are intended to stimulate local effort for the improvement of environmental sanitation, control of infectious disease and the steady development of a programme of health education.

Lastly the Committee has stressed that, in order to ensure a rapid improvement of the public health, a co-ordinated advance on a broad front would be essential and that the schemes put forward for the betterment of community life in all its aspects by various post-war committees should be implemented simultaneously with its own health plan.

THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but some 200,000 mothers lose their lives each year as a result of pregnancy and child birth. The number of mothers who suffer from ill health and are disabled temporarily or permanently as a result of the normal physiological function of child bearing is at least 20 times the annual maternal deaths. Every year more than 2½ million Indian children die before the age of 5 years, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy and childhood.

The maternity and child welfare movement which aims to promote maternal and child health and to reduce deaths, owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford in 1918 and also since 1920 to the Indian Red Cross Society. The amalgamation of these two bodies in 1931 forming the Maternity and Child welfare Bureau, Indian Red Cross Society, has undoubtedly increased and developed the work.

The Maternity and Child Welfare Bureau, Indian Red Cross Society, is the only body voluntary or official at present working on an All-India basis. The Bureau is managed by a technical committee representing the medical and public health services, the nursing profession and voluntary organisations and individuals working in fields allied to maternity and child welfare. The Director of the Maternity and Child Welfare Bureau, Indian Red Cross Society, an officer of the Women's Medical Service, acts as Secretary. The Bureau administers the Victoria Memorial Scholarships fund for the training of dais, the Lady Chelmsford League fund for maternity and child welfare and the Lady Birdwood fund for army child welfare. The income from the funds is expended on the (1) maintenance of a central Bureau of information on all aspects of maternal and child health throughout India, (2) on training schemes for workers in the maternity and child welfare field, doctors, health visitors, midwives, nursery school teachers and nursery nurses, (3) on propaganda, literature and publicity and (4) on grants-in-aid of experimental schemes.

The care needed by the wives and children of sepoys in the Indian Army is being increasingly realised, and nowhere more than in the units themselves. The result has been in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of families hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres. To allow rapid expansion of welfare activities for the Indian Troops, a special committee, "The Indian Fighting Forces Maternity and Child Welfare" took over the management of the Indian Army Centres in the year 1942 which had until then been under the Bureau. The Secretary of the Indian Red Cross Society and the Director of the Bureau are members of this Committee and a sum of Rs. 18,000 is paid each year from the Bureau for grants in aid to the various centres and technical advice of the Director of the Bureau is available to the Committee. The British Army Child Welfare Centres are still under the Bureau. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

Through the Provincial and State branches of the Indian Red Cross Society it has been possible to organise Maternity and Child Welfare Services throughout India although of recent years the trend has been towards transition from voluntary to official direction and it is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities. The Governments of Madras, Bengal, Orissa and some of the larger States have assumed some responsibility with regard to schemes relating to Maternal and Child health, the schemes in these Provinces being directed by special officers. At the same time much excellent work is done by voluntary organisations such as the branches of the Indian Red Cross Society in Assam, Bengal, Madras, North-West Frontier Province, Orissa, Punjab, United Provinces and Sind and several Indian States, by the Bombay Mofussil Council and M. & C. W., the Bombay Presidency infant Welfare Society and the Bihar M. & C. W. Society with the result that in all the provinces and most of the Indian States welfare activities for the care of the mother and her child now exist, the activities

differ in nature of the work undertaken, and the amount of organisation displayed. The Health Survey and Development Committee appointed by the Government of India in 1942 has studied the existing Maternal and Child health services and have made their recommendation for its future development. The Committee has emphasised the need for organising the services as an integral part of the medical and public health services of a Province or State and much emphasis has been laid on the preparation of workers. It is hoped that the implication of the Committee's recommendations on expansion and improvement of facilities for training of public health personnel and in development of the services much progress is expected in the improvement of health, of women and children of India in the near future.

The industrial concerns of recent have realised the importance of providing special facilities for the employees and an increasing number of industries are now maintaining comprehensive welfare schemes for women and children. The Government of India have instructed authorities in the coal mines to establish creches and provide such minimum requirements regarding building staff and equipment as detailed in their circular.

So far the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, undernourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervisions, dental clinics, better housing, open air playgrounds, etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

Such is the magnitude of the field that a consistent, wide-spread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children.

INDIAN RED CROSS SOCIETY.

When the Great War first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the funds of the Joint War Committee to the new Society, and authorised it not only to direct the utilisation for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralised, and are being carried on through 31 Provincial and State Branches under which there are 342 sub-branches.

The objects on which the funds of Society may be spent are :—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.

2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.

3. Child welfare.

4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.

5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.

6. Home Service Ambulance Work.

7. Provision of comforts and assistance to members of His Majesty's Forces whether on the active list or demobilised.

The Society has five grades of subscribing members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150 and anything between Re. 1 and Rs. 12 annually or consolidated payment of Rs. 50. The number of adult members of all categories enrolled during 1945 was 37,731 as against 31,207 in previous year.

To stimulate interest in the aims and objects of the Society amongst the future generation, the Junior Red Cross movement has been instituted which embraces the student population. Out of the 34 Provincial and State Branches, 27 have organised Junior Red Cross groups, which is a clear indication of the fact that this children's branch of Red Cross Society which seeks to develop a child's personality by encouraging his individual initiative, making him think and act, is being firmly established all over India. At the end of the year the total membership of the Junior Red Cross was 8,30,782 in 21,060 groups as against 7,76,642 in 19,518 groups in the previous year. The Director of the Junior Red Cross, K. Shanker Nigam, who is in charge of the movement, is guided by a Sub-Committee under the Chairmanship of Sir John Sargent, C. I. E., M.A., D.Litt., Secretary to the Government of India in the Education Department. Several new lines of activity towards the promotion of health, service to the sick and suffering and international fellowship have been initiated during recent war years and the movement is meeting with increasing popularity among the juvenile population of the country.

Constitution:—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society, of whom 12 are the Vice-Presidents nominated by Provincial or State Branches, 8 selected by the Society at the Annual General Meeting from among the members of the Society, and 5 nominated by the President.

The present Chairman of the Managing Body is Sir Joseph Bhore, K.C.S.I., K.C.I.E. Vice-Chairman: Major General R. Hay C.I.E., K.H.P., I.M.S., and the Secretary General Sardar Bahadur Balwant Singh Puri O.B.E.

The Indian Red Cross Society professes itself as an essentially Indian Society. Most of its members (about 96 per cent.) are Indians. It is controlled in India. Its headquarters are at New Delhi. The Society received a gift of a lakh and a half of rupees from H. H. the Nawab of Junagadh to build headquarters offices in New Delhi. It has branches in every Province of British India and in several Indian States. These branches are again sub-divided into districts, so that there is a network of Red Cross centres all over India. The provincial branches appoint representatives to the Central Committee, called the Managing Body. This Central body, after deduction of management expenses, distributes all its income from invested funds among the branches for their activities.

Like other Red Cross Societies, the Indian Society has never lost sight of its primary obligation to act as an auxiliary to the Army Medical Service in case of war. It maintains a Central Supply Depot administered by headquarters. A large number of military hospitals are supplied with additional equipment and comforts, and these are much appreciated. The Bengal Branch has a Literature Committee, which supplies regular parcels of literature to troops, especially to those stationed in lonely outposts, and many grateful letters of thanks are received. Discharged soldiers suffering from chronic diseases, particularly tuberculosis are referred by the Army Medical Service to the Red Cross, which follows up the men on their return to their villages, and arranges, where possible, for their treatment. Under this scheme many hundreds of cases have been dealt with.

The development of child health services is one of the important peace-time activities. The various branches of the Indian Red Cross Society have initiated and maintained Maternity and Child schemes in the Provinces and States. In the absence of a Maternity and Child Welfare Section under the Government of India, the Bureau functions as Central Office for information and technical advice for the Red Cross Branches and other voluntary and official organisations conducting Maternity and Child Welfare schemes.

Special mention must be made of the Army child welfare centres, which receive generous support from Red Cross funds. These centres are run for the wives and children of British and Indian troops, and are doing excellent work. In view of the importance of a qualified staff to conduct Maternity and Child Welfare schemes the Indian Red Cross Society has all along encouraged training schemes for health personnel. The provincial schemes for training of Health Visitors, midwives and dais have received assistance from the Maternity and Child Welfare Bureau.

The Indian Red Cross Society has supported schemes for inauguration of Public Health Nursing in India and has offered scholarships to candidates for such training. The Society, in addition to the endowment fund for post-graduate scholarship under the Indian National Committee of the Florance Nightingale International Foundation, has recently created a few scholarships for post-graduate training of nurses to enable suitable candidates to have a year's Public Health Nursing training in Canada.

Popular health education is carried on steadily by the Society by varied methods. Health lectures in many different vernaculars are regularly organised under Red Cross auspices illustrated by films and slides.

A large number of civil hospitals in India receive regular assistance from Red Cross funds.

The number of trained nurses registered on the Red Cross roll maintained for civil emergency service is eighty-seven. These nurses belong to different parts of India, and with a view to ensuring speed and accuracy at the time of need, they are asked twice a year to intimate any change of address to headquarters. In addition to the nurses registered at headquarters, seventeen hospitals all over the country continued their undertaking to provide the Red Cross with the services of sixty nurses for temporary emergency duty in the event of disaster striking their respective areas. Fortunately, no occasion arose during the year to requisition the services of nurses registered on the roll.

FINANCES.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December, 1945, stood at a capital investment of the face value of approximately Rs. 76¼ lakhs. The income

derived from the capital of the Society (which is 3 lakhs at present), after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund.

The Indian Forces' Medical After-Care Fund which was instituted, at the headquarters of the Society at the end of 1941 to provide medical relief and other ameliorative measures for discharged Indian soldiers who participated in the World War II. Assistance of the Fund was invoked by an increasing number of ex-servicemen. The total number of applications dealt with until the end of the year was 285 against 100 reported in 1944. During the year 176 ex-servicemen suffering from tuberculosis, leprosy, mental and miscellaneous ailments were helped and artificial limbs provided for seven cases.

A sum of Rs. 50,116 was given in grants during the year, thus raising the total of disbursments made during the last three years to Rs. 71,464. The financial position of the Fund continued to be satisfactory inasmuch as the initial capital of Rs. 3,64.315, steadily augmented by donations and interest, amounted to Rs. 7,18.724 at the end of 1945.

The Mount Abu Hostel started in July 1944 for housing Rajputana ex-servicemen has provided medical After-Care to 38 cases with the assistance of the Adams Memorial Hospital. The Hostel was given a grant of Rs. 4,500 by the Medical After-Care Fund towards its initial outlay and an undertaking to meet half of its first year's running expenses to the extent of Rs. 6,500, out of which Rs. 1,800 was paid in 1944 and Rs. 2,361 during the year under review Recognising the useful purpose served by the Hostel, the Fund Committee renewed its contribution to the extent of half its running expenses for another year, *i.e.* until the end of June 1946.

The most important activity of the year was the Milk Distribution Service which was inaugurated in September 1943 to mitigate famine conditions in Bengal, Cochin, Malabar, Orissa and Travancore and was continued in response to persistent popular demand. although the food situation had improved considerably. Moreover, the practical demonstration to the masses of nutritional value of milk and consequent milk consciousness which it awakened were encouraging considerations against any sudden termination of this beneficial service.

Apart from reclaiming thousands of victims, of malnutrition the Red Cross Milk Service, having so far involved 6,035½ tons of milk, has demonstrated effectively the potentialities of the Society and led to remarkable awakening for the extension of the organisation in certain parts of the country. The famine particularly brought out the need for Red Cross district branches in Bengal and it is heartening that this breach is now being filled. Under the inspiring leadership of H.E. the President of the Provincial Branch, the Right Hon'ble Mr. Richard Casey, an ambitious scheme, costing Rs. 16 lakhs for the first two years, was set in motion and has made considerable headway. The formation of Red Cross Branches in Cochin and Travancore last year was also the direct outcome of milk service in those States.

St. JOHN AMBULANCE ASSOCIATION (INDIAN COUNCIL) AND St. JOHN AMBULANCE BRIGADE OVERSEAS (EMPIRE OF INDIA).

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects:—

(*a*) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured;

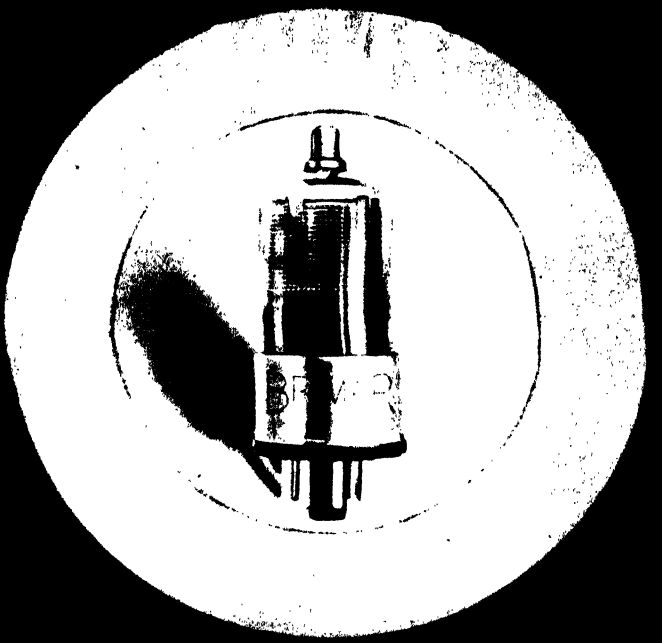
(*b*) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room;

(*c*) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic;

(*d*) The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps;

(*e*) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 624,000 certificates of proficiency in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft and over 31,000 tokens such as Vouchers, Medallions, Labels and Pendants for special proficiency in those subjects. In addition over 117,000 certificates have been issued in the elementary course for school students known as Mackenzie School Course in First Aid, Hygiene and Sanitation.



The object of the Association is not to rival but to aid the medical man, and the subject-matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

During the year 1945, 46,656 persons attended courses of instruction in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft. Of these 33,015 qualified for the Association's certificates; *i.e.*, 30,127 in First Aid, 2,273 in Home Nursing, 403 in Hygiene and Sanitation and 212 in Domestic Hygiene and Mothercraft.

The Association has five grades of members, namely, Patrons, Honorary Counsellors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs. 1,000, Rs. 500, Rs. 100, Rs. 5 and Rs. 2.

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Govern-

ment, fees for certificates and membership subscriptions.

Their Excellencies the Viceroy and Viscountess Wavell and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 23 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble Sir Patrick Spens, O.B.E., Knight of Grace of the Order of St. John of Jerusalem, is the Chairman and Sardar Bahadur Balwant Singh Puri, O.B.E., the General Secretary.

The St. John Ambulance Brigade Overseas is a uniformed, disciplined body of men and women, all of whom are holders of First Aid, and, in the case of women also Home Nursing certificates. They meet together regularly for practice, are inspected and re-examined annually and undertake to turn out for public duty whenever required.

The Brigade in India is commanded by the Hon'ble Sir Patrick Spens, O.B.E. as Chief Commissioner for the Empire of India. Under him are 21 Districts covering almost all the provinces in British India and some of the Indian States with headquarters at Lahore, Calcutta, Bombay, Madras, Bangalore, Lucknow, Nagpur, Patna, Delhi, Karachi, Peshawar, Shillong, Indore, Cuttack, Secunderabad and Sambalpur and there are three also on the North Western, East Indian and G.I.P. Railways. In charge of each District there is an Assistant Commissioner or a Commissioner according to the membership strength of the District, and as the work of the Brigade lies so much in the medical and surgical sphere, the Officers-in-Charge of the Districts are generally the administrative heads of the Civil Medical Departments of the respective provinces. It is their business to organise and maintain the training and efficiency of Ambulance and Nursing Divisions and to see that they are available for public service on occasions when they are required.

At the end of 1945 the Brigade in India consisted of 468 Ambulance Divisions, 114 Nursing Divisions and 110 Cadet Divisions (boys and girls) with a total membership of about 19,000. These Divisions render first aid on public occasions, for example festivals processions and public assemblages of all kinds. At times of special emergencies they turn out promptly and remain on duty so long as they are required. Some of the recent occasions when Brigade members have rendered valuable service are the Bihar Earthquake (1934), when Calcutta members established a camp hospital at Monghyr, the Quetta Earthquake (1935) when Lahore members living in railway trucks at Quetta station gave valuable help to the stricken people, the Bombay riots in successive years, where the local Divisions earned the warm appreciation of the Government of Bombay, the Bihta railway disaster (1937) when the Dinapur Nursing Division gave prompt assistance, the Kumbh Fair at Hardwar (1938) when members from the United Provinces were on First Aid duty for over a fortnight, the Dacca Mail disaster (1940) when members of the Calcutta Police Sub-District rendered first aid and organized an emergency hospital at the Sealdah railway station, the Japanese bombing of Rangoon (Dec. 1941) when the Madras District made a prompt response to the call for medical assistance by sending to Burma a fully equipped party of 48 volunteers, the evacuation from Burma (1942) when members of Divisions in the ports met ships and assisted thousands of evacuees, the collapse of the large building under construction on Marine Drive, Bombay (1942), when the Parsee Ambulance and Nursing Divisions, assisted by others, performed 75 hours consecutive duty at the scene of the disaster, and the recent great fire in the Bombay docks (1944) when the St. John Ambulance and Nursing Divisions rendered signal service.

The Auxiliary Nursing Service, India, was constituted in 1941 to provide a reserve of nurses sufficiently trained to be immediately useful when called up for duty during the present war. The Lady District Superintendents of the St. John Ambulance Brigade Overseas are acting as local recruiting agents and are responsible for the selecting, uniforming and allotting of candidates to the various hospitals. Recruitment is made for two categories of service: (*a*) General for continuous service in Military Hospitals anywhere in India and overseas for those who specifically volunteer; and (*b*) Local for a limited period for full or part-time nursing duty arising out of the war in Military or Civil Hospitals situated within the area in which they have agreed to serve. There has been a fairly satisfactory response to the appeal for this service. Members of Nursing Divisions all over the country have been giving devoted voluntary service at hospitals to supplement the nursing services. While the services of the Brigade personnel both men and women, trained in Air Raid Precautions, are at the disposal of Provincial Governments for the training of the general public and are also utilized in connection with other measures which are adopted for the protection of the civil population against aerial attacks. They have also formed Transport Units at the ports and at present are engaged in evacuating casualties received from overseas. Transport Units in Bombay and Poona, staffed entirely by women, transported respectively over 60,000 and 36,000 sick and wounded during 1943.

Both the St. John Ambulance Association and Brigade work under the aegis of the Order of St. John of Jerusalem and as their work is complementary to that of the Indian Red Cross Society, close co-operation exists between the Order and the Society.

The war greatly stimulated training in First Aid and Home Nursing, and consequently a very large number of men and women received training in these subjects in order to fit themselves for skilled service to the sick and wounded. A large number of new Ambulance and Nursing Divisions of the Brigade, consisting of the trained personnel, have also been registered this year. For its other war work the Association is working in concert with the Indian Red Cross Society, both at headquarters and in the provinces, under the title of the Joint War Committee of the Indian Red Cross Society and St. John Ambulance Association, an account of whose activities is given under the Indian Red Cross Society.

INSANITY AND MENTAL HOSPITALS IN INDIA.

In India, facilities for the care and treatment of persons suffering from mental disorders is still very inadequate. To serve a population of over four hundred million, there are only 17 institutions with a total accommodation for about 15,000 patients. Most of these institutions are little more than lunatic asylums where hardly any provision exists for modern methods of treatment. Many patients are even confined in jails where, of course, no provision exists for any kind of treatment. The most modern mental hospital in India is probably the Mysore State Mental Hospital, Bangalore, which, built at a cost of over Rs. 5 lakhs, is very well equipped for the care and treatment of 300 early mental cases.

The Bangalore Mental Hospital is not merely modern in its buildings and architecture but is also providing facilities for treatment of patients.

All forms of shock therapy are undertaken including Insulin-shock and Cardiazol-convulsions. Surgical approach to the brain by means of Pre-frontal Leucotomy is an additional feature and the Mysore Mental Hospital is the only hospital in India to perform this operation (Pre-Frontal Leucotomy) on the brain.

According to the 1931 census, out of a total population of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded", an item that is not included in the figures of British India. The figures of the 1941 Census are not available at the time of going to press. The Govt. of India have under contemplation, as part of post war reconstruction the provision for increased facilities for the treatment of mental patients on a really adequate scale.

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the Women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring them out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition branches were formed in each Province, each branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial branches; it gives scholarships to a number of women students at the medical colleges of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women. It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 12 Provincial branches and a number of Local Committees.

The Government of India subsidise the Countess of Dufferin's Fund to the extent of Rs. 3,70,000 per annum to maintain a Women's Medical Service for India—this service consists of 48 officers, with a training reserve of 22 doctors and a junior service. Medical women either British or Indian, holding registrable post graduate qualifications, are eligible for the senior service.

The President is H. E. The Viscountess Wavell. The Hon. Jt. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary, Dr. H. M. Lazarus, C.M.G., M.V.O., Viceregal Estate, New Delhi and Viceregal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund, and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £27,750 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 22 women graduates in medicine of Indian Universities. Recruitment to the service is made (*a*) in India by a Medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Joint Secretary to the Council, a medical woman, a medical man and the Chief Medical Officer, Women's Medical Service: (*b*) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportion of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who were in the service of, or who had rendered approved service to the Countess of Dufferin's Fund, were to have the first claim to appointment, and thereafter special consideration was to be paid to the claims of candidates who had qualified in local institutions and of those who were natives of India.

Qualifications.—The qualifications are that the candidate must be (*a*) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Indian Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (*b*) Must be between the ages of twenty-four and thirty-two at entry. (*c*) She must be a first-class medical woman, i.e., she

must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act, and an advance post-graduate qualification. (*d*) The candidate must produce a certificate of health and character. The Council reserves the power to promote to the Service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After three years of probation have been satisfactorily passed, their appointments are confirmed.

The Training Reserve of the Women's Medical Service.—This Service has a sanctioned cadre of 22, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs. 200 to Rs. 250 per month, with furnished quarters.

2. Two of the 22 members of the reserve, but not more at any one time, may be deputed by the Executive Committee for post-graduate training.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was founded in 1908 by Lady Curzon, with the object of securing better standards of midwifery practice by the dais of India. A sum of about 6½ lakhs was secured by public subscription in 1908 and a further sum of Rs. 1,20,000 was added to the Fund in 1935 from Their Majesties' Silver Jubilee Fund. The Fund is now administered by the Maternity and Child Welfare Bureau, Indian Red Cross Society and the income is expended as grants-in-aid of training schemes for dais and midwives maintained by voluntary organisations, especially branches of the Indian Red Cross Societies in the provinces and States of India. The Director Maternity and Child Welfare, I.R.C. Society, an officer of the Women's Medical Service is Secretary to the Fund. In spite of continuous efforts in the training of dais since the beginning of the present century no appreciable improvement has yet been made in the midwifery services in the rural areas. It is, therefore, necessary to extend the training to rural areas taking care that only the required number are trained and allowed to work under supervision until such time that they can be replaced by properly trained midwives.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL.

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February, 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Central P.W.D., the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All-India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Chief Medical Officer, Delhi Province, and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Director-General, Indian Medical Service. An officer of Indian Audit and Accounts Service acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 186 Medical students and 95 nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi within easy reach of old Delhi city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is, for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Irwin Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for all students. There are good playing fields and a large swimming pool was opened early in 1938. The hospital is a fine modern building with accommodation for 345 in patients for teaching purposes and a commodious out-patients' department. The College and Hospital are supported by a grant of Rs. 3,20,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

Attached to the Hospital there are: (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendent, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity

is principally centred in the Bengal, Madras and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staff are maintained, available to the general public on payment of a prescribed scale of fees. These Hospitals also act as training institutions and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation went a step farther, through the establishment of the Bombay Presidency Nursing Association. This was composed of the various Nursing Associations in charge of individual hospitals, and worked under the Government. The principle on which the relations of this Association with the Local Associations was governed was that there was central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. The subject has been under discussion for years. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has established a Provincial Register preparatory to an All-India Register.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first step was taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately, Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the associations are still largely dependent upon annual subscriptions towards the maintenance of their works.

The Bombay Presidency Nursing Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association and it appeared to the Committee improbable that it could be carried out. The auxiliary function of examining and granting certificates to nurses and midwives and maintaining a register of qualified nurses and midwives and also maintaining a Provident Fund for the employees of the affiliated associations were, however, carried uto The Memorandum, Rules and Bye-laws of the Association were not revised and brought into line with the actual working of the Association. This was done towards the end of 1927, when the Committee decided that some steps must be taken to do so. Accordingly a Sub-Committee was appointed to consider the revision and amendment of the Memorandum, Rules and Bye-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the rules piecemeal and that the only way to put the things in order was to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report, the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom. Pending the passing of the Act, the New Memorandum of Association was brought into operation from 1st April 1929.

Establishment of the Bombay Nurses, Midwives and Health Visitors' Council.—The need of legislation for the Registration of Nurses, Midwives and Health Visitors had existed in the Province since a long time and with a view to protect the public from the activities of persons who misrepresent themselves to be fully qualified Nurses, Midwives or Health Visitors, Government, in April 1935, passed the Bombay Nurses, Midwives and Health Visitors' Registration Act. In the absence of State Registration the nurses trained in this Province were subject to certain disabilities and were refused Registration in other Provinces and in other countries, where state registration prevailed. The Act obtains for them the necessary status and secures their registration in other provinces in India or in other parts of His Majesty's Dominions which are willing to reciprocate with the Bombay Nurses, Midwives and Health Visitors' Council which was established in August 1935.

From the date of the establishment of the Council, the Bombay Presidency Nursing Association became defunct. The training and registration of nurses, midwives and health visitors in this Province is now controlled by the Council. Nurses who are trained and registered in this Province can now get registration with the General Nursing Council of England and Wales and the General Nursing Council of Scotland and can practice as qualified nurses in these Countries.

Lady Minto's Indian Nursing Association.—The Lady Minto's Indian Nursing Association was founded in 1892 under the title of the" Up-Country Nursing Association" to supplement the supply of trained nurses in India.

The Punjab and the United Provinces were the first provinces to consider the possibility of providing nurses for private work, but it was not until 1906 that provision was made on a really adequate basis.

Lady Minto issued an appeal to the public both in India and England which met with a generous response.

The financial liabilities of the Association are met from five sources :—

Interest on the Endowment Fund; Government Grant; Donations; Subscriptions; Fees.

It is the practice of the Association to invite people to become annual subscribers. This

carries with it two advantages; priority of claim to the services of a Sister, and a reduction in the fees paid for those services. Thus members of the Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient.

The control of the Association is in the hands of two Committees; one in England and one in India.

The English Committee is responsible for the recruitment of the staff in the United Kingdom, but fully trained nurses are also eligible in India and the Central Committee has the power to enlist them on the spot.

In addition to this duty the Indian Committee deal with all matters of administration delegation to the Provincial Branches questions of local significance.

Her Majesty Queen Mary is a Patron of the Association.

Her Excellency the Viscountess Wavell is President of the Central Committee in India.

Hon. Secretary:—Lieut.-Col. H. Williamson, I.M.S.

Chief Lady Superintendent:—Miss C. Wilson, Central Committee.

Lady Minto's Indian Nursing Association, Viceregal Estates, Simla, and Red Cross Buildings, New Delhi.

THE TRAINED NURSES' ASSOCIATION OF INDIA AND THE ASSOCIATION OF NURSING SUPERINTENDENTS OF INDIA.

The Trained Nurses' Association of India was founded in 1905 and incorporates the Association of Nursing Superintendents of India. It is affiliated with the International Council of Nurses and the National Council of Women in India, and the Nurses' Auxiliary of the Christian Medical Association is an affiliated Association. Its objects are:—

(*a*) to uphold in every way the dignity and honour of nursing profession.
(*b*) to promote a sense of *esprit de corps* among all nurses.
(*c*) to enable members to take counsel together on matters affecting their profession
(*d*) to elevate nursing education and to raise the standard of training.
(*e*) to strive to bring about a more uniform system of education, examination, certification and registration.

The Association has accomplished a great deal in raising the standard of nursing throughout India, in improving nursing legislation and in providing post-graduate courses for nurse administrators, sister tutors and health visitors.

It strives in every way to promote efficient and adequate nursing for the sick and to improve conditions, not only for nurses but primarily for patients. The Association is self-supporting and is maintained by the nurses themselves.

The branches of the Association are the Health Visitor's League, the Midwives' Union and the Student Nurses' Association. The number of qualified members is 3,200 and student members 1,400, totalling 4,600. The official organ of the Association is 'The Nursing Journal of India'.

Patron: Her Excellency Lady Wavell.

Vice-Patrons: H. E. Lady Colville, Bombay; Lady Nye, Madras; Lady Burrows, Bengal; H. E. Sir Evan Jenkins, Punjab; H. E. Lady Dow, Bihar; H. E. Lady Twynam, Central Provinces; Lady Wylie, United Provinces; H. E. Lady Clow, Assam; H. E. Lady Lewis, Orissa; H. E. Mrs. Hay, Baluchistan; H. E. Lady Caroe, N.W.F.P.; Miss Macqueen, Sind; Her Highness The Maharani Sahiba of Travancore and Her Highness The Princess of Berar.

Hon. Legal Adviser: P. A. Mehta, Govt. of India Legislative Department, New Delhi Simla.

President: Miss A. Wilkinson, 3, Commissioner Lane, Delhi.

Vice-Presidents: Miss L. E. Mackenzie; Miss M. Craig; Mrs. E. A. Watts; Mrs. N. Bedford; Miss T. K. Adranvala and Mother M. Kinesbuge.

Officers: General Secretary: Miss M. E. Abram, T.N.A.I. Office, 4, Underhill Lane, Delhi. Hon. Treasurer: Miss E. Hutchings, Office of the Director-General, Indian Medical Services, New Delhi. Editor: Miss M. E. Abram, T.N.A.I. Office, 4, Underhill Lane, Delhi.

Hon. Secretaries: Health Visitors' League: Miss M. Korah, Lady Reading Health School, Delhi; Midwives' Union: Miss S. Round, Lady Reading Hospital, Peshawar; Student Nurses' Association: Miss Van Vranken 20, Stanley Road, Allahabad, U.P.

Representatives of the Nursing Services and Affiliated Associations: The Military Nursing Services (India): Miss J. Patterson, R.R.C., Q.A.I.M.N.S., Chief Principal Matron, G.H.Q. Medical Directorate, New Delhi. Madras Government Nursing Services: Miss D. Chadwick, Office of the Surgeon-General with the Government of Madras. Lady Minto's Indian Nursing Service: Miss C. Wilson, Viceregal Estate, Simla New Delhi.

The Auxiliary Nursing Service: Miss E. Hutchings, Chief Lady Superintendent, A.N.S., Office of the D.G.I.M.S., New Delhi. The Nurses Auxiliary of the Christian Medical Association: Miss H. W. Sutherland, L.W.L. Settlement, Chingleput, S. India.

Membership: Membership is open to qualified Nurses, Health Visitors and Midwives who have completed their training in hospitals or Health Schools recognised by the Association. All officers are fully trained nurses.

Subscriptions: Entrance fee Rs. 3: Annual subscription which includes monthly copies of the Nursing Journal of India Rs. 8 and Nurses whose monthly salaries are under Rs. 50 are entitled to pay half fees.

THE WOMEN'S MOVEMENT.

The women's movement has had a remarkably smooth run in India. Imperceptibly but steadily, during the past ten or twenty years, the women of India have acquired numerous rights, social and legal no less than political. Their political enfranchisement has been achieved with considerable ease.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of schemes of reforms in Indian government planned to give a basis of representative government on a progressively extended scale. The door was being opened to complete self-government but only men were being invited to enter through it, although women compose half the population of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too fair-minded to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** was granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness, and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election; similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 scores of women have become Municipal Councillors and members of Local Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seats in the Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation or Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The ripe moment for giving public expression to their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first-hand in 1917.

During the Rt. Hon. E. S. Montagu's visit only one women's deputation waited on him but it was representative of womanhood in all part of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which, since its inception, women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered *responsible and acknowledged citizens*; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published, no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to

investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of, the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The *House of Commons* decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Reviewing the position about ten years later the Simon Commission showed the extremely limited extent to which women, enfranchised in the manner set out above, had become qualified as electors. Except in Burma, where it was comparatively high, the percentage of women electors to adult female population was less than one.

Madras led the way in the matter of women's franchise and under the operative provision of the Government of India Act, women became enfranchised. Other provinces followed suit, and at the time of the inquiry by the Simon Commission seven out of the nine provinces had acquired the right. Very soon women began to adorn the benches in legislative chambers, first by nomination and then by election. And they justified the confidence placed in them by sponsoring and successfully carrying through many measures of uplift and reform in regard to the status and influence of women.

During the last ten or fifteen years, the women of India have made enormous progress in several directions. A great awakening has dawned on them. The raising of the age of consent for marriage, the abolition of the practice of dedicating girls to temples, the demand for legal and property rights *vis-a-vis* men embodied in some of the reform measures—all have tended to raise the status of Indian women in their own eyes as well as in the eyes of the world. They have marched from reform to reform, and their outlook is for ever widening. The Gandhi movement evoked an unprecedented outburst of service and sacrifice among Indian women who were thrown into the thick of a political struggle from which they emerged fully conscious of their political rights and responsibilities. The part played by the two representatives of Indian womanhood at the India Round Table Conferences held in London brought them and their kind in the lime-light.

Small wonder, therefore, that the Government of India Act of 1935 gave Indian women political rights far in advance of those enjoyed by them before that date. In terms of number of seats, women have been allotted 6 seats out of a total of 150 reserved for British India in the Federal Council of State and 9 out of a total of 250 so reserved in the Federal Assembly. In the Provincial Assemblies, women have reserved to them 8 seats in Madras, 6 in Bombay, 5 in Bengal, 6 in the United Provinces, 4 in the Punjab, 4 in Bihar, 3 in the Central Provinces and Berar, 1 in Assam, 2 in Orissa and 2 in Sind.

But by far the greatest improvement in women's political rights occurred in the liberalisation of the franchise qualifications affecting them. Women have been enfranchised who have the property qualification in their own right, or are wives or widows of men so qualified, or are wives of men with a service qualification, or are pensioned widows or mothers of members of the military or police forces, or who possess a literacy qualification. Women not holding the requisite qualification in their own right are required to apply to be enrolled, stating their derived qualification, but this procedure has been waived in some provinces. By means of such enfranchisement, it is estimated more than six million women (against 315,000 under the Act of 1919) have been given the right to vote, compared to 29 million men.

It is noteworthy, too, that men and women can vote both in general constituencies and in special constituencies. Women can vote in and contest elections to the Upper House in provinces where bicameral legislatures have been set up.

Both evidence and result of the awakening among Indian women are to be found in more than one legislative measure sponsored by women legislators calculated to confer greater rights and freedom on women.

All-India Women's Conference.

In the past 15 years Indian women's rights, grievances and demands have been voiced principally by the All-India Women's Conference.

The All-India Women's Conference came into existence, as a result of the initiative taken by Mrs. Margaret Cousins, towards the end of 1926, the first session of the conference being held at Poona in the first week of January, 1927. In the beginning it was inclined to concentrate its attention on the basic question of women's education. The resolutions passed at the first conference were almost wholly devoted to the different aspects of women's education, the only exception being a resolution condemning child marriage and supporting Sir H. S. Gour's Age of Consent Bill. Even this subject was touched upon only because it was felt that early marriages were a very serious impediment in the progress of girls' education. Such a narrow programme could not, however, be expected to satisfy the leaders of the women's movement for a long time and it was not surprising that at the third session the scope of the conference was definitely widened to include social reform. Education of women, raising the age of marriage, removal of untouchability and caste restrictions, rural uplift, and reform of the laws of inheritance as affecting women are only the more important of the subjects in which the conference has

interested itself. Year by year its activities have been expanding and they have shown that the educated women of India have become conscious of their rights as well as their duty and are prepared to contribute their share to the task of nation-building.

A satisfactory feature of the women's movement in India has been the spirit of unity and co-operation behind it. A mere glance at the list of presidents of the All-India Women's Conference—which includes the names of the Maharani of Baroda, the late Begum of Bhopal, the late Rani of Mandi, Mrs. Sarojini Naidu, Mrs. Muthulakshmi Reddi, Lady R. Nilkanth, Lady Abdul Qadir, Mrs. Faridoonji, the Maharani of Travancore, Mrs. Cousins, Rajkumari Amrit Kaur, Mrs. Rameshwari Nehru and Shrimati Kamaladevi—should suffice to show to what extent the conference has succeeded in securing the co-operation of the awakened womanhood of India irrespective of the differences of caste and community, race and class.

This organisation, it may be noted, has latterly shown a tendency to transgress the requirements of sectional plea and strayed into wider political activity. It is not, however, difficult to explain this development. The women's movement gained considerable impetus by the part played by and the status accorded to, women in the intensive political movement conducted by Mr. Gandhi and the Congress since 1920. This association, while it has undoubtedly brought women to the forefront of public activity, has also served to bring their outlook in line with that of the Congress. There are doubtless members of the fair sex who hold pronounced views on women's rights and yet do not share the extreme doctrines of Mr. Gandhi or the Congress, but it can safely be said that they are in a minority in the All-India Women's Conference. This will explain the somewhat pro-Congress political views expressed at the annual sessions of this body.

According to the secretary's report submitted to the annual session of the conference held in Hyderabad (Sind) in December 1945, the membership has risen to 25,000. Altogether there are 39 branches and 164 constituent branches. Recording the recent achievements of the conference, the report stated that a memorandum was submitted and evidence tendered before the Hindu Law Committee; the central office of the conference was established; an all-India milk-for-children campaign was launched; agitation was carried on against the employment of women and children in mines; and money was collected for the Kasturba National Memorial Fund.

Presiding over the eighteenth session of the All-India Women's Conference held at Hyderabad (Sind) in December 1945, Mrs. Hansa Mehta made a comprehensive survey of the problems of Indian women and said: "It is not enough to ask for our rights; we must also understand our responsibilities. Woman is an individual as well as a member of society. She can no longer lead the life of a parasite, but must contribute her mite to the common good of society. We may soon be called upon to help in the work of national reconstruction, especially in the fields of education and health."

Defining the place of woman, politically, socially and economically, in the new order to be evolved, Mrs. Mehta spoke of the "woman's charter of rights" in the following terms: "Firstly, we stand for the freedom of woman and her equality with man. Equality is not, however, to mean identity, but equality of opportunity. A woman is as much a human being as man is. If freedom and equality are the basis of human development, woman must be entitled to share them with man. There should be no disability attached to her sex. There should be no domination of one sex over the other and no exploitation of one by the other. This idea should form the basis of the charter. It is gratifying to note that the preamble of the charter signed at San Francisco by the United Nations, which includes India, accepts this position of equality between man and woman. As an individual, woman shall enjoy all the rights of, and shall be required to perform all the duties of, a citizen, whether these rights are political, civil or economic. The state shall recognise the individual as the unity of society and not the family. Woman shall therefore be enfranchised in her own right and not as in relation to man. The present basis of franchise, which gives the woman the right to vote as a wife of a man with a certain income, violates this principle and cannot be accepted by us. We must reaffirm our demand for adult suffrage as the only way to enfranchise a larger number of women than we have today, which is one woman to four men while the population ratio is almost fifty-fifty. Women should be associated more and more with the administration of the country if they are competent to do so."

The President next referred to education and emphasised the right of every woman to be educated. She pleaded for the removal of obstacles like child marriage, child labour and "purdah". She endorsed the plea made in the Sargent Scheme for the overhaul of the entire educational system and demanded that woman's education should be such as to help the fullest development of woman's personality and to train her to be a useful member of society.

Mrs. Mehta revealed that more women died in India due to child bearing, which is a normal physiological function, than the number of men and women who died of plague, small-pox or cholera and urged that every Indian woman should have facilities to maintain and protect her health. The Indian housewife worked from early morning till late at night without rest or holiday, and yet it was not considered of value because it was not productive and brought no return in the shape of rupees, annas and pies. She pleaded that the housewife should have a right to a part of her husband's income and that, as a corollary, the husband should have no right to dispose of his entire income without the consent of his wife.

Woman's social rights were examined by the President in relation to the three social institutions, property, marriage and family. "With regard to property," she said, "we must claim that every woman shall have the same rights as man to hold, acquire, inherit and dispose of property. Our laws are defective,

particularly Hindu law. It recognises widows' limited estate and does not consider the daughter as an heir to her father's property along with the son. The draft Hindu code prepared by the Hindu Law Committee is a great advance on the present position in that it gives woman an absolute right over her property and a share in that of her father. The Mohammedan law and the Parsi law give absolute right to woman over her property, but they too discriminate between sons and daughters. The Indian Succession Act comes nearest to our ideal, since it gives equal shares to sons and daughters.

"The more important is, however, woman's position in relation to marriage. Whether we call it a sacrament or a civil contract, marriage is a union between man and woman legalised by the state, and, as far as the state is concerned, it is a contract. The conditions under which two persons are allowed to unite in holy wedlock, so far as the Hindu and Mohammedan law are concerned, are not very satisfactory and have made the social life of many an Indian woman hell on earth.

"Woman should also have the right to limit her family. It is she who has to suffer bearing children, looking after them and bringing them up in a civilised way. The right to decide the size of the family should therefore belong to her. Woman should be conscious of this right which she must learn to exercise for her own good, for the good of the family and for the good of the over-populated country."

More than a dozen resolutions were adopted by the conference, including the following: —

"The question of Indian independence should not be delayed any longer. The prevailing distress and chaos in the country can be surmounted only by the transfer of complete power to Indian people and the establishment of a National Government enjoying the full confidence of all....."

The conference viewed with alarm and distress that the close of the major world hostilities had seen the opening of smaller fronts to suppress the rising tide of freedom in various colonial and semi-colonial countries in Asia, Africa and Europe by various imperialist powers. The resolution protested strongly against the combination of imperialist powers jointly to hold subject people in bondage and against the use of Indian men, ships and money to suppress the freedom movement of people in the East.

A third resolution deplored the Government's proposal to spend two crores of rupees annually for the W.A.C.(I) which was not needed in peace time and which exercised "such glaring discrimination against Indian and Anglo-Indian personnel that several Indian officers had resigned". The resolution also demanded the appointment of an inquiry committee to go into "the scandalous state of affairs" in the W.A.C.(I).

By another resolution the conference reiterated the demand for universal adult franchise and deplored the existing restrictions on the right of vote.

The removal of legal disabilities of women was demanded by another resolution which expressed the hope that the Draft Hindu Code would be introduced in the legislature at an early date.

Kasturba Fund.—The work in connection with the emancipation of Indian womanhood and the improvement of the lot of Indian women, particularly in rural areas, obtained an enormous stimulus in 1944-45, thanks to the well-supported Kasturba Memorial Fund created for the commemoration of Mrs. Gandhi who died under detention in February 1944. At Mr. Gandhi's request the trustees of the fund decided to apply the collections to the establishment of a countrywide organisation to improve the lot of Indian women, especially in villages. This is proposed to be done by providing opportunities for Indian women to secure education, acquire knowledge of basic sanitary and hygienic lines and to become alive to their social and political rights. An essential part of the plan is to equip rural areas with up-to-date maternity hospitals and clinics. In order to fulfil this ambitious project a large number of women are being trained in special camps so that after adequate equipment they can scatter themselves throughout the length and breadth of the land and carry the message of women's uplift to every nook and corner of rural India. Among the subjects handled in these training camps are first-aid and home nursing, child welfare, village nursing, health visits, rural sanitation, balanced diet and cheap remedies. The object of these training camps seems to be the raising of an army of experts called "Gram Sevikas" (servants of the village).

Women in Mines.—The keen awareness which the leaders of the women's movement in India developed in regard to practices affecting women is illustrated by the repeated protests registered by them against the lifting of the ban on the employment of women in mines. These were echoed in Parliament when the Cabinet spokesman made apologetic references to the need for ensuring adequate supplies for coal for war purposes and promised to secure a revision of the position at an early date. The ban on the employment of Women underground in coal mines was reimposed in February 1946.

HINDU LAW REFORM.

As the result of increasing consciousness on the part of Indian women generally of their social and political status, there has in recent years been set on foot a move to revise and codify the somewhat vague and contradictory law governing the Hindu home, especially as it affects marriage, divorce, succession to property, etc. In 1937 the Legislature enacted the Hindu Women's Rights to Property Act. Four years later, the Government of India set up a Committee to overhaul and codify the Hindu Law. This Committee, which is known as the Rau Committee, drafted two bills dealing with Hindu intestate succession and Hindu marriage. When the measures came up for consideration by the two Houses

of the Central Legislature, a joint committee of the two Houses recommended the revival of the Rau Committee with a view to the codification of the entire Hindu Law. The Rau Committee was revived early in 1944. During 1944-45, the Committee made a tour of the country and elicited public opinion on the proposals embodied in the two measures and on the codification of the Hindu Law as a whole. They gathered evidence from leading lawyers and representative organisations of various shades of Hindu opinion on a draft Hindu Code prepared by them. The draft code is divided into six parts dealing with intestate and testamentary successions and matters arising therefrom, including maintenance; marriage and divorce; minority and guardianship; and adoption. In an explanatory statement the Committee say that it is generally felt that the evils of piecemeal legislation on the subject should be avoided and that an entire code acceptable to the general Hindu public should be formulated.

According to the proposed changes daughters are allowed a share—hitherto denied them—in property left by their fathers. Both wives and daughters are given absolute control of their inheritance. Marriages are divided into two classes, sacramental marriage and civil marriage. Either can be performed only when there is no other spouse living, thereby enforcing monogamy. Divorce is a new feature sought to be introduced by the draft code, although the grounds on which dissolution of marriage can be sought are limited; but equal rights in this behalf are given to husband and wife.

The reactions to the draft code have ranged from whole-hearted support by reformist elements to hostility from orthodox quarters. The opposition has tended to centre on the provision for civil marriage and divorce. For example, an Anti-Hindu Code Conference held in Bombay under the auspices of orthodox organisation expressed concern over "the ruinous effects (such as further fragmentation of land, litigations and disintegration of the Hindu Society) that would follow if the draft code were passed into law."

Indian Women's War Effort.

As the war came nearer India, Indian women began to take a more realistic view of the position of India. They set about organising constructive work in order to protect the masses not only against external dangers but also against internal commotion in an emergency.

From the official side, too, a fillip was given to the enrolment of women in the national war effort. As India's expanding army needed every officer who could be spared for training and leading soldiers, it was decided to relieve officers from clerical duties and replace them by a Women's Auxiliary Corps for India. Among the duties for which women were enlisted are: switchboard operators, telephone orderlies, wireless operators, clerks in offices and units, store-women in ordnance, hospital and other units, dispensaries, "plotters" in observer corps, drivers of staff cars and ambulances, etc.

That women in India took a prominent part in war effort is indicated by the fact that a large number of them served both in voluntary organisations and as drivers, nurses, clerks, store-women, switchboard operators, dispensers, plotters in the observer corps, drivers of motor vehicles, etc. Soon after the outbreak of the war the Government of India provided them with large opportunities to prove their usefulness, and a large number of them took advantage of this facility. The throwing open of R.A.M.C. and the A.R.P., nursing staff to women may be cited as examples. The Women's Auxiliary Corps, inaugurated by Lady Linlithgow, attracted hundreds of women who replaced men doing various jobs in the army.

In addition to the official organisation a large number of voluntary units sprang into being in various towns, especially in the metropolitan cities. Society women came forward to set up canteens and recreation centres for the troops which proved very popular and received grateful recognition from the authorities, civil as well as military.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing-craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1930-31, the fisher-population on the West coast totalled 138,294. The esteemed table fish of the coast consist of the Seer (*Cybium* or *Scomberomorous*), Pomfret (*Apolectus* and *Stromateus*) several large species of Horse Mackerel (*Caranx*), Jew fish (*Sciænidæ*), Whiting (*Sillago*), Thread-fins (*Polynemus*), Sardines (*Clupea*), and Mackerel (*Scomber*). In economic importance, however, shoaling fish and fish of inferior quality such as Sardine (*Clupea*), Mackerel (*Scomber* or *Rastrelliger*); Catfish (*Arius*), Ribbon fish (*Trichiurus*,). Gogglers (*Caranx crumenopthalmus*) and Silver-bellies (*Leiognathus* and *Gazza*) take precedence of the former. Sardine and Mackerel overshadow all others. A master fisherman of experience was recruited from Scotland in 1936. He found it impossible to stand the climate of India and had to be repatriated in 1937. Since then efforts to revive deep sea fishing research begun by the trawler 'Lady Goschen' have been made. Proposals to charter a motor boat smaller than a trawler but capable of employing all known methods of sea fishing for bottom, mid-water and surface fish in order to test the suitability of those methods for Indian conditions, have reached an advanced stage. The type of vessel selected could not be chartered on account of the outbreak of war. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Manglore and other convenient centres: the material is largely cured for export.

The Madras Fisheries Service.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson, who from 1905 to 1918, had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a fisheries bureau and this in turn developed into a separate Department of Government. It now forms part of the Department of Industries and Commerce.

They are so varied and far-reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. The most noteworthy result of technological research conducted by the department is the production of sardine oil with Vitamin A potency equal to one-fourth that of Cod-liver oil and the discovery of several other Indian Sea fish which yield oils with a high vitamin A content. Madras practically led the way in developing the shark-liver oil industry in the country. Oil from a South Indian Shark-liver is ascertained to be about thirty-five times richer in Vitamin A than an average sample of medicinal Cod-liver oil. It has been established beyond doubt that Shark-liver oil in general is a most potent source of Vitamin A. When Cod-liver oil could not be imported in any quantity during the war, an opportunity was provided for developing an indigenous industry for the production of fish liver oil rich in Vita-

min A, and also for manufacturing malt extracts and emulsions and various preparations of this kind. The manufacture of shark-liver oil is undertaken at the fish curing yards and oil extraction centres and in 1944-45, 8,798 gallons of oil were manufactured and sent to the Government Oil Factory, Calicut, for purification and blending. Up to 30th June 1943, 18,642 gallons of refined oil were produced at the Government Oil Factory and 21,933 gallons were sold. The product, both in the blended and standardised bulk form and in the vitamin concentrated form of "Adamin" has stood its test very well and is facing a useful post-war stabilisation.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who, after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present there are 112 fish curing yards scattered along the coast. During the year 1944-45, 2,124,345 maunds of fresh fish were brought to these yards for curing and 334,148 maunds of salt were issued for the purpose.

Smoking and Semi-drying:—Besides salt curing, the department has started, in 1944, the smoking of fish, mainly for supplying the army. During the year 1944-45, 124,320 lbs. of smoked mackerel, pomfret and seer were supplied to the army and 5,382 lbs. to the Civilian population, from the seven centres of production. The supply to the army has since been stopped and the production is now switched on entirely to supply civilian needs.

Two fish factories for processing prawns are subsidised by the Imperial Council of Agricultural Research and manufacture semi-dried prawns from inland lakes.

Pearl and Chank Fisheries.—Off the coasts of Tinnevelly and Ramnad Districts of the Presidency lie the valuable pearl oyster beds which, owing to a complex of causes yield an irregular fishery which appears in certain seasons at long intervals, often of many barren years. With a view to elucidating and controlling the fluctuations to the best advantage, the life history of the oyster with correlation to oceanographic factors is studied by the Marine Biological Section of the Department. The rearing of pearl oysters in captivity, started in 1933 at the Krusadai Biological Station, Pamban has been successful and a highly promising technique of pearl production by artificial inducement is being developed here.

Allied to the Pearl fisheries are the Chank fisheries of the maritime districts, both being crown monopolies. Besides the precious sacred chank, the ablution chanks and Pooja conches, lakhs of chank shells feeding the flourishing chank ornament industry in the north go mostly from the seas of this province. A total of 334,148 chanks were fished during the year 1944-45. Experiments in marking chanks started in 1931 to study the rate of growth and migration of the chank in its natural haunt is continuing and up to 30th June 1945, 5,255 chanks have been marked and liberated.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public. A total of 65,236 persons visited the Aquarium during 1941-42 and the receipts amounted to Rs. 5,165 against an expenditure of Rs. 5,060. On account of war emergency, as the building was required for other purposes Government ordered the closure of the Marine Aquarium and it was closed on 8th March, 1942. The opening of a larger Aquarium on more up to date lines is now under consideration.

Deep Sea Fishing.—The annual report of the Public Health Commissioner with the Government of India for 1933 states that the total land area of British India amounts to only 2.44 acre per head of the population but allowing for forests and uncultivated and fallow lands only 0.72 acre per head is under food-crop, quite insufficient for even the present population, and that the population is increasing at an alarming rate and by 1941 will probably reach 400 millions. The finding of the census of 1931 is that agriculture has reached its maximum production under present conditions. Fisheries therefore are the only prime source of food-supply to supplement agriculture, and the Department has been endeavouring to play its true and proper part in improving the catches and methods of sea-going fishermen to augment the fish supply of the Presidency.

With all the age-long popularity and local usefulness of traditional fishing craft and tackle, modern fishing requires improvements so as to cover more of ground as well as of catch. The survey of deep sea fisheries by the trawler "Lady Goschen," though brief, disclosed the existence of important off-shore fisheries unsuspected before. The wealth of fish off Negapatam reported by the trawler was of sufficient importance to attract the notice of Japanese fishermen thousands of miles away. Even then it was realised that if Madras was to benefit by the survey, the allied duty of enabling the local fishermen to exploit the off-shore fishing grounds by suitable craft and tackle must be shouldered by the department.

In 1944, the department initiated deep sea fishing operations in different centres in the Presidency, mainly to augment the output of sharks to feed the growing Shark-Liver Oil industry and also to demonstrate off-shore fishing. The operations resulted in a catch of about 582,000 lbs. of fish in 1944-45, out of which 476,000 lbs. were sharks which gave 50,000 lbs. of liver. In December 1945, a new fishing method was attempted, *viz.*, schooner

fishing. The Pearl Fishery Inspection Vessel, "Lady Nicholson" was engaged in off-shore fishing with handlines and longlines and took four local fishing boats on tow. The catches made during 4 months of the trial were 29,549 lbs. of fish. Further experiments are being planned. The department has acquired 4 motor fishing vessels from the Navy and they will be in commission soon.

A special craft and tackle section has recently been opened to devise, demonstrate and popularise improved fishing methods for different types of water, including inland waters.

The Inland Fisheries.— The fisheries of the numerous, extensive backwaters along the coastal belt of the peninsula, the various rivers and the innumerable irrigation tanks, wells, canals, artificial reservoirs, natural lakes and domestic ponds distributed all over the land are of considerable magnitude, though in several cases the non-perennial nature of the water causes their fisheries to be ignored except during the summer drought when the streams shrink to pools and the tanks to puddles and the owners or the lessees of the fishing rights turn out to catch fish. The major waters are, however, provincialised, and their fisheries systematically developed and exploited directly or through a lease system. With a view to conserve fish seed, great congregations of breeder carps and their young below the Mettur Dam on the Cauvery and her tributaries, of spawning Hilsa below the anicuts in the Godavari, the Kistna, the Cauvery and the Coleroon rivers and of immature mullets in the coastal backwaters, are protected by legislation against their indiscriminate capture. Destructive methods of fishing such as poisoning, dynamiting, etc., are also penalised.

The chief freshwater fishes of economic importance are, the ubiquitous Murrel (*Ophicephalus striatus, O. marulius*, etc.) notable for its ability to live for a considerable period out of water, the various carps (*Catla catla, Cirrhina cirrhosa, C. reba, Labeo calbasu, L. fimbriatus, L. kontius, Barbus dubius, B. carnaticus* and the well known favourite of sportsmen in India, the Mahseers), the catfishes (*Wallagonia attu, Mystus seengala, M. aor, M. punctatus, Pangasius pangasius, Clarias magur, Saccobranchus fossilis, Silundia gangetica*, the eel (*Anguilla*) the spiny eels (*Mastacembelus armatus*), *Notopterus notopterus*, the climbing perch (*Anabas scandens*) and the Hilsa (*Hilsa ilisha*). To these have been added a number of valuable exotic fish which have been successfully acclimatised to the waters of the province. Thus the giant Gourami, acclaimed as the best freshwater table fish in the world has been introduced from Java and successfully reared and bred in the departmental farms from where it has been distributed to Bombay, Bengal, the Punjab and other places. In the Nilgiris the English Carp, the Tench and the Rainbow Trout have been acclimatised and thrive well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche where quantities of trout fry are hatched and reared for replenishment of the streams of the plateau. The Mirror Carp which was introduced from Nuwara Eliya, Ceylon, in 1939, is thriving well in the Nilgiris and is now extensively used for stocking other upland waters of the Presidency. Semi-exotic forms like the Rohu (*Labeo rohita*) and the Mrigal (*Cirrhina mrigala*) have been recently introduced from Bengal. The attempts of the department to introduce Catla, the quick growing carp, into the Cauvery river were successful and this fish which was unknown to the South of the Kistna is now established in the Cauvery System.

Methodical attempts to augment the stock by local fingerling collection and distribution, acclimatisation of salt water forms like the mullets (*Mugil spp.*), the Pearlspot (*Etroplus suratensis*), the milkfish (*Chanos chanos*), the cock-up (*Lates*), etc.; and hatchery operations for Hilsa, carps and the Trout have all been very promising of success in the stabilisation and building up of the Inland Fisheries of the Province.

In addition to the existing departmental fish farms, a fresh scheme of District Rural Fishery Demonstration has started work at nineteen centres, for the systematic survey and utilisation of every piece of cultivable water for aquiculture and, through Demonstration Fish Farms to educate the ryots and make them interested in fish farming as well as to maintain and distribute fish seed.

For the biological control of "water-borne" diseases like Malaria, Filariasis and Guinea worm, small mosquito-cidal and cyclopscidal fishes are collected, reared and distributed in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the directions given.

Research.—The Inland fisheries of Madras had long been without a regular research section. After an experimental stage in Rural Pisciculture a regular Freshwater Biological Research Station, the first and only one of its kind in India, has been opened in Madras since 1942, with a subsidy from the Imperial Council of Agricultural Research. The work of the station is directed towards investigating the bionomics, feeding and breeding habits and biometry of the important food fishes of the Province and the varied aspects of Ecology and Hydrology with a view to determine and promote the optimum conditions of maximum fish production. Two special wings, one Hydrological and the other Phytological have been added to the Research station for special attention to physcico-chemica and floral studies towards the increase of aquatic productivity and the solution of pollution problems.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1944-45 on the west coast was 59.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative Department supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of a Sub-registrar of Co-operative Societies and 3 Inspectors for exclusive work among fishermen under the department.

To promote the education of fisherfolk, the department runs a number of schools for fisher children where free education and midday meals are offered. There are at present 52 Fishery schools with a strength of 5,112 pupils.

While these service institutions of the department have been catering to the needs mainly of the marine fishermen, the diffused distribution of the inland fishermen has been one of the difficulties in the way of equally rapid progress in their rehabilitation work. With the all round developmental programme of the Inland Fisheries in hand, plans for methodical work in this direction are under way. Preparatory statistics of inland fisherfolk are being collected. The growing social consciousness among fishermen is great encouragement in this task.

The educational work of the Department is becoming one of its most important branches in training men in the technology of curing, oil manufacture, etc., in co-operative propaganda and in general Fisheries Science. In the past Fisheries Officers of most provinces and states have received training in the Madras Fisheries. Now the Fisheries Training Institution in Madras, under the subsidy of the Govt. of India, trains batches of graduates and post-graduates in an half yearly course of general fishery work, while a Popular Short Term Course trains interested persons in the art of fish farming, to enable them to run private farms on efficient lines. Arrangements are made for the training of skilled workers at the Marine Fisheries Technological Institute, Tuticorin while Fisheries Technology has been included in the subjects taught in the Polytechnic recently opened at Cocanada. The Fisheries Station at Ennur supplies zoological specimens for the use of college classes and museums and is contributing materially to the advancement of the study of Zoology throughout India.

A Fishery information-cum-propaganda unit has recently been opened to gather and disseminate information on fishery matters and to effect useful propaganda, popularising scientific methods of fish farming, production, exploitation and utilization. Besides, the unit maintains a Central Fisheries Museum and a well equipped library.

Bengal.

General.—The value of the fisheries of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, odd swamps, —to say nothing of paddy-fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstay of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1·6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2·6 in the Presidency, Rajshahi, and Dacca Divisions. 490,865 persons in Bengal subsist by fishing and 272,579 are maintained by the sale of fish. As a freshwater fisherman, the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective —so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Hilsa ilisha*) which annually migrates from the sea and estuaries in innumerable multitudes to seek spawning grounds in the Ganges and the other great rivers. Other valued and abundant river and tank fishes are the rohu (*Labeo rohita*), the katla (*Catla catla*) and mrigal (*Cirrhina mrigala*); prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bhekti or bhetki (*Lates calcarifer*) and the mullets are the most esteemed; apart from these estuarine fishes the most valuable sea-fishes are the Mango-fish or Thread-fin or Indian Salmon (*Polynemus*) and pomfrets. The sea-fisheries are as yet little exploited. Taking everything into consideration, it can be safely stated that the fishery wealth of Bengal is enormous and is far in access of any other province.

Historical.—Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities at the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more bright. The trade, however, is a difficult one to organise and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organisation, the danger run by the

investing public will be considerable. The opinion of the experts is that no stream trawling company working in the Bay of Bengal with headquarters at Calcutta could hope to compete successfully with a company prepared to develop and utilise the local fisheries carried on by Indian fisherman, provided the two main difficulties of rapid transport and proper preservation of the fish are overcome. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in 1920 after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923.

During a lapse of 14 years after the closure of the Fisheries Department, the price of fish in Calcutta has been soaring high consequent on the rapidly increasing demand and the unhealthy monopoly exercised by the small group of vested interests. The economic condition of the actual fishermen was gradually becoming worse due to exploitation by the capitalists and the fisheries in general were getting depleted due to various causes at work. With the increase of distress the public naturally clamoured for the re-establishment of a Fisheries Department to protect the fisheries interests and to organise and develop the fishing industry on modern lines and to improve the general economic condition of the fisherfolk. The Bengal Government therefore appointed a Fisheries Expert to survey the existing condition of the Fishing Industry in the Province and to suggest schemes of development with a view to augment the fish food supply, to examine the ways and means of bringing about a reduction in the ruling prices of fish, and to stimulate commercial enterprise in speedier transport, better marketing arrangements, the establishment of Cold Stores and Factories for fish by-products. The services of Dr. M. Ramaswami Naidu from the Madras Fisheries Department were requisitioned by the Bengal Government. He surveyed the industry and submitted a report to Government as a result of which a Department of Fisheries was started in May 1942 with Rai Bahadur Dr. S. L. Hora of the Zoological Survey of India as its Director, to organise the fish trade under the War emergency conditions, to conserve the existing supplies and to conduct investigations on tank fisheries with a view to increasing the food supply in the province.

Fresh water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South India and Ceylon chank fisheries already referred to.

Potentialities.—So far as the marine fisheries are concerned Bengal has of necessity a more limited scope for its activities than Madras or Bombay. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without much difficulty. There would appear to be good prospects for a few floating canneries, with equipment for the manufacture of fish by-products, working at the head of the Bay of Bengal and in the estuaries, as enormous catches of prime fish are made in those parts during the season which lasts from September-October to March-April. However, this can be taken up only after the war. Fresh water and estuarine fisheries are vast and very important and these require to be developed scientifically.

The importance of the fresh water fisheries of Bengal is evident from the fact that their production is more than fifty per cent. of the total fresh water fish production of India and in money value it is almost 60 per cent. of the Indian total. The Government of Bengal have recently sanctioned a large-scale experimental scheme whereby the extensive and properly embanked paddy-fields in the Sundarban Abads will be used for the culture of carps and saltwater fisheries of the nature of English mulletries will be improved for the culture of bhekti, mullets, prawns, etc.

One of the most important reasons why many of the tanks in the rural areas are not stocked with fish is the non-availability of fry. Even when fry are available they are not always of the suitable type, and the result seldom comes up to expectation. The owners of the tanks who take to pisciculture, therefore, give up their venture in despair after a year or two. To remove this want, Government of Bengal are working a plan for supplying Departmental fry at 50% of the cost of production to those tank-owners who undertook to stock their tanks in accordance with the advice of the Technical Officers of the Fisheries Directorate. Under this scheme Nursery Units are being set up in 14 districts and fry are being distributed therefrom. This roused a good deal of enthusiasm among tank-owners in the rural areas and many of the tanks which had been lying derelict for a long time past, have come to be stocked with fry. Reports so far received from the Departmental Officers indicate that the fish liberated in the tanks are growing well.

It is intended to stimulate production by the free distribution of fry of suitable species and to advance loans for the improvement of derelict fisheries.

Owing to shortage of meat, there is a heavy demand for fish both from the military and civil population of Calcutta and other urban areas. Unfortunately the supplies are limited on account of the refrigeration and transport difficulties, but schemes are under preparation whereby in co-ordination with the military authorities efforts will be made to augment supplies to an appreciable extent.

Other Fishery Investigations.—In recent years, as a result of fishery investigations carried out by the staff of the Zoological Survey of India and by the Zoology Department of the University of Calcutta, much progress has been made regarding the bionomics and life-histories of several species of commercial importance. Particular mention should here be made of the discoveries regarding the breeding grounds of *Hilsa* and the extensive trade in the young of this valuable species. As a result of these studies, it may now be possible to take protective measures for the conservation of the *Hilsa* fishery.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor fishery industries, particularly those connected with the utilization of by-products.

A special department exists for the development of the fisheries of the Province and their organisation on progressive lines. The department is in charge of the Director of Fisheries and has been specially constituted with effect from the financial year beginning April 1, 1945. Till then the administration of fisheries was the responsibility of the Director of Industries who administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May, 1921, off Bombay. The experiment continued until February, 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed such as rapid coaling, supply of ice and stores, and gear for unloading catches. More than this a change is needed in the primitive conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as *karel*, *palu*, *tambusa*, and particularly rays and skates which formed on an average 25 per cent. of the total catch but which is so little esteemed locally that it sells on an average at the rate of 100 lb. for a rupee.

Vast strides have been made in the Bombay fishing industry in the course of the past seven years. This progress is due in a large measure to the awakening among the fishermen, who are traditionally a conservative people, and the introduction of reforms among them is a very gradual process, as strongly ingrained prejudices and customs have to be overcome.

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Dr. H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Presidency, published in 1933. The volume is a storehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved.

Dr. Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution. Elaborating this view, he observes that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social stratum.

Dr. Sorley's more important recommendations are:—

1. The establishment of a marine aquarium in Bombay and Karachi, if they are able to pay their way as the Madras aquarium does.

2. The establishment of a bureau of fisheries information.

3. The advisability of the transfer of the fish curing yards to the control of the Local Government; and

4. The encouragement by the Bombay University of marine biological research.

Dr. Sorley, in his report, also referred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

New Era Started.—A move in the direction outlined by Dr. Sorley was made towards the end of 1933, when the Government of Bombay launched an experiment implementing in some ways his suggestions. The experiment was formally inaugurated by Sir Frederick Sykes, the then Governor of Bombay, at Danda, and was undertaken in co-operation with the head of the fishing community at Danda. For the purpose of the experiment a launch was obtained on loan from the Royal Indian Navy (then the R. I. M.) and suitable alterations were made to adapt it to the purpose of a carrier launch. The results achieved by the working of this launch were very encouraging. The rapidity with which the fish was transported in a much fresher state than had till then been possible aroused the interest of the fishermen, who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fields.

Encouraged by the results, the Government placed in 1934, an order for the construction of two launches the "Lady Sykes" and the "Sir Frederick Sykes" for the use of the fishermen at Danda. That the progress of this experiment has been encouraging is evident from the fact that every year since then has seen an addition to the number of vessels. The following four vessels have been built since then by parties connected with the fishing trade:—

(1) The "Lady Sykes", (2) "Sir Frederick Sykes", (3) "Lady Brabourne," (4) "Lord Brabourne", (5) "Nooremohamadi", (6) "Chand Tara", (7) "Sitara", (8) "Karimi", (9) "Razaki", (10) "Ruparel", (11) "Mackerel Queen", (12) "Lady Colville", (13) "Rehimani", (14) "Gajananprasad", (15) "Dhanluxmi", (16) "Diamond Jubilee", and (17) "Jehangir." All these vessels have been built either in Bombay or along the coast.

The increase in the number of launches in operation was rendered possible on account of the import of 12 gray marine diesel engines from America, early in June 1945.

The launches operate between Bombay and the fishing fields both in the North and South of it. The total quantity of fresh fish brought by the launches during 1945-46 was 30,00,000 pounds as against 12,00,000 pounds brought last year. These vessels also brought into Bombay from Ratnagiri ports 26,00,000 pounds of mangoes as against 2,50,000 pounds brought in the previous year.

Growth of Refrigerating Facilities.—Larger supplies of fish made available by the launches have induced the flow of private capital into channels intimately bound up with the fishing trade. Several ice factories and cold storage plants have since been set up at Malwan on the Ratnagiri coast, and Chendia, on the Karwar coast. In Bombay, quick freezing plant employing the Z-process has been installed by a Russian technician at the Kermani market at DeLisle Road and an ice factory and a cold storage plant have been constructed on the east side of Crawford Market (Bombay). A feature of the last plant is that it has a number of small chambers which are hired out at small fees either to one individual or to several collectively. This plant also provides for the quick freezing of fish.

There is also an ice factory and a quick freezing and storage plant at Sassoon Dock (Bombay), where all the launches, both Government and private, land their catches. This factory and cold storage plant have met a long-felt want and proved an undoubted boon both to fishermen and owners of launches and sailing craft. It has obviated the need of obtaining ice from remote centres in the city, thus saving a good deal of time and expenditure. The existence of the cold storage plant at the Dock is a welcome facility to the fishermen, who are now able to store catches at any hour of the day or night when retail vendors are not on the spot.

The provision of refrigerating facilities is one of the biggest problems and is thrown into sharp relief during glut periods. The Government of Bombay realised the need for the extension of these facilities and have placed an order for import from the U.S.A. of two ten-ton and one eighteen-ton ice making plant in addition to cold storage and quick-freezing equipment.

A unique feature of the Bombay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object of enabling them to take charge of their own launches whenever they decide to go in for these on an extensive scale. The improvement of the economic condition of the fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fishing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or vocation.

Lastly, a fisheries information bureau has also been set up. The function of this bureau is to collate and supply information connected with the local and other fisheries. The information collected by the bureau is useful to the fishing industry, as it furnishes information not available to them before.

The war has led to an investigation of the possibilities of the manufacture of oil from shark livers to replace the dearth of supplies occasioned by the stoppage of imports of Cod-Liver Oil from Norway.

A simple process of oil extraction, not involving the use of any complicated machinery, was devised and demonstrated by the department to the local fishermen and to the fishermen at Ratnagiri, Jaitapur, Malwan and Shiroda. The demonstrations were largely attended and the fishermen were greatly impressed by the fact that a new occupation and a fresh source of income had been opened out to them. As a result of the demonstrations the fishermen earnestly took up the work of oil extraction and have regularly been sending to the Fisheries Department oil extracted by them. This is refined by the department and later sold to chemists in Bombay. During 1945-46, 1,195 gallons of Neat Shark liver oil was supplied to the Haffkine Institute for the manufacture of vitamin concentrates and vitamin tablets. 700 gallons of medicinal Shark liver oil (Cod liver oil standard) was prepared by the department. This was packed in one gallon tins and 10 oz. bottles for sale in the country. Also, 64 gallons of Shark liver oil having vitamin "A" potency of 6,000 I. H. per gramme was supplied to various Government Cattle and Poultry Farms, which reported on the excellence of the oil as a valuable cattle and poultry feed. Eight gallons of low potency oil was supplied to an industrial concern to curry leather and temper steel.

The technique of the manufacture of the oil is capable of great improvement, especially in the matter of extraction, refinement and processing of the product. The value of training in the West for this purpose cannot be gainsaid specially for the Shark liver oil industry, which is likely to play an even larger part than hitherto in the country's fishing industry. This purpose underlies the offer to the Government of Bombay, extended through the Government of India, by the British Cod Liver Oil Producers, a noted firm of Hull engaged in the manufacture of Cod liver oil. One of the Superintendents of the Fisheries Department, was selected for the training and sailed on March 6, 1946, for the United Kingdom.

About 2,22,000 lbs. of Oleum Vitaminatum B.P. were supplied to the Supply Department of the Government of India during the five years from 1940-45.

The superiority of the oil is unquestioned. Oils from certain varieties of Sharks, notably *Carcharias melanopterus* and *Pristis perrotteti* yielded a vitamin. A potency of 140,000 and 40,000 international units per gramme respectively. This is many times more potent than Cod liver oil which, according to the British Pharmacopœia standard, is between 500 to 1,500 international units per gramme.

The oil obtained from Shark liver is of exceptionally high Vitamin potency, which has to be stepped down in order to bring it on a par with Cod liver oil standard. The reduction of the Vitamin potency of neat shark liver oil is carried out by the Department. The oil produced by the Department is marketed, under the

name and style of 'Shark Liver Oil—Bombay Brand' in 10 ozs. amber coloured bottle thus ensuring for the public a product of certified purity.

The control of the fish curing yards was transferred to the Department of Industries from July 1, 1936, prior to which they were administered by the Salt Department of the Government of India. There are 34 such yards, 20 in the Ratnagiri District and 14 in the Kanara District. At these yards duty-free salt is stored in salt *kothars* from where it is issued to fish curers to cure fish.

Since the transfer of the yards the Fisheries Department has been devoting special attention to effecting improvements in the methods of curing. Cement concrete platforms were constructed at the Karwar yard for curing fish. The fishermen have realised the advantages resulting from such platforms, with the result that fishermen at other yards have approached the Department for similar platforms at their yards. As a result of this, cement concrete platforms have been provided at Harwada in the Kanara District and Mirkarwada, Ratnagiri and Malvan in the Ratnagiri District.

To demonstrate improved methods of curing fish, the department also constructed model fish curing sheds at Malwan and Majali. Experienced master curers have specially been recruited to demonstrate improved methods to the fishermen. It is also proposed to erect permanent curing sheds with cement concrete floors and Mangalore tiled roofs which will replace the present thatched sheds and sandy floors. This step will ensure the curing of fish in accordance with sanitary principles and increase the food value of the cured fish. Smoking of fish is another method of preserving fish which has recently been introduced. Smoked fish is specially favoured by overseas troops now stationed in India.

Four fishery schools, one at Ratnagiri in the Ratnagiri District, two schools, one each at Karwar and Ankola in the Kanara District, and one at Satpatti in the Thana District, have been established. Special type of instruction suitable for fishermen's children is imparted at these schools. The growing attendance at these schools furnishes proof that they do meet a long felt need.

The more important sea-fish are pomfrets, srole and sea-perches, among which are included the valuable Jew-fishes (*Sciæna* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported from Bombay for eventual manufacture into isinglass.

The finest of the Bombay fishing boats are from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay duck), pomfrets and Jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts.

The establishment of marine aquarium has been made possible by a munificent donation of Rs. 2 lacs by Mr. and Mrs. Vicaji D. B. Taraporwala. Government have accepted the donation and allotted a commanding plot of land for it along the Marine Drive. The scheme has been admitted as a Post-war Reconstruction measure and it is hoped that the aquarium will be ready in 1947. The feature of the aquarium will be that the exhibits will include both fresh water and marine forms found along the coast of our province. In addition, the aquarium will have facilities for marine biological research and investigations.

South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of *bonito seer* (a large form of mackerel) and allied fishes are often made during the season from September to January. Later sharks and rays predominates. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how big their size is.

Fresh Water Fisheries. With a view to developing fresh water fisheries of the province a survey of different sheets of water and their fish fauna was undertaken which revealed that although there were extensive irrigation reservoirs and tanks for commercial fish culture, there was hardly any indigenous fish suitable for the purpose.

Experiments on growing both indigenous and exotic varieties of fish in natural tanks to study their rate of growth, feeding and breeding habits, have revealed that selected varieties of carps occurring in the rivers of Northern India fatten satisfactorily under local conditions and are most suitable for stocking ponds, lakes, etc. The experiments have shown that a suitable tanks of about four acres in area can grow about 2,000 lb. of fish and the financial returns are most encouraging.

The main difficulty, however, in undertaking stocking operations on a large scale is that fry and fingerlings of suitable carps have to be imported from such distant places as Patna, Calcutta, etc. and consequently there is great uncertainty about the supplies. The future of the fresh water fisheries in this province, therefore, depends on whether a reliable source of supply can be established, at hand. In order to obviate the difficulty of importing fry and fingerlings from outside the province, perrenial sheets of water are being annually stocked. These waters include the Ulhas river, Visapur reservoir, Tata Lakes and Powai Lake.

It is expected that the fish introduced in these waters will grow and breed so that the resulting fingerlings will be utilised for stocking other ponds. The work, however, will have to be continued for a number of years before any tangible results can be obtained.

A scheme for setting up of a fish farm to remedy the lack of precise scientific data regarding the breeding habits of various indigenous and exotic food fishes, their rate of growth, food requirements, etc., has been sanctioned by Government. The farm which will be established at Khopoli on the Tata tail race is expected to come into existence early next year.

Orissa.

The fishery wealth of Orissa is enormous. The East Coastal line, the Chilka lake and large areas of inland waters yield all the 3 types of fisheries, *i.e.* (*i*) marine, (*ii*) estuarine, (*iii*) inland.

(*i*) *Marine.*—Due to lack of communication facilities, the fishing is scattered along the sea coast, the most important fishing centres being Chandbali, Chandipur, Talpada, Puri, Aryipalli, Gopalpur, Markandi and Sonapur. Fish is consumed locally, the surplus being simply sundried or salted. Whitebait, sardine, mackerel, seer, hilsa and pomfrets, are the principal varieties. 12 Fish curing yards in Orissa provide duty free salt to fishermen. Catmarans are used throughout the year, the sea being too rough for larger boats. Podows, *i.e.* country boats, are used in winter for the shore-seine net. Fishing gear employed are hooks and lines, drift nets, drag nets and seines of crude types. These are made locally. Middlemen control the fishery although there are some co-operative societies.

Lack of harbour, cold storage facilities and capital to introduce better fishing methods make improvement of marine fisheries a very difficult problem. The standard of living of the sea-fisherman is extremely poor and calls for improvement. In some fishing centres the fishermen live on fish alone for days together. Improvement of the financial position of the co-operative societies, legislation limiting the middle men's activities, establishment of fishery schools are some of the problems that confront the attention of Government.

(*ii*) *Estuarine.*—The Chilka lake forms a compact fishing area and yields extremely tasty fish and prawns. The lake is leased out by Zamindars to merchants who have built up an organised fishing industry. The export averages 50,000 mds. per annum and consists of mullets, bhekti, pomfrets, mackerel, Indian salmon, etc. The fish is packed in ice and exported mainly to Calcutta. Other estuarine fishing centres are Kirtanjakhati, Kujang, Chowmuhan and Sonapur. Lately, due to intensive fishing, there has been a scarcity of adult-sized fish in the Chilka lake. Problems of controlling the mesh of nets after studying the life history of important fishes are under consideration of the I.C.A.R. and the Government. Prohibition of indiscriminate fishing, killing of immature fish, observance of close season, etc., are post-war problems to be tackled.

(*iii*) *Inland.*—The rivers and tanks form a great potential source of fishing. Hilsa in Orissa is not as tasty as that of the Ganges Rohee, catla and mrigala are the economic species. These breed only in rivers and in large bunds which resemble rivers during rains as in the Sambalpur District. Collection of fry is carried on every year in Balasore, Cuttack and Sambalpur. An organised fry trade exists in Lakhannath in the Balasore District. Government fry distribution centres supply fry in Cuttack, Sambalpur and Lakhannath.

The fisheries are owned mostly by private individuals. Government fisheries are controlled by the Revenue Department. Although people realise that pisciculture is profitable, the multiple owners of water areas prevent active development. The activities of the Fishery Department have been confined to propaganda which, without executive authority, have not led to appreciable results. The prohibition of killing of fry in canals, paddy fields, etc., by legislation and of letting of sewage into inland waters, construction of dams with fish ladders and placing of Government fisheries under control of the Fisheries Department are under contemplation. A scheme for the development of inland and estuarine fisheries has been instituted in the Province in connection with the "grow more food" drive which is expected to benefit materially, the owners of fisheries, the fishermen and the fish-consuming public.

The Punjab.

During the year under report the Fisheries Department remained under the Game Warden Punjab upto December 1944 and thereafter it was put under a seperate Warden of Fisheries.

The Department was reorganised and its activities now fall under the following categories :

1. *Conservation, Comprising :* (*i*) District work, (*ii*) Licensing, (*iii*) Fish migration, (*iv*) Fish sanctuaries, (*v*) Eradication of fish enemies.

2. *Development, Comprising :* (*i*) Culture of exotic species, *e.g.* Trout, etc., (*ii*) Culture of indigenous species, *e.g.* Carp, etc.

3. *Marketing and Exploitation, Comprising :* (*i*) Socio-economic condition of fisherman, (*ii*) Survey of rivers, (*iii*) Marketing of fish, etc.

4. *Miscellaneous, Comprising :* (*i*) Propaganda, (*ii*) Anti-malarial activities.

1. CONSERVATION :

DISTRICT WORK

The number of fishing licences issued during the year was 10,724 as compared with 10,074 of the last year. The increase is due to strict supervision by the staff and rise in the price of the fish which induced the fishermen to take out licences. The number of netting licences in the Kulu Valley has been restricted to 60 and the fee for such licences has been raised from Rs. 12 to Rs. 30 per licence.

The receipts from Fisheries in 1944-45 amounted to 1,81,394 as against Rs. 1,14,184 in 1943-44.

The total number of fishing offences reported during the year 1944 was 331 as compared with 300 of the last year.

The catches of fishermen were on the whole satisfactory in all the districts.

(ii) Fish Ladders and Fish migration :— Fish ladders are provided at all the Headworks of the canals except at Tajewala and Sidhnai Headworks. Most of the fish ladders are defective and in order to enable the fish to migrate upstream the fish ladders are being improved.

(iii) Fish Sanctuaries :- There are 23 sanctuaries in the Punjab, especially in the spawning areas of the Carp and also at places where killing of fish is prohibited due to religious scruples. The fishing in the sanctuaries is totally prohibited. Heavy floods in the Kangra District caused some damage to the sanctuaries there.

II. DEVELOPMENT.

1. *Culture of exotic species- Trout Culture :* - In addition to the two natural ponds already constructed 5 more natural rearing fry ponds were constructed during the year.

(i) Stripping :—106 fish weighing 131 lbs. were stripped during the season which yielded 1,19,221 ova. All of them were hatched out at the farm. In addition to this 7 wild hen were also stripped at the hatchery and 1544 ova were obtained from them. 55,182 ova reached the fry stage and the rest were picked out bad or unfertilized upto the time of hatching upto fry stage.

(ii) Stocking :—The fry were disposed of as under :—

Patli Kuhl Farm	10,000
Patli Kuhl Farm Natural rearing pond	5,000
Mahili Trout rearing pond	5,000
Katrain Trout rearing pond I	5,000
Katrain ,, ,, ,, II ..	4,000
Bahang Bihal Natural rearing pond ..	4,000
Kulath Natural rearing pond	2,000
Bahang Bihal Natural rearing sanctuary	4,000
Sujain Nal	3,000
Fojal Nal	3,000
Chubli Nal	3,000
Kept at Mahili Farm	1,671
Losses upto the time of stocking and upto 30-5-45	5,511
	55,182

Besides 4,117 Brown Trout yearlings from Patli Kuhl, Katrain and Kalath natural ponds were stocked in the neighbouring streams.

(iii) Licensing :—137 Trout Angling Licences were issued in Kulu Trout waters in 1944-45 as compared with 160 of the last year. The fishing conditions in the Kulu Valley are improving and sufficient measures have been adopted for its improvement The Kulu Angling Association held 5 meetings and their resolutions were carefully attended to.

The control of fishing in the Pabar river has been taken over by the Bushahr State.

2. *Culture of indigenous species—Carp Farming :*—The Punjab Government sanctioned the following 4 schemes for January 1945 in connection with ' Grow More Food Campaign '.

(i) Survey of spawning grounds of Carp and sale of fry, *(ii)* Establishment of Hatcheries and Nurseries, *(iii)* Improvement of village ponds and stocking of such ponds and local jheels with fish, *(iv)* Establishment of Fish Farms in the Punjab.

All the above 4 schemes are inter-connected and their aim is to increase the fish food supply in the Province.

In addition to the existing Fish Ponds at Batala, Chhenawan and Lyallpur, thirty ponds and tanks were selected for stocking with Carp in the vicinity of large consuming centres namely, Lahore, Sheikhupura, Gujranwala, Gurdaspur and Ferozepore.

A lorry for the transport of fry for stocking the tanks and ponds has been provided by Government of India.

(i) Spawning : -There were good showers of rain on 25th July 1944 and the fish at Chhenawan Farm spawned on 26th July. Spawning occurred at other places as well especially at Ferozepore, Khori and Wazirabad. Spawning grounds of Rohu (*Labeo rohita*) and Thella (*Catla catla*) were surveyed during the year.

(ii) Salvage of Fry :— Salvage of fry from such pools which are likely to dry in summer was undertaken and 66,162 fry of Mahseer and other different species of Carp were salvaged.

(iii) Stocking :— During the year 19 tanks were stocked with 13,565 fry.

(iv) Mortality :—There was unprecedented flood in all the streams in Kangra Valley on the 5th August 1944. All the bridges were washed away. Hundreds of fishes were picked out dead from the stream. The first flood washed away all the fish from Mumtah Sanctuary near Nagrota but subsequent floods brought new stock and the sanctuary was filled up. Another sanctuary in the Kangra district near Palampur was silted up altogether.

III. MARKETING AND EXPLOITATION COMPRISING OF.

(i) Socio-economic conditions of fishermen :—The complaints of the fishermen are enquired into and every possible step is taken to remove their grievances. Efforts to bring in more fish markets for the disposal of their catches are being made. They are also being helped for the supply of yarn for their nets, etc.

(ii) Survey of Rivers :—The Fisheries Staff has surveyed most of the rivers, streams and dhands in their jurisdiction with the result that most of the fishing is done in back waters and not in the main streams of the rivers except where main stream is shallow.

(iii) Marketing of Fish :—An enquiry into the catching and marketing of Fish in the Punjab was conducted by the Board of Economic Inquiry, Punjab. The report deals with nine districts comprising the western half of the Punjab. The object of the enquiry was to find out how fish is being caught and marketted and was mainly to interest the Punjab businessmen in the possibilities that await the proper exploitation of the Industry. The enquiry shows

that the annual fish production of the Punjab has increased considerably as is evidenced from the following :—

Lahore Markets.	Year.	Maunds.
	1920	7,264
	1921	11,946
	1922	13,004
	1923	13,711
	1924	8,191
	1939-40	14,699
	1940-41	14,824
	1943-44	38,826

There used to be only one wholesale market in Lahore upto 1924. But now there are 8 wholesale markets, which is a strong proof to show that the quantity of fish has increased considerably.

IV. MISCELLANEOUS.

1. *Propaganda :*—Vigorous propaganda is carried out by the Fisheries Staff to induce the public especially the zamindars to take up fish farming. The public are taking sufficient interest in the matter.

2. *Larvicidal Fish :*—Larvicidal fish have spawned successfully at Chhenawan. 1600 fish were sent from the Chhenawan Fish Farm during the year under report.

Sind.

Taking into consideration the limited sea board and the number of fishing villages, Sind has a rich sea fishery. During the year 1940-41, 26,525 maunds of fresh fish were transported by rail to up-country stations from Karachi and 62,870 cwts. of dried fish were transported to distant markets like South Africa, Hongkong, Singapore, Malaya and Colombo.

The fishing grounds are located not only around Karachi, but as far away to the south east as Kutch and towards north as Sonmiani and even Pasni, Ormara, Gwadar up to the Persian Gulf. Vigorous drift net fishing is carried out in the sea board specially between 10 to 20 fathoms deep and right up to 120 miles due south of Karachi for important economic fish like Ghol, Surmai, Sole, Rawas, Choki, Kargoon, Pitho, Hiro, Sang, Sangro, Gissar, Kanderi, Kar, Lato, etc., etc.

Extensive fish curing operations are carried on with the duty-free coloured salt manufactured in Sind.

A scheme for starting Government Fish curing yards has been approved to begin with 5 yards at Cape Monz, Karachi, Ibrahim Hydri, Sonneri and Mull on the sea coast and one at Buback for Fresh water Fish in Munchur Lake have been sanctioned, where curing will be done under Govt. supervision with clean white duty free Salt in cemented tanks under hygienic conditions. Later on 18-19 such yards will be started throughout the coast.

The best market for Sind's dry fish is Colombo, where in the year 1943-44, 95,000 cwts. of dry fish and cured prawns were sold. Fresh fish packed in ice is also exported to upcountry places like Simla, Lahore, Peshawar, Rawalpindi, Quetta. In the year 1944-45 about 30,000 mds. of fish were exported to these places.

With a view to developing the fishery resources of the Province on the above lines an independent Department of Fisheries was constituted and Dr. M. R. Naidu was appointed as its Director. Of the above schemes the following have since been sanctioned :—

1. Edible Oysters.
2. Semi dried Prawns.
3. Smoke House.
4. Transport of Fish carriers.
5. Shark Liver Oil.

As a result, one Edible Oyster Park has been started at Irbahim Hydri where experiments for the collection of Oysters spats to increase the output of Oysters are being conducted.

22 Maunds of "semi-dried" prawns were manufactured. Owing to the unexpected tidal wave disaster which occurred at the height of the prawn fishery season, practically 2 or 3 fishing settlements along a 40 miles coast were completely destroyed, 113 fisher folk were drowned, and the prawn fishery was adversely affected.

A Smoke House for smoking "Palla" (Hilsa) Fish has just been completed at Sukkur near the Lloyd Barrage and experiments in smoking Palla fish will be started soon.

2 Motor Fishing Launches, one 75 footer with 160 H.P. Diesel engine and another 95 footer with 260 H.P. Diesel marine engine, both fitted with a power winch, have just been purchased by the Sind Government from the Royal Naval Base at Cochin. These will be brought here after the South West monsoon season and utilized as "fish carriers" to fetch fish caught in distant places in the sea up to the Persian Gulf in the West and Kutch in the South East, and also probably for deep sea fishing.

The first fishermen's Co-operative Purchase & Sale Society has been started at Karachi and is working very well. The Society has exported a first consignment of 1,286 cwts. of cured fish to Colombo. The Government of India have given this Fishermen's Co-operative Society a special Licence Quota of 18,000 cwts. for the export of dry fish abroad.

Arrangements are being made to instal a cold store for fish at Karachi.

The important fishing villages are :—

		Fishing population.
Khudda.	(in Karachi)	3,000
Kalirl.	,,	2,500
Baba Island.	,,	2,500
Bhit Island.	,,	1,600
Ibrahim Hydri.		4,000
Rerhi.		2,000

Besides, there are other less important fishing villages in the deltaic areas of the Sind coast.

Prawn Fishery.—Seasonal fishery, which commences from the month of November and ends by end of March, is also a very important fishery of this province. On an average 40,000 mds. of cured prawns are exported every year to Colombo and other places.

The important fishing areas for prawn fishery are :—

Kurangi creek.
Phiti creek.
Kudi creek.
Patiani creek
Dabo creek.
Chaan creek.

Of the above, Phiti, Pitiani and Dhabo creeks are the prolific prawn fishing areas.

The prawns caught in Sind waters belong to a big marine group "Penaeidae" which are normally inhabitants of sea but migrate into estuaries of lower salinity in quest of their food which is predominantly diatomaceous in character.

The prawns comprise of the following three kinds. The names are naturally in the local language.

1. "Jhairo" the biggest 5"-9"
2. "Kaliri" the medium 4"-6"
3. "Kidi" the small 2"-4"

A good number of sharks (Saw fish, Hammer head, and other several ordinary sharks) are captured specially during the months of August, September and October and again February and March. One variety, the "Basking" shark (Rhinodon typicus) which grows as large as 60 feet, is occasionally fished with harpoons. Its liver yields a large quantity of oil.

There are at present two private shark liver oil factories and they are manufacturing a fairly good refined oil, fit for therapeutic purposes which is being marketted both as concentrated (20,000 i.u.s.) and standardised oil (1,600 i.u.s.).

There are two distinct oyster-fisheries in Sind,—both present in the creeks which constitute the mouth of the Indus and its network, specially between Karachi and Ketibunder. These are (1) Edible Oyster and (2) the window-pane oyster which yields pearls. An auction held in the year 1944-45 yielded only Rs. 800 under certain conditions.

The most popular fish in the Indus is the Pulla or Palloh (the well-known Indian Shad). This fishery is under the control of the Revenue Dept. who lease out different stretches of the Indus. The Dumbra and other fresh water carps and prawns are other items in the Indus fisheries.

The Hub river which forms the west boundary from Sind and Baluchistan, contain the well-known sporting fish-Mahseer (Barbustor).

Aphanius dispar (Cyprinodon dispar-Day) a well-known mosquito larvivorous fish is present in fresh water pools around Karachi and is used to a certain extent to combat malaria.

Two Dehydration Factories started here to meet the requirements of the Defence Forces stationed in India were closed this year as such products were no longer in demand.

In August 1944 the Sind Government appointed Dr. M. Ramaswami Naidu of the Madras Fisheries Department as Fisheries Expert with a view to making a survey of the Fisheries of this province, both marine and inland, and to examine the possibilities of developing them. He has completed a part of this survey and the report on this is now under preparation. In the meantime the following schemes for the development of the fishing industry were prepared by him and submitted to Government.

1. Edible oyster culture and establishment of an oyster park.

2. Development of prawn fishery and manufacture of semi-dried prawns.

3. The establishment of Smoke houses for smoking Hilsa and other fishes.

4. The establishment of five Government fish curing yards in the Sind coast for production of good quality cured fish.

5. Stabilising the fishing industry and improving the socio-economic conditions of the fisher-folk.

6. The establishment of Hilsa Hatchery and a fresh water fishery research station.

7. The establishment of a Marine Acquarium in Karachi.

8. Deep sea fishing experiments with modern type of power crafts and tackle and introduction of fish carrier launches for expeditious transport of fish.

9. Establishment of demonstration plants for the manufacture of fish manure and fish meal by the utilisation of fish waste and non-economical fish.

10. Establishment of a Marine Biological and Technological station at Karachi.

11. Establishment of an up-to-date wholesale fish market with cold storage and ice packing facilities close to the new fish harbour at Karachi proposed by the Port Trust.

12. State control of the production of shark liver oil and its other products.

Of the above schemes the first four have already been sanctioned by the Government of Sind and are being put into execution.

Other schemes for the conservancy and development of fresh water fisheries of the province are under preparation.

Steps have also been taken to improve road communications for expeditious transport of fresh fish from fishing centres to consuming centres.

United Provinces.

Fisheries investigations in the United Provinces date back to the sixties when Dr. Day, as Inspector General of Fisheries made a survey of the inland fisheries of India. His report on the fresh water fisheries of India (1876) includes replies to his questionnaires to District and Taluq officers in the United Provinces which contain valuable information, most of which still holds good. One of the results of Day's investigation was the enactment of the Government of India Fisheries Act of 1897.

The possibilities of developing fisheries in the U.P. however was for the first time considered by the Government of the U.P. in 1920 in connection with a reference from the Punjab Government about the regulation of fishing in the Jumna. The Government decided to institute an investigation into the possibility of establishing a Fisheries Industry in the U.P. A proposal to legislate on the lines of the Punjab Fisheries Act was also then considered.

The inquiry was conducted by Mr. Edye whose report was published in 1923. Despite the general impression that Mr. Edye dealt mainly with sporting fish and not with fish as food for the general public, his investigations

were comprehensive and his recommendations sound. Due to this general misunderstanding resulting from Edye's own imperfect summary of his recommendations in the report and his unrealised hope that extensive imports of sea fish were about to commence which might render the development of inland fisheries unnecessary, no serious attention was paid to his report. The only concrete action taken by Government appears to be with reference to the conservation of the sporting fish Mahseer and Trout in hill streams and the general recommendation to the Municipal and District Boards and to the Co-operative Department to develop local fisheries. During the next 20 years no developments occurred except the production of a Marketing report on fish by Mr. Pati Ram Kala, of the U.P. Agricultural Dept.

In 1943 as part of the programme for post-war reconstruction and more immediately to provide against the prevailing shortage of food caused by the War, the development of fisheries received consideration. It was, however, felt that exploitation of the fisheries to increase the supply of fish to towns and the Army was the immediate need and should take precedence of fisheries survey, and fisheries research. The Government therefore decided to take immediate steps to provide a regular, abundant and cheap supply of reasonably good quality fish in the market in Lucknow and in the other important cities. Energetic action was taken by the Government through the Co-operative Department, War Supply staff :-

In improving the existing sources of supply by encouraging market contractors to increase supplies and where this was not possible by directly recruiting fishermen supplying them with Boats and nets and intensively fishing rivers, tanks and Jhils.

In seeking and developing new sources of supply hitherto unexploited.

In improving transport by the provision of ice and refrigeration vans, and

In improving the marketing of fish by direct sale to the public and the Army at equitable rates far below the ruling market prices.

The scheme is now working at Lucknow, Allahabad, Benares and Naini Tal and has been extended to other large consuming centres in 18 out of 48 districts. In March 1944 the need for a technical expert was felt and a Fisheries Development Officer was appointed in the Department of Animal Husbandry to help immediately in the proper expansion of the supply scheme which had been launched and ultimately to plan a Scientific Department of Fisheries for the United Provinces.

A comprehensive 5 years' plan of Post-war Development was drawn up by the fisheries Developments Officer and has been approved by the Government.

In response to the general demand to grow more food a scheme for stocking as many suitable tanks as possible in the 6 districts of Benares, Mirzapur, Jaunpur, Allahabad, Banda and Jhansi was sanctioned jointly by the Government of India and the U. P. Government early in 1945 and some tanks have so far been cleared of predacious fish and stocked with the fry of quick-growing carp. The scheme has since been extended to 18 districts. A further proposal to extend the scheme to 6 more districts round Meerut is now under consideration

Rivers being the primary source of supply of food fish it was realized that side by side with intensive culture and exploitation the conservation and control of river fisheries should receive attention. A staff of 6 wardens, 15 asstt. wardens and 21 watchers has been sanctioned and has been partially recruited to patrol the rivers. A fisheries research laboratory at Lucknow has been sanctioned for continuous study of conditions obtaining in the rivers and tanks and to initiate suitable measures of fish conservation and culture which will keep pace with intensified exploitation. A suitable site at the Tanda Falls (Mirzapur) has been selected for a research fish farm.

Baroda.

The fishery resources of the Baroda State to-day, while mainly relating to true fish, both marine and freshwater, include the crustaceans and molluscs ; among the latter are the conches and the oysters, one species of oyster being valued for the cheap pearls yielded. To tap these resources a Department of Fisheries, started in September 1937, is being organised by Dr. S. T. Moses, the Director, whose services have been lent by the Government of Madras. Apart from fishery and biological surveys conducted, the main achievements so far are the successful departmental working of the Windowpane Oyster Pearl Fishery for two seasons and the subsequent revival of the lease, along with that of the conch fishery, the demonstration of utilisation of these 'Placuna' pearls, previously used only in medicine, for making jewellery, preparation of oystergrit for poultry from the shells of the edible oyster, conservancy of manure from (1) fish offal, (2) prawn and other crustacean offal and (3) marsh plants (samphire and seablite), preparation of prawn meal dust and the manufacture and sale of shark liver oil with vitamin contents of 2,000 international units per gramme of A and 200 of D. Gradual attempts to introduce freshwater fish culture as a subsidiary occupation for the ryot are being made and studies of larvicidal and cyclopecidal fish, both local and imported, have been started. In Baroda City a Fish Market was erected and the Aquarium in the Public Park was revived. Alterations and additions to the aquarium as to include Laboratory facilities are under the consideration of Government. Schemes just being started are the establishment of a 'Prawn Farm' in the Dadhar river and a scheme for 'curing, pickling and smoking of fish' in the Kodinar area, the latter partly financed by the Imperial Council of Agricultural Research. Two other schemes sanctioned are Biological studies of our marine fauna and flora and experiments in their industrial uses and experiments in emulsification, deodorisation, etc., of Shark Liver Oil and bye products. At the famous fishing grounds off Kodinar, which supply almost all pomfrets for Bombay, are exploited mainly by outside fishermen who merely camp in the State during

the season, a colonisation scheme has just been begun under which the fishermen are induced to settle permanently at Kotdah by grant of concessions (residential huts, curing yards, salt and even lands for cultivation) ashore and (use of motor launch and loan of nets, etc.) afloat. The first batch of fisherman arrived from Beyt in March 1944.

War, however, held up some schemes, *e.g.*, the Velan Backwater Fishfarm for mullets, salmon and edible oysters and the Muldwaraka Fish Hatchery for Hilsa. A Five-year plan of fishery development in Port Okha, programmed as follows was also deferred until after the war :—

1st year :—erection of a Biological Station ;
2nd year : erection of an Aquarium ;
3rd year : erection of a fish liver oil factory and cold storage station and starting of power fishing ;
4th year : erection of a fishmeal factory ;
5th year : erection of a cannery. These have now been included in the Post-war Reconstruction Programme of the State and are under consideration by a special committee " Ways and Means Committee " with the member of Post-war Reconstruction as Chairman.

Hyderabad (Deccan).

The Hyderabad Fisheries Department was established in 1941. Investigations and preliminary survey of many reservoirs and tanks have been carried out, and about 100 varieties of fishes have been collected. Perennial rivers are Godavari, Kistna and Manjera, but most of their tributaries dry up during summer. There are many big reservoirs and more than 35,000 big tanks, besides thousands of small annual ones. 'Murrel' is the most common and popular fish, which is obtained in large numbers during the hot season, and there is always a scarcity during other periods of the year. Breeding and culture of fishes is being taken in hand, and fish-farms near the City and in the Nizamabad district will be established soon, where, besides indigenous fishes, Gourami and Etroplus will be kept for breeding. Stocking of the reservoirs and tanks will also be done on an extensive scale, and some breeding grounds of Catla and other fishes have been located. The public are taking interest in fish-culture, and several high-class people have started their own concern. Mahseer and other cat-fishes are amongst the sporting fishes.

A plan has been submitted which aims at the development of Fisheries in districts so that a good item of diet may be available to the cultivators and villagers. Nizamabad and Medak districts have been taken up to start with, and this work will gradually be extended to other districts. A five-year plan has also been formulated under the Post-War Planning scheme for the development of Telingana districts so that fishes may be available all the year round in large quantities. It is expected that if these parts be fully developed, Hyderabad may become self-sufficient to a great extent so far as fish is concerned.

Four Fishermen's Co-operative Societies have already been started, whilst others are being formed in the City and districts. Fishermen will be taught the latest methods for catching fishes in deep water, and other facilities to improve their condition will also be afforded.

Oryzias, *Gambusia*, *Brachydanio* and *Esomus* have been introduced into the A.R.P. static tanks for controlling the breeding of mosquitoes and have proved very successful. For the control of Guineaworm disease *Barbus ticto* and *Barbus sophore* have proved quite successful.

Travancore.

The Department of Fisheries of the State is affiliated to the University of Travancore and is now under the control of the Professor of Marine Biology and Fisheries who co-ordinates research and administration.

The coast line of Travancore is 172 miles long and is margined by a shallow water area, within the 100 fathom line, of nearly 3900 square miles. Out of this vast-expense of fishable waters, only a distance of 5-7 miles is exploited at present and the value of the industry to the State at present is estimated at Rs. 1,20,00,000 per year. The surf swept coast is singularly deficient in harbours and during the monsoon months the fury of the breakers is a source of great hindrance to fishing. From Cape Comorin to Trivandrum the unsinkable catamarans composed of logs tied side by side is the only possible easy going fishing craft. From Quilon to the northern most boundary of the State small country made canoes are used and from October to June, when weather conditions are favourable seine nets are extensively employed.

The esteemed table fish of the coast consists of pomfrets, seer fish, several species of horse-mackerel, tunny, Jew fish, whiting, mackerel and thread fins. In economic importance, however, shoal fish and fish of inferior quality such as butter-fish, sardines, white bait and ribbon fish take precedence. Butter-fish, sardines and prawns are abundant in the northern half of the coast, white cat-fish, white bait and ribbon-fish are ,predominant in the southern half. This conspicuous difference in the distribution of shoal fish has been found to be mainly due to the differences in the nature of the sea bottom. During favourable seasons, butter fish, white bait, ribbon-fish and cat-fish are so greatly in excess of the local food requirements that large quantities are salted and dried both for inland consumption and for export. Travancore exports annually about Rs. 23,00,000 worth of salted fish, the greater part of which is sold in the adjoining tamil districts and Ceylon.

As the important shoal fish are seasonal in their appearance certain months are more favourable for fishing than others. During these favourable seasons large catches are landed daily along the coast and the only method of conservation of the large unsaleable surplus is salting and drying. But realizing that salted fish is devoid of some of the essential properties

of fresh fish, the Government opened a refrigerating plant in the metropolis for the preservations and storage of fresh fish.

The Department also succeeded in devising a cheap and efficient method of packing frozen fish for transport over distances within 72 hours by rail. Although, by this means, it was found possible to send frozen fish to all important inland towns in South India, the method did not prove a commercial proposition owing to its high cost and the competition of iced fish from Malabar; consequently it had to be abandoned for the duration of the war.

Fish Curing.—The prevalent methods of fish curing being impefect and very often unhygienic, the salted and dried fish produced in India are usually inferior in quality, which accounts for the low prices they fetch and the limited demand for them. In order to stimulate demand by improving the quality, the Department of Fisheries has prepared a scheme of hygienic methods of curing and experiments on dehydration of fish are in progress.

Shark Liver Oil.—The Department started the manufacture of Shark liver oil in 1939, and the oil is offered in the market under the trade name 'Sharliverol'. The oil is roughly standardized to ensure Vitamin 'A' potency of 6,000-8,000 international units and is sold in the pure form after eliminating traces of free acids and sterine. Since maintenance of a high standard of quality is the guiding principle of the Department, only oil extracted by special methods is used in the manufacture of Shark liver oil in order to maintain a high standard of quality and no attempt is made to blend it with cheap vegetable oils. During the last twelve months, about 14,500 lbs. of oil was produced, the greater part of which was exported to British India and Ceylon. Though some degree of success has been achieved in the manufacture of Shark liver oil, the need for further improvement has not been overlooked. Researches on oil technology and determination of the specific properties of the oil obtained from various species of sharks are in progress in collaboration with the Department of Industrial Chemistry, with a view to improved methods of manufacture and suitable standardization.

The demand for other marine oils has also been steadily increasing. Sardine oil as was very scarce during the past year but it was more or less supplemented by turtle oil and the oil extracted from Ballistis, popularly known as leather jackets.

Other marine products also came into prominence. The war situation stimulated investigation of the commercial possibilities of some of the common sea weeds found along the coast of Travancore. The extraction of iodine from Sargossum and of Agar Agar from Gracilaria was attempted by the Department of Industrial Chemistry which undertake a survey of the distribution of sea weeds, as a result of which the manufacture of Agar Agar has been started on a commercial scale.

Lake Fisheries.—The lake fisheries constitute an important section of the industry. A chain of interconnected lakes extends from the borders of Cochin to Trivandrum. The largest of them is about 30 miles long and ten miles across, at its broadest part. Their greatest advantage is their proximity to the sea and their temporary or permanent communication with the sea, which bring them under tidal influence. Certain varieties of fish and prawns migrate into these lakes periodically either in search of some special type of food or suitable spawning grounds. The most important of these migratory forms is prawn, the annual catch of which is estimated at Rs. 25,00,000, out of which about Rs. 15,00,000 worth of dried prawn pulp was being exported to Burma and Singapore. But after the fall of Burma, the prawn industry was confronted with an unprecedented slump which threatened the economic welfare of a large section of the fishing population who depended mainly on prawn fishing; but the crisis was averted to some extent by discovery of new markets in British India and Ceylon through Departmental propaganda. Experiments were also conducted for improving methods of preservation and for the preparation of new products out of prawn. As a result of these endeavours, a new-product called powdered prawn, suitable for making prawn cutlets, chutnies, pastes and curries has been produced and will soon be placed on the market. A better method of preservation which will prolong the keeping qualities from two months, which is the normal period now, to eight months is also being demonstrated to the public.

Shell Fish Industry.—The shell fish industry of the lakes is now confined mainly to the collection of lime shells from certain regions of two of the major lakes. These supply all the lime required for building purposes in the State and recently a scheme has been drawn up for exploiting these extensive resources for the manufacture of cement.

Large beds of edible oysters are also found in three of the lakes. At present these are not very popular as an article of food but investigations are under progress for culturing them on the same principles as those followed in Europe and for finding out markets for liver oysters outside the State.

While in the rest of India inland fisheries are very unfavourable situated as many of the rivers and tanks dry up in summer, in Travancore fresh water fisheries are a source of perennial fish supply. There are about 120 varieties of fresh water fish some of which grow to very large size.

Research Activities.—A combined Aquarium and Marine Biological Laboratory was recently completed under the auspices of the University of Travancore. The Aquarium which is one of the largest in Asia is open to the public and the Laboratory, in addition to training students for post-graduate research degrees will also function as a bureau of fisheries.

The Marine Biological station of the Department has so far completed seven pieces of research relating to marine and backwater fisheries, the most noteworthy of which are the "Food habits of the Shoal fishes of the coast," "A survey of the prawn fisheries and "The causes of spoilage in dried prawns. The department also read three papers at the last session of the Science Congress and contributed a few short notes to the *Current Science*. At present there are five Research Students working in the Marine Biological Laboratory.

Mysore State.

The Fisheries Department in Mysore is and adjunct to the Department of Veterinary & Animal Husbandry Services. It was started in 1940. A survey of the fisheries of the State with a view to studing the existing condition of the fisheries, the extent of fishing done at present and the scope of improvement of fishing industry has been completed.

Fishery development work, namely adoption of conservation measures, establishment of fish sanctuaries and stocking of tanks and rivers with good species of food fishes has been organised in three suitable areas of the State. They constitute Shimoga, Krishnarajasagar and Kolar Fishery Divisions.

Two Fish Farms have been established, one at Marconahalli and the other at Markandeya, where fishery investigations are being carried out.

The main object of the Fisheries Department is to effect proper conservation of the fisheries on scientific lines with a view to increasing the production of food fishes and to alleviate the economic condition of the fishermen in the State.

Cochin State.

The maritime State of Cochin, South India, has three types of fisheries, namely, marine, estuarine and fresh-water. Its 35 mile coastline includes 19,700 acres of backwater abounding in different varieties of fish, brought in through the natural openings in Cochin and Cranganore. Thanks to the heavy monsoon months bearing down rich feed from the mountain and forest tracts of the interior, the State has her best sea-fishing during the rainy half of the year.

Marine and Estuarine Fishing.—The State has over 800 sea going-boats which bring in on an average 2½ lakhs maunds of fish every year, consisting of Sardine and Mackerel (through gillnets), miscellaneous varieties like butter fish, ribbon fish, sole fish, silver bellies and horse mackerel (caught by boat seine) and sharks, rays, seer and other bigger varieties (by hauling).

The bulk of the monsoon catch is needed to meet the demand within the State itself, while a fraction is salt-cured and exported to the markets of Travancore and British India. The annual export trade in cured fish amounts to about Rs. 5 lakhs per year. Due to war conditions, the demand for fish within the State has so mounted up of late that no surplus is now left for its export in ice.

Prawn Fishing.—The sea, the extensive lagoons and the paddy lands on the cost produce various types of prawns during different parts of the year. All the varieties are nourishing and tasty. Before the war Burma in general and Rangoon in particular used to provide the best market for hard-dried prawn pulp from the State, the annual export amounting to Rs. 15 lakhs, but with the fall of Burma new markets have been explored in India and Ceylon with partial success. The Department of Fisheries has now resources for preserving prawns in air-tight tins which keep the product well preserved for periods ranging from 8 months to one year. In the post-war era it is quite likely that the State's rich crop of prawns may form raw materials for a canning industry within the State.

Preservation.—Salt curing is the most widespread and perhaps the only preservation process which is dependent on the sun. Artificial drying or dehydration is generally resorted to during the monsoon. Smoking of fish is also encouraged as there is a demand for this from the Army. The Department has devised a plan for using smoke and heat from a common oven for smoking and dehydrating separate lots of fish in different chambers.

Fish Oil Industry.—Shark liver oil and Ray liver oil are now being produced by the Department. The hammer-heads and saw fishes are famous for the healing qualities of their oil, particularly in ophthalmic and pulmonary troubles. Shark liver oil which has a very high percentage of Vitamin A has an exceedingly good market in the State. The Cruder form of this oil is used for caulking boats and polishing leather. The stearin is made into insecticidal soaps and lotions.

Shell Fish Industry.—This industry is confined to the collection of little heaps of shells washed ashore. Shells are calcined in kilns to produce lime as a cottage industry. Near Wellington Island in the State, oysters are available, their meat being used as a specific in wasting diseases and also as a delicacy. The Fishery Department is now exploring the possibilities of making face powder out of oyster shells.

Fish Farming.—Estuarine fish farming is another contribution made by the Department in the development of the fishing industry. A splendid ground for the culture of mugilis and milk fish has been discovered by transforming the unused land for paddy or coconut into a sort of nursery. Separate areas for fishes such as the Bekhti, the Indian salmon and Jew Fish which appeal to the sporting angler and the eater alike, are also marked and planned for systematic operations.

Deep Sea Fishing.—The State is working up a scheme for the operation of the boat-seine of Malabar with the basal platforms of net for mackerel: and of drift nets and hook and line for bigger fishes like seer, chornimus, rays and sharks.

The Socio-Economic Activities of the Department are directed towards the liquidation of illiteracy amongst fisherman, by establishing five fishery schools manned by teachers from the fisher community trained in fisheries technique. Canals and roads for facilitating transport of fish are also being opened by the Department. Co-operative Societies have also been established and are being under the auspices of the Department.

COPYRIGHT.

Copyright in every original literary, dramatic, musical and artistic work means the sole right to produce or reproduce the work or any substantial part thereof in any material form whatsoever; to perform or in case of a lecture to deliver the work or any substantial part thereof in public; if the work is unpublished, to publish the work or any substantial part thereof. Amongst the things it includes the sole right to produce, reproduce, perform or publish any translation of the work; in the case of a dramatic work, to convert it into a novel or other non-dramatic work and in the case of a novel or other non-dramatic work or of an artistic work, to

convert it into a dramatic work by way of performance in public or otherwise, and in the case of a literary dramatic or musical work, to make any record, perforated roll, cinematograph film or other contrivance by means of which the work may be mechanically performed or delivered Copyright also includes the right to authorise any such acts as aforesaid.

Publication in relation to any work means the issue of copies of the work to the public but does not include the performance in public of a dramatic or musical work, the delivery in public of a lecture, the exhibition in public of an artistic work or the construction of an architectural work of art.

Copyright Act.

Copyright in India is governed by the Indian Copyright Act III of 1914 which made the Imperial Copyright Act of 1911 applicable to India with such modifications as appeared to be desirable for adapting its provisions to the circumstances of India. The portions of the Imperial Act made applicable to India form the First Schedule to the Indian Copyright Act III of 1914.

Copyright subsists throughout the parts of His Majesty's dominions to which the Imperial Act extends. Registration is no longer necessary but the publisher of every book has to supply a copy thereof as provided in the Copyright Act and in the Press and Registration of Books Act XXV of 1867. The author of a work is the first owner of the copyright therein and may assign the right either wholly or partially (copyright being a bundle of different rights) and either generally or subject to limitations, or may grant any interest in the right by license to another person but no such assignment or grant is valid unless it is in writing signed by the owner of the right in respect of which the assignment or grant is made or by his duly authorised agent.

Duration of Copyright.

Generally the term for which copyright subsists is the life of the author and a period of 50 years after his death but at any time after the expiration of 25 years or in the case of a work in which copyright subsisted at the time of the passing of the Imperial Act of 1911, 30 years from the death of the author of a published work, copyright in the work is not deemed to be infringed by the reproduction of the work for sale if the person reproducing the work proves that he has given the notice in writing prescribed by the Governor-General in Council of his intention to reproduce the work and that he has paid in the prescribed manner to or for the benefit of the owner of the copyright, royalties in respect of all copies of the work sold by him calculated at the rate of 10 per cent. on the price at which he publishes the work.

If, at any time after the death of the author of a literary, dramatic or musical work, which has been published or performed in public, a complaint is made to the Judicial Committee of the Privy Council that the owner of the copyright in the work has refused to re-publish or allow the re-publication of the work or has refused to allow the performance in public of the work and that by reason of such refusal the work is withheld from the public, the owner of the copyright may be ordered to grant a licence to reproduce the work or perform the work in public as the case may be on such terms and subject to such conditions as the Judicial Committee may think fit.

Duration of Sole Ownership of Copyright.

In the case of works first published in British India copyright is subject to this limitation that the sole right to produce, reproduce, perform or publish a translation of the work subsists only for a period of 10 years from the date of the first publication of the work but if within the said period the author or any person to whom he has granted permission so to do publishes a translation of any such work in any language, copyright in such work as regards the sole right to produce, reproduce, perform or publish such translation in that language is not subject to the limitation above prescribed.

Copyright of Photographs.

The term for which copyright subsists in photographs is 50 years from the making of the original negative from which the photograph was directly or indirectly derived and the person who was owner of such negative at the time when such negative was made is deemed to be the author of the work.

Musical Instruments.

The provisions of the act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, have not been published, *i.e.*, written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, which has been reduced to writing.

The Copyright Act does not apply to designs capable of being registered under the Patents and Designs Act II of 1911 except designs which though capable of being so registered are not used or intended to be used as models or patterns to be multiplied by any industrial process.

Infringement of Copyright.

Copyright in a work is considered to be infringed by any person who without the consent of the owner of the copyright does anything, the sole right to do which is conferred by the Copyright Act on the owner of the copyright. Where copyright in any work has been infringed, the owner is entitled to all remedies by way of injunction, damages and accounts. Every suit or other civil proceeding regarding infringement of copyright must be instituted and tried in the High Court or the Court of the District Judge. An action in respect of infringement of copyright cannot be commenced after the expiration of 3 years next after the infringement. No Court inferior to that of a Presidency Magistrate or a Magistrate of the First Class can try any offence against the Copyright Act. It is not an infringement of copyright to publish a report in a newspaper of an address of a political nature delivered at a public meeting.

Where a married woman and her husband are joint authors of a work the interest of such married woman therein shall be her separate property.

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many Parts of India indicated the necessity for a strong forest policy, but, whether or not our early administrators realised the importance of the forests to the economic and physical welfare of the whole country, the fact remains that little or nothing was done to check uncontrolled destruction with its inevitable results in erosion and sterilisation of the fertility of the land. The years between 1850 and 1857 witnessed the first beginnings of forest conservancy in Southern India. During the preceding twenty years far-sighted individuals had repeatedly urged, both in Madras and Bombay, that scientific advice in the management of the forests had become an urgent necessity. In 1847 the Bombay Government appointed Dr. Gibson as Conservator of Forests for the Presidency. Madras did not follow this example until nine years later, when Dr. Cleghorn was appointed Conservator of Forests in 1856. It was a Memorandum of the Government of India issued in 1855, arising as it chanced out of the annexation of the Province of Pegu in Burma which first laid down the outline of a permanent policy for forest conservancy in India. Progress was delayed for a time by the disturbed state of the country, but from 1860 onwards forest organisation was rapidly extended, though the earlier years of forest administration were full of difficulties. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of organised management, were long and laborious tasks, which are even yet not completed. Nevertheless, large tracts of forest were saved from ruin and were gradually brought under increasingly efficient management. It was in 1862 that the Governor-General in Council submitted to the Secretary of State detailed proposals for the administration of forests as a public estate for the welfare of the country as a whole. "The idea that forest is a thing valuable in itself, and, in truth, just as essential to the community as fields of wheat, sugar, or cotton, took a long time to spring up, and, in fact, is not even now generally realised in that complete manner that is essential before forest management can be said to stand on a proper basis." With the appointment of Brandis (later Sir Dietrich Brandis) as the first Inspector-General of Forests in 1863 commenced the scientific management of India's forest estate. Whatever may have been the opinions held in the past in some quarters regarding restrictions imposed by forest policy, there can now no longer be any doubt regarding the very substantial benefits which have accrued to the country through the formation of an extensive forest estate and that in her forests India now possesses a property of great value, the future importance of which it is hardly possible to over-estimate.

Types of Forest.—More than one tenth of the total area of British India is under the control of the Forest Department. These areas are classified as reserved, protected or unclassed State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassed forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India under the control of the Forest Department on 31st March, 1941, was 98,258 square miles or 11·4 of the total area. This was classed as follows: Reserved 72,936; Protected 6,772; Unclassed State 18,550.

Throughout this vast forest area, scattered over the length and breadth of India, from the Himalayan snows to Cape Comorin, and from the arid Juniper tracts of Baluchistan to the Eastern limits of the Assam hills, there is an infinite variety in the types of forest vegetation, depending on climate, topography, soil and other local factors. Vegetationally, the greater part of India, including the Indo-Gangetic plain, must be considered as in the tropics, but wherever there are mountains, such as the Nilgiris in the south and the Himalayas and Assam-Burma hills in the north, subtropical, temperate and, in the north, alpine zones must be distinguished, each supporting its own forest types. Next to the major altitudinal effects, rainfall is the most important factor in the determination of the nature of the forests, and within each of the main zones, tropical, subtropical, temperate and alpine, there can be distinguished wet, moist and dry forest types. In addition, various edaphic and seral types occur, dependent on local conditions, such as littoral (beach), tidal, fresh-water swamp, and riverain forests.

The following is a brief description of the main forest types :—

I.—TROPICAL FORESTS.

1. Tropical Wet Evergreen Forests.—These are dense forests, with a large number of tree species all mixed together, but according to their heights forming several canopies or layers. The upper canopy trees, among which *Dipterocarps* are usually characteristic, are often 150 to 200 feet high, and they very often have clear stems of 100 feet before the first branch is reached. These forests are found in the areas with the heaviest rainfall. In the southern or Peninsular region, they occur along the Western Ghats from a little south of Bombay to Tinnevelly, *i.e.*, in the western parts of Bombay, Madras, Coorg, Mysore, Cochin and Travancore. In the northern or Indo-Gangetic region, the type is to be found in the wetter parts of Bengal (the submontane and Chittagong areas), extending into the damper parts of the coastal strip of Orissa, and intermingled with the next two types over almost the whole of Assam. The type also occurs extensively in North Burma and the Andamans.

2. Tropical Semi-Evergreen Forests.—These form an intermediate type between the wet and the moist types. They are very extensive in Burma, and are fairly widely distri-

buted in the Northern region of India, occurring all over Upper Assam and in North and South Bengal (Buxa, Jalpaiguri, Kurseong, Kalimpong, Chittagong), and in Orissa (Puri, Angul and some of the adjoining States). In the South, however, the type is not extensive, owing to the steep rainfall gradient in the Western Ghats, and it is limited to narrow strips just north of Bombay, near Goa, South Cochin and part of Coorg. Forming a dense forest of several canopies, there are again numerous evergreen species, but mixed with them are many deciduous species, such as the *Terminalias*, and the general height is somewhat less than in the wet evergreen forests.

3. Tropical Moist Deciduous Forests.—In these forests the trees are leafless for part of the year, and although the canopy is complete, the forests are not so dense, nor are the trees so tall as in the preceding types. The height of the dominant trees varies from 100 to 150 feet. In the southern region, *Teak* is the chief tree, mixed with *Terminalias* and many other species. The type is widely distributed all over the centre and south of India, in the Central Provinces, Bombay, Madras, Mysore, Coorg, Cochin and Travancore. In the North, *Sal* (*Shorea robusta*) is the dominant species, and the type extends extensively through Bengal and Assam, Bihar and Orissa, and the United Provinces up to the eastern border of the Punjab.

4. Tropical Dry Deciduous Forests.—This type is found throughout the Peninsula, in Bombay, Central Provinces, Hyderabad, Mysore and Madras, and in the Indo-Gangetic plain, from Orissa, through Bihar and the United Provinces to the Punjab, wherever the annual rainfall is from about 30 to 50 inches. In the South, the most important tree is again *Teak*, but there are many associates, which often become the dominant species. In the North, the forest is typically mixed, with *Sal* occurring only locally.

5. Tropical Thorn Forest.—The dry tract throughout the Peninsula, to the lee of the Western Ghats, from the extreme south to Indore and Bhopal, with a rainfall of only 20 to 35 inches per year, is characterised by a low open forest of thorny trees, of which various species of *Acacia* are especially common. The corresponding area in the North has an even lower rainfall, 10 to 30 inches per year. It extends throughout the western side of Upper India (except for areas of actual desert), from the North-West Frontier Province, through the Punjab and Rajputana, to Sind and Baluchistan, with eastern extensions into the drier parts of the United Provinces, especially on unfavourable soils. *Acacias* are again characteristic, although less prominent than in the south and the related tree *Prosopis spicigera* is also generally distributed.

6. Tropical Dry Evergreen Forest.—A special type is met on the Carnatic coast, where the rainfall is 30 to 50 inches per year, but is largely from the retreating (north-east) monsoon in October and November. Here there is a low forest 30 to 40 feet high, consisting of small thick leaved evergreen trees, such as *Mimusops hexandra* and *Memecylon edule*.

II.—SOUTHERN SUBTROPICAL AND TEMPERATE FORESTS.

These are represented only by wet types on the higher hills, such as the Nilgiris and Palni hills, where the rainfall is relatively high. The subtropical zone, from about 3,000 feet to 5,500 feet, has a dense evergreen forest of medium height (60 feet) in which *Eugenia* is a characteristic genus, with *Lauraceæ* and other families also well represented. Above this, in the temperate zone, rolling grassy downs are characteristic, as round Ootacamund, with patches of forest, known as *sholas*, occupying the sheltered folds in the hills. These forests, probably the relics of former much more extensive forests which have been reduced by burning, felling and grazing, are typically a relatively low but fairly dense evergreen type, 50 to 60 feet high, with a great variety of trees, among which *Ternstrœmia*, *Eugenia* and *Meliosma* are typical genera.

III.—NORTHERN SUBTROPICAL FORESTS.

1. Subtropical Wet Hill Forests.—This type occurs on the lower slopes of the Eastern Himalayas and in the Assam-Burma hills, from a little under 3,000 feet to 6,000 feet. The forests are mostly of good height (up to 150 feet) and density, characterised by many species of evergreen *Oaks* and *Chestnuts*, with many other temperate trees, such as *Alder* and *Birch*, which are deciduous for short periods. *Pines* are typically absent, or are confined to drier sandy soils or well drained ridges, while *Dipterocarps* sometimes extend upwards from the tropical wet evergreen forests.

2. Subtropical Moist Hill Forests.—These extend the whole length of the Western and Central Himalayas, from the North-West Frontier Province to Bhutan, mostly between 3,000 and 6,000 feet, but descending in places to 2,000 feet, and ascending on southerly aspects to 7,500 feet.

The principal tree is the *Chir* or *Chil* pine (*Pinus longifolia*), which forms almost pure forests over extensive areas. *Oaks*, *Rhododendrons* and other trees mix with or replace the *Chir* at the higher levels and in damper situations.

The type extends eastwards into the Khasi, Naga, Manipur and Upper Burma hills, but instead of the *Chir* the dominant tree is the *Khasi pine* (*Pinus khasya*). This again is replaced by *Pinus merkusii* on the hills in the South Shan States and parts of Lower Burma.

3. Subtropical Dry Evergreen Forests.—These are open low scrub forests of evergreen trees and thorny shrubs, in which the chief species is the *Olive* (*Olea cuspidata*). They occur from about 1,500 feet to 5,000 feet in the Himalayan foothills, the Salt Range and the Kala Chitta hills in Punjab, Kashmir and Hazara, extending westwards into Baluchistan and other countries. The forests have mostly been considerably impoverished by grazing, lopping and felling and with protection the general density becomes much better.

IV.—NORTHERN TEMPERATE FORESTS.

1. Wet Temperate Forests.—These are found in the Eastern Himalayas from Nepal eastwards, extending through Bengal into the higher hills of Assam and Burma, from about 6,000 feet

to 9,500 feet. They are typically fairly dense evergreen forests, in which several species of *Oaks* and *Chestnuts* predominate, but many other species are also present, including typically deciduous trees such as *Maple*, *Elm* and *Prunus*.

2. Moist Temperate Forests.—Along the whole length of the Himalayas from the North-West Frontier Province, through Kashmir, Punjab, United Provinces, Nepal and the Darjeeling district to Sikkim and Bhutan, at altitudes from 5,000 to 11,000 feet, and with a rainfall from 40 to 100 inches per year, are to be found extensive coniferous forests similar to the temperate forests of Europe and North America. The chief trees are *Spruce*, *Silver Fir*, *Cedar* (*Deodar*), *Blue Pine* (*Pinus excelsa*), and *Tsuga*. *Cypress* and *Yew* also occur to a less extent. Often these trees are mixed together, but pure crops of one or the other are almost more frequent, depending on the altitude, aspect and other conditions. Evergreen *Oaks* are also often present, particularly on southern aspects, while in the damper situations are often many broad leaved trees, also typical of European forests, such as *Maples*, *Hornbeam*, *Horse Chestnut*, *Birch*, *Elm*, etc.

3. Dry Temperate Forests.—In the inner ranges of the Himalayas, where the South-West monsoon is feeble, and the rainfall is usually less than 40 inches a year, and that is mostly in the form of winter snow, is to be found extending from 5,000 to 10,000 feet a drier and more open type of temperate forest. It consists chiefly of the conifers *Cedar* (*Deodar*), *Pinus gerardiana* and *Juniper* (*J. macropoda*), with some *Silver Fir* and *Blue Pine* at higher elevations. Broad leaved trees, such as *Maple*, *Ash* and the *Holm Oak*, occur scattered or in pure patches, while the *Olive* spreads up from the dry subtropical zone. The type occurs in Hazara, Kashmir, Chamba, Inner Garhwal and Sikkim. Among the herbs and shrubs present are many medicinal plants, such as *Artemisia* and *Ephedra*.

V.—ALPINE FORESTS.

The uppermost forests of the Himalayas, from about 9,500 to 12,000 feet, consist of a dense growth of small trees and large shrubs, chiefly *Birch*, *Rhododendron* and dwarf *Juniper* with patches of coniferous overwood of high level *Silver Fir* and *Blue Pine*.

This gives place to an alpine scrub above, consisting of dwarf *Rhododendrons*, *Junipers* and other shrubs, interspersed with patches of grassland, which form excellent grazing areas in summer, when they are covered with a great variety of beautiful alpine flowers.

VI.—SPECIAL FOREST TYPES.

Among various special edaphic and seral forest types, the following may be mentioned :—

1. Beach Forests.—All round the coast, wherever a fair width of sandy beach occurs, there is a fringe of forest in which *Casuarina*, originally introduced from Australia, is now often the most characteristic species. Elsewhere, small evergreen and deciduous trees form a low but fairly dense fringe along the shore.

2. Tidal Forests.—In the Sunderbans of the Ganges-Brahmaputra delta, and along the mouths of other large rivers, such as the Mahanadi, Godaveri and Indus, are to be found *Mangrove* (*Rhizophera*, *Brouguiera*, etc.) and *Sundri* (*Heritiera*) forests, typical of salt water swamps. Many of the trees have stilt roots for support, and "knees" or pneumatophores projecting upwards from the swamps to provide aeration for the roots.

3. Fresh-water Swamp Forests.—These are not very extensive, but are to be found above the salt water limit in the deltas of the large rivers, and also in depressions, often old river beds, in parts of Assam, Bengal, the United Provinces and Madras. They are subject to prolonged annual flooding and have various species according to the locality. The delta type in Bengal supports the best of the *Sundri* forests, often over 100 feet high.

4. Riverain Forests.—Along all the larger rivers on the banks of new alluvium are to be found stretches of moisture-loving trees, such as *Lagerstræmia flos-regina*, *Terminalia myriocarpa* and *Salix tetrasperma*. On recently deposited gravels and sand, extensive stretches of which occur along many river courses both in North and South India, are often to be found forests in various stages of succession, depending on how new or old is the deposit, on the rainfall and other local factors. Perhaps the most characteristic are the *Khair* (*Acacia catechu*), *Sissoo* (*Dalbergia sissu*) and *Tamarix* forests found throughout Northern India from Assam to Punjab. These forests are usually characterised by heavy grass, and with protection they slowly change to a more miscellaneous type of forest by the gradual colonising of other species.

VII.—THE BAMBOOS.

No account of the forests of India would be complete without a reference to the *Bamboos*, of which there are very many species occurring in the tropical, subtropical and temperate zones. Tall bamboos, such as *Bambusa arundinacea* and *Dendrocalamus hamiltonii*, often form a very dense undergrowth in the tropical semi-evergreen and moist deciduous forests, while *Dendrocalamus strictus* is locally abundant and economically important in the drier parts of the tropical moist deciduous forests and in some of the tropical dry deciduous forests. One of the important results of forest research is the utilisation of bamboos for the making of paper, but there are still extensive areas of forests with a dense undergrowth of bamboos, which are not at present economically exploitable and which often greatly hinder other forest operation.

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely :—

(*a*) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(*b*) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Central and Southern India, the sal forests of Northern, Central and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(*c*) **Minor Forests, containing somewhat inferior kinds of timber and managed for the production of wood, fodder, grazing and other produce for local consumption**; these forests are of great importance in agricultural districts.

(*d*) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Agriculture. The Inspector-General of Forests is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces unless any local Government on examination of the position could make out a convincing case against the transfer in its own province. After the Constitution of 1935 Burma was separated from India and Forests were included in the schedule of Provincial subjects throughout India.

Territorial Charges.—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests; usually provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Sub-divisions. The Ranges are further sub-divided into a number of rounds and beats. These are protective as well as administrative sub-divisions held by Foresters and Forest Guards.

Non-Territorial Charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, Silviculture, Utilisation and the preparation of Forest Working Plans.

The Forest Service.—The Forest Service comprises four branches:—

(1) The Indian Forest Service.—This still contains 147 officers. Of these, 139 were recruited direct to the service. Recruitment to this service ceased in 1932.

(2) The Indian Forest Engineering Service.—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian service of Engineers and some have resigned or have retired. The present number of officers in the Indian Forest Engineering Service is only 2, one in the Punjab and the other in Bombay.

(3) The Provincial Forest Service.—Till 1928, officers for the lower gazetted Forest Service were recruited for direct appointment as Extra Assistant Conservators of Forests, and were known as Provincial Forest Service Officers. They were trained at the Imperial Forest College, Dehra Dun. After the training of Indian officers for appointment to the Indian Forest Service was started at Dehra Dun, in 1926, the training of the Provincial Forest Service officers was stopped in 1928.

With the advent of Provincial autonomy in 1935 and the consequent cessation of all further recruitment to the Indian Forest Service, Provincial Governments are now building up new Provincial Forest Services of their own to take the place of the Indian Forest Services. As a result the old Provincial Forest Services will disappear in due course.

(4) The Subordinate Forest Service.—These consist of Forest Rangers, Deputy Rangers, Foresters and Forest Guards.

The training of Forest Rangers for the whole of India is concentrated at the Indian Forest Ranger College, Dehra Dun: but in addition to sending candidates to this college, Madras has its own Forest College for training Forest Rangers at Coimbatore.

The training of subordinates below the rank of Rangers is carried out in various local forest schools and training classes.

Forest Education.—Forest education in India first started with the founding in 1878 of a Forest School at Dehra Dun, for the training of forest rangers. The school owed its origin to a memorandum submitted in September, 1877, by Sir Dietrich Brandis, the first Inspector-General of Forests to the Government of India, in which he urged the desirability of creating a national Forest School in India, with the object of preparing students for the executive charge of a range, and of enabling Forest Rangers to qualify for promotion to the superior staff. Forestry, he said, must cease to be a subject of foreign introduction: it must become naturalised before it could be regarded as established on a safe and permanent basis.

The hopes of Sir Dietrich have today been more than realised, for not only is the executive charge of ranges and even divisions now being held by ranger students of Dehra Dun or of the daughter college at Coimbatore, but with the establishment of the new Indian Forest College, probationers are now being trained directly for the Superior Forest Services of the various Provinces and States of India.

The original Forest School, established in 1878, came directly under the Government of India in 1884, when it became known as the Imperial Forest College, and trained Rangers at first for all the provinces. In 1912 the Madras Forest College was opened at Coimbatore, serving Madras, Bombay, the Central Provinces, Bihar and Orissa, and the South and Central Indian States, the Imperial Forest College at Dehra Dun serving the rest of India. The Madras Forest College was closed from 1st July 1939, but was re-opened for Madras candidates only in 1945. Apart from this Ranger students

from all parts of India are being trained at Dehra Dun. The College at Dehra Dun has now been renamed the *Indian Forest Ranger College*, to distinguish it from the new *Indian Forest College* for the training of officers for the Superior Forest Services, opened in 1938.

In 1912 a separate course was started for the Provincial Forest Services as then constituted. This course was closed in 1928 with the cessation of direct recruitment to the old Provincial Forest Services. From 1st November, 1926, the training of Indian probationers for the Indian Forest Service was commenced, a separate Indian Forest Service College being established in the old Forest Research Institute at Chandbagh, Dehra Dun. This College, however, had to be closed in November, 1932, owing to the cessation of recruitment to the Indian Forest Service.

Following the transfer of "Forests" to popular control, under the reformed constitution, the old Indian Forest Service is slowly disappearing, and in its place each province is building up its own Superior Forest Service. For the training of officers for these new Provincial Forest Services, and for the corresponding Forest Services of the Indian States, the *Indian Forest College* was established at New Forest in conjunction with the Forest Research Institute and was opened in May, 1938.

The Indian Forest College.—The Indian Forest College is housed in the Forest Research Institute building at New Forest and is well equipped with lecture and common rooms, and biological and chemical laboratories. The museums, herbarium laboratories and workshops and the Central Library of the Forest Research Institute form an important part of the College, in so far as they are largely used for educational purposes by the Research Officers and College Staff a Hostel accommodation is provided in separate blocks and there is a common mess. A large playing field with a pavilion provides football and hockey grounds, a cricket pitch and tennis courts.

The staff of the College consists nominally of six—the Principal and Professor of Forestry, and five lecturers, under the Director of Forest Education, who is responsible for both Colleges, and under the general administrative control of the President, Forest Research Institute and Colleges. But in addition the Research Officers of all the branches of the Forest Research Institute act as lecturers in their respective subjects.

The course covers two years, and among other conditions: "An honours degree, not lower than second class, in any natural science or mathematics or agriculture, or its equivalent, is required as a qualification for entry, and the combination of botany and mathematics is preferred." The fees are Rs. 3,500 per year, and the total cost, including stipend for living expenses, cost of camp outfit and equipment, and travelling expenses for field training and tours comes to about Rs. 12,000 for the two years' course. Only those students are accepted who are deputed by their Provinces or States, or who have a guarantee of employment on their successfully completing the course. Holders of the College Diploma are styled "Associates of the Indian Forest College" and are entitled to use the letters "A.I.F.C." after their names.

The Indian Forest Ranger College.—The Indian Forest Ranger College (formerly known as the Forest School, and then as the Imperial Forest College) is housed partly (2 classes) in the original College buildings at Dehra Dun and partly (2 classes) at New Forest, near the Forest Research Institute. These comprise college buildings, with lecture and common rooms, drawing and engineering halls, biological laboratory and museum, and hostels for the students. The surrounding grounds of the main College at Dehra Dun, covering about 4 acres, constitute a small arboretum and include tennis-courts, while there is a good playing field adjacent.

The staff of the College consists at present of the Director and seven Instructors. Certain of the Research Officers of the Forest Research Institute also lecture on their special subjects, while the lecturers in Surveying and Engineering at the Indian Forest College also conduct the courses in Engineering at the Indian Forest Ranger College.

The course covers two years. Among other conditions, the minimum qualification for admission to the College is: A certificate of having passed the Intermediate Examination of any recognised Indian university with one or more of the following subjects:—Mathematics, Physics, Chemistry, Botany, Zoology. A certificate of having passed any other examination of an equivalent or higher standard will be admissible. The fees are Rs. 1,500 per year, and the total cost, including stipend for living expenses, camp outfit and equipment, and travelling expenses for field training and tours comes to about Rs. 5,500 for the two years' course. Only those students are accepted who are deputed by their Provinces or States, or who have a guarantee of employment on their successfully completing the course.

Research.—The Forest School founded at Dehra Dun in 1878 became also a recognised centre of Forest Research in 1906, when at the instance of Sir Sainthill Eardley-Wilmont, then Inspector-General of Forests, a staff was appointed to investigate problems connected both with the growing of forests and with the utilisation of forest produce.

In 1914 the first Forest Research Institute was opened on the Chandbagh Estate, Dehra Dun. Within a very few years the war demand for forest produce emphasised the scope and need for extensive research far beyond that for which accommodation had been provided. Plans were therefore made for a new Forest Research Institute on the Kaulagarh (New Forest) estate a few miles out of Dehra Dun, and it was opened on the 7th November, 1929. The old Institute was converted into the Indian Forest Service College, but with the closing of that college in 1932, the whole of the Chandbagh estate was given up, and with many additions and modifications now forms the Doon School.

The Forest Research Institute is under the administrative control of the President. There are five main branches of forest research, namely Silviculture, Forest Botany, Utilisation, Entomology and Chemistry & Minor Forest Products. Silviculture, which deals with all the production

side of forestry, is under the direction of the Silviculturist. Much of the actual research work is, however, decentralised and done by local provincial silviculturists in the provinces, but the Central Silviculturist co-ordinates their work, does all the statistical computing and acts as an information bureau on silvicultural matters for the whole of India and Burma. The Botanical branch is chiefly concerned with the identification of species, but has a mycological section dealing with fungus diseases of trees and wood rotting fungi. The Utilisation branch has sections dealing respectively with timber testing, wood working, wood preservation, timber seasoning, paper making and wood technology. The sections are under the charge of specially trained Indian assistants and are equipped with up-to-date workshops, testing machines, seasoning kilns, antiseptic treatment plant, sawmill and a paper-making plant sufficiently large to enable paper-making tests to be carried out on a commercial scale. The Forest Entomologist is primarily concerned with research into the control of insect attacks in tree crops, and insect damage to timber. There is also a section dealing with the taxonomy of Indian insects under the Systematic Entomologist. The Chemist does research work into drugs, oils, and other minor forest products, and there is also a Soil Chemist who is engaged on silvicultural problems.

The Forest Research Institute is thus organised and equipped to deal with every aspect of Forest Research and the work it has done in the past and is doing, has gone a long way towards improving the productivity of the forests of India, and had led to the fuller and better utilisation of their products, with correspondingly increased financial returns. Limited facilities also exist at the Forest Research Institute for training in research methods and for the conduct of research by private individuals.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources averages about 306 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras, by utilising modern American methods, to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The Provincial Government after this experience adopted a more cautious policy.

In the Andamans notable developments have taken place. In the past, extraction of timber was done by elephant dragging with the result that only a fringe of the forests could be touched. Attempts were made in employing American methods of mechanical logging, for which machinery was bought and an American expert employed to take charge of the work. The costs of extraction, however, by these means proved too high. Recently the problem has been solved by means of light tramways, the trains of trucks being drawn by elephants which have been superannuated from ordinary work, and it has been found possible in this way to work large, hitherto inaccessible areas of forest very cheaply. Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are, on the whole, regarded trustworthy if sufficient control over their operations is exercised.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognised. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The growth of forest revenue, expenditure and surplus during the past 70 years has been steady. Gross revenue, before the late world-wide depression caused a temporary disorganisation of all trades, steadily increased until it amounted to some Rs. 299 lakhs a year, surplus revenue amounting to upwards of 26 per cent. of gross revenue. Most of the provinces ordinarily show a steady increase of surplus. Figures of Revenue, Expenditure and Surplus for the three years ending 1940-41 are as follows:—

Year.	Revenue.	Expenditure.	Surplus.
1940-41	37,105,052.	23,763,614.	133,41,438.
1939-40	30,202,818.	22,744,245.	74,58,573.
1938 39	30,097,367.	23,130,435.	6,966,932.

Agencies.—The general practice of the Forest Department in the Government of India and the various Provinces is to conduct their own sales direct with timber dealers or large consumers though there are notable exceptions. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. Sales of Indian timbers and especially timbers from the Andamans are steadily increasing.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun, U.P.

BROADCASTING.

History.—For several years limited broadcasting services were maintained by radio clubs in Calcutta, Bombay and Madras. Although the transmitting sets employed by them were of very low power, the broadcasts were popular. The clubs were assisted financially by a government contribution based upon the revenue from licence fees, but this did not nearly suffice to cover the cost of the transmissions, and great credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes.

After negotiations extending over several years, an Indian Broadcasting Company was granted a licence to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected at Bombay and Calcutta, the service at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of one and a half kilowatts, the same as that of the 2LO stations in London, of which they were practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

Owing to financial difficulties the Indian Broadcasting Company went into liquidation with effect from March 1, 1930. Since then the Government of India have been controlling broadcasting in this country. Government for this purpose formed an Indian State Broadcasting Service, now called All-India Radio, and instituted a Central Broadcasting Advisory Committee.

In 1934, Government felt justified in embarking on a policy of development and, as a first step, a sum of Rs. 2,50,000 was granted for a 20-kw. mediumwave station to be established at Delhi. This station was actually opened on January 1, 1936.

In the year 1936 a special fund of Rs. 40,00,000 was created for the development of Broadcasting in India. At that time there was, in addition to the mediumwave centres at Bombay, Calcutta and Delhi, a 0.25 kw mediumwave centre at Peshawar which was being operated by the N.W.F.P. Government.

Orders for extensive new equipment for implementing the scheme of expansion were placed in January 1937. It included 10 transmitters which were put into operation as follows :—

Lahore 5-kw mediumwave : December 16, 1937 ; Delhi 10-kw shortwave : December 16, 1937 ; Bombay 10-kw shortwave : February 4, 1938 ; Lucknow 5-kw mediumwave : April 2, 1938 ; Delhi 5-kw shortwave : June 1, 1937 ; Madras 10-kw shortwave : June 16, 1938 ; Madras 0.2-kw mediumwave : June 16, 1938 ; Calcutta 10-kw shortwave : August 16, 1938 ; Trichinopoly 5-kw mediumwave : May 16, 1939 ; Dacca 5-kw mediumwave : December 16, 1939.

Peshawar, which was taken over from the N.W.F.P. Government on April 1, 1937, was converted into a 10-kw mediumwave centre on July 16, 1942.

Broadcasting House.—Probably the largest centre of broadcasting activity in the East was completed in 1943. Architecturally, Delhi's newest and one of its most striking sites, it represents from the point of view of equipment, the latest in radio engineering. With its soft-shaded studios, each with an individual acoustic pattern to suit every variety of sound reproduction, its control room—a compact of up-to-the-second scientific efficiency - its dramatic control panels and its luxury-liner corridors between studios, it constitutes a landmark in every sense of the word in the history of Indian broadcasting.

A 100-kw transmitter capable of providing a broadcasting service to countries outside India which was opened on May 1, 1944 constituted another technical development of great importance in AIR's history.

The mediumwave regional transmitters provide a firstgrade service for local listeners located within 80-100 miles, and the shortwave regional transmitters a second-grade service for distant listeners within 500 miles of their range.

In the year 1942, India became an important operational base for the Far Eastern theatre of world War II. Consequently His Majesty's Government requested All India-Radio to install at Delhi five short wave transmitters including one 100-kw transmitter as an urgent war measure. These projects were undertaken and completed according to schedule.

The receiving centre at each broadcasting station is the link between the Central News Organisation at Delhi and the station itself and is further required by the station for relaying important broadcasts from Delhi.

Post-War Plan.—In November 1944 a Basic Plan for the development of broadcasting in India was drawn up and submitted to the Government of India as a post-war scheme. This was revised in September 1945 to include a scheme for External Broadcast and for the re-organisation of the Central Directorate and other units located at Delhi.

The objects of the scheme, as outlined in the basic plan, are :

(*i*) To provide two different broadcast services—an urban service in large cities and towns and over thickly populated areas of urban character, and a rural service for the whole of India on two different sets of transmitters.

(*ii*) (*a*) Under urban service to provide urban programmes in 19 major languages.

(*b*) Under rural service to provide rural programmes in 125 different rural languages and dialects spoken in the rural areas.

(*iii*) To provide an alternative urban service (zonal programme) over certain areas where the density of urban population is high.

This post-war broadcasting scheme, in general, seeks to provide, among other things, each of the seven lakh villages in India with a community receiving radio set and over 130 transmitting stations broadcasting instructional and entertainment programmes.

All-India Radio.—All India Radio is an "attached" office of the Department of Information and Arts, of the Government of India. Its head is the Director-General, All India Radio, whose office is located in Broadcasting House, Parliament Street, New Delhi. Other officers at headquarters: Chief Engineer, three Deputy Directors General (Administration, Home and External programmes), Director of Administration, Assistant Chief Engineer, Public Relations Officer, Assistant Director of Administration, Assistant Solicitor, Director of Programmes, and three Officers on Special Duty (Programmes, Administration and Engineering). Under the Directorate General, All India Radio, there are fourteen "subordinate offices", each with its own head of office. These are the nine Regional stations (each in charge of a Station Director); the Central News Organisation (under the Director of News and External Services); the Installation Department; the Research Department; the Indian Listener; Engineer-in-Charge, High Power Transmitters at Delhi, and the Monitoring Office at Simla.

Regional Stations.—These Stations are situated at Peshawar, Delhi, Lucknow, Calcutta, Dacca, Madras, Trichinopoly, Bombay and Lahore. Each Regional Centre consists of studios and office building, of transmitter installations and receiving centre installations. The number of studios at each centre varies, ranging from four studios at mediumwave centres to seven studios at the more important regional centres. At Delhi, however, because of its importance as All India Radio headquarters and centre for external broadcasts, fifteen studios have been provided in Broadcasting House. The technical facilities at the studios provide for simultaneous programme transmissions, channels for simultaneous rehearsals and tests, listening rooms, recording facilities, etc. The studios at Delhi, Bombay, Madras and Calcutta are air-conditioned.

At Bombay, Calcutta and Madras there are two transmitters each—one mediumwave and one shortwave. At Delhi, however, five transmitters are operated—a 20kw mediumwave transmitter for local services, a 10kw shortwave transmitter for regional services, a 10kw and a 5kw shortwave transmitters for the internal news services centralised at Delhi, and one 100kw transmitter for the external service. Peshawar, Lahore, Lucknow, Delhi and Trichinopoly possess only one mediumwave transmitter each. This gives a total of sixteen transmitters of All India Radio besides the five transmitters installed at Delhi at the request of His Majesty's Government. The studios are situated in the towns, and the transmitters as well as the receiving centres some distance from the towns, but connected to the studios by means of telephone lines.

Transmissions.—Most stations transmit for about nine to eleven hours a day. This is generally split up into three daily transmissions—morning, afternoon and (longest of all) evening.

Programmes.—Programmes, both Western and Indian, are planned by Station Directors with the assistance of their Programme Executives and Programme Assistants. These are drawn up well in advance of their schedule dates, and are published in fortnightly journals of All India Radio. These programmes are broadcast in English and thirteen Indian languages. English is broadcast in various degrees from all stations. The general programme consists of Indian music, talks, plays, feature programmes and programmes for women and children. Rural programmes are broadcast from all stations with the exception of Calcutta and Dacca. Educational broadcasts are given by Bombay, Calcutta, Madras, Trichinopoly, Delhi, Lahore and Dacca. European music is mainly concentrated at Delhi, Bombay, Calcutta and Madras and only a short period is allotted to it at the other stations.

Central News Organisation.—This is situated at Delhi and provides (*a*) news bulletins for Home programmes (in English and seven Indian languages) and (*b*) external programmes. All the news bulletins are prepared in the Central News Organisation and broadcast from the transmitters at Delhi set apart for news. Each station relays the bulletins suitable for its listening areas.

A few minutes are set apart at each station for local news. This period accommodates news of purely local interest.

The external broadcasts from the Central News Organisation consists of daily services in Mid-Eastern and Far-Eastern languages, programmes for Indians Overseas and programmes for the forces. All these are radiated from Delhi but they are distinct from the programmes of the Delhi (regional) station. Altogether fiftynine news bulletins a day in twenty-one languages—fourteen foreign and seven Indian—are broadcast from Central News Organisation at fixed times of the day. The languages used in External Services include Burmese, Thai, Kuoyu, Amoy, Cantonese, Japanese, French Arabic, Persian, Afghan-Persian, English, Hindustani, Tamil, Gujerati, Tonkinese, Cochin-Chinese and Italian.

Installation Department.—This Department is in charge of the Installation of transmitters, studios and receiving centres. The Research Department deals with all practical technical problems concerning reception of transmissions which require careful study and constant vigilance. Both these departments are situated in New Delhi but the Installation Department has an itinerant staff working on the location required.

Radio Journals.—The office of the Editor, "The Indian Listener", who is also in charge of "Awaz" (Urdu) and "Sarang" (Hindi), is situated in New Delhi. There are also two other radio journals; "Vanoli" (Tamil) which is in charge of the Station Director, Trichinopoly, and "Betar Jagat" (Bengali) which is in charge of the Station Director, Calcutta.

Monitoring Office.—In order that all news bulletins should be prepared with a knowledge of what is being broadcast by other important stations of the world a Monitoring Office has been established at Simla.

Public Relations.—For establishing and maintaining contact between All India Radio and its listeners there is a Public Relations Officer at headquarters and a Liaison Officer and a Listener Research Officer at each Station.

Advisory Committees, established at the nine broadcasting centres in consultation with the Provincial Governments, keep the Director General, All India Radio, in touch with local public opinion in the matter of programme construction and advise him on such matters. For advising the Director General All-India Radio, on the choice of a generally acceptable vocabulary for Hindustani, a Hindi-Urdu Standing Advisory Committee was formed in 1946. The first meeting of the Committee was held in May and June 1946.

Licences.—Broadcast receiver licences are issued at all head and sub-post offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the tribal areas of the North-West Frontier Province. Licences for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applications, a considerable number have been issued. The number of traders in wireless apparatus who are required to take out special import licences has increased considerably during recent years. Broadcast Receiver Licences are issued to Municipalities or other public bodies for the reproduction of broadcast programmes in public places by the Postmaster-General of the Province. A licence issued for this purpose covers the use of one wireless receiver and any number of loudspeakers at one place only but does not cover any external wiring erected outside the premises of the licensee.

A commercial Broadcast Receiver Licence is, however, necessary in the case of clubs, institutions, messes, etc., for reproducing broadcast programmes at subscriptions dances, concerts, bazaars, etc., to which the public are admitted. This licence is also issued by the Postmaster-General at a fee of Rs. 25 and is valid for one year.

While the number of wireless receiver Licensees in India has increased, the total for British India of 2,05,130 at the end of March 1946 is negligible, when one considers the vast population, about 388,097,955, and when one compares it with the progress in Europe, America or Japan where it has become an indispensable dynamic social institution.

Taking the figures of wireless licences, there was an increase of 11,000 between January 1933, and July 1935. The number in April 1937 was 43,351, in April 1938, 53,810, in April 1939, 73,698, in April 1940, 100,388, in April, 1941, 1,28,087, in April 1942, 1,56,793, in April 1943, 1,68,236, in April 1944, 1,81,848, and 2,05,130 in April 1946. At the end of March 1946 there were 47,492 licence holders in the Punjab and North-West Frontier Province Postal Circle which has the largest number in India, the Bombay Postal Circle coming next with 45,144.

The growth of Broadcast receiver licences at the end of March of each year beginning with 1933 is given below which will indicate the interest evinced in radio :

Year	*Licences.*
1933	9,275
1934	12,037
1935	17,881
1936	28,066
1937	42,152
1938	52,883
1939	72,282
1940	97,597
1941	1,25,847
1942	1,55,735
1943	1,67,123
1944	1,80,660
1945	1,99,589
1946	2,05,130

Radio Imports—The imports of wireless apparatus into India has increased rapidly in recent years, though lately there has been some decline. Imports increased in value from Rs. 11 lakhs in 1933-34 to Rs. 47.7 lakhs in 1937-38. The value for 1938-39 was Rs. 41.1 lakhs, in 1939-40, Rs. 49.8 lakhs and in 1940-41, Rs. 44.3 lakhs. In 1941-42 it rose to Rs. 52.5 lakhs while in 1942-43, it fell to Rs. 30.7 lakhs owing to shipping restrictions, in 1943-44 to 19.9 lakhs and in 1944-45 to 13.2 lakhs. For the nine months 1st April to 31st December 1945, the total value of imports was Rs. 15·0 lakhs.

A feature of the imports statistics is the growth of importations from the United Kingdom, which now heads the list of countries supplying wireless apparatus to India. The United States come second.

During the year 1934-35, imports from the United Kingdom fell by over a lakh from Rs. 5,71,971 to 4,66,316 while those from the United States of America increased by 6½ lakhs from Rs. 1,78,944 to 8,30,348. In 1937-38 imports from the United Kingdom increased to Rs. 15,54,884 and in 1938-39 to Rs. 16,87,726. Imports from the U.S.A. in 1937-38 amounted to Rs. 15,36,217 and in 1938-39 to Rs. 12,63,017. In 1939-40 imports from the U.K. were valued at Rs. 17,35,318 whereas from the U.S.A. at Rs. 15,95,349. In 1940-41 imports from the U.K. were valued at Rs. 29,19,771 and those from the U.S.A. at Rs. 17,12,827. In 1941-42 imports from the U.K. were valued at Rs. 29,09,344 and those from the U.S.A. at Rs. 18,82,353. In 1942-43 imports from the U.K. were valued at Rs. 16,61,497 and those from the U.S.A. at Rs. 7,78,564. In 1943-44 imports from the U.K. were valued at Rs. 13,13,323 and those from the U.S.A. at Rs. 5,58,874. In 1944-45, imports from the U.K. were valued at Rs. 6,39,488 and those from U.S.A. at Rs. 5,87,150. For the nine months, 1st April 1945 to 31st December, 1945. total imports from the U.K. were of the value of Rs. 6,90,281 and from the U.S.A. Rs. 6,92,084

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks.—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

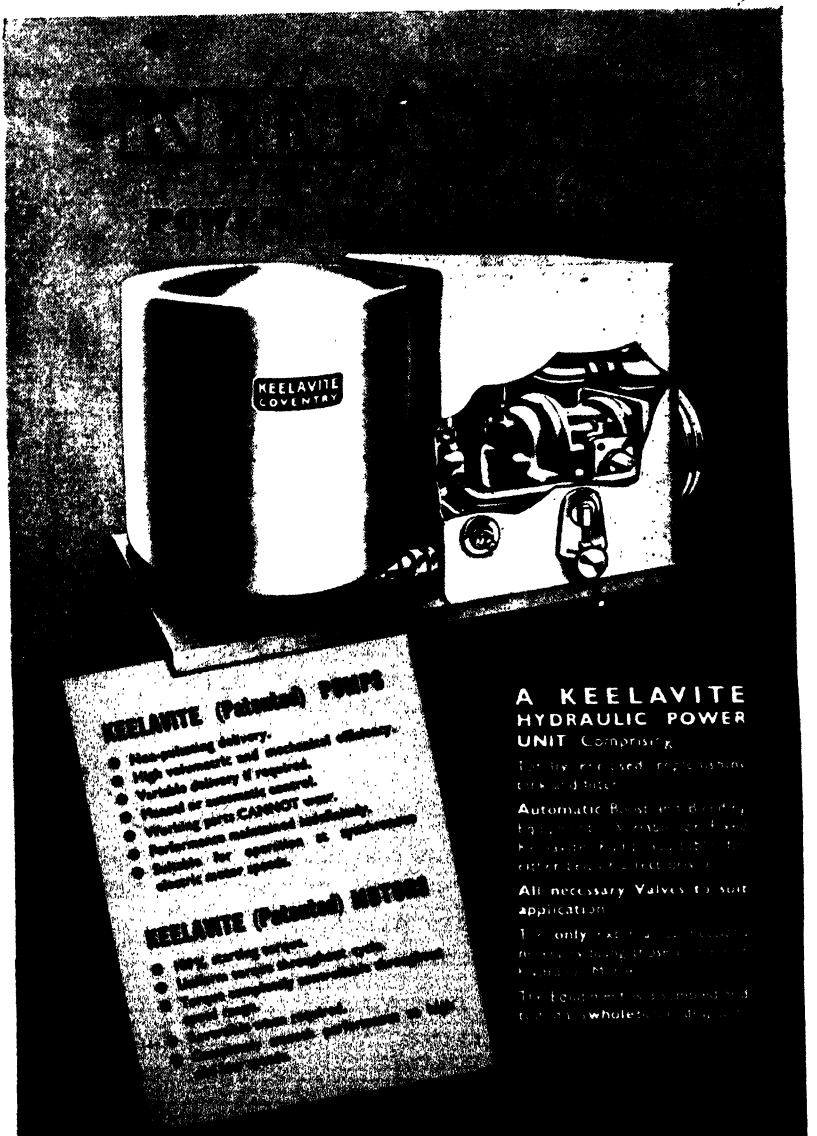
This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India.—Under the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934 which came into force from 1st April 1935 the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. The Central Board of Directors shall consist of:—

(*a*) the presidents, vice-presidents and the secretaries of the Local Boards;
(*b*) one person elected from amongst the members by each Local Board;
(*c*) a Managing Director and a Deputy Managing Director appointed by the Central Board;
(*d*) not more than two non-officials, nominated by the Central Government.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.



The Central Government shall nominate an officer of the Crown to attend the meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 3½ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11¼ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 6,07,50,000 and the Balance Sheet of 31st December 1945 showed the deposits at Rs. 259,37,45,355 and Cash Rs. 41,59,86,716 with a percentage of cash to liabilities of 16·03.

Agreement with Reserve Bank of India.—The Bank has entered into an agreement with the Reserve Bank of India which will remain in force for 15 years and thereafter until terminated after five years' notice on either side. Provisions contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are:—

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of India Act, 1934, and there is no branch of the Banking Department of the Reserve Bank of India.

In consideration of the performance of the Agency duties, the Reserve Bank of India shall pay to the Imperial Bank of India as remuneration a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent. on the first 250 crores and 1/32 per cent. on the remainder of the total of the receipts and disbursements

NEW DELHI		

dealt with annually on account of Government. As for the remaining five years the remuneration to be paid to the Imperial Bank shall be determined on the basis of the actual cost to the Imperial Bank of India, as ascertained by expert accounting investigation.

The first ten years of the agreement having come to a close on the 31st March 1945, the rates of remuneration were revised with effect from the 1st April 1945 for a further period of five years. According to the revised rates, the commission payable to the Imperial Bank on the turnover of Government account is to be calculated at 1/10th of one per cent. on the first 150 crores (in place of the first 250 crores), 1/32nd of one per cent. on the next 150 crores (in place of the remainder), 1/64th of one per cent. on the next 300 crores, and 1/128th of one per cent. on the remainder of the total receipts and disbursements dealt with annually on account of Government.

In consideration of the maintenance by the Imperial Bank of India of branches not less in number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall, until the expiry of 15 years, make to the Imperial Bank the following payments :—

(*a*) during the first five years of this agreement Rs. 9 lacs per annum ;
(*b*) during the next five years of the agreement Rs. 6 lacs per annum ; and
(*c*) during the next five years of the agreement Rs. 4 lacs per annum.

In Schedule 1, Part 1, of the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are:—

(1) Advancing money upon the security of.—

(*a*) Stocks, etc., in which a trustee is authorised by act to invest trust moneys and shares of the Reserve Bank of India.

(*b*) Securities issued by State aided Railways, notified by the Central Government.

(*c*) Debentures, or other securities issued under Act, by, or on behalf of a district or municipal board or under the authority of any State in India.

(*d*) Debentures of companies with limited liability registered in India or elsewhere.

(*e*) Goods, or documents of title thereto, deposited with, or assigned to the Bank.

(*f*) Goods hypothecated to the Bank against advances.

(*g*) Accepted Bills of Exchange or Pro. Notes.

(*h*) Fully paid shares of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in 'a' to 'f' and, if authorised by the Central Board, in 'g.'

(2) Selling of promissory notes, debentures, stock-receipts, bonds, annuities, stock, shares, securities or goods or documents of title to goods deposited with or assigned to the Bank as security for advances.

(3) With the sanction of the Provincial Government, advancing money to Courts of Wards upon security of estates in their charge for the period not exceeding nine months in the case of advances relating to the financing of seasonal agricultural operations or six months in other cases.

(4) Drawing, accepting, discounting, buying and selling of bills of exchange and other negotiable securities.

(5) Investing the Bank's funds in the securities referred to in (1) *a*, *b*, *c* and *d*.

(6) Making, issuing and circulating of bank post-bills and letters of credit to order or otherwise than to the bearer on demand.

(7) Buying and selling gold and silver.

(8) Receiving deposits.

(9) Receiving securities for safe custody.

(10) Selling and acquiring such properties as may come into the Bank's possession in satisfaction of claims.

(11) Transacting agency business on commission and the entering into of contracts of indemnity, suretyship or guarantee.

(12) Acting as Administrator, for winding up estates.

(13) Drawing bills of exchange and granting letters of credit payable out of India.

(14) Buying of bills of exchange payable out of India, at any usance not exceeding nine months in the case of bills relating to the financing of seasonal agricultural operations or six months in other cases.

(15) Borrowing money upon security of assets of the Bank.

(16) Subsidizing the pension funds of the Presidency Banks; and

(17) Generally, the doing of the various kinds of business including foreign exchange business.

The principal restrictions placed on the business of the Bank in Part 2 are as follows:—

(1) It shall not make any loan or advance:—

(*a*) For a longer period than six months except as provided in clauses 3 and 14 above;

(*b*) upon the security of stock or shares of the Bank;

(*c*) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons of firms unconnected with each other in general partnership.

(4) Discounts cannot be made or advances given against any security not being a security in which a trustee may invest trust money under the Indian Trusts Act, 1882.

* Govt. Deposits were taken over by Reserve Bank as from 1st April 1935.

Reserve Bank.—The Reserve Bank of India Act was passed by the Legislative Assembly and received the assent of the Governor-General on 6th March 1934 and the Bank began to function from 1st April 1935. From this date, the Reserve Bank took over the management of the Currency Department of the Government of India by the creation of a special department known as the Issue Department. The assets of the Gold Standard Reserve were transferred to the Bank and were combined with the assets of the Currency Department. From July 1st the Banking Department was opened and the scheduled banks deposited the required percentage of their demand and time liabilities. The Clearing House was transferred from the Imperial Bank to the Reserve Bank as from this date.

The share capital of the Reserve Bank is 5 crores of Rupees in shares of Rs. 100 each, fully paid up. The Reserve Fund of Rupees five crores is provided by Government to the Bank in the form of Government Rupee Securities.

The Bank maintains share registers at its offices at Bombay, Calcutta, Delhi, Madras and Rangoon.

Management.—The general superintendence and direction of the affairs and business of the Bank is entrusted to a Central Board of Directors which exercises all powers and does all acts and things which may be exercised and done by the Bank. The Board is composed of:—

(*a*) A Governor and two Deputy Governors appointed by the Central Government after consideration of the recommendations made by the Board.

(*b*) Four Directors nominated by the Central Government.

(*c*) Eight Directors elected on behalf of the shareholders on the various registers.

(*d*) One Government official nominated by the Central Government.

The Governor and Deputy Governors are the executive heads, and hold office for such term not exceeding five years as the Central Government may fix when appointing them, and are eligible for re-appointment. A Local Board is constituted for each of the five areas.

Business which the Bank may transact.—The Bank is authorised to carry on and transact the following commercial business, *viz*:—The accepting of money on deposit without interest; the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions; the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lac; the making of advances to the Central Government and to Provincial Governments repayable in each case not later than three months from the date of making the advance; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase; the purchase and sale of securities of the Government of India or of a Provincial Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

The Bank is authorised to act as Agent for the Secretary of State in Council, the Central Government or any Provincial Government or State in India for the purchase and sale of gold and silver; for the purchase, sale, transfer and custody of bills of exchange, securities or shares; for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares; for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Right to issue Bank Notes.—The sole right to issue bank notes in British India is vested in the Reserve Bank and at the commencement the Bank shall issue currency notes of the Government of India supplied to it by the Central Government and on and from the date of such transfer the Central Government shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

Obligation to Sell or Buy Sterling.—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1*sh.* 5 49/64*d.* and not higher than 1*sh.* 6 3/16*d.* respectively; provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds.

Publication of the Bank Rate.—The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

The full text of the Reserve Bank Act is reproduced elsewhere in the Year Book.

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far *each* Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India; the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets latest available of the undernoted Banks will give some idea of this:—

LIABILITY OF BILLS OF EXCHANGE REDISCOUNTED AND STILL CURRENT.

	£
Chartered Bank of India, Australia and China	369,000
Eastern Bank, Ltd.	7,580,000
Mercantile Bank of India, Ltd. ..	164,000
National Bank of India, Ltd. ..	693,000
	8,806,000

The above figures do not of course relat to re-discounts of Indian bills alone, as th Banks operate in other parts of the world als but it may safely be inferred that bills drawn i India form a very large proportion of the whol

The bills against exports are largely drawn a three months' sight and may either be "clean" or be accompanied by the documents relatin to the goods in respect of which they are drawr Most of them are drawn on well-known firm at home or against credits opened by Bank or financial houses in England and bearing a they do an Exchange Bank endorsement the are readily taken up by the discount house and Banks in London. Any bills purchase in India are sent home by the first possibl Mail so that presuming they are rediscounte as soon as they reach London the Exchang Banks are able to secure the return of thei money in about 16 or 17 days instead of havin to wait for three months which would be th case if they were unable to rediscount. I must not be assumed however that all bill are rediscounted as soon as they reach Londo as at times it suits the Banks to hold up th bills in anticipation of a fall in the Londo discount rate while on occasions also the Bank prefer to hold the bills on their own accoun as an investment until maturity.

The Banks place themselves in funds in Indi for the purpose of purchasing export bills i a variety of ways of which the following ar the principal:—

(1) Proceeds of import bills as they mature
(2) Sale of drafts and telegraphic trans fers payable in London and elsewher out of India.
(3) Purchase of Council Bills and Telegra phic Transfers payable in India fron the Secretary of State.
(4) Imports of bar gold and silver bullion
(5) Imports of sovereigns from London Egypt or Australia.

The remaining business transacted by th Banks in India is of the usual nature and nee not be given in detail.

The following is a statement of the position of the various Exchange Banks carrying on busines in India as it appears from the latest available Balance sheets:—

In Thousands of £

Name.	Capital.	Reserve.	Deposits.	Cash and Investments.

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India; and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years; really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events confidence has been largely restored. But in April 1923 the Alliance Bank of Simla failed. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The end of June 1938 witnessed a banking crisis in South India in the failure of the Travancore National & Quilon Bank Ltd. The bank held a very important position among the South Indian joint stock banks with a paid-up capital of Rs. 25 lakhs. The total resources were said to be large and the bank had 78 branches. As soon as the news of the failure was received, the Reserve Bank sanctioned special credit limits to banks in South India and these limits were later doubled. Although the acuteness of the crisis soon subsided, an underlying feeling of nervousness continued until the close of the year.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :— *In Lakhs of Rupees.*

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people; but this is hardly fair to the people known as "shroffs" in banking circles; as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close

touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct, and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation; if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money; and it is at this point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, *viz.*; (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shown that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or 1½% is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the whole of India until the 4th of July 1935 when the right to fix the official Bank rate was exercised by the Reserve Bank. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discount are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is some times nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rates during the last 18 years:—

Year.	1st Half-year.	2nd Half-year.	Yearly average.
1928	6·945	5·456	6·2
1929	6·878	5·788	6·333
1930	6·508	5·277	5·892

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, Reserve Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Reserve Bank at Calcutta, Bombay, Madras, Karachi and Rangoon and by the Imperial Bank at Colombo and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below :—

The Railways.

It was only after the railways had proved to be a definite asset to the nation in England that their construction in India was contemplated. And then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (32 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853; wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India readily available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway and now part of the East Indian Railway; (7) the Sind, Punjab and Delhi, now merged in the North-Western Railway; and (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was a five per cent. return coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22*d.* to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the civil administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attribute this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions, the result was that by 1869 the deficit on the Railway budget was Rs. 166½ lakhs. Seeking for some more economical method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87); the Southern Mahratta (1882); and the Assam-Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal and North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Indian States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Indian State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantej, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent. trustee stocks they were revised in 1896 to provide for an absolute guarantee of 3 per cent. with a share of surplus profits; or rebate up to the full ex-

tent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab, Assam and Bombay.

Railway Profits begin.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic; both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western Railway. Owing to the burden of maintaining the unprofitable Frontier lines; this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £ 2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway earnings continued to increase steadily till they reached a figure of over £10 millions in 1918-19. This era of profits ended with the close of the year 1920-21 and in 1921-22 there was a loss of over £6 millions. These changes in the fortunes of the railways affected the Budget of the Central Government rather seriously and in 1924-25 the Railway finances were separated from the General Budget. The terms of the separation are referred to in a later paragraph while the profits of the railway in the years from 1924-25 onwards are given below:

Year.	Contribution to General Revenues.	Transferred to Railway Reserve Fund. †	Total Gain or loss. *

*Figures preceded by a — indicate a loss.

1933–34 is the first year to show some signs of recovery since the depression. The earnings of the State-owned lines increased from Rs. 84 crores in 1932-33 to Rs. 86 crores in 1933-34 and to Rs. 95·48 crores in 1936-37; but the net result of the year's working showed a gain of Rs. 121 lakhs.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend guaranteed at 22*d.* per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian; the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually worked it. Under these new conditions the East Indian Railway Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase; a clear profit of nearly ten millions. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed, but the poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, has for some time kept this scheme in the background.

There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre-gauge systems of Northern and Southern India will also probably one day be connected and Karachi given direct broad-gauge connection with Delhi, a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape; to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

Government Control and Re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was

given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" which was being printed as appendix 'B' to Volume I of the Annual Report by the Railway Board on Indian Railways upto the Report for the year 1938-39. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(*a*) the directly controlling authority of the State-worked systems aggregating 21,356 miles on the 31st March 1943,

(*b*) the representative of the predominant owning partner in systems aggregating 19,169 miles,

(*c*) the guarantor of many of the smaller companies and

(*d*) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. The Railway Board as then reconstituted consisted of the Chief Commissioner, the Financial Commissioner and two members. The proposal of the Acworth Committee that the Indian Railways should be sub-divided into 3 territorial divisions with a Commissioner in-charge of each was not accepted and the work of the Members of the Board was divided on the basis of subjects.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and 11 Deputy Directors and 2 Assistant Directors working under them.

The necessity of some central organisation to co-ordinate the publicity carried out on railways and to undertake work on the many forms of railway publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The Bureau was a great success and the organisation was made permanent from January 1st, 1929. In the slump of the 4th decade of the present century, however, it was found difficult to maintain this. Moreover when the war of 1939 came on, it had its own effects. The Central Publicity Bureau was ultimately shifted to Calcutta on the 1st July, 1940, and amalgamated with the Publicity Offices of the East Indian and Eastern Bengal now the B. & A. Railways.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

During the depression which began with the 'thirties it was decided to hold in abeyance many superior posts including those of Member, Traffic, Member, Engineering; Director, Civil Engineering and Director, Mechanical Engineering. Some of these posts have since been

revived and on the recommendations of the Indian Railway Enquiry Committee—presided over by Sir Ralph Wedgewood—the Central Accounts organisation of railways was taken over by the Railway Board. The present superior staff in the railway Board, therefore, consists of the Chief Commissioner, the Financial Commissioner, 2 Members, 6 Directors, a Secretary and 15 deputies and assistants.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established in 1930 under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The technical Officer under the Railway Board was transferred to this office as a Deputy Controller. This office was made permanent in 1935.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the General Managers and the Controller of Railway Accounts has been made a Director under the Railway Board.

Management.

There are two important systems of administration organisation on Indian Railways—the Divisional system and the Departmental system. In the divisional system the railway is divided into divisions, each under a Divisional Superintendent, who in turn has officers of all departments like Civil Engineering, Transportation, Commercial, Accounts, Stores, the running and operation portion of Mechanical Engineering and on some railways even the Medical, working under him in his division. In the departmental system the railway is divided into smaller portions called districts by each department (and districts of the various departments need not be co-terminus) and each of these districts is under a District Officer reporting direct to the head of his department in the Headquarters Office.

Clearing Accounts Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula and B. B. & C. I. Rlys. later.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3⅜ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connecting Assam with the Rajputana lines and Kathiawar and another system in Southern India serving large tracts of the Bombay and Madras presidencies and the States of Hyderabad, Mysore and Travancore. These two systems are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaveri Railway, cannot be long delayed. Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

State versus Company Management.—The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the

great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed.

The subject has also been discussed on many occasions in the Central Legislature. The Government of India have, however, been following a uniform policy of increasing the scope of direct State-management. The East Indian Railway was taken over for State-management from 1st January, 1925, and since then the policy has been continued, the latest additions to state-management being the Bengal and North Western and Rohilkund and Kumaon Railway which were taken over from the 1st January 1943. From the same date the two were amalgamated and the combined system named as the Oudh and Tirhut Railway.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the Company, was acquired and its management taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council:—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year *plus* one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(*a*) forming reserves for,

(*i*) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(*ii*) depreciation,

(*iii*) writing down and writing off capital,

(*b*) the improvement of services rendered to the public,

(*c*) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, *i.e.*, will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Standing Finance Committee for Railways on some date prior to the date for the discussion of the demand for grants for railways.

This resolution was examined by the Committee appointed by the Legislative Assembly on 3rd March 1924 to examine the proposals for the separation of railway from general finances. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 3rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 3rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The principles of allocation of surplus laid down in the above resolution has since been amended by a subsequent resolution passed by the Legislative Assembly on 2nd March 1943 which provided, *inter alia* that from 1st April 1943 so much of the convention as provides for the contribution and allocation of surplus to general revenues ceases to be in force and until a new Convention is adopted by the Assembly, the allocation of the surplus on commercial lines between the railway reserve and general revenues shall be decided each year on consideration of the needs of the railways and general revenues, the loss, if any, on strategic lines being recovered from general revenues.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system is invariably in existence on those railways which have adopted the Divisional organisation. It is also being adopted by some railways where the general organisation is still on the Departmental basis.

The Pope Committee.

When the railway finances were in a bad way, a Committee under the chairmanship of Mr. F. A. Pope, General Executive Assistant to the President of the L. M. S. Railway, was formed to investigate and inaugurate a detailed analysis of every important achievement of railway operation. The Committee started work during 1932-33 and among other things, perfected a system of detailed investigation into individual items of railway working which came to be known as 'Job Analysis.'

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

The most important recommendations of Mr. Pope's second report related to:—

1. Intensive use of locomotives.
2. Intensive use of coaching stock.
3. Intensive use of machinery and plant.
4. Disposal of Uneconomical wagons.
5. Combining resources between railways.
6. Handling and transport of smalls traffic and of traffic to be transhipped at break of gauge stations.
7. Ticketless travel.
8. Methods of increasing earnings.

As a result of the 1st report of the Pope Committee, special 'Job Analysis' Organisations, were set up on most of the important Indian Railways. Their main purpose was to investigate in detail by special methods individual aspects of railway working and suggest means whereby economies may be achieved or the efficiency of operation increased.

Having overhauled the methods of working on the railways by stages, these organisations have since been abolished.

Indian Railway Enquiry Committee.

As a result of the recommendation of the public Accounts Committee the Indian Railway Enquiry Committee was appointed in October 1936. This Committee was under the Chairmanship of Sir Ralph L. Wedgewood, C.B., C.M.B., Chief General Manager of the London North Eastern Railway. Its terms of reference were:

To examine the position of Indian State-owned railways and to suggest such measures as may, otherwise than at the expense of the general budget,

(i) secure an improvement in net earnings, due regard being paid to the question of establishing such effective co-ordination between road and rail transport as will safeguard public investment in railways, while providing adequate services by both means of transport; and

(ii) at a reasonably early date, place railway finances on a sound and remunerative basis.

The report was submitted in June 1937 and duly considered by the Railway Board. Early action was taken to implement such of the recommendations as could be accepted without further examination. Where special investigation was considered necessary this was arranged for.

Rates Advisory Committee.

The Railway Rates Advisory Committee continued during the year 1942-43 with Khwaja Sir Mohamed Noor as its President.

The functions of the Committee are to investigate and make recommendations on :—

(1) Complaints of "undue preference"—Section 42(4) of the Indian Railways Act;

(2) Complaints that rates are unreasonable in themselves;

(3) Complaints or disputes in respect of terminals—Section 46 of the Indian Railways Act;

(4) Complaints in respect of conditions as to packing of articles specially liable to damage in transit or liable to cause damage to other merchandise;

(5) Complaints in respect of conditions as to packing attached to a rate; and

(6) Complaints that railways do not fulfil their obligations to provide reasonable facilities under Section 42(3) of the Indian Railways Act.

Closer Contact with the Public.

The closest possible contact between the Railways and the business community was maintained by means of the Central and Local Advisory Committees, which were first introduced in 1923, meetings with Chambers of Commerce, Trade Associations and personal contact by railway officers with business firms.

Inauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the electrified main line section of the G. I. P. Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bhore Ghat Reversing Station.

Output of Railway-owned Collieries.—The output of Railway owned collieries during 1944-45 was 2,946,299 tons. This represents an increase of 17 per cent over the output of 1931-32.

During the year 1944-45, the output of Railway Collieries represents 32 per cent of the total coal consumed on locomotives on Indian Railways.

Number of Staff.—The total number of employees on Indian Railways at the end of the year 1944-45 was 9,62,009 as compared with 701,307 at the end of 1938-39. The following table shows the number of employees by Communities on 31st March 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944 and 1945 :—

* Revised figures: Due to changes made by the Railway administration in the figures published last year.

Indianisation.—Superior services, following the recommendation of the Lee Commission that recruitment in India be advanced as soon as practicable up to 75 per cent of the total number of vacancies in the Superior Services of the Railways, the various Railway Companies managing State and other railway lines followed the government lead. As far as concerns State managed Railways, the direct recruitment during the year included no European while 57 Indians were appointed.

Accidents.—The following table shows the number of passengers, railway servants and other persons killed and injured in accidents on Indian Railways, excluding casualties in railway workshops, during the year 1944-45 as compared with the previous year :—

Cause.	Killed.		Injured.	
	1943-44.	1944-45.	1943-44.	1944-45.
A.—Passengers.				
In accidents to trains, rolling-stock, permanent way, etc.	170	40	493	234
In accidents caused by movements of railway vehicles exclusive of accidents to trains ..	539	664	2,101	2,346
In accidents on railway premises not connected with the movement of railway vehicles.. ..	..	2	33	56
Total ..	709	706	2,627	2,636
B—Railway servants.

Grand Total ..	4,373	4,239	26,510	27,774

Amenities for Passengers.—Railway administration in peace time are constantly endeavouring to make railway travel, especially in the lower classes, more attractive and the amenities afforded necessarily cover a large and varied ground. Improved booking facilities by setting up additional booking offices and out-agencies, provision of clean and adequate accommodation in trains, avoidance of overcrowding, arrangements for the vending of wholesome refreshments at reasonable rates in railway premises and trains, amenities to the public waiting at stations in the shape of waiting rooms and covered platforms and measures for ensuring the security of women passengers are some of the main directions in which progress continues to be made from year to year. But both by the size and scale of arrangements required and its primary necessity to the passenger, the most important of all is the adequate supply of wholesome drinking water to the travelling public, particularly in the hot weather season, for which, in addition to the existing permanent arrangements, a hot weather (special) establishment is drafted every year.

THE CHIEF RAILWAYS IN INDIA.

Bengal Assam.

The Assam-Bengal Railway; which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It was worked under a limited guarantee by a company.

The Eastern Bengal Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway; which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

The Assam Bengal Railway has come under State management and has been amalgamated with the E. B. Rly. with effect from 1st January, 1942 and the combined system is named as Bengal Assam Railway.

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatisgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

The State took over the line from October 1, 1944.

Bombay, Baroda and Central India.

The Bombay Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad-gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

The State has taken over the management with effect from January 1st, 1942.

1944-45

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholder by annuities; but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhund Railway was amalgamated with it.

(*Mileages are route mileages.*)

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15¼ miles on the Bhore Ghat and 9¼ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management.

Mileage open	.. ..	3,530.17
Capital at charge	.. Rs.	1,16,71,51,000
Net earnings	.. Rs.	15,98,96,000
Earnings per cent.	.. ..	13.70%

Madras and Southern Mahratta Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula

Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company; a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and re-leased to a large Company called the Madras and Southern Mahratta Railway Company.

The contract was terminated and it was decided to bring the railway under State management on the 1st April, 1944.

1944-45

Mileage open	..	2,940.31
Capital at charge	Rs.	56,28,71,000
Net earnings	Rs.	5,26,80,000
Earnings per cent.	..	9.36%

North-Western.

The North-Western Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western Railway. It is the longest railway in India under one administration.

Mileage open	..	6,881.27
Capital at charge	Rs.	1,51,89,72,000
Net earnings	Rs.	14,91,22,000
Earnings per cent.	..	9.82%

Oudh Tirhut.

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Bengal and Assam Railway at Katihar and the East Indian Railway at Benares and Mokameh Ghat.

The Rohilkund and Kumaon Railway was constructed on the metre-gauge and opened for traffic in 1884. Later on extensions were added between 1906 and 1916.

The Bengal and North Western and the Rohilkund and Kumaon Railway have come under State-management from 1st January 1943. From the same date the two were amalgamated and the combined system is named as Oudh Tirhut Railway.

Mileage open	..	2,683.94
Capital at charge	Rs.	28,56,99,000
Net earnings	Rs.	81,40,000
Earnings per cent.	..	2·85%

South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line ; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

The contract was terminated on 1st April, 1944, when the State took over the management.

Mileage open	..	2,349.25
Capital at charge	Rs.	48,56,08,000
Net earnings	Rs.	4,08,54,000
Earnings per cent.	..	8.41%

The Indian States.

The principal Indian State Railways are the following :—

Bikaner State.

The line is owned by the Bikaner Government. It was worked by the Jodhpur-Bikaner Railway Administration upto 31-10-1924, when it was taken over by the Bikaner Government.

Mileage open 883.05

Jodhpur.

The railway, which was worked by the Jodhpur-Bikaner Railway Administration upto 31-10-1924, is now worked by the Jodhpur Durbar. At present the Railway consists of 318.74 miles of British section and 806.95 miles of Durbar lines.

Total mileage open 1,125.69

Mysore State.

These lines are the property of the Mysore Government. Of the 9 lines 5 sections were worked by the Madras & Southern Mahratta Railway. Of these 3 lines were taken over by the Mysore Government from 1-10-1919 and the other two from 1-1-1938. It consists of 609.47 miles of metre-gauge and 128.80 miles of narrow-gauge lines.

Total mileage open 738.27

H. E. H. The Nizam's State.

The Railway was constructed by a company under a guarantee from the Hyderabad State, which took over the management from 1-4-1930. It consists of 57·82 miles of British sections and 1302·16 miles of Hyderabad State lines.

Total mileage open 1,359.98

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes have been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 20 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20·05 miles of which 7·19 will be upon the dry land of the various lands, and 12·86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong Valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft. aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition.

Main results of working of all Indian Railways treated as one system.

Mines and Minerals.

Mineral Production in Inter-War Period

A general tone of stability was noticeable in the mining industry considered as a whole during the period intervening between the two wars. While the output of some minerals showed a decrease, others showed an increase. Among the minerals whose output was on the increase, coal, iron ore, manganese, petroleum and mica stand out prominently.

The annual output of coal at the outbreak of the present war exceeded 25,000,000 tons and this output has raised India to the eighth rank among the coal producing countries of the world. During the present war, the production could not keep pace with the industrial activity in the country owing to various factors, including shortage of labour.

The production of iron ore which was hardly 900,000 tons in 1921 had by 1938 reached the neighbourhood of 3,000,000 tons, the bulk of which was for consumption by the steel industry in India.

India's normal annual output of manganese is slightly more than a million tons, representing roughly a third of the world production, but during the slump period production declined to about 200,000 tons, equivalent to a fifth of the 1929 figure; in terms of value the proportion was a great deal smaller. In fact manganese was the mineral most seriously affected by the last depression; but the increased foreign and internal demand from iron and steel industry in later years had so greatly accelerated the recovery in prices in this case that by 1938 the value of output had risen to Rs. 4 crores from Rs. 2 crores in 1929 although the volume of output was the same in both the years.

The history of the petroleum industry in India is one of continued development. Starting from a modest figure of 9,500,000 gallons, the production in the Punjab and Assam oilfields rose steadily to 87 million gallons in 1938 notwithstanding the ups and downs witnessed in world production.

With the output nearly quadrupled in the course of 20 years, India had by 1938 become the world's biggest supplier of mica and her production of nearly 6,000 tons in that year represented nearly 80 per cent. of the estimate world production. The present war gave a further fillip to the activity.

The publication of statistics regarding India's mineral production has been discontinued since the outbreak of the war as a war-measure. But the demands made by the war has resulted in a substantial increase in the mineral output. 92,694 workers were employed in mines in British India in 1943 as compared with 55,123 in 1939, the corresponding figures for Indian States being 6,583 and 5,090. The total value of Minerals produced in the country during 1937 and 1938 (which are the latest available) is as under :—

COAL.

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwana coal-fields. Outside Bengal and Bihar and Orissa the most important mines are those at Singareni in Hyderabad, and in Central Provinces but there are a number of smaller mines which have been worked at one time or another.

Provincial production of Coal during the years 1937 *and* 1938 *(which are the latest statistics available).*

Average ..	..	..	3 1 11	..	..	3 12 1

In 1938 the total production of Indian Coal rose to 28,342,906 tons or 3,306,622 tons (13·2 per cent.) increase on the output of the previous year and is thus the highest figure yet recorded. In the years 1931, 1932 and 1933 there was a continuous decrease in production of coal from the peak figure of 23,803,048 tons in 1930. In 1934 the direction of change was reversed and production increased by 2,268,284 tons (or 11·4 per cent.) from 19,789,163 tons in 1933 to 22,057,447 tons in 1934. In 1935 the increase continued but at a less rate by 959,248 tons (or 4·3 per cent.) to 23,016,695 tons. In 1936 there was again a decrease by 405,874 tons (1·8 per cent.) to 22,610,821 tons, followed in 1937 by an increase of 2,425,565 tons (10·7 per cent.) to 25,036,386 the highest output till then, but which has now been greatly exceeded. This increase was shared by all provinces except Orissa, which showed a slight decrease.

The increased output of 13·2 per cent. in 1938 was accompanied by an increase of 36·2 per cent. in the total value of the coal produced in India to Rs. 10,64,23,835 (£7,942,077) in 1938, from Rs. 7,81,02,439 (£5,872,364) in 1937.

There was also an increase of 10 annas 2 pies in the pit's month value per ton of coal for India as a whole, namely from Rs. 3-1-11 to Rs.3-12-1. This increase in value was recorded from all provinces without any exceptions. In opposition to the trend of 1934, 1935 and 1936, the exports of coal from India in 1937 have more than doubled as compared with 1936, deducting Burma's share. Since the separation of Burma on the 1st April, 1937, it appears in these statistics as a foreign country, and in 9 months it has taken a little more than Ceylon did in the year.

The average number of persons employed in the coalfields during the year showed an increase of 16·5 per cent. The average output per person employed showed a decrease from the high figure of 130·2 tons in 1934, which is practically the same as the figure for 1929, namely 130·4 tons, the highest figure recorded, to 124·92 tons in 1938 which is less than the figure 128·59 for 1937. The figures for the last nine years average higher than those previously recorded; these higher figures are partly due to an increased use of mechanical coal-cutters, and partly to concentration of work. During recent years a large number of collieries have been shut down and the labour absorbed in the remainder; this concentration permits of a proportional reduction of the supervising staff, resulting in a larger tonnage per head. The fall in output per person employed in 1938 is of course due to increased employment.

There was a decrease in the number of deaths by accident from 274 in 1935, 435 in 1936, to 213 in 1937 but the number increased to 338

due to accidents in Bengal, Bihar and Hyderabad in 1938. In 1935 there were three major accidents, at Loyabad and Bagdigi collieries in the Jharia coalfield and at Kurhurbaree colliery in the Giridih coalfield, in which 11, 19 and 62 lives, respectively, were lost; in 1936 there were two, at Poldih in the Raniganj field, and Loyabad in the Jharia field, which accounted for 209 and 35 deaths respectively. These figures may be compared with the annual average for the quinquennium 1919-1923, which was 274, the annual average for the quinquennium 1924-1928, which was 218, and the annual average for 1929-1933, which was 186. The death rate was 1.09 per thousand persons employed in 1937 and 1·49 per thousand in 1938: the average figure for the period 1919-1923 was 1.36 for the period 1924-1928 was 1.16, and for the period 1929-1938 was 1.08.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposit that no European Ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the Iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron and Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonai States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Buru, a portion of Notu Buru, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hæmatite-jaspers. The ore itself is high-grade micaceous hæmatite often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hæmatite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore-bodies in the Ralpur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hæmatite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

For some years up to and including 1929 the production of iron-ore in India had been steadily increasing; India is now, in fact, the second largest producer in the British Empire, and yields place only to the United Kingdom. Her output is of course still completely dwarfed by the production in the United States (30½ million tons in 1935 and 48¾ million tons in 1936) and France (32·3 million tons in both 1935 and 1936); but her reserves of ore are not much less than three-quarters of the estimated total in the United States and there is every hope that India will eventually take a much more important place among the world's producers of iron-ore. From 865,000 tons in 1921, the production of iron ore increased to 2,430, 136 tons in 1929. Then came the depression and the output of iron-ore in India fell to 1,228,625 tons in 1933. In 1934, however, there was a turn of the tide and the production recovered sharply to 1,916,918 tons and in 1935 rose still further to 2,364,297 tons, in 1936 to 2,553,247 · tons. in 1937, to 2,870,832 tons valued at Rs.45,86,378 (£344,840), but in 1938 the production fell slightly to 2,743,675 tons valued at Rs.45,56,974 (£340,073). These figures exclude the output of about 25,000 tons, by the Burma Corporation, which is used as a flux in lead-smelting.

The **Steel Industry (Production) Act 1924** (Act **No. XIV of 1924**)—authorised, to companies employing Indians, bounties upon rails and fishplates wholly manufactured in British India from materials wholly or mainly produced from Indian iron-ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons, a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and the payment of bounties consequently ceased on the 31st March, 1927; the industry is, however, protected to a certain extent by the varying tariffs on different classes of imported steel. As a result of a new Act, No. XXXI of 1934, provision has been made for an increase of tariffs by about half over the 1927 rates, or about Rs. 10 per ton *ad valorem* in most cases, or about Rs. 40 per ton in the case of articles not of British manufacture.

MANGANESE ORE.

This industry was started some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

The catastrophic fall in the production of manganese ore in India from the peak figures of 1927, namely 1,129,353 tons valued at £2,703,068 *f.o.b.* Indian ports to 212,604 tons with a value of £140,022 in 1932 has been recorded previously. In 1933 the output rose slightly to 218,307 tons but the value fell to £123,171. These are the smallest quantities and values reported since 1901, when the output was 120,891 tons valued at £122,831. In 1905 the output was 247,427 tons valued at £223,432, since when the smallest production was 450,416 tons in 1915 valued at £929,546; whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,908. In 1934 there was, however, a partial recovery to 406,306 tons valued at £388,240, further increased in 1935 to 641,483 tons valued at £768,630, in 1936 to 813,442 tons valued at £1,124,422 and in 1937 to 1,051,594 tons valued at £3,229,554 but in 1938 there was a fall in output and prices to 967,929 tons valued at £2,932,445. The full magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one-twenty-second part of the value of the 1927 production. In fact in none of the major Indian mineral industries had the effects of the slump been so seriously felt as in the manganese industry; it is gratifying, therefore, that some measure of recovery can now be recorded, though the value of the output is still less than half the peak figure of 1927, with a much higher value.

The substantial recovery in 1936 is due mainly to increases in the Balaghat, Nagpur and Bhandara districts of the Central Provinces, and to the resumption of work in Panch Mahals. The output from Sandur State fell by a third. The most pleasing feature of this improvement is the recovery of the Central Provinces production from the trivial figure to which it had fallen in 1933 (28,789 tons) to 568,806 tons in 1936.

The recovery in 1936 has been set back by decreases in the Bala Ghat and Bhandara Districts of the Central Provinces, Keonjharin the Eastern States Agency and in North Kanara (Bombay), the Sandur State (Madras) and in the Chitaldurg districts of Mysore State. There has been an improvement in the production from the Panch Mahals, Chindwara, Bellary, Tumkur and Vizagapatam. During 1932 and 1933 the majority of mines in the Central Provinces had been closed, including several mines that had never been closed since the commencement of work in 1900 and 1901; there had been a total cessation of production in the Nagpur district and almost total cessation in Bhandara. The amount of ground recovered can be judged from the fact that the production of the Central Provinces averaged 660,559 tons annually during the quinquennium 1924 to 1928. All producing districts are now actively engaged in the output of Manganese-ore.

The partial recovery of the Indian manganese industry during 1934 and 1935 was reflected in an increase of exports, including the quantities exported from Mormugao in Portuguese India, from the nadir of 275,904 tons in 1933 to 864,698 tons in 1935. In 1936 this fell to 742,547 tons, and after rising to 1,151,834 tons in 1937 fell to 648,740 tons in 1938. The United Kingdom even with a decrease of over 127,000 tons retained her position as the chief importer of Indian manganese-ore. The second place as importer was taken by Japan with 113,212 tons, with the U. S. A. third with 89,037 tons and France a close fourth with 80,950 tons. The Belgium German figures show a marked decrease.

The fall in the Indian output of manganese-ore of recent years can be correlated with the fall in the price of first-grade ore, *c.i.f.* United Kingdom ports, from an average of 22.9*d.* per unit in 1924 to 14.9*d.* per unit in 1929, and then to 9.5*d.* per unit in 1932 and 1933. A partial recovery in output in 1934 accompanied a rise in the average price to 10.5*d.* per unit, and to 12.26*d.* in 1936, rising as high as 22.5*d.* in 1937, but in 1938 the price fell to 19.7*d.* per unit.

This continued fall in the price of manganese-ore from 1924 to 1932 is to be correlated with the fact that from 1924 to 1927 the rate of increase of the world's production of manganese-ore was much greater than the rate of increase in the world's production of pig-iron and steel. And although there was a fall in the world's output of manganese-ore in 1928, there was a very large increase in 1929, greater than was justified by the increased production of iron and steel in that year, and it is evident that the world's available supplies of manganese-ore are now much in excess of normal requirements. The present chief sources of production of Manganese-ore are Russia, India, the Gold Coast, South Africa, Brazil, Cuba, Egypt, Czechoslovakia and Japan. Russia is able to place a large quantities of ore on the market at a price with which many Indian producers cannot compete without a return to pre-war railway freights. The Gold Coast has also become a serious competitor of recent years. The large deposits of high-grade manganese-ore discovered near Postmasburg in South Africa are also being developed. With this increasing competition and falling prices it is not surprising, therefore, that in spite of the apparent prosperity of the Indian manganese industry in 1929 and 1930, as judged from figures of production and export, yet by 1930 the industry as a whole had arrived at a stage of relative depression, causing many operators to cease work. Added to increased available supplies there was in 1931 and 1932 a disastrous decline in the activities of the iron and steel industry of the world.

GOLD.

(The Statistics given below are the latest available.)

The steady decline in India's output of gold in spite of the steep rise in the price has been noted since 1921 when it was as much as 390,927 ounces as against 252,262 ounces in 1943. It has nowhere been adequately explained, but is probably due in the main to increased difficulties resulting from the high temperature in the depths of the Kolar Gold Fields (the mines go down to 8,000 feet below ground level, *i.e.*, roughly 5,000 feet below sea level) which account for almost the entire output of gold in this country.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave in output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way.

The production of gold in India during the ten years ended 1943 aggregated 3,039,000 ounces or one per cent of the total world production, excluding that of the U.S.S.R.

In 1931 the gradual secular decline in the total Indian gold production was temporarily arrested with an output of 330,488.8 ozs. valued at Rs. 2,08,01,943 (£1,540,885), followed by a rivial fall again in 1932, when the output was 329,681.7 ozs. valued at Rs. 2,53,51,438 (£1,906,123). In 1933 there was an increase to 336,108.3 ozs. valued at Rs. 2,76,40,071 (£2,078,201). In 1934 the output fell to 322,142.9 ozs., but the value increased to Rs. 2,92,71,130 (£2,200,836), being the highest in terms of sterling since 1920. It is interesting to note that the output of 1921, which was valued at £2,050,575 a figure very close to that of the 1933 production, was 432,722.6 ozs. In 1935 the output rose again to 327,652.5 ozs. valued at Rs. 3,04,01,775 (£2,285,848), and in 1936 to 333,385.6 ozs. valued at Rs. 3,06,02,413 (£2,300,933). In 1937 the output fell slightly to 331,748.2 ozs., valued at Rs. 3,04,80,105 (£2,291,737). In 1938 the output decreased slightly to 321,137.8 ozs. valued at Rs.3,04,75,397 (£2,274,283) from 330,743.9 ozs. valued at Rs. 3,03,95,871,(£2,285,404). The estimated production of gold in India in the following years has been given below :—

1939—315,000 ounces, 1940—285,929 ounces (Rs. 3,31,31,783), 1941—260,387 ounces (Rs. 3,72,88,285), 1942—260,302 ounces (Rs. 3,76,83,442), and 1943—252,262 ounces (Rs. 5,02,57,880).

Until the outbreak of the war, the prices of gold remained approximately on world parity although there were occasional and independent fluctuations due to local speculative movements. Upto September 1931, when the United Kingdom went off the gold standard, the gold parity in Bombay was an import parity, *i.e.*, the price in Bombay was the price in London plus the cost of importing gold. After that date until 1940-41 India was an exporter of gold and prices were based on the export parity, *i.e.*, the price of gold in London (or New York) less the cost of sending it to these places.

The outbreak of hostilities in the Far East on December 7, 1941 led to an outburst of speculation and a scramble for gold hoarding, and ready gold rose to Rs. 50-2 on December 19 and the subsequent Japanese advances pushed the prices to Rs. 58-4 on March 12, 1942. A month later, the gold rate declined to Rs. 44-12 on April 18, and then started an upward trend to reach Rs. 71-6 at the close of the financial year. In 1943-44, the price reached a new high level as a result of intensified demand partly induced by the inflation complex. In May the issue of the Defence of India Rule 90-C made all forward and option dealings in bullion illegal, and two months later, another Rule was issued in order to empower the authorities to prohibit advances against commodities and bullion. The Reserve Bank started selling gold on account of the overseas principals on August 16, 1943 and has continued those sales.

The highest, lowest and annual average prices for gold in the Bombay market for the years 1926-27 to 1943-44 are given below :—

Year.	Highest.	Lowest.	Average.
	Rs. a. p.	Rs. a. p.	Rs. a. p.
1926-27 ..	21 11 6	21 4 6	21 7 8

SILVER.

Inda's production of Silver has been negligible as compared to the world's output, but the country has got fascination for the white metal and has been a heavy importer of the metal from abroad. The details about the output are given below:—

Year.	World output in ounces.	Indian production.	
		Ounces.	Rs.
1939	264,200,000	22,745	33,361
1940	278,000,000	21,808	34,931
1941	266,000,000	22,929	41,597
1942	248,000,000	22,466	48,451

The highest, lowest, and the annual average prices for Silver in the Bombay market, together with the import duty on silver, since 1926-27 are given below:—

Year.	Highest.	Lowest.	Average.	Import duty.
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
1926-27	72 0 0	55 8 0	63 1 5	*Nil.*
1927-28	61 2 0	56 8 0	59 3 7	*Nil.*
1928-29	66 6 0	58 2 0	60 9 2	*Nil.*
1929-30	59 7 0	46 14 0	53 9 11	*Nil.*

1943-44	141 8 0	101 8 0	120 7 11	8 7 0

SALT.

The production of salt in India was almost steady during the past 25 years. In 1921, India produced 1,334,000 tons of salt, the figure dropped to 1,084,000 tons in 1935 when it reached the bottom, four years later the output was placed at 1,439,000 tons and moved in the following decade between 1,368,000 tons and 1,538,000 tons. The war gave a further fillip to the production of this article of vital necessity and the figure reached new high levels as the years passed by. In 1940 the salt production amounted to 1,644,000 tons; in the following year, it increased to 1,778,000 tons; and in 1942 it reached the record high level of 1,890,000 tons. No up to date details are available regarding salt production in the various provinces.

Since the outbreak of the war, imports continued to dwindle and reached a low level of 133,000 tons in 1942-43 as compared with 262,000 tons in the preceding year, 207,000 tons in 1940-41. The decline in imports during the war period was attributable to the elimination of Germany which was an important source of supply before the war and reduced shipments from Aden.

There was a moderate increase in the production of salt in India in 1938, made up of increase in the production in Northern India and Madras, with decreases in the production in Sind and Bombay.

The production in Aden was less in 1938 than in 1937; the production in Burma showed a large decrease.

There was a decrease in the imports of salt into India in 1938.

Quantity and value of Salt produced in India during the years 1937 *and* 1938 *(which are the latest figures available.)*

Stock Exchanges.

The earliest reference to stock broking in this country dates back to the end of the 18th century when transactions in Government securities and the shares of the East India Company used to take place in Calcutta under a *neem* tree. Similar references are also available about business in shares in Bombay before 1840. The boom following the American Civil war gave great impetus to this business.

By an indenture dated December 3, 1887, the Native Share and Stock Brokers' Association of Bombay was formally constituted. It has a membership of about 475 brokers who carry on business in the Brokers' Hall bought in 1887 from the funds of the Association. Trading is governed by the rules framed by the Governing Board. The present value of a broker's card is about Rs. 45,000.

This is the only share market where forward business used to be conducted in an organised way. This business is governed by separate rules approved by the Government of Bombay under powers vested in them by the Bombay Securities Contract Control Act. This legislation was enacted in 1925 in pursuance of the recommendations made by the Stock Exchange Inquiry Committee, with Sir Wilfrid Atlay as President, in 1923. Thirteen years later, the Government of Bombay appointed a Committee, with Mr. W. B. Morison as Chairman, "to examine and report on the organisation and methods of working of the Native Share and Stock Brokers' Association, to consider whether any modifications are desirable in the interests of the investing public and to make recommendations."

Besides the premier share market in Bombay, occasional attempts were made in the city to have an additional share market. In 1917, the Bombay Stock Exchange Ltd. was registered, but it ceased to function after a brief period. A new stock market was opened in 1938 under the name of the Indian Stock Exchange, Ltd.

The Calcutta Stock Exchange Association was founded at No. 2, New China Bazar Road (now known as 2, Royal Exchange Place), Calcutta, with 150 founder members in 1908. Fifteen years later, it was registered as a limited liability concern. The Association is controlled and managed by a Committee and has a membership of 232 brokers.

The only registered institution in South India of brokers dealing in shares and securities is the Madras Stock Exchange Association, Ltd. It was registered in 1937.

Of late, several stock markets have been started at other industrial centres. These include Delhi, Lahore and Cawnpore. Plans for setting up a share market in Nagpur are now under way.

The Ahmedabad Stock Exchange is also a registered body and recognised by the Government of Bombay under the Bombay Securities Contract Control Act.

Among the Indian States, Hyderabad State has recently started a stock market of its own.

The wild orgy of speculation that started in the share markets all over the country in 1943 called for Governmental action. On September 11, 1943, the Government of India issued Rule 94-C under the Defence of India Rules, prohibiting with effect from the 24th of that month all stock exchanges in British India from permitting or affording facilities for *badla* transactions or for the making of any contracts other than for ready delivery contracts. Speaking about the working of this Rule at the annual meeting of the Native Share and Stock Brokers' Association in 1945, Mr. K. R. P. Shroff, however, complained that instead of achieving the objective, the Rule had only created "grey" markets all over the country.

The Government of India have appointed a special officer to investigate into the question of having a centralised control over the affairs of stock markets.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very keen in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber, and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another but constantly work in association.

In 1921, the London Chamber of Commerce, realising the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organisation. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it, have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aimed at effecting great improvement in strengthening Indian commercial organisation. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. The late Sir Dinshaw Wacha, the then President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The organisation languished for lack of support for some years until a number of merchants specially interested in currency and exchange questions revived it in 1926 at Delhi and in 1927 at Calcutta, the initiative in the new activities coming, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December, 1926, and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located."

Among the objects for which the Federation is established are the following:—

(*a*) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.

(*b*) To encourage friendly feeling and unanimity among the business community and association on all subjects connected with the common good of Indian business.

(*c*) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise, that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.

(*d*) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of the Federation.

(*e*) To take or otherwise acquire and hold shares in any other company, having objects altogether or in part similar to those of the Federation.

(*f*) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.

(*g*) To draw, make, accept, discount, execute and issue bills of exchange, promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

Federation of Indian Chambers of Commerce and Industry.

The Federation has 95 Chambers of Commerce and Commercial Associations affiliated to it as Ordinary Members and 5 Associate Members, and is recognised by the Central Government as the premier organisation representing commercial and industrial interests in the country. The headquarters of the Federation are situated in New Delhi. There are two classes of Members, Ordinary and Associate.

Office-Bearers for 1946-47.

President :—Lala Gurusharan Lall, Calcutta.

Vice-President :—M. A. Master, Bombay.

Hon. Treasurer :—Dr. S. B. Dutt, Ph.D. (Lond.), Bar-at-Law, Calcutta.

Secretary :—D. G. Mulherkar.

Office :—28, Ferozshah Road, New Delhi.

ALL-INDIA ORGANISATION OF INDUSTRIAL EMPLOYERS.

The Employer's Delegations to the various sessions of the International Labour Conference felt the necessity of a central organisation in India representing employers of industrial labour in the country with a view to studying various questions coming before these International Conferences from the Indian employers' point of view. Walchand Hirachand, who was the President of the Federation of Indian Chambers of Commerce and Industry, with the consent of the Committee, took the initiative of launching a central organisation in December, 1932, to represent Indian employers. Any organisation representing an industry, the constituents of which are employers of industrial labour, is entitled to become a member of the All-India Organisation of Industrial Employers (briefly called A.O.I.E.). Besides this membership, any industrial concern is also entitled to become a member of the Organisation.

The annual subscription for industrial associations is Rs. 300 and for individual industrial concerns Rs. 50.

The Organisation has on its roll 16 industrial associations representing Ahmedabad and Bengal millowners, Northern India employers, salt industry, national shipping, sugar industry, Baroda State Mills and Industries, glass, coal mining, tea, Delhi Factory Owners and jute industry. Besides, there are about 131 big industrial concerns as members of the Organisation.

Office-Bearers for 1946-47.

President :—Seth Sakerlal Balabhai, Ahmedabad.

Secretary :—D. G. Mulherkar.

Office :—28, Ferozshah Road, New Delhi.

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associate) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint-stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office-bearers of the Chamber for the year 1946-47 :—

President :—The Hon. Mr. H. D. Townend, Shaw Wallace & Co.

Vice-President :—H. D. Cumberbatch, Messrs. Andrew Yule & Co., Ltd.

Committee Members :—Sir Harry Burn, Imperial Chemical Industries (India), Ltd.; A. T. Orr Deas, Messrs. Mackinnon Mackenzie & Co.; A. J. Elkins, Gillanders Arbuthnot & Co.; J. McFarlane, Messrs. Octavius Steel Co. Ltd.; A. P. Benthall, Messrs. Bird & Co. F. W. Heilgers & Co.; A. C. Watkins, The Chartered Bank of India, Australia & China; P. F. S. Warren, Jessop & Co., Ltd.

Secretary :—D. C. Fairbairn, M.A., C.I.E.; *Deputy Secretary* : J. J. B. Sutherland; *Assistant Secretaries* : W. D. Bryden, T. R. Crook and J. J. Rattray.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned, for the current year.

The Council of State.—The Hon'ble Mr. H. D. Townend.

The Bengal Legislative Assembly.—D. Gladding, C.I.E.; J. R. Walker, F.T.I.; R. Haywood; A. W. Taylor; H. Rowan Hodge; C. W. Miles and F. F. M. Ferguson.

The Calcutta Port Commission.—A. T. Orr Deas; A. J. Elkins, C.B.E.; J. F. Elton; A. L. Cameron, J. Morshead, Nell Brodie.

The Calcutta Municipal Corporation.—J. B. Elias; E. H. Edney; W. H. Humphrey; J. N. Smart and A. A. Wise.

The Board of Trustees for the Improvement of Calcutta. T. Godley.

The Bengal Boiler Commission.—J. M. Grant, G. P. Chestney and W. H. W. Urquhart, A.M.I. Mech. E.

The Bengal Smoke Nuisances Commission.—R. J. Oliver; J. M. Grant.

The Chamber elects representatives to various other bodies of less importance, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce:—

Calcutta Grain Oilseed and Rice Association, Indian Jute Mills Association; Indian Tea Association; Calcutta Tea Traders' Association; Calcutta Insurance Association; Calcutta Import Trade Association; The Wine, Spirit and Beer Association of India; Indian Mining Association; Calcutta Baled Jute Association; Indian Paper Makers' Association; Indian Engineering Association; Calcutta Jute Fabrics

Shippers' Association; Calcutta Hydraulic Press Association; Jute Fabric Brokers' Association; Calcutta Baled Jute Shippers' Association; Calcutta Jute Dealers' Association; Calcutta Hides and Skins Shippers' Association; Calcutta Flour Mills' Association; Calcutta River Transport Association; The Masters' Stevedores' Association and the Association of Paint, Colour & Varnish Manufactures in India; Calcutta Freight Brokers' Association and European Mofussil Jute Balers' Association.

The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measurers' Department controlled by a special committee. It includes a Superintendent (G. C. Gee Smyth), Head Office Manager (F. W. Kendall) and Assistant Superintendents (Messrs. J. B. F. Hentrey, on active service, B. Perry and S. J. Warwick) and the staff at the time of the last official returns consisted of 110 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers' Club.

BENGAL NATIONAL CHAMBER OF COMMERCE.

The Bengal National Chamber of Commerce, the premier institution of the Indian Commercial Community in Bengal, was founded in 1887. The objects of the Chamber are to aid and stimulate the development of commercial, agricultural and industrial enterprises in Bengal and Assam and to protect the commercial interest of all persons trading therein; to promote unanimity and uniformity of practice amongst the members of the commercial community; to represent their views and requirements to the Government, railway and port authorities; to arrange for organised action on all matters involving the interests of members including conditions of employment of industrial labour; to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and Assam.

The constitution of the Chamber extends the facilities of Associate and Honorary Membership to the entire trading community in Bengal. The number of Ordinary members on the roll is about 600. Almost all the leading Indian commercial and industrial firms and persons in every branch of the inland and foreign trade in Bengal are members of the Chamber. A considerable portion of the joint stock capital invested in Bengal in banking, insurance, steamer services, cotton mills, etc., is also represented. The constitution of the Chamber provides for a close association as between the Chamber and various sectional organisations of trades and industries in Bengal.

List of Associations Affiliated to the Chamber.—All-Bengal Bobbin Manufacturers' Association; All Bengal Electrical Contractors' Association; All-India Soap Makers' Association; All-India Tea Growers' Federation; Association of Engineers; Barisal Mahajan Samity; Bengal Motion Pictures Association; Bengal Hosiery Manufacturers' Association; Bengal Glass Manufacturers' Association; Bengal Banks' Association; Bengal Galvanized Sheet Merchants' Association; Bengal Cotton Association, Ltd.; Bengal Industries Association; Bengal Building Traders' Association; Bengal Knitting & Millowners' Association; Bengal Stationers' Association; Bengal Oil Mills' Association; Bolpur Cloth, Merchants' Association; Brick Field Association; Kotrung; Brahmanbaria Merchants' Association; Burdwan Rice Mills Owners' Association; Calcutta Cloth Ration Shop Association; Calcutta Electric Traders' Association; Calcutta Flour Dealers' Association; Calcutta Iron Merchants' Association; Calcutta Jute Exchange, Ltd.; Calcutta Paper Traders' Association; Calcutta Retail Yarn Merchants' Association; Calcutta Rice Dealers' Association; Calcutta Sugar Dealers' Association; Calcutta Timber Merchants' Association; Calcutta Salt Association, Ltd.; Calcutta Rice Mills Association; Calcutta Wine Association; Dacca District National Chamber of Commerce; East India Jute & Hessian Exchange Ltd.; Faridpur Local Merchants' Association; Gramophone & Radio Dealers' Association; Grain & Pulse Dealers' Association; Indian Insurance Institute; Indian Lamp Factories' Association; Indian Cement Distributors' Association; Indian Colliery Owners' Association; Indian Confectioners' Association; Indian Plywood Manufacturers' Association; Indian Plywood Traders' Association; Indian Cycle Traders' Association; Metropolitan Banking Association; Merchants' Association, Khulna; Memari Paddy & Rice Merchants' Association; Pabna Mahajan Samity; Paddy Merchants' Association; Tripura Tea Association; Retail Textile Dealers' Association; Sirajganj Bengali Cloth & Yarn Dealers' Association.

The Chamber enjoys the privilege of electing representatives to the Bengal Legislative Assembly, the Calcutta Port Trust, the Calcutta Improvement Trust, Bengal Industries Board, Economic Enquiry Board, Bengal, Indian Central Jute Committee, Indian Central Cotton Committee, Indian Tea Market Expansion Board, Indian Coal Grinding Board, Provincial Sugar Board and other important bodies.

The headquarters of the Chamber are at Calcutta and its affairs are administered by a committee of 32 members in addition to the president, two Vice-Presidents, and the Honorary Treasurer, with the help of the Secretary and a number of Departmental committees.

LIST OF OFFICE-BEARERS AND MEMBERS OF THE EXECUTIVE COMMITTEE FOR 1946.

President :—Dr. S. B. Dutta, M.A., Ph.D. (Econ. Lond.), Bar-at-Law.

Vice-Presidents :—D. N. Sen ; K. Basu.

Hony. Treasurer :—Dr. Satya Churn Law, M.A., Ph.D.

Members of the Executive Committee :—I. B. Sen ; Nalini Ranjan Sarker ; Dr. N. N. Law, M.A., Ph.D., J. K. Mitter ; P. Mukherjee ; Lt.-Col. D. N. Bhattacharyya ; S. N. Chaudri ; A. C. Dutta ; C. L. Bajoria ; H. C. Sarcar, B.Sc. (Econ. Lond.) ; Raj B. G. Mookerjee Bahadur ; G. Basu, B.A. ; Dutta, F.S.A.A., F.C.I.S. (Lond.), B.A. ; D. P. Goenka ; N. Datta ; S. M. Bose, A.B. (Stanford), M.Sc. (California, U.S.A.) ; Sadhan C. Roy, B.Sc., L.M.E., M.I.E.E. ; Tulsi Charan Roy; S. N. Dutt, B.Sc. (Engr. Glasgow), A.M.I.C.E., M.I.E. (Ind.) ; S. Chatterji ; R. Datta.

Co-opted Members of the Executive Committee:—Ashutosh Battacharyya ; J. N. Sen Gupta, M.A., B.L., M.B.E. ; N. N. Rakshit ; C. K. Ghosh ; B. T. Ghattack ; Raghunath Dutt ; S. C. Nawn ; S. C. Roy, M.A., B.L. ; N. C. Ghose ; B. C. Ghose, B.Sc. (Lond.), B.com. (Lond.), M.L.A. ; Dabes C. Ghose.

Secretary.—S. R. Biswas, M.A.
Asst. Secretary.—B. C. Kundu, M.A.
Office :— 4, Clive Ghat Street, Calcutta.
Telephone : Calcutta, 3932.
Telegram : 'Conjoint.'

Patron :—Moulvi A. K. Fazlul Huq, M.A., B.L., Ex-Premier, Bengal ; *President* :—Nandalal Chatterji, B.L. ; *Vice-President* :—Mrs. Protiva Sasmal ; *Hony. Secretary* :—Jamnadas G. Bhatia; *Hony. Treasurer* :—B. Sattar.

Members of the Executive Committee :—Bhupal Chandra Rai Choudhury of the Churamon Estate, Dinajpur ; Chandra Nath Mookerjee of Uttarpara ; M. M. Sengupta ; B. N. Chatterji, Land-Holder, Tollygunge ; Miss Naya Debi ; R. Roy, B.A. ; S. P. Mehta ; Sivananda Sarker of the Zanbazar Estate ; H. Chakravorty ; Anil Chandra Banerjee ; Dr. R. G. Guha Thakur, M.B.H., A.M.C. (Eng.), M.C.P.S. (Cal.); S. Acharya Chowdhury of Mymensingh ; Y. Johnson ; K. N. Desai, B.Sc. ; S. K. Gangopadhaya.

The Committee shall co-opt. members if recommended by any two of its members and by the committee.

Address :—91, Dr. Daudor Rahaman Road Lake-Side, Calcutta.

INDIAN CHAMBER OF COMMERCE, CALCUTTA.

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned ; to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians ; to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular, the Indians, engaged in trade, commerce or industries in India ; to adjust controversies between members of this Chamber ; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the chamber ; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India ; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta ; and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of Members, local and mofusil. The local Members pay an annual subscription of Rs. 300 and the Mofusil members Rs. 150. Merchants, Bankers, Shipowners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1946 :—

President :—K. D. Jalan.

Senior-Vice-President:—Darab Cursetji Driver.

Vice-President :—K. P. Goenka.

Members :—Sir Abdul Halim Ghuznavi; B. M. Birla; M. L. Shah; D. P. Khaitan; G. L. Mehta; R. L. Nopany; Lala Gurusharan Lall; K. L. Jatia; Nand Lal Puri; K. M. Naik; Lala Karam Chand Thapar; Dr. H. Ghosh; M. R. Jaipuria; P. D. Himatsinghka; R. N. Bangur; Sir Padamji P. Ginwala; K. C. Neogy; Khan Bahadur G. A. Dossani.

Secretary :—Dr. R. D. Tiwari, M.A., Ph.D., LL.B.

Senior Asst. Secretary :—L. S. Bisht, B.Sc., LL.B.

The following Associations are affiliated with the Chamber :—

Indian Sugar Mills' Association; Indian Chemical Manufacturers' Association; Indian Paper Mills' Association; Engineering Association of India; Indian Insurance Companies' Association; Indian Paint Manufacturers' Association; Indian Colliery Owners' Association; Indian Hemp Association; Calcutta Tea Merchants' Association; Indian Steel Makers' Association; Indian Re-Rolling Mills' Association; Calcutta Chemical Merchants' Association; East Indian Jute Association Ltd; Jute Balers' Association; Gunny Trades' Association; Calcutta Hessian Exchange Ltd; Indian Tea Brokers' Association; Calcutta Kirana Association; Indian Coal Merchants' Association; Shareholders' Association; Calcutta Tube Importers' Association; Calcutta Metal Merchants' Association; Marwari Rice Mills' Association; Calcutta Rice Merchants' Association; Indian Produce Association; Sindhi Merchants' Association; Bengal Sugar Merchants' Association; Indian Boat Builders' Association; Calcutta Ice Makers' Association; Indian Non-Ferrous Metal Manufacturers' Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various trades. With a view to covering the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades:—(1) Jute; (2) Gunny; (3) Sugar; (4) Piece-goods and yarn; (5) Iron and Steel; (6) Coal and Minerals; (7) General.

The various bodies on which the Chamber is represented are as under :—

Bengal Legislative Assembly.—D. P. Khaitan.

Visiting Committee of the Campbell Hospital.—P. D. Himatsinghka.

Visiting Committee of the Medical College Group of Hospitals.—K. M. Naik.

Indian Central Jute Committee.—K. D. Jalan.

Bengal Textiles Association.—M. R. Jaipuria and Ramnarayan Bhojangarwala.

Tertile Advisory Board, Government of Bengal.—R. L. Nopany; M. R. Jaipuria; L. P. Goenka; B. K. Birla.

Port Committee of Export Advisory Council.—Surajmull Mohta.

Advisory Committee of Manufacturers of Engineering Stores.—B. K. Rohatgi, and Pratap Singh.

Bengal Assam Railway Local Advisory Committee.—B. P. Dalmia.

MARWARI ASSOCIATION.

160A, CHITTARANJAN AVENUE, CALCUTTA.

The Marwari Association was established in the year 1898.

Its chief objects are :

To promote and advance the moral, intellectual, commercial, economic, political and social interests of the Marwari community and to protect its rights and status.

To arbitrate in the settlement of disputes arising out of commercial transactions between parties either one or both of which are members

of the Marwari community, provided the parties are willing to abide by the judgment and decision of the Association.

To adjust controversies between members of the Association.

To communicate with Chambers of Commerce and other mercantile and public bodies within or outside India and to concert and promote measures for the protection of trade, commerce and industries in which Indians, in particular Marwaris, are engaged.

To found and support establishments and institutions for disseminating commercial, technical and general education in different branches of Art and Science in the Marwari community.

To take all necessary steps for promoting, supporting or opposing legislation or other action, affecting the interests of the Commercial communities in general and of the Marwari community in particular either by Government, or any department thereof or by any local body or bodies.

To take such action as may be necessary for securing the redress of grievances of any branch of trade, commerce and industry in which the Marwari community is interested as also such other action as may be conducive to the development and growth of such trade, commerce and industry.

The constituents of the Association are the leading industrialists, exporters and importers of the province of Bengal.

The Association issues certificates of origin to exporters of indigenous goods.

The Association is a member of the Federation of Indian Chambers of Commerce and Industry.

The Association publishes a monthly Journal called "The Journal of the Marwari Association."

The following are the Office-bearers:—

President.—Anandi Lall Poddar, M.L.A.

Vice-Presidents.—K. P. Khaitan, Bar-at-Law and Babulal Shroff.

Honorary Secretary.—Madan Gopal Poddar B.L., Attorney-at-Law.

Asstt. Secretary.—Prahlad Rai Bhagat.

Treasurer.—Murlidhar Sonthalia.

Auditor.—Ram Chandra Singhi.

Personal Assistant to the Honorary Secretary and Officer-in-charge.—Saibendranath Chatterjee, M.A., B.L., Examiner-in-Law, Calcutta University.

The following are representatives on public bodies:—

Central Legislative Assembly.—Baijnath Bajoria.

Bengal Legislative Assembly.—Anandi Lall Poddar.

Price Advisory Committee, Bengal.—Mukundlall Chiripal.

Cotton Cloth and Yarn Control Advisory Committee (Bengal). Mungturam Jaipuria.

Board of Economic Enquiry, Bengal.—Harikrishna Jhajharia.

Board of Industries, Bengal.—Babu Lall Shroff.

Non-Official Jail Visitor, Howrah Jail.—Ratan Lall Goenka.

Non-Official Jail Visitor, Presidency Jail.—Kanahiya Lall Jatia.

Non-Official Jail Visitor, Alipore Jail.—Anandi Lall Poddar.

E. I. Ry. Wagon Supply Advisory Committee.—Mahabir Prasad Kasera, B.Com., B.L., M.R.A.S., Sahityaratna.

B. N. Ry. Wagon Supply Advisory Committee.—Mahabir Prasad Kasera, B.Com., B.L., M.R.A.S., Sahityaratna.

INTERNATIONAL CHAMBER OF COMMERCE, INDIAN NATIONAL COMMITTEE.

The Indian National Committee of the International Chamber of Commerce was established for the following purposes in the year 1928:—

(a) To participate in the promotion of the objects for which the International Chamber of Commerce, hereinafter called the "International Chamber," is established, namely:

(i) To facilitate the commercial intercourse of countries.

(ii) To secure harmony of action on all international questions affecting finance, industry and commerce.

(iii) To encourage progress and to promote peace and cordial relations among countries and their citizens by the co-operation of businessmen and organisations devoted to the development of commerce and industry.

The Indian National Committee has on its roll 37 commercial bodies as Organisation Members and 48 commercial firms as Associate Members.

OFFICE-BEARERS FOR 1946-47.

President.—Lala Gutusharan Lall, Calcutta.

Vice-President.—M. A. Master, Bombay.

Honorary Treasurer.—D. N. Sen, Calcutta.

Secretary.—D. G. Mulherkar.

Office.—28, Feroshah Road, New Delhi.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in the Memorandum and Articles of Association, are to encourage and promote a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency, to collect and circulate information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests

in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals on all subjects of general mercantile interest; and to arbitrate between parties willing to refer to, and abide by, the decision of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 225. Of these 12 represent banking institutions, 7 shipping agencies and companies, 3 firms of solicitors, 3 railways, 18 insurance companies, 20 engineers and contractors, 162 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 360. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of twelve ordinary members, consisting of the President and Vice-President and ten members. The committee as a rule meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for a specific purpose.

The Chamber elects representatives as follows to various public bodies:—

The Council of State, one representative.

Bombay Legislative Assembly, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chamber for the year 1945-46 and its representatives on the various public bodies:—

President: A. W. Percy.

Committee: C. R. Agar; C. P. Bramble, C.I.E., M.L.A.; C. J. Damala; R. L. Ferard; A. D. Finney; A. L. Hutson; C. G. Marrable; H. C. De Mierre; H. F. Milne; W. G. J. Shaw.

Secretary.—L. Boult.

Representatives on—

Council of State: The Hon'ble Mr. J. M. B. Gibbons.

Bombay Legislative Assembly: W. M. Martin, M.B.E., C.R. Sharpa.

Bombay Port Trust: R. W. Bullock; C. J. Damala; A. D. Finney; D. R. C. Hartely, C.B.E., D.S.O., E.D.; E. Wilkinson.

Bombay Municipal Corporation: C.B. Cockaine.

Sydenham College of Commerce Advisory Board: R. W. Bullock.

Bombay Smoke Nuisances Commission: H. F. Milne.

Persian Gulf Lights Committee: C. F. Morris.

Indian Central Cotton Committee: L. F. H. Goodwin.

Empire Cotton Growing Corporation: S. B. Samollys.

Back Bay Reclamation Scheme—Standing Advisory Committee: L. A. Halsall.

Auxiliary Force Advisory Committee: L. A. Halsall.

National Service Advisory Committee.—C. P. Bramble, M.L.A.

Ex-Services Association, India.—A. W. Percy.

Ex-Services Association, Bombay Branch—C. R. Agar.

Bombay Seamen's Society: L. A. Halsall.

Indian Sailors' Home: N. McLeod.

I. M. M. T. S. Dufferin: A. D. Finney.

Traffic Advisory Committee.—V. Corbett-Wright.

Federation of Chambers of Commerce of the British Empire: Sir Geoffrey Winterbotham, Kt.

Railway Advisory Committees—

G. I. P.: C. W. Warrington.

B. B. & C. I.: C. W. Warrington.

Railway Rates Advisory Committee: L. A. Halsall, C. J. Damala; A. P. Darlow; and A. L. Hutson.

Government of Bombay Board of Communications: W. R. Wood.

Bombay University: The Hon'ble Mr. J. M. B. Gibbons

Bombay Provincial Transport Authority: The Hon'ble Mr J. M. B. Gibbons.

Bombay Provincial Advisory Committee for War Supplies: R. W. Bullock.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of nineteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the

statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrivals Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer and country craft to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of British India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives the number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued every Saturday and shows the rates of exchange for Bank and Mercantile Bills on England and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 16, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in these certificates the freight payable by the Shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late.

Associated Chambers of Commerce of India.

HEAD OFFICE LOCATED IN CALCUTTA FOR 1945.

President.—The Hon'ble Mr. H. D. Townend of Messrs. Shaw Wallace & Co.

Secretary.—D. C. Fairbairn, M.A., C.I.E.

Millowners' Association, Bombay.

Established in the year 1875, the Millowners' Association, Bombay, is one of the oldest and most important organisations of industrial employers in the country. Membership of the Association is mainly confined to cotton spinning and weaving concerns drawn from every part of India including the Indian States. The great work done by the Association ever since its inception has been generally recognised, and the important role which it fills in the economic life of the country is perhaps no where better illustrated than in the representation accorded to it in the Central and Provincial Legislatures, in local authorities such as the Bombay Municipal Corporation, and on public bodies such as the Bombay Port Trust. The Association is also represented on all important all-India bodies constituted by the Central Government connected in one way or another with the interests of the textile industry.

By special arrangement with the Department of Commercial Intelligence and Statistics, the Association compiles every month special statistics relating to the import, re-export and export trade in cotton yarn and piece-goods and artificial silk goods of British India and the Province of Bombay. The annual Cotton Mill Statement published by the Association is well-known as a comprehensive and authoritative directory of cotton mills in India.

By a system of market correspondents stationed in important piece-goods consuming markets in India, the Association keeps its members regularly informed of the trend of prices and tendencies in the principal trading centres in the country. The Association also publishes every fortnight detailed lists of the average ex-mill quotations for the principal lines of cotton yarn and piece-goods produced by Bombay mills and the wholesale bazaar prices of the chief lines of goods imported into the principal ports in India.

As large employers of Labour, the Association has always adopted a forward policy in regard to labour problems, and a very large number of recommendations have been made to member mills during the last few years for the amelioration of the conditions of labour employed by constituent members. That some of these recommendations have subsequently been adopted by other large employers of labour and the country is at once a tribute to the excellent spade work done by the Association in the field of social and labour work.

The Association has on its rolls 149 members, including 5 woollen mills, 3 silk mills, 2 cotton ginning and pressing factories and 4 dye and bleach houses.

The following is the Managing Committee of the Association for the year 1946:—Dharamsey Mulraj Khatau (*Chairman*); Bhagwandas C. Mehta (*Dy. Chairman*); Sir Ness Wadia, K.B.E., C.I.E.; Sir Sorab Saklatvala, Kt., M.L.A.; Sir Vithal Chandavarkar, Kt.; H. F. Milne; T. V. Baddeley; Neville N. Wadia; A. Pether; Krishnaraj M. D. Thackersey; J. C. Burns; Navinchandra Mafatlal; G. D. Somani; J. C. Lancashire; L. F. H. Goodwin; H. G. H. Everitt; W. B. Bryden; Ramnath A. Podar; Ramniwas Ramnarian; and R. S. Khaitan; N. S. V. Aiyer (*Secretary*); R. G. Gokhale (*Labour Officer*).

The Office of the Association is located at 2nd Floor, Elphinstone Building, Churchgate Street, Fort, Bombay, and the Telephone Nos. are 31041 and 31042. Tel. Address: Millomutua.

The following are the Association's Representatives on public bodies:—

Bombay Legislative Assembly: Sir Sorab Saklatvala, Kt., M.L.A.

Bombay Port Trust: Krishnaraj M. D. Thackersey.

Victoria Jubilee Technical Institute: Sir Vithal Chandavarkar, M.L.A.

Bombay Smoke Nuisances Commission: G. S. Karpur and H. A. Wood.

Advisory Board of the Sydenham College of Commerce and Economics: B. S. Dabke.

Indian Central Cotton Committee: Sir Sorab Saklatvala, Kt., M.L.A.

Development of Bombay Advisory Committee: Sir Vithal Chandavarkar, M.L.A.

G. I. P. Railway Advisory Committee: Krishnaraj M. D. Thackersey.

B. B. & C. I. Railway Advisory Committee: Sir Vithal Chandavarkar, M.L.A.

Bombay Municipal Corporation: Ramnath A. Podar.

University of Bombay: Sir Vithal Chandavarkar, M.L.A.; Neville N. Wadia.

Royal Institute of Science: Sir Vithal Chandavarkar, M.L.A.

Millowners' Mutual Insurance Association, Ltd.

The Millowners' Mutual Insurance Association, Ltd., was registered on 30th June, 1924, as a Company limited by guarantee. The registered office of the Association is located in Elphinstone Building, Churchgate Street, Fort, Bombay.

The objects of the Association are:—

(*a*) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of and in the course of their employment; (*b*) the insurance of members of the Company against loss or damage by or incidental to fire, lightning, etc.; and (*c*) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counter-insurances and counter-guarantees, etc., etc.

All members of the Millowners' Association are eligible for admission to the Mutual Company. Non-members are also eligible for membership of the Mutual, provided their application is approved of by the Committee of the Millowners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are:—

Sir Ness Wadia, K.B.E., C.I.E. (*Chairman*).

Sir Joseph Kay, Kt.; Sir Sorab Saklatvala, Kt.; Krishnaraj M. D. Thackersey; D. M. Khatau; A. Pether; and A. C. M. Cursetjee, M.A., LL.B., Secretary of the Association.

Indian Merchants' Chamber.

The Indian Merchants' Chamber was established in the year 1907. Its objects are:—

(*a*) To encourage friendly feeling and unanimity among the business community on all subjects connected with the common good of Indian merchants.

(*b*) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.

(*c*) To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.

(*d*) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.

(*e*) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies, and in general to take the initiative to secure the welfare of the business community in all respects.

(*f*) To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.

(*g*) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.

(*h*) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.

(*i*) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.

(*j*) To secure the interests and well-being of the Indian business communities abroad.

(*k*) To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including 'regulating conditions of employment of industrial labour' in various industries represented by the members of the Organisation.

(*ii*) To nominate delegates and advisers, etc., to represent the employers of India at the Annual International Labour Conference of the League of Nations.

(*iii*) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.

(*iv*) To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.

(*l*) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

Under the Montagu-Chelmsford Reforms the Chamber has the right of electing one representative on the Central Legislative Assembly and under the Government of India Act 1935 it has the right of electing one representative on the Bombay Legislative Assembly. The Chamber also has the right to elect five representatives on the Bombay Port Trust, and one representative on the Bombay Municipal Corporation.

President for 1946.—Mahomed Husein Hasham Premj.

Vice-President.—Ratilal Mulji Gandhi.

Representatives of the Chamber on various public bodies: —

Asstt. Secretaries.—A. C. Ramalingam; K. P. Daru; P.M. Shah, M.A.

Address:—Lalji Naranji Memorial, Indian Merchants' Chamber Building, Back Bay Reclamation, Churchgate Street, Fort, Bombay.

Phone.—Bombay, 25212.

Grams.—"Inchambu."

Bombay Piece-Goods Native Merchants' Association.

Office:—Mulji Jetha Cloth Market Hall, Bombay.

The objects of the Association are:—

(*a*) To promote, by creating friendly feelings and unity amongst the merchants, the business of the piece-goods trade in general at Bombay, and to protect the interests thereof; (*b*) to remove, as far as it will be within the powers of the Association to do so, all trade difficulties of the piece-goods business and to frame such line of conduct as will facilitate the trade; (*c*) to collect and assort statistics relating to piece-goods and to correspond with public bodies on matters affecting the trade, and which may be deemed advisable for the protection and advancement of the objects of the Association or any of them; and (*d*) to hear and decide disputes that may be referred to the Association for arbitration.

The following are the office-bearers for the current year:—

Chairman.—Purshottam Mulji Kapadia, Advocate.

Deputy Chairmen:—

(1) Narottamdas Keshavlal, J. P.

(2) Harjivan Bhagwandji.

Hon. Jt. Secretaries.—

Padamsey Damodar Govindji, J. P.

Himatlal Trimbaklal Munshi.

Navinlal Lallubhai Shah.

Hon. Treasurer.—

Jethabhai Kalianji.

Grain Merchants' Association.

The object of this body is "to promote the interests of the merchants and to put the grain and oil-seeds trade on a sound footing." It is an influential body with a large membership. Office-bearers for the current year are:—

President.—Sheth Velji Lakhamsi Napoo B.A., LL.B.

Vice-President.—Sheth Devji Rattansey.

Hon. Secretary.—Sheth Vallabhdas Peraj.

The address of the Association is Masjid Bunder Road, Mandvi, Bombay.

MAHARASHTRA CHAMBER OF COMMERCE.

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the City of Bombay, Bombay Suburban District, Poona, Sholapur, Satara, Ratnagiri, Kolaba, Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and the Indian States in and about these, namely, Kolhapur (with its Jagirs), Sangli, Miraj, (Senior and Junior), Kurundwad (Senior and Junior), Jamkhandi, Sawantwadi, Mudhol, Ramdurg, Jath, Akalkot, Phaltan, Aundh, Bhor, Surgana, Jawhar and Janjira.

President—M. L. Dahanukar.

Vice-Presidents—D. R. Naik, J.P.; G. V. Puranik and E. B. Rajderkar, M.Sc.

Secretary—D. V. Kelkar, M.A.

Address:—Industrial Assurance Building, Church Gate, Bombay.

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon "any gentlemen interested in the affairs and objects of the Chamber." All new Members joining the Chamber pay Rs. 750 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 150 per annum per set for Members and Rs. 280 per annum per set for non-Members. The set comprises :—

(i) a Daily Trade Return containing lists of commodities entered in the Customs House for export, and imports cleared from Customs on each working day, shipping information and statistics of commodities entering Karachi by rail, and leaving by sea,

(ii) a Weekly Price Current and Market Report which, besides giving quotations for commodities traded in the Karachi Markets, also contains statistics of exports and imports compiled from Ships' Manifests, and shipping movements,

(iii) Export Manifests of all Steamers leaving Karachi for Foreign Ports,

(iv) Monthly Import and Export statistics for the main commodities compiled from Ships' Manifests.

The affairs of the Chamber are managed by a Committee of ten Members, consisting of a Chairman, Vice-Chairman and eight other Members, elected at the annual general meeting of the Chamber held early in each year. The Chamber elects a representative to the Sind Legislative Assembly, four representatives to the Karachi Port Trust, one to the Karachi Municipal Corporation and two to the North Western Railway Advisory Committee, Karachi. There were 60 Members of the Chamber in April 1946. The following are the officers for 1946-47 :

Chairman.—B. R. Graham.

Vice-Chairman.—E. J. Pakes.

Members of Committee.—A. J. Bebbington; C. M. Clamp; W. J. Cullen, M.B.E.; T. G. R. Eagan, E.D.; H. A. Henry; Lt.-Col. W. B. Hossack, M.L.A.; G. O. Pike; T. Waddell.

Secretary.—H. J. Martin.

Asstt. Secretary.—J. S. Lobo.

Public Measurer.—G. B. Potts. (E.T.W. Nicholas, Acting.)

Representative on the Sind Legislative Assembly.—Lt.-Col. W. B. Hossack, M.L.A.

Representatives on the Karachi Port Trust.—A. J. Bebbington; T. Waddell; Col. R. B. Fairclough, M.C., E.D.; E. J. Pakes.

Representative on the Karachi Municipal Corporation.—N. W. G. Brown.

Representatives on the North-Western Railway Local Advisory Committee, Karachi.—A. J. Bebbington and B. R. Graham.

The following are the principal ways in which the Chamber gives special assistance to Members :

The Committee take into consideration and give an opinion upon questions submitted to them regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlement of disputes. When two Members of the Chamber or when one Member and a party who is not a Member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are Members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. Any person or firm, interested in the general trade, commerce, or manufactures of the Madras Presidency is eligible for Chamber membership. Distinguished persons, members of kindred associations, and officials interested in trade, commerce or industry in the Madras Province may be elected Honorary Members of the Chamber. Honorary Members do not have to pay any subscription and are not entitled to exercise the privileges of Ordinary Members except to speak at any ordinary meeting of the Chamber. Other Chambers of Commerce may be Affiliated Members. Election for membership is by ballot. Every member other than an Honorary Member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in every 10 years. The subscription shall not exceed Rs. 360 per annum, payable quarterly in advance. Each Affiliated Member shall pay an annual subscription of Rs. 50 payable at the beginning of the calendar year.

The Chamber undertakes arbitrations and surveys, and the granting of certificates of origin.

There are 60 Firms, who are Members of the Chamber; and there are 5 Affiliated Members and 9 Honorary Members of the Chamber in 1945. The officers and the committee of the Chamber for the year are as follows :—

Chairman : H. S. Town, M.L.A. *Vice-Chairman :* W. T. Williams. *Committee :* C. P. Johnstone; B. S. Laurence; D. G. Leonard, M.L.A.; S. M. Smith; H. I. Wonfor. *Secretary :* W. Fyfe.

The following are the Chamber's representatives on various public bodies during 1946 :—

Corporation of Madras : E. F. G. Hunter, G. M. Morrison, and S. M. Smith; *Madras Port Trust :* F. G. Hadden; H. R. Goosey, H. S. Town, M.L.A., H. I. Wonfor; *Madras*

and Southern Mahratta Railway Advisory Committee: J. H. Henrie; *South Indian Railway Advisory Committee:* D. G. Leonard, M.L.A., *Board of Communications:* C. P. Johnstone; *Senate of the University of Madras:* F. H. Oakley, H. S. Town, M.L.A.; *Senate of the Annamalai University:* F. H. Oakley; *State Technical Scholarship Board:* F. H. Oakley; *Board of State Aid to Industries:* S. G. H. Davies; *South Indian Nursing Association:* F. H. Oakley; *Madras Provincial Cotton Committee:* D. V. Bulloch; *Madras City Excise Licensing Board:* D. V. Bulloch; *Claims Committee under the War Risks Insurance Schemes:* H. S. Town, M.L.A.; *War Risks (Factories) Insurance Ordinance Advisory Committee:* B. S. Laurence; *Trade Mark Advisory Committee:* D. M. Passmore.

SOUTHERN INDIA.

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are three classes of members, Affiliated, Resident and non-Resident. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber holds survey and arbitration, issues certificates of origin and certificates of invoices; certificates of sampling, analysis and weights.

The right of electing three representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1941. Members of the Chamber hold seats in the Madras Legislative Assembly, and the Chamber has also been accorded the right of electing a representative to that body. Co-jointly with the Nattukottai Nagarathars Association the Chamber has the right of electing a representative to the Federal Assembly.

Under the Madras City Municipal Amending Act, 1936, the Chamber has the right of electing one Councillor to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the South Indian Railway Local Advisory Committee, M. & S. M. Railway Local Advisory Committee, Senate of the Madras University, Senate of the Annamalai University, Board of Industries, Board of Communications, Madras City Improvement Trust Board, Indian Tea Market Expansion Board, Madras City Excise Licensing Board, Madras War Supply Advisory Committee, Textile Trade Marks Advisory Committee, Madras Port Committee, Board of Referees, E. P. T. Madras University Employment Bureau, War Risk Insurance Madras Claims Committee, Prices and Supply Board Panel, Transport Board Panel, Railway Rates Advisory Committee, Madras Income Tax Board of Referees, Indian National Committee, H. P. P. Ordinance Panels, Madras Employment Exchange, Advisory Committee for Manufacturing Engineering Stores, Advisory Committee for Madras Requisitioning of Lands, etc.

The Chamber has about 700 members on the rolls and has its own building. Forty-five Associations in the City of Madras and Chambers of Commerce in the mofussil have been affiliated to this Chamber.

President.—Dr. Sir Rm. Alagappa Chettiar.
Vice-Presidents.—Messrs. V. Pandurangiah and A. P. Yamal.
Secretary.—P. Raghavan Nair, B.A., B.Com.

NORTHERN INDIA.

"COMMERCE HOUSE." 14, LAWRENCE ROAD, LAHORE.

The Northern India Chamber of Commerce was founded in 1923 and has its headquarters at Lahore. The business of the Chamber is conducted by the Chairman, and a Committee consisting of a minimum of eight but not more than 11 elected members, and a maximum of 3 co-opted members and ex-officio members.

The Chamber is represented on the Communications Board, Punjab; and Joint Development Board, Punjab; the North-Western Railway Advisory Committee, Lahore Branch; the Managing Committee of the Hailey College of Commerce, Lahore; Board of Economic Enquiry, Punjab; Board of Industries, Punjab; Electricity Board, Punjab; Industrial Survey Advisory Committee, Punjab; Board to deal with trade and prices in the Punjab; Price Control Advisory Committee—Wheat; Provincial Standard Cloth Advisory Committee; Railway Priority Sub-Committee; Executive Committee S. P. C. A., Lahore; Industrial Development Committee, Punjab; Provincial Transport Authority; Punjab Labour Tripartite Conference Advisory Committee for Engineering Stores; Civil Supplies Board, Punjab; Punjab Board of Film Censors, Punjab Industrial Research Committee and also nominates a panel for the Railway Rates Advisory Committee and Excess Profits Tax (Board of Referees).

The Chamber is affiliated with the Associated Chambers of Commerce of India, and with the Federation of Chambers of Commerce of the British Empire, London.

A Tribunal of Arbitration has been set up under the Rules of which arbitration relating to commercial disputes are carried out on behalf of members and non-members. Surveys of merchandise are also frequently held. Certificates of origins are issued for goods manufactured in India.

The aim of the Chamber is to protect and further commercial, industrial and agricultural interests in Northern India by every possible means, and it is the constant endeavour of the Chamber to achieve as much as possible for the good of the common interest of members—the business prosperity of Northern India.

Chairman :—C. T. Mason.

Vice-Chairman :—Sardar Bahadur Sarda Sapuran Singh Chawla.
Secretary :—G. J. Lumb.
Head Clerk :—S. Mohd Hussain Bokhari, D.Com.
Address : Commerce House, 14, Lawrence Road, Lahore.
Telegraphic Address :—" Commerce ".
Telephone No. 2237.

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore, Rs. 500 a year; an individual member resident or carrying on business in Cawnpore, Rs. 500; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints Arbitration Tribunals for the settlement and adjustment of disputes, when invited to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has a membership of 139 excluding 2 honorary, 12 affiliated members.

President.—C. W. Tosh.
Secretary.—H. W. Morgan, M.B.E.

MERCHANTS' CHAMBER OF UNITED PROVINCES, CAWNPORE.

The Merchants' Chamber of United Provinces was established in November, 1932, with the object of safeguarding the interests of trade and industry in the United Provinces, providing regular and efficient statistical and intelligence service to the business firms of the province and generally helping the promotion of trade and business in the United Provinces through proper organisation of commercial opinion. The Chamber represents almost entirely Indian capital and has affiliated to its membership Cotton Mills, Sugar Mills, Jute Mills, Silk weaving and Hosiery works, oil mills Banks and Firms engaged in extensive dealings in Piece-goods country-produced Hide and Leather. Ten Commercial Organisations and Trade Associations of the Province are also affiliated to the Chamber. The Chamber maintains a ceaseless channel of correspondence with the Central and Provincial Governments and the various Railways on all points of commercial grievances, whether of general or of specific interest. It issues every month an English and Hindi Bulletin to its members who are scattered over the entire province. The report of the activities of the Chamber is a regular feature of the daily press of the province. The Chamber is represented on the U.P. Legislative Assembly, Court of the Lucknow University, Rly. Advisory Committees, Provincial Economic Advisory Board, U.P. Price Advisory Board, Governing Body of the Agricultural College, Cawnpore, Provincial Board of Agriculture and Animal husbandry, Cawnpore Municipal Board, United Provinces Food Advisory Council and about 15 other spheres of public service. The constitution of the Chamber which is registered under the Indian Companies Act 1913, with a license under Section 26, provides for an Executive consisting of a President, a Vice-President and 19 Members of the Council. A wholetime Secretary is attached to the Council.

Grams:—"Chamber," New Delhi.

THE PUNJAB FEDERATION OF INDUSTRIES (Amritsar).

The Punjab Federation of Industries was established in 1937, with the object of creating a solid body of industrialists of the Punjab and Northern India to promote and protect their interests through organised effort. It is now the only body of its kind in the Punjab as a purely industrial association which can speak with authority on all matters relating to industrial development. The Federation has now among its members the largest industrial units in the province and no industry of any importance is left unrepresented in the Federation.

President:—St. B. S. Sapuran Singh Chawla, (Managing Director, Amritsar Distillery Co. Ltd.). *Vice President*:—H. R. Sakhuja, (Managing Director, The Upper India Metal Works Ltd.).

Members of the Managing Committee:—Shaikh Ahmed Sadeque (The Amritsar Swedeshi Woollen Mills); Satya Paul Virmani (Jawala Flour Mills); W. Roberson Taylor (Oriental Carpet Mfg. Co. Ltd.); Som Raj Kapur, (Messrs. Shambhu Nath & Sons Ltd.); Lala Kishori Lal (Mohabir Hosiery & Textile Mills); L. Kidar Nath (The Model Woollen & Silk Mills); Y. R. Puri. (The Amritsar Spinning Mills); *Secretary*.—Dr. Jagdish Chand.

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October 1868.

The following are the members of the Chamber, which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras:—

Members.—The Coromandel Co., Ltd.; Ripley & Co.; Gordon, Woodroffe & Co. (Madras) Ltd.; Wilson & Co.; Best & Co., Ltd.; Burmah-Shell Oil Storage and Distributing Co. of India Ltd.; The Agent, Imperial Bank of India; The Deccan Sugar and Abkhari Co., Ltd.; Samalkot & Parry & Co., Ltd., Vizagapatam.

Members of the Committee.—S. A. Cheesman (*Chairman*), W. Le Faucheur, J. D. James, G. M. Lake (*Secretary*).

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. Subscription for members whose place of business is in Cocanada, Rs. 120 per annum, payable quarterly, for others Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

MARWARI CHAMBER OF COMMERCE.

(ESTABLISHED 1900.)

The main object of this Chamber is to foster the growth of commerce and industry in the country, to safeguard the interests of the commercial communities, to protect and promote the trade, commerce, manufactures, agriculture and industries of Bengal, to watch over and protect the general commercial interests of persons engaged in trade, commerce, manufactures, agriculture or industries in India and in particular of Calcutta, and to deal with all questions connected with trade, commerce, agriculture, manufacture and industries. It

arbitrates in disputes arising out of commercial transactions and also issues certificates of origin to exporters of indigenous goods. The Chamber is generally consulted by Government on questions of public interest and commercial matters. It undertakes special enquiries and action for securing redress of legitimate grievances of any branch of trade or industry. The Chamber is the Calcutta agent of the Central Cotton Committee and controls most of the Calcutta piece-goods market. It has an ordinary membership of about 750.

The Chamber accepts surveys to be conducted in the Technological Laboratory, Matunga, Bombay.

President :—M. L. Khemka.

Vice-Presidents :—Rai Bahadur G. V. Swaika and R. N. Bhojnagarwalla.

Hony. Secretary :—K. N. Gutgutia. *Hony. Asstt. Secretary* :—P. L. Saraogi.

The following Associations are affiliated with the Chamber :—Marwar Association, Kalimpong ; District Marwari Merchants' Association, Darjeeling ; The Wheat and Seeds Association, Calcutta ; Sonada Merchants' Association, Sonada ; The Indian Jute & Cotton Association Ltd., Calcutta ; Assam Marwari Chamber of Commerce ; Calcutta Salt Association ; Cloth Merchants' Association, Siliguri ; Upper Assam Marwari Chamber of Commerce, Jorhat ; Bogra Cloth and Yarn Merchants' Association ; Bengal Textile Unit Holders' Association.

Address : Imperial Bank Building, Burrabazar Branch, Calcutta.

Telephone No. B.B. 2265.

Telegram Address : —" Marchamber."

THE BERHAMPUR CHAMBER OF COMMERCE (ORISSA).

The Berhampur Chamber of Commerce was established soon after the formation of the new province of Orissa. It is registered under the Indian Companies' Act and is recognised by the Government of Orissa. It maintains a library and an information service, arranges commercial arbitration and makes commercial opinion available to Government. It has nearly 100 members on its rolls and is represented on all important Committees set up by Government for various purposes.

President :—P. Narayana Rao, B.A. B.L. ; *Vice-President* :—The Agent of Messrs. Haji Jamal Nur Mohamad ; *Hon. Jt Secretaries* :—I. Ramanur and T. R. Mohana Rao, B.A. ; *Assistant* :—G. V. Rangacharyulu. Address :—Berhampur, Ganjam Dist., B. N. Rly.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

(1, COUNCIL HOUSE STREET, CALCUTTA.)

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta, and was until lately administered by the Director General of Commercial Intelligence assisted by two Deputy Directors and an Assistant Director. The posts of Director General and Deputy Directors having been abolished there are now two Directors, one designated Director of Commercial Intelligence and the other Director of Statistics with one Assistant Director. It embraces two distinct classes of work: (*a*) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (*b*) the compilation and publication of All-India statistics.

Among the important publications for which the Department is responsible are the following annual volumes :—Statement of the Foreign Seaborne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly journal— "The Indian Trade Journal"—the principal features of which are (*a*) information as to tariff changes in foreign countries which affect Indian interests, (*b*) notices of tenders called for and contracts placed by Government departments and public bodies, (*c*) crop reports and forecasts, (*d*) Government orders, communiques and other notifications affecting trade, (*e*) analysis of Indian trade statistics, (*f*) market reports, price and trade movements of the staple exports and imports, (*g*) trade enquiries for securing trade introductions, and (*h*) monthly, quarterly and annual reports of the Indian Trade Commissioners abroad and summaries of the leading features of consular and other trade reports.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence and Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General, which control is now exercised by the Director of Commercial Intelligence. It has now been expanded into a first-class technical library containing over 21,325 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 385 technical and commercial journals and market reports. Ordinarily books are consulted in the Library but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with the Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London, Toronto (Canada), Mombasa (East Africa), New York, Buenos Aires (Argentine), Alexandria, Sydney (Australia), Tehran (Persia) and the Indian Trade Agent, Kabul, with His Majesty's Trade Commissioners in India and the Dominions and with Consular Officers in various parts of the world.

TRADE COMMISSIONER SERVICE IN INDIA.

UNITED KINGDOM TRADE COMMISSIONER SERVICE.

The United Kingdom Trade Commissioners are the representatives in India, Burma and Ceylon of the Board of Trade. The two departments of the Board which are mainly concerned with external economic relations are the Commercial Relations and Treaties Department, which is responsible for general external commercial policy, and the Export Promotion Department, which acts as the executive instrument for fostering export trade. Both departments are under the same ministerial direction—the Secretary for Overseas Trade—who is responsible to the President of the Board of Trade under whose guidance he is concerned with the whole field of external trade.

In foreign countries the counterpart of the work performed by Trade Commissioners is undertaken by Foreign Service Officers in Commercial Diplomatic and Consular posts. The Board of Trade is associated with the Foreign Office in the staffing of commercial posts in foreign countries. But the trade policy of the United Kingdom is a matter for the President of the Board of Trade acting, as do all other Ministers, in consultation and agreement with those of his colleagues whose interests are also concerned.

Function of United Kingdom Trade Commissioners. The primary duty of the United Kingdom Trade Commissioners consists in the giving of assistance to governments, organisations, firms and individuals who wish to establish contact with sources of supply in the United Kingdom. The Trade Commissioner, in addition, himself collects information in regard to trade opportunities which may arise within his territory. He reports to the Board of Trade on all matters affecting the trade, industry and commerce of the area entrusted to him. He is responsible for maintaining close personal relations with ministers and officials of governments in his area, with chambers of commerce, trade associations and the principal importers and manufacturers. He aims at visiting the principal commercial centres, reporting upon foreign competition, on financial and trade conditions, and new legislation affecting trade. He is also expected to maintain a regular flow of commercial information of all kinds to the Board of Trade, to maintain active correspondence with firms in the United Kingdom who wish to extend their trade, and to give all possible assistance to representatives of United Kingdom firms who may visit his territory.

The United Kingdom Trade Commissioners in India endeavour to maintain contact with United Kingdom representatives and agents in India. The offices are equipped with a wide range of directories and reference books of all kinds, including libraries of catalogues of the leading United Kingdom manufacturers. Firms desiring information with regard to specific manufacturers are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will *not hesitate to make more extensive use* of the information available in these offices, and to bring to the attention of the United Kingdom Trade Commissioners any cases where difficulties may have arisen over the harmonious development of trade between the United Kingdom and India.

THE CANADIAN FOREIGN TRADE SERVICE.

The Canadian Department of Trade and Commerce comprises, as one of its principal divisions, the Foreign Trade Service, formerly described as the Commercial Intelligence Service. This Service had its beginnings prior to the establishment of the Department in 1892 and has since undergone considerable expansion. Before the war it included a head-quarters staff in Ottawa and thirty-four Trade Commissioner offices abroad, seventeen of these being in British and an equal number in foreign countries. Several of these were closed during the war years but are being progressively re-opened and at the beginning of 1946 the service comprised offices in the United Kingdom, the Dominions, India, Newfoundland, Eire, the West Indian Colonies, the United States, Cuba, Egypt, the principal countries of Central and South America, the Netherlands, Norway, Sweden, Portugal France, and Belgium Plans are at present under way to expand the service both in respect to offices and trained personnel in order to assist in the transition of Canada's extensive war-time trade to a normal commercial basis.

In those countries where Canada has established diplomatic representation the Trade Commissioner's office has been incorporated into the Canadian embassy or legation.

The office of the Canadian Trade Commissioner for India, Burma and Ceylon was established in Calcutta in 1922 and was transferred to Bombay on April 1, 1940. Its services are at the disposal of Canadian firms interested in the export of their goods to the Indian, Burma and Ceylon markets and to Canadian Manufacturers and others who may be interested in the purchase of local products. It is also in regular touch with import houses in these countries and is prepared to co-operate as well with exporters interested in the Canadian market.

Canadian Government Trade Commissioner in India, Burma and Ceylon.—Paul Sykes, Gresham Assurance House, Mint Road, Bombay, P.O. Box 886. Telephone—20672. Tel. Address:—"Canadian, Bombay."

THE AUSTRALIAN GOVERNMENT TRADE COMMISSIONER SERVICE IN INDIA.

The Australian Government Trade Commissioner is located in Bombay and covers the territory of India, Burma and Ceylon.

The Trade Commissioner deals with enquiries received from India, Burma and Ceylon and places Indian Merchants and Firms in touch with manufacturers in his country. He maintains a flow of trade information to the Department of Commerce, Australia, for dissemination to Australian exporters and information on specific openings for trade, including Government contracts and tenders for which Australian products might be suitable. He watches the demand for specific goods and gives information concerning competition to be met in their supply. An important function is to provide details of credit conditions and terms of payment. Market surveys on specific commodities are prepared and sent for the information of trade interests in Australia.

Information and literature is available on all aspects of trade with Australia.

Australian Government Trade Commissioner in India.—H. R. Gollan, D.S.O., M.C. *Address:* "Fairlie Place, Calcutta".

CEYLON TRADE COMMISSIONER FOR INDIA.

In 1937 the Government of Ceylon decided to send over to India a Trade Commissioner for the purpose of stimulating trade between Ceylon and India. "Ceylon House in Bombay" was thus inaugurated in June, 1937, and was to continue operation for a period of three years as an initial experiment. At the expiration of the first period of three years, it has been decided by the Ceylon Government to continue Ceylon House for a further period. The purpose of Ceylon House is not actually to enter into trade directly but to put Ceylon producers in direct touch with Indian importers and to see that all Ceylon products get a fair deal in the Indian markets or find outlets where they are not much known. In pursuance of this policy the Commissioner helps all local inquirers in obtaining the necessary trade contacts. Information and literature relating to Ceylon and Ceylon produce are being supplied by the Commissioner and free advice is given to intending tourists.

Trade Commissioner.—Annesley de Silva; *Secretary.*—G. A. Fernando, B.A. (Lond.). *Address* Ceylon House, Jehangir Wadia Building, Bruce Street, Fort, Bombay *Telegram* "Lankatrade." *Tel.* 31239.

SOUTH AFRICAN GOVERNMENT TRADE COMMISSIONER SERVICE.

The South African Government, Department of Commerce and Industries, decided to open the office of the Trade Commissioner in India in 1940 primarily for the purposes of furthering the export of South African products to India, to maintain informative correspondence with firms in South Africa who wish to extend their trade in this direction and to give all possible assistance to representatives of South African firms who may visit this territory, based on the policy of assistance without interference.

During the War the Government of the Union of South Africa found it necessary to obtain various essential commodities from India and the National Supplies Control Board called upon the Trade Commissioner in Bombay to assist in the purchase and prompt shipment of these commodities with the co-operation of the relative Government Control bodies in India

The Trade Commissioner's office also furnishes information to local importers and buyers who wish to contact South African Manufacturers and Exporters and is equipped with reference books and lists of manufacturers who have goods to offer.

Interesting literature and other material relating to publicity, travel and immigration into South Africa is supplied upon application, to enquirers.

SENIOR TRADE COMMISSIONER FOR THE EAST:—

ALBERT H. HANDFORD.

Address: Gresham Assurance House, Mint Road, Bombay. P. O. Box 763.

IRANIAN TRADE REPRESENTATION IN INDIA.

The Iranian Trade Representation in India purchases all goods required by the Iranian Government as also deals with enquiries received from India and Ceylon and tries to put in contact Indian merchants and firms with firms and merchants in Iran.

The Iranian Trade Representation studies ways and means of improving the trade between India and Iran and endeavours to give all kind of assistance to firms and traders who wish to trade with Iran.

Telephone No. 45093. *Assistant Trade Commissioner* :—A. Behnia. *Chief Accountant* :—G. V. Tehrani.

THE INDIAN CENTRAL COTTON COMMITTEE.

Office.—Nicol Road, Ballard Estate, Bombay.

Secretary.—D. N. Mahta, O.B.E., B.A. (Oxon.).

Asst. Secretary.—C. J. Bocarro, M.B.E., M.A.

Offg. Director, Technological Laboratory.—D. L. Sen, M.Sc. (Tech.) (Manch.) M.Sc. (Bom.), A.I.I.Sc., F.I.C.

The Indian Central Cotton Committee was constituted by the Government of India in March 1921, as a result of the recommendation of the Indian Cotton Committee of 1917-18. Originally the Committee was purely an advisory body but with its incorporation under the Indian Cotton Cess Act in 1923, it became an administrative body having at its disposal funds for the improvement and development of the growing, marketing and manufacture of cotton in India. The funds of the Committee are derived from the Cotton Cess of two annas per bale (four annas for the first three years) which was imposed in 1923. Having complete control over its funds, the Committee has been able to build up a satisfactory reserve and is at present spending about Rs. 10 lakhs per annum on cotton improvement, mainly on agricultural and technological research and seed distribution and marketing schemes.

The activities of the Committee now extend to all branches of cotton improvement in India, and, as an authoritative body to advise the Central and Provincial Governments on important matters of cotton policy, it has attained an outstanding position. The Committee provides funds for research into cotton problems of all-India importance and for the development, extension and marketing of improved varieties of cotton. The aim, however, has always been to supplement and not supplant the work of the Agricultural Departments in the cotton growing provinces and Indian States. Including as it does representatives of growers, agricultural officers, traders, spinners and manufacturers, it has been an invaluable forum for the discussion of many problems of general concern. A list of the members constituting the Committee and the various interests they represent as on 1st April, 1946 is given below :—

MEMBERS OF THE COMMITTEE.

President.—Sir Herbert Stewart, C.I.E., I.A.S., Vice-Chairman, Imperial Council of Agricultural Research.

G. Saraiya, O.B.E., J.P. ; Roger Thomas, C.I.E. ; G. V. Deshmukh ; Khan Saheb Agha Yusuf Ali, Director of Agriculture, Bahawalpur State, Bahawalpur ; Sir Chunilal B. Mehta (Vice-President) and Sardar Bahadur Sardar Beant Singh.

Amongst the research schemes of the Committee, plant breeding schemes for the improvement of quality naturally take pride of place. The agencies employed by the Committee for its research work have varied little in character since 1923, though they have grown in number. It continues to maintain a Technological Laboratory at Bombay which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre and a Testing House which is recognised by the B.I.S.F.A. The Committee also provides a large proportion of the funds for the Indore Institute of Plant Industry.

For a considerable period the Committee restricted its grants to agricultural research, but in 1930 it was decided that the time had come to add its support to the efforts already being made to bridge the gap between the experiment station and the cultivator and to supplement the funds which the Agricultural Departments were devoting to the introduction of improvements into agricultural practice. Special attention from that time began to be devoted to seed distribution schemes.

The Committee has not stopped at the production of better cotton, but from its inception has devoted special attention to better marketing, to the prevention of adulteration and other abuses and to many other problems connected with the cotton trade of the country. Regulated Cotton Markets existed in Berar before the establishment of the Committee, and that system which had stood the test of time was commended with certain modifications for general adoption. Regulated Cotton Markets have now been established in Bombay, Central Provinces, Madras, Punjab, Hyderabad Baroda and Indore. Similarly, on the recommendation of the Committee, the Cotton Transport Act was passed in 1923 by which Provincial Governments are empowered to exclude from any specified area cotton, *kapas* or seed from outside unless required for a special purpose and covered by a licence. Prior to the passing of this Act, inferior cottons used to be imported in large quantities into the staple cotton tracts for purposes of adulteration, to the detriment of the reputation of several valuable cottons. The Act is now in force in almost all the important staple cotton areas of Bombay, Madras and the Central Provinces as well as in Baroda, Rajpipla, Chhota Udepur, Hyderabad and Indore, etc. In 1925, on the recommendation of the Committee, the Cotton Ginning and Pressing Factories Act was passed. This provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. Recently the Act has been used for the prevention of watering and for the mixing of non-cotton articles with cotton. The Committee has also taken steps to bring to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale.

It may be stated without hesitation that, as a result of the efforts of the Committee, the last nineteen years have seen a marked change in the character of the Indian crop, particularly in the percentage of short and medium staple. Equally important is the result of agricultural research and its application to the yield of cotton per acre. The average yield per acre in the quinquennium 1939-44 for the whole country was 112 lbs. This is 18 per cent. higher than for the quinquennium 1927-32. The average yield per acre in 1944-45 was 121 lbs. The ascertained area under improved cotton during 1944-45 was about 52 per cent. of the total. The ultimate ideal is to encourage the establishment of single variety tracts wherever agricultural conditions and the limitations of irrigation supply and soil make this possible.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz., The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Mucadums' Association, Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the East India Cotton Association under Bombay Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October, 1932. With effect from 1st November, 1932, the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The Constitution of the Board on 1st September 1945 was as under :—

Sir Purshotamdas Thakurdas, K.B.E., C.I.E. (President); Haridas Madhavdas (Vice President), (Sellers' Panel); Ramdas Kilachand, Jehangir Pestonji Patel, Madanmohan R. Rulya, Arthur Pether (Buyers' Panel), Hansraj Jivandas, Fathechand Jhunjhunwala, Shivchandari Jhunjhunwala (Sellers' Panel); Chunilal Krishanalal Sayta, Maganlal Popatbhai Mehta, Chandulal Chhotalal, Hemraj Anandilal, Madanlal Nemani, Hirlal A. Dave (Brokers' Panel); Rao Bahadur Sir Madhavrao G. Deshpande, K.B.E., L. Madhava Reddi, B.A., B.L., Vakil, Major Nawab Mohd. Jamshed Ali Khan, M.B.E., M.L.A. (Cotton Growers' Representatives nominated by the Indian Central Cotton Committee); Rao Bahadur F. B. Laxmeshwar Kurthoti, P.M. Bildiker (Cotton Growers' Representatives nominated by the Government of Bombay).

Officers.

C. M. Parikh, B.Com., *Secretary*; S. A. P. Aiyar, *Assistant Secretary*.

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user, whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the cotton trade; to establish just and equitable principles in the trade and to maintain uniformity of control; to fix or adopt standards of classification of cotton; to acquire, preserve and disseminate useful information connected with the cotton interest throughout all markets; to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the cotton trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted; to establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House; to regulate the handling and exportation of cotton from India and the importation of cotton into India in so far as it may be imported; to bring, prosecute, or defend, or aid in bringing, prosecuting, or defending, any suits, actions, proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, a large Trading Hall on the lines of Liverpool and New York Exchanges, Survey Rooms, Appeal Rooms, etc.

The Association has another fine Building, "The Cotton Exchange" at the corner of Sheikh Memon Street and Kalbadevi Road, wherein trading in "forward" contracts is conducted. It comprises of a basement, a ground floor (Trading Hall) with two galleries and six other upper floors. There are 114 telephone cabins for members on the ground floor and the galleries. The top floor accommodates the administrative offices of the Association and the Clearing House, and the remaining five floors contain 113 rooms for members' offices.

The Association has a membership of 537.

The Bombay Cotton Annual containing matters relating to every branch of the trade is published annually in December and statistics are issued twice weekly.

Address :—Cotton Exchange, Marwari Bazar, Bombay 2.

Telephone :—Bombay No. 26176.

Telegraphic Address :— "Cotboard."

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well-known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.—The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blocade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread rule followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions.

The principal varieties are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert.

The cultivation of cotton in India has shown a marked variation by way of adjustments to the world cotton conditions and domestic price fluctuations mainly dictated by overseas markets which happened to be the main customers for Indian cotton in the pre-war years. The gradual decline in the average price of Broach from Rs. 255 in 1873 to Rs. 150-8 in 1899 checked the growth of this crop; but thereafter the growing demand and upward price trend reaching the climax at Rs. 561 in 1923-24 gradually raised the production to 6,098,000 bales in 1924-25 as against 1,090,000 bales in 1899-1900. A downward twist given to the prices by the depression reduced the size of the crop to 4,007,000 bales in 1931-32. After a minor recovery, the prices slumped to the bottom of Rs. 157 following the decision of Japan to reduce her purchases from India and the Indian Central Cotton Committee was forced to launch a campaign for reducing the acreage under short stapled cotton for which Japan was the best customer. As a result, the production was voluntarily brought down to 4,909,000 bales in 1939-40 from the all time record level of 6,234,000 bales in 1937-38.

The outbreak of the war reminded the growers of the fortunes they had made in the past wars and the crop was stepped up under the stimulus of upward trend of cotton prices to 6,223,000 bales in 1941-42. The war developments, however, upset the calculations and the quotation for Broach fell precipitately to Rs. 148. Simultaneously, the Government was forced to launch the grow-more-food campaign. The combined effect was a sharp cut of 22 per cent. in acreage and 26 per cent. in output of cotton in 1942-43. The crop was higher in the following year in sympathy with the better cotton prices; but the statutory ceilings on cotton prices and legal limitations on cotton cultivation reduced the acreage to the 32 years old record low level of 14,803,000 acres yielding 3,543,000 bales in 1944-45.

The constitution of the Indian Central Cotton Committee in March 1921 has proved an important landmark in the history of this leading cash crop of the country. The introduction and extension of super varieties of cotton on which the Committee has been spending nearly Rs. 10 lakhs every year has gradually changed the face of Indian cotton. The production of 'medium and long staple' cotton (7/8 inch and above) increased in 1943-44 by 1,531,000 bales or 95 per cent. as compared with the figure for 1922-27, while there was a reduction of 1,889,000 bales of 49 per cent. during the same period under 'short staple' cotton (below ¾ inch). The production of cotton of staple length, one inch and above, was nil in 1922-27; but it amounted to 654,000 bales in 1943-44. While tackling the question of improving the quality of Indian cotton, the importance of raising the yield per acre has not been overlooked by the Committee. The average yield per acre rose from 96 lbs. in the quinquennium 1922-27 to 109 lbs. in the quinquennium 1937-42 and was as much as 112 lbs. in 1943-44.

Cotton Trade. Bombay is the heart of the cotton trade with Karachi next in importance and a network of regulated markets spread throughout the cotton growing tracts. Trading in futures forms an integral part of the markets in Bombay and Karachi. The year 1942-43 was a most eventful year during which speculation took up the cotton price to the record peak of Rs. 637 on March 12, 1943 and forced the Government of India to close down the futures market on May 1, 1943. This was followed by regulation of movement of cotton, fixation of floors and ceilings for the various varieties, and the resumption of trading in new crop.

The introduction of the Indian cotton contract, based on Khandesh Jarilla cotton of ¾ inch staple with other varieties having staples between ¾ inch and 7/8 inch tenderable against the contract, was an important innovation in 1942-43. The new contract replaced the Broach, Bengal and Oomra contracts which had served the trade for nearly a quarter of a century. It was the outcome of the necessity to establish a close identity between the hedge contract and the type of cotton required by the domestic textile industry.

Indian cotton assumed importance in the past mainly as an exportable commodity and until 1936-37, export markets formed the most

important outlets for the commodity. Among them Japan was, of course, the most valuable buyer responsible for the offtake of over one-fourth of the crop. Thereafter the Japanese textile industry was switched on to the Chinese cotton with the result that India's total exports fell from the all time record level of 4,268,000 bales during the financial year ended March 31, 1937 to 2,703,000 bales in 1938-39. The bottom was knocked down by the war developments and exports were reduced to only 282,000 bales in 1943-44.

The consumption of Indian cotton by the domestic textile industry became an important feature of the cotton trade only after 1936-37 cotton season. For the first time in the history of the trade, mill consumption outstripped the export figure in 1937-38 season during which mill consumption totalled 2,99,609 bales as against 2,732,000 bales shipped out of India. The figure for absorption of Indian cotton within the country reached the peak in 1942-43 when the mill industry used 4,280,817 bales, while foreign markets were able to buy only 301,000 bales. This trend has continued thereafter.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piecegoods.

Indian Cotton Mill Industry.—The foundations of the Indian cotton mill industry were laid as early as in 1818 when the first mill was erected at Calcutta. Bombay saw its first mill in the year 1854 owing to the enterprise of a Parsee merchant, Mr. Cowasjee Nanabhoy Davar. Till 1877 Bombay city was the exclusive home of the industry; but its development was thereafter widely distributed owing to the proximity of raw cotton. The factory legislation first undertaken in 1881 led to the diversion of the industry to Indian States.

The following table shows how by successive stages, the industry's productive capacity has grown:—

Year.	Number of Mills.	Number of Spindles.	Number of Looms.
1880 ..	56	1,461,500	13,502
1890 ..	137	3,274,196	23,412
1900 ..	193	4,945,783	40,124
1905 ..	197	5,163,486	50,139
1910 ..	263	6,195,671	82,725
1915 ..	272	6,848,744	108,009
1920 ..	253	6,763,076	119,012
1925 ..	337	8,510,633	154,292
1930 ..	348	9,124,768	179,250
1935 ..	365	9,685,175	198,867
1940 ..	388	10,005,785	200,076
1941 ..	390	9,961,178	198,574
1942 ..	396	10,026,425	200,170
1943 ..	401	10,130,568	200,890
1944 ..	407	10,222,107	201,761
1945 ..	417	10,238,131	202,388

It may be noted that the rate of development has not been uniform in all centres of the Industry in India, and although in the initial stages, the Industry was concentrated in Bombay owing to its advantageous geographical and climatic situation, this pre-eminence of Bombay was not maintained in subsequent years. The number of mills in Bombay City was around 81 till 1931, while at present there are only 65 mills. The industry's development in later years has been more rapid in other Provinces in India and particularly in the Indian States. Out of 417 mills, Bombay province can boast of 209 mills, 69 mills are located in Madras Province, Bengal has 37 mills and the U. P. has 30.

From 1860 to 1865, progress was materially assisted by the accession of wealth which accrued to Bombay commercial interests owing to the high prices at which Indian cotton was sold during the American Civil War. Another factor which contributed to the rapid growth of the Industry was the establishment of a profitable export yarn trade with China. In the years 1865 to 1871, the Industry suffered a severe setback to its prosperity owing to the financial crash which followed the American Civil War. In the early 'seventies, after the restoration of credit, the industry made rapid progress, though in the initial stages, the development of the weaving side of the industry was comparatively slow. The profitable yarn trade with China enabled the Bombay mills to make further progress in the 'seventies and 'eighties of the last century.

Cotton Excise Duty.—The growth of the industry in India during the early years was regarded with a jealous eye by the Lancashire manufacturing interests whose agitation resulted in the Government of India exempting from import duty coarse yarn and cloth in 1878. This resulted in the substitution of the exempted classes of goods for the medium and fine goods previously imported from England, to the detriment of the growing indigenous industry. In 1893, the Indian mints were closed to the free coinage of silver. This step had a disastrous and almost immediate effect on the industry. With the precision of an automatic machine, business with China and Japan came to a standstill as the exchange dropped by about 12 to 15 per cent. to the detriment of India. This measure was followed three years later by the imposition of an excise duty of 3½ per cent. on cloth manufactured in Indian mills for the purpose of countervailing the import duties which had been re-imposed at the end of 1894. From the date of its imposition, until it was finally abolished in the year 1926 this excise duty was condemned by all shades of public opinion in India as an inequitable and unjust burden on the indigenous industry. The closing years of the last century also witnessed the beginnings of the growth of a Mill Industry in China and Japan, which contributed greatly to the cutting off of the Indian yarn trade with the Far East in the following years. Japan later proved to be a very formidable rival to India in the China Market, and eventually threatened the very existence of the Indian industry even in its home market. The loss of the export trade with China and Japan, with whom Indian mills were doing a profitable business in yarn,

was a serious matter, and was the main reason for the development of the weaving side of the Indian industry, which had previously been relatively neglected.

The first Swadeshi Movement afforded a temporary fillip to the Indian industry in the years 1905 to 1907. The intensification of the movement during these years gave a considerable impetus to the cotton manufacturing industry, and as the yarn trade with China was not then profitable, attention was naturally turned to the installation of more looms in the mills, so that the yarn spun in the mills might be turned into piece-goods instead of being exported to China. In 1907 there were large failures of commercial houses, particularly in Bombay, consequent on the heavy fall in the prices realised for yarn in China, the fall in demand from that country following a famine, and violent fluctuations in the silver exchange. The next three years saw the industry passing through a difficult period accentuated by the enhancement of the duty on silver. The adverse conditions persisted with brief spells of partial recovery until 1917 when the boom arising from the Great War set in, which lasted up to the year 1922. The Capital investment in the industry increased from Rs. 20.84 crores in 1917-18 to Rs. 40.98 crores in 1921-22. Production was up during this period by about 50 per cent. while exports of piece-goods doubled the pre-war average. The mills' profits soared and the industry paid high dividends amounting to 40.1 per cent. of the paid up capital in 1919, 35.2 per cent. in 1920 and 30 per cent. in 1921.

Abolition of Excise Duty.—This boom was followed by a period of severe depression, especially in Bombay. This depression, combined with the growing severity of Japanese competition in the home market, assisted as it was by inferior labour conditions, led in the years following 1923 to a renewed agitation for the repeal of the cotton excise duty. In August 1925, a deputation from the Bombay and Ahmedabad Millowners' Associations waited on His Excellency the Viceroy. The situation worsened in the following months, and in December 1925, the excise duty was suspended, and it was finally abolished in March 1926.

Tariff Board Enquiry.—A special Tariff Board was appointed soon after to enquire into the position of the industry, the causes of the depression, the extent to which it was due to foreign competition and the necessity or desirability of protection. The Board found that the difficulties of the industry were mainly due to the unfair advantage which Japan enjoyed owing to the adoption of the double shift system and the employment of women and children at night. The Board, however, presented a majority and a minority report. Government were unable to accept the recommendations made, but as a measure of partial relief, they removed the import duties on mill stores and textile machinery.

The general disappointment felt at Government's decisions on the Tariff Board's recommendations and the grave crisis which then faced the industry were brought to the notice of His Excellency the Viceroy by a deputation of millowners from all parts of the country which waited on His Excellency on 12th July 1927. As a result of this deputation, Government revised their original decisions and imposed a minimum specific duty of 1¼ annas per pound on imported yarns with effect from September 1927, for a period of three years. By the end of this period, although labour conditions in Japan had improved, a new danger had arisen in the shape of a large import trade from China where labour conditions were far inferior to those in India. The protective duty was, therefore, extended for a further period of three years ending on the 31st March 1933.

Protection to Cotton Industry.—The utter inadequacy of the protection extended to the industry by the Yarn Protection Act of 1927 was abundantly evidenced by the increasing imports of piecegoods from Japan in the following years. On 22nd July 1929, on the suggestion of the Bombay Millowners' Association, Mr. G. S. Hardy was appointed by Government to examine the possibility of substituting a system of specific duties for the then existing system of *ad valorem* assessment. Mr. Hardy's conclusions, which revealed that Japanese competition was extremely severe in certain classes of goods manufactured in India, were discussed at a conference of millowners convened by the Government of India towards the end of 1929, and in February 1930, Government introduced in the Legislative Assembly the Cotton Industry (Protection) Bill, which, as finally passed, provided for a change in the then existing revenue duty of 11 per cent. to a protective duty of 15 per cent. in the case of British cotton piece-goods and of 20 per cent. in the case of foreign goods, with an alternative minimum specific duty in either case of 3½ annas per pound on plain grey goods. For revenue reasons, these *ad valorem* rates were raised by 5 per cent. in March 1931, and a surcharge of 25 per cent. of the enhanced duties was imposed in October of the same year, bringing the rate of duties to 25 per cent. (British) and 31¼ per cent. (foreign) with a minimum specific duty of 4¼ annas per pound on plain greys. At the same time, an import duty of 6 pies per pound on all raw cotton and of 10 per cent. on machinery and dyes used by the industry was also levied. The duty on raw cotton was raised in 1939, again for reasons of revenue, to one anna per pound.

Early in 1932 Government directed the Tariff Board to enquire into the question of the grant of substantive protection to the industry. In the meantime the depreciation of the Japanese exchange, consequent on Japan's going off the Gold Standard in 1932, enabled her to place her piece-goods on the Indian Market at abnormally low prices, and offset to a very great extent the protection conferred on the Indian Industry by the 1930 Act. Government, therefore, directed the Board to hold a special enquiry into this question, and in accordance with the recommendations of the Board, the duties on foreign piece-goods were raised from August 1932, to 50 per cent. or 5½ annas per pound, whichever was higher, but in view of the continued severity of the Japanese competition, Government once again found it necessary in June 1933 to raise the level of the duty on foreign piece-goods to 75 per cent. *ad valorem* or 6¾ annas per pound. At the same time notice was also given of Government's intention to abrogate the Indo-Japanese Trade Convention of 1904.

British & Japanese Trade Delegations.—This was followed by the arrival in India of an official Delegation from Japan and an unofficial Trade Delegation from the United Kingdom. The United Kingdom unofficial Delegates' deliberations with Indian millowners culminated in what has been termed the Mody-Lees Pact of 1933, an understanding which was to be in force until the end of 1935. Similar discussions between certain unofficial delegates from Japan and Indian millowners proved abortive, but the efforts of the Japanese official delegates resulted in a fresh Convention and Protocol being agreed to early in 1934, under which a link was established between the exports of Indian raw cotton to Japan and the imports of cotton piece-goods from Japan. Japan agreed to take one million bales of Indian raw cotton in return for the right to export 325 million yards of cotton piece-goods to this country, with a maximum limit of 400 million yards for an aggregate offtake of 1¼ million bales of Indian raw cotton. Japan was also accorded most-favoured-nation treatment in respect of her miscellaneous trade. In virtue of the terms of the Protocol, the duties on Japanese cotton piece-goods were reduced, with effect from 8th January 1934, to 50 per cent. *ad valorem* with a minimum specific duty of 5¼ annas per pound on plain grey goods.

The protective duties on cotton yarn and piece-goods imposed by the Cotton Textile Industry (Protection) Act, 1930, were due to expire on 31st March 1933, but as Government were not able to complete their consideration of the report of the Tariff Board of 1932 (which had recommended the institution of specific duties based on weight subject to their being combined with alternative *ad valorem* duties to prevent a loss of revenue and the imposition of a duty of one anna per pound in the case of yarns below 50s count) before that date, they extended the provisions of the Act for another year.

Textile Protection Bill.—The Cotton Industry (Textile Protection) Bill of 1934 sought to give effect to the recommendations of the Tariff Boards on the cotton and sericultural industries in the light of the Indo-Japanese Protocol and the unofficial agreement entered into between Indian and Lancashire millowners. So far as yarn was concerned, the Act, as passed, fixed the rates of duties at 5 per cent. (British) and 6¼ per cent. (non-British) with a corresponding alternative minimum specific duty of 1¼ annas and 1½ annas per pound on counts up to and including 50s. In the case of piece-goods, the levels of the duties were fixed at 25 per cent. and 50 per cent. on British and non-British goods respectively, with a minimum specific duty of 4¼ annas and 5¼ annas per pound on plain grey goods. The Act also guaranteed protection to the Industry for a period of five years ending March 1939, but recognized the need for an examination of the scale of duties on two occasions: firstly on the expiry of the Mody-Lees Pact at the end of 1935, and secondly, at the end of the Indo-Japanese Protocol in March 1937. Accordingly, at the end of 1935, Government directed the Tariff Board to examine the adequacy of the then existing levels of duty on British goods. Accepting the recommendations of the Board, Government reduced, with effect from June 25, 1936, the duty on all United Kingdom cotton piece-goods, with the exception of prints, to 20 per cent. *ad valorem* with a minimum specific duty of 3¼ annas per pound on plain grey goods.

Textile Trade Agreement.—The Indo-Japanese Trade Protocol was subsequently renewed for a further period of three years ending March 1940, without any material modification in the rates of duties applicable to Japanese cotton piece-goods. With the separation of Burma from India in April 1937, however, the basic quota of cotton piece-goods for India was reduced to 283 million yards, rising to a maximum of 358 million yards, leaving a margin of 42 million yards for Burma.

The negotiations between the Government of India and His Majesty's Government in the United Kingdom for the conclusion of a new Trade Agreement in replacement of that entered into at Ottawa in 1932 were brought to a conclusion early in 1939, and the new Agreement specifically provided for a reduction of the basic rates of duties on United Kingdom cotton piece-goods as under:—

Printed goods ..	17½% *ad valorem.*
Grey goods ..	15 % *ad valorem* or As. 2-7½ ps. per lb., whichever is higher.
Others	15 %

The basic rates were subject to a reduction of 2½ per cent. if imports from the United Kingdom in any year were less than 350 million yards and to an increase to the same extent in the event of United Kingdom imports exceeding 500 million yards. The new rates of duty came into force on April 1, 1939. In the year 1939-40, the European War affected imports from the United Kingdom, and as her sendings of piece-goods did not exceed 350 million yards, the duties on all classes of British piece-goods were reduced by 2½ per cent. with effect from April 17, 1940.

Between Two Wars.—This was a period of chequered career for the industry. Yet it recorded such a good progress in the inter-war period that the share of imports in the cloth requirements of the country decreased from about four-fifths to much less than a fifth. In the same period, the number of mills in British India increased from 227 to 355, the number of spindles from 6.2 millions to 8.4 millions and the number of looms from 109,000 to 168,000. The output of yarn more than doubled in weight and the output of piece-goods nearly trebled in length. Many technical improvements were effected by the industry during this period, chief among these being the installation of modern machinery for spinning and weaving and the development of new bleaching, dyeing, printing and finishing processes.

The following table shows at a glance the progress made by the Indian Cotton Mill Industry during the last forty-five years:—

Progress of Cotton Mills in British India and Indian States since 1900.

Years ending 30th June.	Number of Mills.	Number of Spindles installed.	Number of Looms installed.	Average No. of Hands employed daily.	Approximate quantity of Cotton consumed.	
					Cwts.	Bales of 392 lbs.
1901	193	50,06,936	41,180	1,72,883	47,81,090	13,51,740

Grand Total ..	1,349,038,771	1,577,177,579	1,533,736,189	1,680,462,582	1,650,925,426

Fine Count Yarn.—Substantial progress has been made in the last few years in the direction of spinning fine count yarn. Much, however, remains to be accomplished; but the duty of one anna per pound which Indian mills have now to pay for long staple cotton imported from abroad is a factor which is likely to hamper more rapid progress.

The statement below shows the total quantities of woven goods manufactured in Indian mills during the past four years:—

	1941-42.	1942-43.	1943-44.	1944-45.
	Yds.	Yds.	Yds.	Yds.
Grey & Bleached goods	3,310,230,682	3,020,518,284	3,765,350,893	3,608,103,822
Coloured Piece-goods	1,183,382,586	1,088,818,506	1,105,336,010	1,118,368,451
Grand Total ..	4,493,613,268	4,109,336,790	4,870,686,903	4,726,472,273

Here again, it may be pointed out that Indian mills are now turning out increasingly larger quantities of fine Dhoties, Cambrics and fine Longcloth on the lines recommended by the first Tariff Board (1927).

Textile Industry and the War.—After continuous period of almost unrelieved gloom extending over a period of nearly two decades, culminating in measures being actively explored with a view to bringing about an organised curtailment of production throughout the country, the war in Europe which commenced in September 1939 opened up the prospect of a spell of prosperity for the industry. Following the cessation of trade with Japan, which happened to be the leading supplier of cotton textile to the East in December 1941, the Indian cotton textile industry enjoyed a completely monopolastic position. It was faced with a steadily expanding demand from overseas, an increasing volume of war orders and growing domestic requirements for civil purposes stepped up by inflationary forces. The cloth production was stepped up from 4,012·4 million yards in 1939-40 to the record level of 4,870·6 million yards in 1943-44. Yet the industry was unable to meet the growing demand and the prices were pushed up to four times the pre-war levels.

In may 1943 the Government of India issued the cotton cloth and yarn (control) order based on an agreement between the Government of India and the representatives of the textile industry. Its objects were to reduce prices and stimulate production by controlling the cost and supply of mill stores and by regulating the price of raw cotton and by superintending the distribution of cloth from the mills to the retailers. The control authorities were, however, faced with a formidable task created by reduction in output due to coal shortage and *hartals* on the one hand and growing demand on the other. Consequently, though in the following two years, the prices stamped on the cloth were brought down by about 60 per cent. the full benefit was not passed to the consumer owing to widespread black market activity, mainly encouraged by illicit exports due to trade regulations and large scale hoarding as inflation hedge.

The latest supply position was reviewed by the Chairman of the Textile Control Board recently when he said: "In the calendar year 1945, Indian cotton mills produced 4,687 million yards of cloth and 1,625 million lbs. of yarn in 1944 and 4,715 million yards of cloth and 1,620 million lbs. of yarn in 1943. The loss in production in 1944 is primarily due to reduction in output following stoppages of mills for lack of coal or inferior coal. In 1945 a higher production might have been attained had it not been for a large number of spindles and loom hours lost through hartals, shortage of labour, shortage of raw materials, etc. It is estimated that the total quantity of cloth and yarn exported in 1945 would be approximately 387 million yards of cloth and 13 million lbs. of yarn as compared with 434 million yards of cloth and 18 million lbs. of yarn in 1944. Supplies of cloth and yarn for defence services in 1945 have amounted to 417 million yards of cloth and 25 million lbs. of yarn as compared with 583 million yards of cloth and 28 million lbs. of yarn in 1944. The net available supplies of mill made cloth for civilian consumption in 1945 amount, therefore, to 3,883 million yards as compared with 3,794 million yards in 1944. Including handloom, it is estimated that the cloth available for the civilian population of India in 1945 is approximately 14 yards per head per annum for India's population of 400 million."

The table below sets out the exports of cotton twist and yarn from India to her chief export markets:

	1938-39.	1941-42.	1943-44.	1944-45.
	lbs.	lbs.	lbs.	lbs.
United Kingdom	182,238	3,651,838	..	..

Grand Total ..	163,758	335,884	645,855	688,738

In relation to the world cotton textile industry, the Indian Industry ranks second from the point of view of the volume of cotton consumed, and fifth in point of spindles and looms installed. The position of the Mill Industry in the national economy of India will be evident from the fact that, at the present time, it consumes more than 70 per cent. of the total Indian cotton crop, directly gives employment to over 500,000 workers, and affords subsidiary employment to large numbers of persons who are engaged in various trades which directly depend for their existence upon the Cotton Mill Industry.

Hand Weaving Industry.—Hand weaving is the largest single unit among India's small scale industries controlled mainly by a small class of entrepreneurs. It is essentially an urban industry and turns out approximately 1,600 million yards of cloth representing nearly 25 per cent. of the goods available for domestic needs. The recent estimates indicate that the total number of handlooms is about 2½ millions of which nearly 64 per cent. are throw-shuttle looms and 35 per cent. fly-shuttle looms. The industry supports nearly 10 million persons including 2,400,000 weavers and 2,600,000 auxiliary workers, a number greatly in excess of that dependent on any other industry except agriculture.

The first 15 years of the current century witnessed a steady rise in the production of handloom cloth; but the unsteady supply of yarn during the first world war resulted in a sharp decline of over 50 per cent. in its output. The industry was thereafter able to raise its head; but no appreciable progress could be made owing mainly to the political movement which created a strong prejudice against the use of imported yarn thereby preventing the handloom weaver from finding market for cloth of finer counts woven by him. That was followed by the change in the clothing habits and the competition from the mill made cloth with the result that the hand weaving industry had to face a long period of depression in the 'thirties.

The economic plight of the handloom weaver focussed the attention of the Government of India and the provincial governments on the remedial measures and as a result of the recommendations of the Industries Conference held in 1933, grants-in-aid were allotted to the provincial governments to organise the industry by providing facilities for improving its technique, production methods and marketing system.

One of the recent developments in the history of the industry is the entry of small power looms. In 1941, there were 11,604 power looms of which about 55 per cent. were located in Bombay Province alone. The latest information indicates that their number has gone up to 18,758.

The report of the Fact-Finding Committee (Handloom and Mills) appointed by the Government of India in 1941 to survey the position of the industry reveals that the cost of production of the industry is high on account of the heavy profit of the middlemen, while the existing marketing system robs the weaver of a reasonable

return owing to the high margin of profit varying up to 46 per cent. usurped by a chain of middle men.

With a view to improving the position of the industry, the Government of India have constituted the All-India Handloom Board on which the weaver, the provincial governments and Indian States interested in the industry are represented. The recommendation of the Board favouring the increase of the present yarn supply to the industry by reserving half the production from the spindles to be installed during the first five years of the post-war development plan has been accepted by Government. Proposals for organising the industry on a sound footing by rationalising and standardising its products and consolidating its markets are under examination. A scheme is being evolved for ensuring free inter-provincial movement of handloom cloth in order to enable the industry to regain the pre-war markets within the country.

Post-War Plan.—The expansion of India's present productive capacity of mill-made cloth from 4,800 million yards to 7,200 million yards per annum is desirable but impracticable at present because of difficulty in securing the necessary machinery, says a press note announcing the post-war plan for the industry issued by the Industries and Supplies Department, Government of India, on May 3, 1946. It adds that an expansion of about 2·75 million spindles proposed as the immediate target will produce an additional 1,700 million yards a year, consisting of 510 million yards of fine and 1,190 million yards of coarse cloth. This production together with handloom cloth, will help to provide approximately 18 yards per head per annum after allowance for exports of 10 per cent of the total Indian production.

Planning must be on an all India basis and the distribution of new plants and extensions of the existing plants should follow territorial divisions of India. The plan will in the present circumstances be an interim plan and it is the intention of the Government of India to review it when world economic conditions or other circumstances make a review desirable. In order to ensure increased supplies of yarn for handloom weavers and other consumers, the Government of India have directed that at least 25 per cent. of the new spindles installed shall be left uncovered by looms. Each British Indian Province and Indian State would of course be the best assessor of its own exact needs, and the Government of India propose, therefore, that the Provinces and States may, if so advised, reserve a larger spindlage for such purpose.

On the question of reduction in the duty o foreign cotton and a full rebate of import duty paid on cotton for the benefit of India's export trade, the press note says that the Government of India will review the matter when competitive conditions return in order that the Indian export trade may be able to compete in world markets on equal terms with other countries.

The Government of India have turned down the suggestion for banning imports of second-hand machinery on the ground that it will be some years before India can produce enough cloth for her own requirements. They will, therefore, allow import licences for second-hand machinery for the present if they are fully satisfied that the machinery in question will be serviceable for a reasonable period and suitable for economic production. As regards the suggestion that import of certain machinery should be permitted freely from any country in the world, Government consider that import should be permitted only when there is reason to believe that the plant will be delivered appreciably earlier or will be considerably cheaper or better than if obtained from the sterling area.

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now about 5,500 tons a day of 10 working hours, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits at Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine-spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-looms.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gouripore, Serajgunge, and India Jute Mills.

"From 1868 to 1873," writes Mr David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Belliaghatta-Barnagore branch mill), Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard National, Delta (which absorbed the Serajgunge), and the Kinnison. A lull of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions.—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of Hukumchand, Birla, Shree Hanuman, Gagalbhai, Premchand and Agarpara Mills, which—with the exception of the last-named—are under Indian ownership.

Progress of the Industry.

The record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows the number of Mills, capital invested, number of looms and spindles employed in the industry in the various Provinces from 1929-30 to 1938-39 :—

Province.	No. of Mills.	Authorised Capital Rs., £ and $	Paid-up Capital Rs., £ and $	Number of Looms.	Number of Spindles.
		Rs.	Rs.		
Bihar	3	62,00,000‡	39,00,000	455	11,025
Bengal	98(*b*)	25,31,56,000(*a*) £3,175,000 $3,750,000	19,38,01,125(*a*) £2,250,000 $3,750,000	65,720	1,296,501
Madras	2	15,05,000(*d*)	15,05,000(*d*)	805	21,664
United Provinces	3	68,00,000	33,49,500	809	18,208
Central Provinces and Berar (*c*)	1	5,00,000	5,00,000	150	3,068
Total 1938-39	107	26,81,61,000 £3,175,000 $3,750,000	20,30,55,625 £2,250,000 $3,750,000	67,939	1,350,466
Totals 1937-38	105	24,88,47,000 £3,175,000 $3,750,000	20,29,05,640 £2,525,000 $3,750,000	66,705	1,337,958
1936-37	104	24,42,47,000 £3,175,000	20,21,52,480 £2,525,000	65,273	1,300,077
1935-36	104	24,11,47,000 £3,175,000	19,97,07,038 £2,525,000	63,724	1,279,460
1934-35	100	23,05,67,000 £3,175,000	19,67,69,738 £2,525,000	61,387	1,221,786
1933-34	99	23,70,67,000 £3,175,000	19,56,54,808 £2,525,000	59,501	1,194,405
1932-33	99	23,70,67,000 £3,175,000	19,72,05,145 £2,525,000	60,506	1,202,183
1931-32	103	23,60,67,000 £3,175,000 $12,000,000	19,76,49,386 £2,525,000 $12,000,000	61,426	1,220,586
1930-31	100	23,60,67,000 £3,175,000 $12,000,000	19,61,74,249 £2,525,000 $12,000,000	61,834	1,224,982
1929-30	98	21,86,67,000 £3,175,000 $12,000,000	18,71,65,615 £2,525,000 $12,000,000	53,900	1,140,435

‡ Capital of one mill not stated.

(*a*) Capital of two mills not stated.

(*b*) Includes one mill in French Settlements.

(*c*) The mill is situated in Raigarh State.

(*d*) Capital of one mill not stated as it has other branches of business for which capital cannot be distinguished.

Jute and Jute Manufactures.—(Rs. 45,42 lakhs). The total export of raw and manufactured jute during the year 1942-43 amounted to 863,000 tons as compared with 1,213,000 tons in 1941-42, showing a decrease of 350,000 tons or 29 per cent. The value of these shipments which also recorded on equal percentage decrease fell from Rs. 64,31 lakhs to Rs. 45,42 lakhs. The following table shows the variation in export of raw jute and manufactured goods separately during the past five years as compared with 1935-36.

	Export of raw jute.	Percentage variation as compared with 1935-36.	Exports of sacking bag and cloth.	Percentage variation as compared with 1935-36.	Export of Hessian bags and cloth.	Percentage variation as compared with 1935-36.
	Tons (000)		Tons (000)		Tons (000)	
1935-36 ..	771	100	438	100	354	100
1938-39 ..	690	89	488	111	451	127
1939-40 ..	570	74	511	117	546	154
1940-41 ..	243	32	445	102	464	131
1941-42 ..	315	41	403	92	460	130
1942-43 ..	243	32	331	76	273	77

Exports of raw jute decreased in quantity from 315,000 tons in 1941-42 to 243,000 tons in 1942-43 or a decrease in 23 per cent, the value showing a fall of 13 per cent from Rs. 10.42 lakhs to Rs. 9,02 lakhs. The decline was shared by almost all the principal consuming countries except the United States of America which occupied the premier place for the first time displacing the United Kingdom. Exports to the United States of America increased from 99,000 tons to 124,000 tons in the year under review, but those to the United Kingdom fell by 57,000 tons to 89,000 tons in 1942-43. As a result of the situation brought about by the war the Continental countries excluding the U.S.S.R. were completely out of the picture. Export to U.S.S.R. amounted to 7,000 tons as against 14,000 tons in 1941-42. There were no exports to China and Japan in the year under review which took respectively 1,700 tons and 2,600 tons in 1941-42. The amount sent to the Argentine Republic was 7,000 tons as against 12,000 tons, while that to Brazil 9,000 tons as against 15,000 tons in the preceding year. Shipments to Australia fell from 4,000 tons to 2,000 tons in 1942-43.

The consumption of raw jute by Indian mills recorded a slight decrease in 1942-43 as compared with that in the preceding year. The following table shows the exports and Indian consumption of raw jute during the last five seasons, July to June:

Season (July-June)	Exports of raw jute.	Consumption in India.*	Proportion of consumption to exports. (%)
	Tons (000)	Tons (000)	
1938-39 ..	693	1,112	160
1939-40 ..	529	1,288	243
1940-41 ..	241	989	410
1941-42 ..	276	1,222	443
1942-43 ..	235	1,202	511

*Figures refer to mills in the membership of the Indian Jute Mills Association.

It will be observed that during all these years consumption was higher than exports, the relative proportion between the two being the highest in 1942-43 when the consumption was five times that of exports.

Exports of jute bags and cloth in the past three years are shown in the following table:—

	Bags (Millions.)	Cloth (Million yards.)
1940-41	678	1,546
1941-42	492	1,696
1942-43	406	908

The Indian Jute Mills Association, now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new markets, working results were not favourable, came to an agreement with the late S. E. J. Clarke, Secretary to the Chamber of Commerce as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

Working Hours.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust

themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. It is about 20 years now that the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advice them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. By an agreement operating from October 1931 the mills in the membership of the Association, comprising some 95 per cent. of the trade, worked during 1932, 1933 and the greater part of 1934 for 40 hours per week, with 15 per cent. of the total complement of looms sealed; and the agreement incorporated a clause which provided that the mills would not install any extra productive machinery or relative buildings during the currency of the agreement. The agreement also provided machinery whereby production could be gradually increased by reducing the percentage of looms required to be kept sealed. The process of increasing production in this way was begun on 1st November 1934, when 2½ per cent. of the total complement of looms were unsealed, and was continued throughout 1935, a further 2½ per cent. of looms being unsealed on 1st May 1935, 2½ per cent. on 5th August and 2½ per cent. on 11th November. The remaining 5 per cent. of looms were unsealed on the 17th February 1936. Throughout this time the mills, with five exceptions, continued to restrict their working hours to 40 per week. The five exceptions, namely, Premchand, Craig, Waverley, Megna and Nuddea had, by the terms of the agreement, been granted the privilege of working 54 hours per week with a full complement of machinery and all five worked in accordance with the special terms allowed to them. This working agreement between the Association mills, however, in accordance with the requisite notice given in December 1935, terminated on the 31st March 1936 and was superseded by an agreement, operating from the 1st April 1936, under which the mills were permitted to work up to but not exceeding 54 hours per week on single shift, with no night work. As in the old agreement, this new agreement incorporated a clause which restricted the mills from installing any extra productive machinery or relative buildings during the currency of the agreement.

Under this agreement the mills' working hours were increased by successive stages until with effect from the beginning of August 1936 all mills in the membership of the Association were working 54 hours per week on single shift. With effect from the 1st March 1937, however, the agreement was suspended indefinitely and mills were at liberty to work whatever hours and install, whatever machinery they desired; in 1938 the position was reviewed and a new short time working agreement was proposed to take effect from the 15th March 1939, whereby member mills agreed to hours of work which would not be less than 40 nor greater than 54 per week. A supplementary agreement was entered into with effect from the 31st July 1939, by which the mills worked 45 hours per week with 20% Hessian and 71% Sacking looms sealed. This was the position at the outbreak of the present war, after which large government orders for sandbags and a heavy overseas demand necessitated increased production; the restriction on working hours was withdrawn and all mills went into full production at 60 hours per week. This was an emergency arrangement that came into effect from about the middle of November 1939 to cope with the British Government orders, for which provisions in the Factories Act regarding working hours had to be relaxed. After a few months however, it was realised that as a result of the small offtake of sand bags and difficulties in obtaining shipping facilities, the mills were producing more goods than there was demand for. To meet this situation the working hours of the mills were reduced to 54 per week from the 8th April 1940. This arrangement continued up to August, but the mounting of stocks made it clear that this could not continue after the sand bag orders were completed. From 19th August 1940, mill working hours were further curtailed to 45 per week. This too did not have the desired effect on the stock position and the Indian Jute Mills Association decided to close their mills for one week in each month from September 1940 up to the end of the year. With new orders for sandbags the working hours had to be reviewed again and the mills worked 60 hours per week upto May 17, 1942. In view of shipping difficulties the working hours were again changed to 54 from May 18 when 10 per cent of the looms were also sealed.

This arrangement continued up to March 14, 1943, when to meet an urgent demand for 12 crores yards of hessian from the U. S. Government the Association decided to increase the working hours of jute mills from 54 to 60 per week with effect from March 15, 1943, and to unseal 10 per cent of the looms then under seal. The working hours were again curtailed to 54 hours per week from May, 1943, and 10 per cent of the looms were also sealed. After a month, on June 15, all looms were unsealed to meet the demand of another big American order. Since then no change took place up to May, 1945.

In addition to the above working agreements which applied only to the mills in the membership of the Association, an agreement was entered into, with effect from 1st August 1932, with the five principal mills outside the Association, namely, Adamjee, Agarpara, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30 June 1933. With certain modifications this agreement was extended and became a continuing agreement subject to six months' notice of termination being given by either party, which notice of termination could not be given before 1st July 1934. On the 30th September 1935 the Association gave the required notice and the agreement terminated on the 31st March 1936.

Indian Central Jute Committee.—A Central Jute Committee has been constituted by the Government of India with 27 members. Representation has been found in the Committee for trade and agricultural interests and for the Provincial Governments most concerned, namely, Bengal, Bihar and Assam.

The formation of the Committee is the result of a recommendation made by the Royal Commission on Agriculture, which suggested that there should be a committee on the lines of the Indian Central Cotton Committee to watch over the interests of all branches of the jute trade from the field to the factory.

The functions of the Committee include agricultural, technological and economic research; the improvement of crop forecasting, of production, of testing, and of distribution of improved seed; enquiries and recommendations relating to banking and transport facilities and transport routes; improvement of marketing in the interests of the jute industry; and collection and distribution of all relevant information on Jute.

The Committee will also advise the Local Governments concerned on any points within its prescribed functions which may be referred to it.

The Offices of the Committee are situated at 4, Hastings Street, Calcutta. *President (Ex-Office)*: H. R. Stewart, C.I.E., I.A.S. (Vice-Chairman, Imperial Council of Agricultural Research); *Secretary*: B. Das Gupta, M.A.

Agricultural Research.—The Jute Agricultural Research Laboratories are situated at Dacca and are working on (1) the improvement of the plant, both in regard to quality and yield (2) the improvement in the methods of jute-growing, (3) the reduction of loss caused by diseases and insects, and (4) the improvements in the methods of retting. These aspects of research are being tackled in five sections viz. Botany, Agronomy, Mycology, Entomology and Chemistry.

In the field of genetics considerable progress has been made, the mode of inheritance of branching habit, pigmentation patterns and other important characters have been worked out.

Very interesting work has been done on the anatomy of jute from seedling to maturity. These investigations have helped in a fuller understanding of the changes involved in the retting of jute and the origin of certain commercial defects. Quite hopeful results have been achieved in the field of breeding improved races of jute which is in progress at Dacca and three sub-stations. Interesting experiments have been carried out which help in assessing the relative importance of factors such as climate, soil variety and retting water on the quality of jute. The effect of spacing and manuring on jute is being tested. It has been established that line sowings are more economical and profitable than the usual practice of sowing the crop broadcast.

Some new light has been thrown on the mode of infection by stemrot fungus and certain measures have been devised to combat the spread of infection through the seed. Work has been commenced on hitherto unrecorded diseases of jute. Intimate knowledge regarding the bi-nomics of jute pests has been gained on the basis of which practical control measures have been devised for most of the jute pests. A field-centre has been opened to control diseases and pests in the ryots' fields.

The causes for the colouration of jute have been worked out. The chemical changes that take place in the water during the retting process have been determined. Such aspects as the relationship between the volume of jute steeped and the volume of water, the depth of steeping, gradual steeping, etc., are under investigation.

Technological Research.—The work undertaken at the Technological Research Laboratories of the Committee at Tollygunj, Calcutta, includes the spinning of samples of fibre obtained in agricultural experiments (breeding, manurial trials, etc.) and reporting on their quality as indicated by the results obtained. The spinning tests are carried out at a standard temperature and humidity and a special technique has been worked out to give good results with as little as 12 lb. of fibre.

Work of fundamental importance includes the investigation of the relations that may exist between spinning quality and measurable chemical or physical characters of the fibre. In this considerable progress has been made.

Problems dealt with, which are of direct interest to the mill, comprise the effect of twist on yarn strength, the improvement of jute bags for storing commodities such as sugar and cement in damp atmospheres and the spinning of flax and other fibres on jute machinery, either alone or blended with jute.

The matter of finding new or extended uses for jute is constantly in view and in this connection machinery for spinning fine yarns from jute has been installed.

A certain amount of time is devoted to day-to-day problems submitted by mills of other bodies.

Tests are made on fibres which are, or may become, competitors for jute, with the twofold object of assessing the danger from competition and of determining the suitability of the fibres for spinning on jute machinery.

A useful Library has been got together and information bearing on the technology of jute is abstracted and indexed.

The Principal Officers of the Technological Research Laboratories are:—

Director.—C. R. Nodder, M.A. (Cantab.); *Manager*.—A. S. Gillies; *Senior Research Physicist*.—K. R. Sen, D.Sc. (Dacca); *Senior Research Chemist*.—P. B. Sarkar, D.Sc., A.I.C.

Marketing.—During 1938 and part of 1939, the Marketing Section carried out a comprehensive enquiry into the conditions governing the marketing and transport of jute in the principal jute growing districts of Bengal, Assam, Bihar, Orissa and the United Provinces. The data, thus collected, were published in two reports entitled, "Report on the Marketing and Transport of Jute in India" (1940) and "Report on the Marketing of Jute and Jute Products"

(1941). The former embodies the results of the enquiry relating to the marketing and transport of raw jute so far as inland business is concerned while the latter embodies that relating to the jute export trade and manufacturing industry. Thus, the two reports will appear to give a complete picture of the jute industry and trade in India.

For the last few years, the Section has been engaged in certain developmental work of which the main are :—

(i) *Dissemination of jute prices in the mofussil.*—With the help of the Publicity Section of the Committee, jute growers in the interior of the jute-growing provinces of Bengal, Bihar, Orissa and Assam are informed of the daily prices prevailing in Calcutta so that they may be well posted with fluctuations taking place in the terminal market. This is being done since the 1939-40 season.

(ii) *Marketing of fibre grown from improved seed.*—This scheme is intended to interest growers in improved jute seed which can give higher yield and at the same time produce better fibre. Seeds of improved strains are distributed to growers at concessional prices and the results of grading and marketing of fibre produced both from the improved and local varieties are studied with a view to demonstrating to the growers the advantages of using good seed. The scheme is in operation since the 1942-43 season.

(iii) *Organisation of Grading Parties.*—The primary producers are instructed through peripatetic Grading Parties to assort jute themselves, according to the trade specifications and sell it on the basis of grades so that the middlemen may not under-estimate the value of their fibre. They are also told about the various faults that occur in jute and the steps that should be taken to eradicate them. The scheme has been operating from the 1941-42 season.

(iv) *Establishment of Co-operative Jute Sale Societies.*—With a view to forming a selling organisation of the growers, a few such Societies have been established in 1942-43 in Bengal, as an experimental measure. Three such societies are also working in Orissa. While those in the former province do not provide for credit facilities, those in the latter have linked credit with marketing.

(v) *Study of Indian Market with a view to increasing the consumption of jute and jute goods.*—The war has closed many overseas markets for jute and its manufactures ; at the same time, substitutes are becoming more important. Therefore, a comprehensive study of the Indian market is being undertaken with a view to explore the possibilities of increasing the internal consumption of jute. The scope of the enquiry includes both mill-made and cottage industry goods.

Principal Officer in charge of the Section.—S. M. Gupta, B.Ag. (Bombay).

Jute Forecast.—Work on the Jute Census have long been completed. The results of the random sampling survey have been considered to be satisfactory and the method has been adopted by the Government of Bengal, for forecasting the jute acreage.

Experiments are being conducted to find out a cheap and accurate method for the determination of the yield of the crop.

Economic Research.—The Economic Research Section keeps constant vigilance over all aspects of the economics of jute. Some important findings relating to the world consumption of jute, its trend in recent years and its relation to the changes in the world market, such as those brought about by the war, have been published in the Committee's *Economic Research Bulletin No.* 1. An investigation into the relationship between the demand for and the supply and price of jute is now under progress, the results of which may have an important bearing on the question of the control of the jute crop. Other investigations have thrown light on some important aspects of the jute industry, such as the productive capacity of the Indian Jute Mills, the possibility of extending the market for jute goods manufactured in India, etc. The effect of the growth of jute substitutes and of new uses of jute on the jute trade is also being investigated. A pamphlet on Jute substitutes is expected to be published soon.

Besides research work on the economics of jute, a large volume of information on various subjects pertaining to jute is regularly collected from authoritative sources in different parts of the world. The Committee has also a special correspondent in the Argentine Republic to report on the conditions of the jute trade in that country. A close watch is maintained on all developments in economic and commercial policy abroad calculated to replace jute by its possible substitutes, and prompt steps are taken to collect all relevant information on the subject to place it at the disposal of the trade and others concerned.

Publicity.—A monthly journal, known as the *Indian Central Jute Committee Bulletin*, the annual subscription of which is Rs. 5-8 or 10s. (including postage), is published monthly, containing figures of production, consumption, prices, stocks, imports and exports of jute and jute manufactures, and also information regarding the prices and utilisation of jute substitutes. It also includes items relating to export and import restrictions imposed on various countries and other information regarding the economics of jute and its competitors, as well as general information of interest to the trade. The Committee also disseminate information to the grower to assist him towards improved methods of growing and retting, and getting better prices for his crop. A preliminary investigation into the economics of jute growing has been undertaken in three representative villages of Bengal.

Principal Officers of the Economic Research Section :—*Director* D. Ghose, M.A. (Cantab.), Bar-at-Law ; *Asst. Economics Officer.*—K. C. Basak, B.A. (Cantab.)

Besides all general publicity work of the Committee, the Publicity Section has been entrusted with the organisation of a big Central Jute Museum in Calcutta which is soon expected to materialise.

Principal Officer in charge of the Section :—K. I. A. Quaderi.

Indian Iron and Steel Industry.

Less than thirty years ago the iron and steel industry on a modern scale was non-existent in India. To-day India has practically reached self-sufficiency in the more widely used forms of steel. It is now a vital, national, basic and defence industry. The last war proved its usefulness; the present war has confirmed its indispensability.

History of Iron and Steel in India.—India has known iron and its uses since some four to five thousand years before the Christian era. In 1836 Josiah Heath stated that India's claim to the discovery and uses of this metal was beyond doubt. The famous 'Iron Pillar' of India, well known to all visitors to Delhi, is estimated to be about 1,500 years old. Considerable skill must have been exercised in welding and shaping this Pillar which is over 23 ft. in length, weighs approximately 6 tons and varies from 12¼ to 16¼ inches in diameter.

The manufacture of steel has been known in India for over 1,000 years. Damascene or Wootz sword or dagger blades of genuine Indian manufacture can still be obtained in Northern India. These weapons or the metal from which they were produced were obtained by Persian traders centuries ago and exported to and via Damascus. It happened, however, that the Indian steel makers never overcame certain difficulties and did not progress with the times.

The first recorded efforts to found an iron and steel industry on modern lines were those of Mottee and Farquhar in 1779. In 1825 Josiah Heath of the Indian Civil Service, Madras, resigned his appointment in order to establish an iron and steel works in that province. The charcoal furnaces installed by him at Porto Novo resulted in complete failure owing to financial difficulties and lack of practical experience, and the East India Company, who acquired his derelict works and formed a new Company in 1853, did not achieve any commercial success and ceased operations in 1874.

The next undertaking was started by Messrs Jessop & Co. which finally resulted in the erection of the Barakar Iron Co. at Kulti in 1875. After passing through several vicissitudes, it passed into the hands of the Barakar Iron & Steel Co. in 1887. In 1889, the plant was modernized and it became known as the Bengal Iron & Steel Co. A steel plant started in 1905 closed within a year as the orders received could not be supplied at economic rates. Since 1919, this company has been known as the Bengal Iron Co. and it amalgamated with the Indian Iron and Steel Co. Ltd. in 1937.

The credit for the first successful attempt to manufacture steel in India on a commercial scale goes to The Tata Iron & Steel Co. Ltd., and it is to the genius, perseverance and foresight of Jamshedji Tata, the great pioneer of India industry, and his sons, that The Tata Iron and Steel Co. owes its origin and development. It owns valuable iron ore concessions, manganese ore deposits, limestone, dolomite, coal, magnesite and chromite, scattered over India.

Other important steel companies were subsequently started in Bengal and Bhadravati in Mysore. The first production of pig iron was made in 1911, and of steel in 1912. There has been continuous development and The Tata Company now produces more iron and steel than any single firm in the British Commonwealth.

Owing to the restrictions imposed by Government, it is not possible to give particulars about the plant at the various steel works, their capacity, the output of the different kinds of steel, or any other detail as those would be of use to the enemy.

Raw Materials.—Of the raw materials required by the iron and steel industry, the three most important are iron ore, coking coal and limestone and dolomite for fluxing purposes.

Iron Ore.—On account of the high ash of Indian metallurgical coke, it is usual in estimating the Indian iron ore reserves to accept only ores with an iron content of 60% and above. Ores below this iron content are used only in very small quantities in Indian blast furnaces. Large deposits of high grade ores are limited to a few areas of which only three field, require special mention:

(*i*) *Mysore.* There are big deposits of quartz—magnetite ore in Mysore but they are of low-grade and would require concentration before using them. The ores used in the Bhadravati Iron Works can be compared to Singhbhum ores containing about 60% Fe. and the quantity available may be put at 30 million tons.

(*ii*) *Goa.* Large quantities of ores are available near Goa. Though the grade is good, the ores are soft and require either sintering or briquetting and bagging before despatch.

(*iii*) *Singhbhum and Orissa.* In what is known as the Singhbhum Iron Belt, consisting of the Singhbhum District, in which the Tata Iron & Steel Company's Steel Works are situated, and the neighbouring Orissa Feudatory States, there exists some of the richest iron ore deposits in the world. The iron ore content is nearly 60%, and these deposits are estimated to contain about 3,000 million tons, which are sufficient for the iron and steel requirements of India for nearly 1,000 years. In other parts of the world equally rich iron ore may be found but it cannot always be landed at the iron works at anything alike the same cost. The advantage India possesses in the shape of iron ore is, therefore, very great.

Coal.—Nature has not been so bountiful to India in respect of its coal resources. The most important coal measures in India are (*i*) the Gondwana (Permian) coalfields of the Peninsula, such as Raniganj, Jharia, etc., and (*ii*) the Tertiary coalfields of Assam, the Punjab and Baluchistan. Taking only seams with a thickness of more than 4 feet and ash content below 20%, and those occurring within a depth of 2,000 feet only, the Indian coal resources have been estimated to be of the order of 24,000 million tons. Out of this,

good quality coal, with less than 18 per cent. ash content, is estimated to amount to only 6,000 million tons and coal capable of yielding coke of metallurgical quality to only about 1,400 million tons, which is found in the Gondwana (Permian) coal fields of the Damodar basin.

More than 1,000 million tons of strongly coking coal with less than 8% ash, but high in sulphur, occur in the Tertiary coalfields of Assam, but these are not at present considered useful for metallurgical purposes.

The manufacturers of hard coke in India rely on the Jharia coalfields to an overwhelming extent to meet their requirements. With the present wasteful means of extracting coal and the use of metallurgical coal for non-metallurgical purposes, some experts consider that the coking coal resources of the Jharia field will not last for more than 30 years. The Indian Coal Mining Committee reported in 1937 that these reserves would last for about 57 years.

If the Government and the coal industry co-operate and adopt adequate measures for improved methods of mining coal and conserving and economising the use of metallurgical quality coal, the life of these reserves will be extended beyond the gloomy prognostications referred to above.

In addition, it might become possible in the future, as the result of technical research, for the iron and steel industry to use coals not regarded as coking coals at present, by blending them with strong coking coals.

While the reserves of coking coal in India are not adequate for melting the huge quantity of iron ore available, frequent repetition of this statement has produced an impression abroad that adequate raw materials are not available in India for a large scale iron and steel industry, which is entirely a mistaken view. The metallurgical industry has taken its own precautions to prevent the speedy exhaustion of its coking coal reserves. It is unfortunate that so much of India's best coking coal is still being used for steam raising purposes but we can confidently hope that this practice will tend to diminish in the near future.

The coalfields and the iron ore deposits are situated within a short distance of one another and there are ample supplies of limestone and dolomite within a reasonable distance of other raw materials.

Importance of the Industry in the National Economy.—The total capital invested in the iron and steel industry in India is estimated to be about Rs. 25 crores. Roughly 150,000 men and women are employed directly and indirectly in the Indian iron and steel industry, the re-rolling mills and the auxiliary enterprises. Including their dependents, the total number of people dependent on the industry in India is about 600,000. The industry is contributing to the Government and the public revenues between Rs. 7 to 8 crores per annum by way of excise and customs duties, income and super taxes.

Development.—The last decade has seen a great expansion of the iron and steel industry in India accompanied by improvement in the various processes and the application of scientific methods of control. The successful development on a commercial scale of the rapid dephosphorising process and the making of acid steel out of Indian basic pig iron, for both of which full credit is due to the Tata Iron & Steel Company Ltd., may be regarded as the most important advance in steel making practice that the young Indian steel industry has made. It is likely to have far-reaching effects on the establishment of several new industries in India such as locomotive manufacture, and the manufacture of railway wheels, tyres and axles for which acid steel is specified. The development and manufacture of a low alloy high tensile steel containing copper and chromium known as Tiscrom is another instance. The steel is being employed for the construction of the New Howrah Bridge.

Besides metallurgical research, fuel research, chemical research and research in refractories are being pursued in India.

Special Steels Manufactured in India.—Amongst special steels now manufactured in India and special bars for the manufacture of shells, bullet-proof armour plate for the fabrication of armoured vehicle bodies, bullet-proof plate for howitzer shields and gun turrets, various kinds of alloy steels for the manufacture of steel helmets, armour piercing bullets and shots, and shear blades for shearing armour plates, chrome molybdenum alloy steel for aircraft, spring steels for machine-guns, special deep drawing for rifles and machine-gun magazine, nickel steel plates for gun-carriage mountings, high carbon steels for high explosive shells and mint dies, high speed steel for machine tools and stainless steel for surgical instruments. Other manufactures by the industry include steel mill rolls, steel billets for drawing into telegraph wires and barbed wire, and steel to Admiralty specification for ship-building. A process for the manufacture of acid open hearth steel required for gun forgings, gun carriage axles and railway wheels, tyres, etc. has also been developed.

A new chapter in India's iron and steel industry was opened when the Tatas added a Wheel Tyre and Axle plant with up to date mills and finishing requirements to their plant at Jamshedpur and began the manufacture of acid steel. It is bound to go a long way towards the country's self-sufficiency so far as its steel requirements are concerned. This might be also a prelude to a large-scale manufacture of locomotives in India.

India's Munitions Output.—Referring to India's important munitions output, the India Office recently announced: "The American Technical Mission has recently sponsored several new plants including work for machine tools. India has also undertaken the manufacture of alloy steels which form the components of special steels. The manufacture of ferro-silicon has been established in one Indian works and at least half of India's requirements will be met from this source. The production of aluminium in India will begin shortly on a scale which is ultimately expected to enable India to meet her requirements of this metal. The progress of the steel industry is one of the outstanding developments of the war in India."

The Paper Making Industry.

Paper making in India is of some antiquity. The manufacture by hand had been practised from quite early times. The first paper-making machine in India was erected and operated by a famous missionary, Dr. William Carey, over a century ago at Serampore on the Hooghly River near Calcutta, but the establishment of paper making as a modern industry may be said to date from 1867. In that year the Royal Paper mill was established at Bally, only a few miles away, using in the first instance Dr. Carey's original plant and machinery. About 15 years later the Upper India Couper Paper Mill at Lucknow and the Titaghur Paper Mills at Titaghur, near Calcutta, were started. Other mills at Raneegunge and Kankinara, in Bengal and other Provinces soon followed. Production began to increase, so that by about 1900 the total made annually in India amounted to approximately 20,000 tons.

To-day the quality of paper produced by Indian mills is accepted as equal to that of most imported paper of the same class, and the range of qualities has been extended to include coloured banks and bonds, tub-sized rag papers, embossed covers and writings, supercalendered tinted printings, and imitation art and kraft.

Raw Materials.—In its early days the Indian industry considered the manufacture of high class white paper rather beyond its capacity, and this was to some extent due to its dependence upon rags and waste paper for its raw material. But this crude practice was soon to change. Routledge in 1860 proved the virtues of esparto—a semi-tropical grass—and in 1875 and 1879 reported upon the possibilities of Indian bamboo which served to draw attention to other Indian fibres. There are only incomplete records of the early experiments with Indian fibres, but it is known that two mills made use of Moonj (*Saccharum Moonja*) and Sabai (*Ischaemum Angustifolium*) in their first years. Moonj seems to have held the field in the beginning, for it made a very good paper. Sabai, however, presented less difficulty as regards treatment, and, therefore, soon came into universal favour among Indian mills. Having found in Moonj and Sabai ample resources of plant fibre it was perhaps natural that the Indian mills then in operation should at that time have made no effort to follow up Routledge's researches in bamboo—a much more difficult problem. Possibly India might have come to the front as one of the world's most important producers of pulp and paper. What actually happened was that the industry based on Sabai grass, while relatively still in its infancy, was almost put out of business by the competition of wood pulp. Nevertheless in bamboo it later found a new raw material of great value.

The Bamboo Paper Industry (Protection) Act of 1925 not only gave Indian mills an opportunity of repairing the damage to their plant and machinery caused by the incessant and intensive work required by India's first world war demands, and of overcoming the difficulties of getting stores and machinery replacements, but also encouraged and enabled them to develop bamboo pulp as their main fibre. The protective tariff on paper was renewed by the Government of India on the recommendation of the Tariff Board in 1932, and imported wood-pulp was also made subject to a duty of Rs. 45, or approximately £3 a ton. This pulp duty naturally had the direct effect of preventing the establishment of new paper mills designed to work only on imported wood-pulp. The mills, therefore, immediately began to develop and increase the production of bamboo pulp, which had already been proved to be eminently suitable for all the usual classes of fine writing and printing papers, banks, ledgers, &c. Sabai grass, which is the Indian equivalent of esparto, having its own special characteristics, is also used by some of the mills, but bamboo pulp is now the main material. Incidentally the manufacture of pulp from bamboo is at present practically exclusive to India.

The protective tariff attracted others to a profitable field of industry, and there are at present 13 paper mills operating 28 machines with a total production of nearly 90,000 tons. Another one-machine mill in Hyderabad, Deccan, is nearing completion.

Experimental work.—For many years the paper pulp section of the Forest Research Institute at Dehra Dun has been carrying out experimental work in connection with the development of new fibres for paper-making, and it has been reported that considerable success has been obtained in making kraft paper from bamboo pulp. Two paper Mills in India have been successfully manufacturing, for over a year, kraft papers from bamboo.

Newsprint.—With the assistance and encouragement of the Commerce Department of the Government of India, Newspapers have now come to an arrangement to ration supplies of imported newsprint and to charge certain agreed prices for various sizes of newspapers. Imports of newsprint from U.S.A. and Canada are permitted up to certain limits by a system of licenses.

Indian Mills are not in a position to meet any part of the newspapers requirements of newsprint.

The whole of India's newsprint requirements is imported, it being not possible so far to produce it in the country on an economical basis owing to the lack of the necessary raw materials. Recent enquiries show that the Kashmir and Tehri-Garhwal States can supply fir and spruce in quantities sufficient for the establishment of a newsprint mill in each of the two states. The two species of woods are well known raw materials for the production of mechanical pulp for use in newsprint manufacture and the suitability of both the species from the two States has recently been tested at the Forest Research Institute, Dehra Dun. Enquiries are in progress in connection with the maturing of projects for the manufacture of newsprint from the two species of woods available in the two states. The abnormal rise in the costs of machinery and the difficulties of importing these from abroad, however, appear to be serious handicaps in the early materialisation of the projects.

The industry has made such headway in recent years that the outbreak of the second world war found it ready to take up the vastly increased demand for Indian paper brought about by the difficulty of importing from abroad. Imports of fine papers are very limited and Indian mills are working to full capacity. The emergency has undoubtedly given the newer mills an excellent opportunity of establishing themselves but with the considerably increased consumption of paper by the Central and Provincial Governments and the Army, a serious shortage of paper has been felt by industry and commerce and the general public. From April 1, 1943, the Government of India decided to release for civilian consumption 30 per cent of the total production of Indian made paper, which was further reduced by an Ordinance issued in June 1944 to 30% of the quantity used in 1943. Government have also taken action to increase the output of Indian mills by giving them every possible assistance in the matter of transport facilities for raw materials and also in obtaining chemicals such as Sulphur, Alum, Caustic Soda, etc. Indian paper mills have also been asked to confine production to 6 or 7 standard varieties so as to permit of longer runs on machines and therefore allow of the production of the maximum amount of writing surface.

THE WOOL INDUSTRY.

Although the woollen industry in India is very ancient, flourishing as it did as a cottage industry, its rise as a factory industry is only a few decades old. The first mill was established in 1876, but its progress was halty and hesitant, so much so that, by 1914, there were only four mills, the Dhariwal and Cawnpore mills, the Bombay Woollen Mill manufacturing both woollen and wasted goods, and the Bangalore Woollen Mill making only coarse blankets. The large demand for woollen goods after the first world war stimulated private enterprise to start more woollen mills, and, between the years 1919 and 1921, three new companies were floated which opened mills in or near about Bombay. About the same time, other mills sprang up in Bangalore, Baroda, and Amritsar. The total number of spindles rose to about 74,500 and the capital investment increased from about Rs. 50 lakhs to about Rs. 240 lakhs in 1921. Owing to foreign competition, the industry was in a depressed condition thereafter, and, between 1925-33, three of the mills went into liquidation

The major units of the industry are concentrated in Cawnpore, Dhariwal (Punjab), and Bombay. Bombay has six mills and Cawnpore one. Smaller units are located at Bangalore, Amritsar, Srinagar, Baroda and Mirzapur. The powerloom industry is almost completely centred in Amritsar. In 1939, there were 24 woollen mills in India (16 in British India and 8 in Indian States) employing 17,201 persons daily. In addition, there were 19 woollen carpet and *shawl* weaving establishments and 73 hosiery factories employing 3,382 and 264 persons, respectively. According to one estimate, there were also about a lakh of handlooms engaged in the weaving of wool.

Until the outbreak of World War II, many of the woollen factories were not altogether prosperous, and some of them were actually incurring heavy losses. This is mainly due to the fact that indigenous goods could not compete with imported lines as the latter were never all-wool affairs. In other words, the enormous amount of the cheaper types of woollen goods imported into this country from Italy, Poland, Germany, and Japan was composed of waste wool, wool reclaimed from old garments, and fibres other than wool, whereas the Indian mill industry justifiably prided itself on producing pure wool stuff from all-virgin wool.

The outbreak of World War II came to the rescue of this industry, as of many other industries also. The Indian woollen mills were invited to undertake production for the Defence Services on a 100 per cent. basis. The terms of payment were on a cost *plus* profit basis, and the mills got full work, namely three shifts per day. The output of the organised mills is reported to have increased by 375 per cent., mainly as a result of the introduction of standardisation schemes. This naturally led to the importation of Australian wool on a large scale. Imports of wool which remained at Rs. 2·66 crores improved to Rs. 3·07 crores in 1939. There was some setback in 1940, when the value of imports declined to Rs 2·16 crores. During 1941 to 1943, imports were somewhat restricted on account of enemy U-boat activity. In 1944 and 1945, the value of imports aggregated Rs. 2·46 crores and Rs. 2·14 crores, respectively. During the war period, there was a sharp recession in imports of woollen yarn, knitting wool, as also woollen and worsted piecegoods, thanks to the absorption of the U.K. in the war effort. Now that the war is over, it is likely that the U.K. will try to resume exports of woollen and worsted goods to India to some extent.

It is well-known that India has been enjoying a good export trade in wool and woollen carpets for the last many years. Generally speaking, wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and sea. Imports by sea came chiefly from the Commonwealth of Australia, while a certain quantity from Iran also comes by land. The main imports are from Afghanistan, Central Asia, Tibet, and Nepal. Many of the Punjab districts enjoy a good lucrative *entrepot* trade, as, for instance, Amritsar, Multan, Lahore, etc. In 1944, raw wool exports come to Rs. 2·42 crores, but this figure was surpassed in 1945, when the value improved to Rs. 3·54 crores.

Besides raw wool, India used to send substantial quantities of woollen carpets and rugs to overseas countries, particularly to the U.S.A., Canada, and the U.K., where they are popular not only on account of their cheapness but also owing to their attractive designs and bright colours. During the war, this trade was hit hard owing to lack of freight facilities, but it is hoped that this trade will revive ere long.

Generally speaking, all the worsted mills in this country, of which there are four today, are dependent upon supplies of Australian wool and tops for their manufacture of worsted cloth and hosiery yarn. The woollen sections of mills use indigenous wools largely for blankets and rugs. It will be more or less correct to say that, apart from blankets and rugs, very little of indigenous wool is used in cloth intended for apparel.

The handloom woollen industry is spread throughout the country and its production is confined to the making of coarse blankets which have a large seasonal demand from the poorer classes. Another section of the handloom industry generally specialises in the manufacture of carpets and *durries*. The principal centres of this trade are Mirzapur, Amritsar, and Srinagar in the North, and Bangalore and Ellore in the South The war gave considerable fillip to this industry, since the demand from the Army for barrack blankets was quite enormous and far in excess of available productive capacity. The Supply Department placed heavy orders and it is estimated that handloom weavers supplied more than a million blankets in a year to the Army.

Silk.

Sericulture has been practised in India for the last two thousand years and a lot of silk used to be exported in days long gone by. Now, however, India has lost her export market and imports annually Rs. 13,000,000 worth of silks. Switzerland and United Kingdom never exported raw silk to India. Italy's export stopped long ago. China and Japan used to export till the last Great War. At present India is not importing silk from any foreign country. The world demand for silk and silk waste has shrunk and there is increasing competition from foreign silk goods and mixtures and artificial silk substitutes. In Assam, eri, mulberry and muga silk worms are being reared and about Rs. 1,70,000 worth of silk is annually produced there. Bengal produces Rs. 20,00,000 worth of mulberry silk, Bihar and Orissa produce Rs. 42 lakhs worth of tasar and a little eri silk. A little mulberry silk is also being produced in Bihar in the district of Purnea. The Central Provinces produce Rs. 14 lakhs worth of tasar silk.

Mysore, Kashmir, Jammu, Madras and the Punjab produce Rs. 38,00,000, Rs. 10,00,000, Rs. 2,00,000, Rs. 5,00,000, Rs. 16,600 worth of silk respectively.

Bombay and the United Provinces are investigating whether sericulture can be introduced. The new era industry in Baroda is spreading. Some of the native States, Madras and the Punjab are trying to introduce era silkworm rearing.

The industry has been declining in almost all parts of India. China is exporting more silk to India than Japan in spite of the tariff wall. It is progressing in Mysore and Kashmir only. It is believed that the moribund industry will be resuscitated if sufficient duty is imposed on foreign silks.

The price of indigenous raw silk has been increased by about 300 per cent. on account of stopping of the import of raw silk from China and Japan due to the war. Almost all the above Provinces and States are trying to increase their production both in quality and quantity. The production of raw silk has also gone up about 200 % more due to its increase in price.

Indigo.

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma there is a marked decrease in the number of a species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dyestuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led to the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower

and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the maddar dye of Europe, then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. With what success may be judged by the present state of affairs. Actually there was a revival of the industry in India during the last War and for a few years after, but after the war with many countries producing synthetic indigo, among them being Germany, Switzerland, Great Britain and America, the natural indigo industry was almost killed. There has been a mild revival since the commencement of the present war but unless protected the industry cannot survive. There are many advantages to India in the revival of the natural indigo industry, as besides keeping a large sum of money in the country that now goes abroad, it gives considerable employment, and the crop itself has a great value to the peasant grower as a change crop. It is a leguminous plant that brings down nitrogen from the heavens into Indian soil, and it has peculiar value as an organic manure in a country where animal manure is not available.

OILS AND OIL CAKES.

The statistical publications, issued by the Commercial Intelligence Department of the Government of India, show that the export of all oil seeds from India is steadily going down except groundnuts on account of keen international competition.

It is economically as well as industrially unsound for India to export her oil seeds instead of manufacturing oils, oil cakes and other allied products in India. The present practice allows the other countries to derive the manufacturing profits and at the same time deprives Indian agriculture of the great potential wealth of oil cakes as cattle feed and manure.

In India there are about 500 oil mills registered under the Factories Act and over 1,000 medium size power driven oil mills. An immense quantity of oil is, as a matter of fact, already manufactured in this country by crude as well as up-to-date processes.

Village Oil Mills worked by bullocks and handpresses exist in all parts of the country and supply most of the local demand for oil and oil cakes. The big mills supply the requirements of the towns and export trade. These mills treat all kinds of oil seeds available in the country.

The industry has made good progress in the production of mustard oil, castor oil, groundnut oil and linseed oil and as a result the export of these oils and oil cakes to foreign countries has steadily improved during the last ten years. The progress in the case of groundnut and castor is very satisfactory.

The development of oil milling industry in India has to face the under-mentioned difficulties. There are high protective tariffs in European countries which encourage the export from India of raw materials rather than the manufactured products. Secondly there is a better market for the oil cake in Europe and Indian oil cake, on account of want of standard specifications, is sold at a discount. The freight on oil seeds is less than that on oils and oil cakes, hence it is easy and economical to transport oil seeds by sea than oils or oil cakes. The development in the export trade in oils demands special consideration of shipping companies to provide tanks for bulk transport of oils as arranged by the railway companies.

The standardisation of oils and oil cakes will help the industry in finding markets in foreign countries where a better price can be obtained for the articles.

It is necessary to educate the Indian Cultivator in the use of oil cakes for feeding and manurial purposes and it should be impressed on him that the value of the article does not depend on the oil content but on oil and albuminoid content of the article. The animal cannot properly digest a cake having a higher oil content and it thus goes waste.

Effect of War on the Oil Industry of India.—During the War of 1914-18 the average export of linseed oil, groundnut oil and castor oil had increased by 443%, 150% and 60% respectively over the last pre-war average of 1912-13 and 1913-14, but the export of cake had, however, no marked change during that period. The oil crushing industry of India had a good opportunity of developing during the second war period.

The prices of oils and oil cakes at the commencement of War in September were lower than half the prices of these articles during last pre-war, war and early post-war periods on account of general low price levels since 1933-34. The second world war has resulted in increasing the price level and brisk trade in oils.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern and to this day the largest company in India. It was anything but prosperous during the first ten years of its existence. But about 1852, its condition began to improve and its success made the prospects of the industry appear so promising and attractive that speculators eagerly rushed into it. The discovery of the indigenous tea in Sylhet and Cachar gave the impetus for an expansion of the industry into the Surma valley, and in a few years thereafter the whole of the upper portions of the province of Assam (both Brahmaputra and Surma valley) was converted into a huge tea plantation. Thus the foundations of the present tea industry were laid during the fifties of the last century. Since that period the growth of the industry has been phenomenal and "in less than a hundred years the British Empire has become the tea garden and tea-shop of the world."

The following table shows the growth of the industry since 1900:—

Progress of the Industry.

Year.	Area under tea in '000 acres.	Production in '000,000 lbs.	Year.	Area under tea in '000 acres.	Production in '000,000 lbs.
1900-1904 (average)	523	201	1931 ..	807	394
1905-1909 ,, ..	539	242	1932 ..	809	434
1910-1914 ,, ..	591	290	1933 ..	818	384
1915-1919 ,, ..	662	374	1934 ..	826	399
1920-1924 ,, ..	709	336	1935 ..	832	394
1925 ..	728	364	1936 ..	834	395
1926 ..	739	393	1937 ..	834	430
1927 ..	756	391	1938 ..	833	452
1928 ..	776	404	1939 ..	833	453
1929 ..	788	433	1940 ..	833	464
1930 ..	804	391	1941 ..	834	501
			1942 ..	836*	564*

* Subject to revision.

It will be seen from the above table that since the beginning of the present century, while the area under tea has risen by nearly 60 per cent., the production has more than doubled.

Assam and Bengal are the two most important centres of the tea industry in India, Assam alone accounting for more than half the total production. In 1942, Assam produced 309 million lbs. or 55 per cent. of the total Indian production. The rest of Northern India produced 160 million lbs. or 28 per cent. and Southern India 95 million lbs. or 17 per cent.

The total number of persons employed in the industry in 1940 was 918,354 as against 925,237 during the previous year. Of these 865,226 were permanently employed and 53,128 temporarily employed. The average monthly wages of labourers employed in the tea gardens in Assam excluding non-cash payments, in 1939-40 were as follows:—

Men.	Women.	Children.
Rs. a. p.	Rs. a. p.	Rs. a. p.
9 2 9(*a*)	7 14 5(*a*)	5 6 6(*a*)
8 2 4(*b*)	8 6 2(*b*)	5 7 5(*b*)

(*a*) Settled labourers. (*b*) Faltu or Basti labourers.

Although India produces large quantities of tea its consumption of tea is comparatively very little. The low domestic consumption, however, enables India to export large quantities to other countries, the principal among which is the United Kingdom. In 1942-43, 57 per cent. of the total quantity of tea produced in India was exported abroad. This was, however, considerably less than in the preceding year when the quantity exported represented 76 per cent. of the total production. Of the total exports of 323 million lbs., the United Kingdom alone took 252 million lbs. during the year.

The year 1932-33 was one of the worst for the tea industry. In addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former. To check over-production a scheme was therefore introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1933. The

industry has consequently been able to enjoy more stable conditions than would otherwise have been possible in the circumstances of the last six years. The export quota which was fixed at 82½ per cent. of the standard exports in 1935-36 rose steadily to 92½ per cent. in 1938-39. Due to accumulation of stocks and decline in prices the quota for the following year was fixed at 90 per cent., but the restriction of supply and an increase in demand had the effect of placing the industry again in a favourable position in the world market even before the outbreak of the war.

The outbreak of war gave rise to entirely new conditions. In the United Kingdom, the entire tea trade passed under the control of the Government. A Tea Controller for India was appointed to administer the emergency tea control scheme. Owing to the suspension of re-exports from London, the need for replenishing their stocks by America and the Colonies and the transfer of their demand by some of the markets supplied by Java to Indian tea there was a strong demand for practically all kinds of tea and the export quota was, therefore, raised to 95 per cent. in October 1939 and was kept unchanged at 95 per cent. for the next season. In June 1940, however, the International Tea Committee reduced the quota for 1940-41 to 90 per cent. for all participating countries. An Ordinance amending the Indian Tea Control Act, 1938, was passed in August 1940 authorising the Government of India to alter the Indian allotment at any time during the financial year. The reduction had a stimulating effect on the markets, but it was soon discovered that in view of the increased requirements of the United Kingdom, U.S.A. and other countries, the maintenance of the export quota at 90 per cent. would result in a severe curtailment of the available supplies and the quota was revised to 92½ per cent. from October 1940. The export quota for 1941-42 was fixed at 110 per cent. of the Standard exports. The export quota for 1942-43 was fixed at 479 million lbs. The internal demand for tea had, however, been steadily on the increase, and to prevent a shortage the Government of India announced in October 1942 that exports would not be allowed to exceed 421½ million lbs.

The International Tea Agreement which was due to expire on 31st March 1943, is to remain in force for the duration of the hostilities and for two years thereafter.

The following table explains briefly the position as regards the *export of tea* by sea from India:—

Year.	Amount exported (million of lbs.)	Value in lakhs of rupees.
1	2	3
1930-31	356	23,56
1931-32	341	19,44
1932-33	379	17,15
1933-34	318	19,85
1934-35	325	20,13
1935-36	313	19,82
1936-37	302	20,04
1937-38	334	24,39
1938-39	348	23,29
1939-40	359	26,31
1940-41	349	27,75
1941-42	382	39,57
1942-43	323	31,64

The following table shows the exports of tea from India to different countries by sea:

	1941-42 (million lbs.)	1942-43 (million lbs.)
United Kingdom	288	252
Canada	30.5	9.2
U.S.A.	23.6	18.6
Australia	8	13.4
Egypt	4	1.9
Iraq	1.8	8.1
Arabia	1.7	6.3
Iran	1.4	5.6
Ceylon	5.6	0.7

The exports to British Empire countries amounted to 279 million lbs. and to other countries 44 million lbs. during the year 1942-43 as against 345 and 37 million lbs. respectively during the previous year.

From 1923 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1923, 'all tea' fluctuated in the London market within a range of 25 per cent., Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb. realised at the Calcutta auction sales during 1932-33 was 5 as. 2 p. as against 6 as. 5 p. in 1931-32 and 9 as. 4 p. in 1930-31. The position, however, has improved considerably since then. After the outbreak of the war the prices of tea assumed a marked rising trend. The demand for practically all kinds of tea was strong and the prices advanced steadily till they reached their peak at the beginning of December. By the middle of January, however, they began to decline and by the end of the season had reached the pre-war levels. Nevertheless, the

average auction price for the season (11 as. 5 p. per lb.) was higher than in any season since 1929-30. The trend of prices during the 1940-41 season was very satisfactory, except for the first few months of the season. The average quotation for the season worked out to 13 as. 6 ps. per lb. It further improved to Re. 1-0-9 during the season 1941-42. The average price per lb. realised up to the middle of September 1942, when the auction sales for teas with export rights were stopped following a Scheme of block purchase by H.M.'s Government, was Re. 1.

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11 = 100 :—

	Average price at auction sales.	
	Price per lb. As. p.	Index Number.
1901-02 to 1910-11 ..	6 0	100
1927-28	14 10	247
1928-29	11 4	189
1929-30	9 11	165
1930-31	9 4	156
1931-32	6 5	107
1932-33	5 2	86
1933-34 ..	9 7(*a*)	160(*a*)
	4 10(*b*)	81(*b*)
1934-35 ..	8 9(*a*)	146(*a*)
	5 2(*b*)	86(*b*)
1935-36 ..	0 9 5(*a*)	157(*a*)
	0 4 10(*b*)	81(*b*)
1936-37 ..	0 10 1(*a*)	168(*a*)
	0 4 8(*b*)	78(*b*)

	0 4 0(*b*)	67(*b*)
1939-40 ..	0 11 5(*a*)	190(*a*)
	0 4 4(*b*)	72(*b*)
1940-41 ..	0 13 6(*a*)	225(*a*)
	0 4 1(*b*)	68(*b*)
1941-42 ..	1 0 9(*a*)	278(*a*)
	0 7 3(*b*)	122(*b*)
1942-43 ..	1 0 0(*a*)	267(*a*)
	1 0 2(*b*)	269(*b*)

(*a*) For teas sold with export rights. (*b*) For teas for internal consumption.

The rate of duty under the Indian Tea Cess Act of 1903 was raised to Rs. 1-6-0 per 100 lbs with effect from March 1939. The total amount of duty collected in 1940-41 was Rs. 50,97,000.* The Indian Tea Cess Act was due to expire on 31st March 1938, but at the request made by the producers through the Indian Tea Market Expansion Board, the Government of India agreed to extend the life of the Act for a period of ten years.

* Subject to revision.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The total production of cured coffee during the season 1941-42 was 33.8 million lbs. as compared with 31.4 million lbs. during the previous year.

As a result of the war the coffee industry in India has lost a considerable proportion of its export market and the total exports during the year 1940-41 were the lowest since 1937-38. In that year the exports had dropped to 135,000 cwts., but they had again risen to 185,000 cwts. during the following year. In 1939-40 they had again declined to 168,000 cwts. but the fall during 1940-41 was steep and India was able to export only 52,324 cwts. during the year. They rose to 84,000 cwts. in the following year, but again declined slightly to 82,000 cwts. in 1942-43. Exports to the United Kingdom declined from 33,000 cwts. to 29,000 cwts. But exports to Iraq and Arabia increased from 9,000 cwts. and 13,000 cwts. to 13,000 cwts. and 15,000 cwts. respectively.

Not only does India export coffee in large quantities, but till a few years ago it also used to import it, chiefly from Java, Ceylon and the Straits Settlements, which it used to re-export to Muscat Territory, Iraq and the Bahrein Islands. During 1936-37, however, there were no imports of coffee into India. In 1940-41, the total quantity imported was 3,915 cwts. mostly from Burma, as against 424 cwts. during the previous year.

The following table gives the figures of the production and exports of Indian coffee :—
Production and Export of Indian Coffee in thousands cwts.

12 Months ending June 30th.	Production.	Export.	Surplus available for Home consumption.
1928	317·5	261·5	56·0
1929	247·9	138·3	109·6
1930	352·0	279·4	72·6
1931	294·4	208·4	86·0
1932	300·1	162·0	138·1
1933	295·0	168·7	126·3
1934	308·8	186·6	122·2
1935	292·6	147·5	145·1
1936	367·6	230·0	137·6
1937	303·6	162·4	141·2
1938	299·3	146·5	152·8
1939	358·1	206·7	151·4
1940	310·9	118·9	192·0
1941	280·7	48·7	232·0

The declared value per cwt. of coffee was Rs. 46-2-4 during 1940-41 as against Rs. 43-8-8 during the previous year.

The Indian Coffee Cess Act, providing for the creation of a fund to be expended by a Committee specially constituted in this behalf for the promotion of the cultivation, manufacture and sale of Indian Coffee, was passed in November, 1935. It provides for the levy of a customs duty on all coffee produced in India and exported therefrom to any place beyond the limits of British India or to Burma at a rate, not exceeding one rupee per cwt., fixed by the Governor-General in Council on the recommendation of the Coffee Cess Committee. The rate originally fixed was 8 as. per cwt. But from 1st June, 1938, it was raised to Re. 1 per cwt.

In addition to this cess, an excise duty on all coffee is also leviable at the rate of Re. 1 per cwt. under the Coffee Market Expansion Ordinance which was promulgated in December 1940 for the control of the coffee industry in order to secure a fair price for the grower and to secure export markets for the surplus coffee. The provision made thereunder was continued by the enactment in March 1942 of the coffee Market Expansion Act, 1942. The Act will remain in force till the end of the twelve months commencing on the 1st day of July subsequent to the termination of the present hostilities and during this period the Indian Coffee Cess Act shall be deemed to be repealed, without prejudice, however, to the continuing validity of any action taken by the Indian Coffee Cess Committee which is not inconsistent with the provisions of this Act. Similar legislation has also been brought into force by the States of Mysore, Cochin and Travancore.

Sugar.

Sheltered behind adequate tariff protection, guaranteed for a period of fifteen years, ending on March 31, 1946, which has been extended by another year, pending a further Tariff Board Enquiry, the Indian sugar industry has made phenomenal progress and has achieved the position now of being the largest sugar producing country (including Cuba) in the world. And, the capital invested in the industry is estimated at Rs. 35 crores.

An important landmark in the history of the sugar industry was the year 1930-31, when the question of protection was referred to the Tariff Board by Government. Pending consideration of the Tariff Board's report, the revenue duty was enhanced to Rs. 7-4 per cwt. in March, 1931. In addition, a revenue surcharge of 25 per cent. (amounting to Rs. 1-13 per cwt.) was imposed in September, 1931. In accordance with the Tariff Board's recommendations, Government issued a *communique* on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. of all classes of sugar until March 31, 1938. The total import duty along with the surcharge was Rs. 9-1-0 per cwt. till 31st March, 1934. From 1st April, 1934, the protective duty was enhanced to Rs. 7-12, but the surcharge was reduced to Rs. 1-5-0 and made equivalent to the excise duty of Rs. 1-5-0 imposed on internal production. Thus the total import duty remained the same, *viz.*, Rs. 9-1-0 per cwt. From the 28th February, 1937, the protective duty was decreased to Rs. 7-4-0, and a surcharge was imposed at the rate of Rs. 2-0-0 per cwt., equivalent to the increased excise duty of Rs. 2 per cwt. on internal production from the same date. The total import duty from 28th February, 1937, was Rs. 9-4-0 per cwt. With effect from 1st April, 1939, the import duty was reduced to Rs 8-12-0 per cwt. and it was raised to Rs. 9-12-0 from 1st March, 1940, as a result of the increase in the excise duty from Rs 2 to Rs. 3 per cwt. As a result of the imposition of a general surcharge of 20 per cent. on all customs duties, with the exception of cotton, salt and petrol, the import duty on sugar is now higher at Rs. 11-1-7½ per cwt. (the excise duty remaining Rs 3 per cwt.) with effect from 1st March 1942. The emergency surcharge levied on all import duties in the financial year 1942-43 was continued till 31st March 1946, after which the duty on the present level was again continued for a period of one year, ending 31st March, 1947, by when a

fresh Tariff Board will hold an enquiry to determine the quantum of protection required after March, 1947.

A Tariff Board Enquiry was instituted in March, 1937, for determining the extent of protection to be conferred on the industry for the remainder of the period of 8 years. The Tariff Board submitted its Report in December, 1937, but as the Government of India could not complete their examination of the Report before March, 1938, they continued the existing import duty on sugar up to 31st March, 1939. On the 30th March, 1939, the Government of India published the Tariff Board's Report—after a period of 15 months. The Tariff Board had recommended continuance of the protection at the existing rate, *viz.*, Rs. 9-4-0 per cwt. upto 31st March, 1946, but the Government not agreeing with this recommendation, announced their decision to decrease the protection by Rs. 0-8-0 per cwt. pending a further Tariff Board Enquiry in 1940, and passed an Act giving protection to the industry at the rate of Rs. 8-12-0 per cwt. for a period of two years, ending 31st March, 1941. The existing protective duty has been continued by stages, upto 31st March, 1946.

With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re. 1-5 per cwt. on factory produced sugar was imposed during the financial year 1934-35. Besides, it was proposed to set aside from the proceeds of the excise duty an amount equivalent to one anna per cwt. to be distributed among the provinces "for the purpose of assisting the organisation and operation of co-operative societies among the cane-growers so as to help them in securing fair prices." The excise duty was enhanced to Rs.2-0-0 per cwt. from 28th February, 1937, and to Rs. 3-0-0 per cwt. with effect from the 1st March, 1940.

Due to the outbreak of the European war, the Central Government announced in September, 1940, that no tariff board would be appointed, as was announced by them in March, 1939. In the Delhi sessions of the Legislatures in 1941 the Government of India passed an Act, whereby the existing duties were continued in the first instance upto March, 1942. Subsequently the protective duties have been continued up to 31st March, 1946 and again extended up to 31st March, 1947.

The area under cultivation of sugar-cane has kept pace with increased production; from 2,677,000 acres in 1929-30, it increased to 4,440,000 acres in 1936-37 but fell to 3,869,000 acres in 1937-38 and to 3,108,000 acres in 1938-39. Again it increased to 3,731,000 acres in 1939-40 and to 4,113,000 acres in 1943-44 and to 4,234,000 in 1944-45. Prior to 1932-33, there were only 31 cane-factories; 25 new factories were added in 1932-33 alone while another 65 new factories were started in the following year—an increase of 400 per cent. in two years. Since 1933-34, about 34 new factories of large cane crushing capacity have been established, and in 1941-42, no less than 150 factories were working. Production of sugar in India may be classified under three main heads—by modern factories working with cane, by modern refineries working with raw sugar (*gur*) and by indigenous open pan concerns. Sugar production in India a few years ago amounted approximately to half the estimated total consumption within the country. Since 1931-32, the volume of factory produced sugar has increased by approximately 700 per cent. During 1936-37, India produced over 1,230,000 tons of sugar, i.e., slightly more than her estimated consumption of about 1,150,000 tons in 1936-37, and after two lean years, again produced over 13½ lakh tons in 1939-40. The maximum production was achieved in 1943-44, which was estimated to be 1,304,000 tons.

Statistics given below, show the progress of the industry in recent years:—

Year.	No. of Factories.	Quantity of sugar manufactured from cane. Tons.	Quantity of sugar refined from *gur*. Tons.	Quantity of Khandsari production Tons. (Est.)	Total quantity of sugar. Tons.
1937-38	136	930,700	16,500	125,000	1,072,200
1938-39	139	650,800	14,200	100,000	765,000
1939-40	145	1,241,700	31,700	125,000	1,373,400
1940-41	148	1,095,400	48,500	125,000	1,268,900
1941-42	150	778,100	13,800	150,000	941,900
1942-43	150	1,070,000	6,370	117,630	1,294,700
1943-44	151	1,216,400	7,980	80,000	1,304,380
1944-45	140	953,500	6,030	80,000	1,039,530
1945-46	145	966,000	6,000	60,000	1,032,000
1946-47	146	1,000,000	6,000	60,000	1,066,000

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance, from an average of approximately one million tons in the years up till 1930-31, imports fell by about 45 per cent. in the following year and dropped to about 250,000 tons in 1933-34 and decreased further to 221,000 tons in 1934-35. During 1935-36, imports fell further to 198,888 tons, and in 1936-37, the net import was only 11,960 tons. As a result of dwindling imports Government are losing revenue from this source. The import during 1937-38 was only 9,410 tons but the import in 1938-39 was over 254,000 tons, in view of the deficit in indigenous production. In 1939-40, due to the greatly increased internal production and the outbreak of the European

War, the imports dwindled to about 35,000 tons. The yield from this source diminished from over Rs. 10 crores in 1930-31, to about Rs. 3·81 crores for the financial year ended March 31, 1935, to 2·24 crores for the year ended March 31, 1936, to Rs. 50 lakhs in 1936-37, to Rs. 25 lakhs in 1937-38, and to Rs. 45 lakhs in 1938-39. In 1939-40, however, it went up to about Rs. 3,96,00,000 due to increase in imports, necessitated by the small cane-crop, diseased cane, etc., in 1938-39, in India. The imposition of the excise duty at the rate of Re. 1-5-0 per cwt. on factory sugar, and Re. 0-10-0 on khandsari sugar, from April 1st, 1934, has yielded a revenue to the Government of Rs. 97,22,000 in 1934-35, and Rs. 1,58,24,000 in 1935-36, and Rs. 2,52,62,000 in 1936-37. With the increase in excise duty on factory sugar to Rs. 2 per cwt. and Re. 1 per cwt. on Khandsari sugar the yield during 1937-38 was Rs. 3,30,07,000 in 1937-38, and Rs. 4,22,44,000 in 1938-39 and Rs. 2,47,19,000 in 1939-40. With a further increase in the excise duty from March 1, 1940, the yield was Rs. 3,92,00,000 in 1940-41. In the year 1941-42 the amount collected was very much higher at Rs. 6·72 crores. In the twelve months ended March, 1943, the amount collected was Rs. 4·83 crores. In 1943-44, the duty amounted to Rs. 7·24 crores, and in 1944-45 to Rs. 6·90 crores.

Since the imposition of the excise duty it is noteworthy, that the Khandsari production has gone down considerably. From 1st March, 1939, the duty on Khandsari sugar was decreased to Re. 0-8-0 per cwt., but the definition of "factory" in the Sugar Excise Duty Act, 1934, was amended, so as to omit the reference to the number of workers employed with a view to enabling duty being charged even in premises where less than 20 workers are employed. The Government of India expected that with the definition of 'factory' thus amended even with the reduced duty on Khandsari of Re. 0-8-0 per cwt. there would be a revenue of about Rs. 6,00,000 during 1939-40. But this hope was not fulfilled. The yield was only about Rs. 1,46,000 in 1939-40. The amount of duty levied in 1940-41 was Rs. 2,86,000 and in 1941-42 Rs. 4,43,000. In 1944-45 it was Rs 3,65,000 only.

During the year 1937, there was a precipitate fall in the price of sugar and in order to avert internal unrestrained competition a Sugar Syndicate was brought into existence, comprising over 90 mills. Later in the year, the industry approached the Government for legislative interference with a view to avoid over-production of sugar and to overcome internal unrestrained competition, which brought down the price of sugar to an uneconomically low level. The Governments of the U.P. and Bihar, to whom these representations were made passed Sugar Factory Control Acts, and made it compulsory for every mill to obtain a licence for working sugar factories from the Government. One of the conditions of the grant of licence to a factory has been membership of the Indian Sugar Syndicate. The Indian Sugar Syndicate has thus been given legislative recognition by the Governments of the U.P. and Bihar, and all mills working in the provinces of the U.P. and Bihar are compelled to sell their sugar through the Syndicate. The Governments of the U.P. and Bihar have also appointed a joint Control Board consisting of the representatives of the U.P. and Bihar Governments, the representatives of the industry, and of cultivators and consumers. In 1940, the life of the Sugar Control Act was extended by Bihar and U. P. Governments up to June 30, 1944, and a Sugar Commission was also appointed by them to be "a final authority, subject to Government control, on all matters connected with the production and sale of sugar, as well as other matters regarding cane-prices, etc."

The life of the U.P. and Sugar Control Act has now been extended till 30th June, 1950.

There was a very large carry-over of sugar, approximating over 4 lakhs tons, at the beginning of the 1940-41 season and as a consequence the U. P. & Bihar Governments restricted, by means of quota, the production of sugar in factories in U. P. and Bihar. There was no check, however, to the production of sugar in Provinces outside U.P. & Bihar and in Indian States. Since 1942, the policy adopted by Government is to maximise production, and their efforts have met with considerable success, as can be seen from the increase in production in 1942-43 and 1943-44 in spite of handicaps of obtaining sulphur, coal, etc. The production of sugar fell in 1944-45 and also in 1945-46 owing to shortage of cane and transport difficulties. High prices realised for *Gur* also diverted cane supplies to some extent from the manufacture of sugar in factories to the manufacture of *Gur*.

During the year 1937 the Government of India imposed a ban on the export of sugar from India, by sea, to any country except to Burma, for a period of five years.

The International Sugar Agreement expired in August, 1942. In view of the opportunities afforded in the export sugar markets, for Indian sugar on account of the loss of Java, Philippines and other important producing centres, and the utter uselessness of continuing the International Sugar Agreement when many of the signatories had ceased to exist, the Government of India decided to terminate the agreement in deference to the wishes of the industry.

As a result of the termination of the International Sugar Agreement India is now free to export sugar by sea but whether it will be possible to take full advantage of the present situation cannot be said as there is a shortage of sugar within the country and there is hardly any surplus left over for export.

It is also of interest to note the production of *gur* for direct consumption since 1931-32.

	gur. (Tons.)
1931-32	2,758,000
1932-33	3,240,000
1933-34	3,486,000
1934-35	3,701,000
1935-36	4,101,000
1936-37	4,268,000
1937-38	3,364,000
1938-39	2,131,000
1939-40	2,441,000
1940-41	3,414,000
1941-42	2,829,000
1942-43	3,015,000
1943-44	3,990,000
1944-45	4,250,000
1945-46	3,600,000

The price of sugar has been fixed since 1943, by imposing a control on the industry by the Sugar and Sugar Products Control Order and the factories are compelled to sell their sugar at controlled rates, and to consign their sugar to destinations advised by the Sugar Controller from time to time. In 1946, the price was Rs. 16-6-0 *per maund*, varying slightly according to quality.

In view of the shortage of sugar production in 1944-45 and 1945-46, the various Provinces were allocated quotas, smaller by about 25 per cent than the previous consumption, and in certain big cities like Bombay, sugar was also rationed from 1943 onwards. The ration in Bombay was 3 lbs. of sugar per person and in other places the ration is smaller. In 1946, this ration was cut by 25 per cent. in Bombay.

It may be noted also as a matter of interest that India is the largest producer of sugar (including *gur*) among all the countries in the world, the total yield of raw sugar (*gur*) being 5,452,000 tons (*vide* The Indian Sugar Industry Annual, for 1945-46, by M. P. Gandhi).

The total value of *gur* and sugar produced in India was estimated at about Rs. 100 crores 1943-44, and in 1944-45, it would be about Rs. 160 crores.

The Indian Sugar Industry is now the second largest industry, next in importance to only the Cotton Textile Industry, giving employment to over 120,000 workers, in addition to about 3,000 graduates and technical men and 20 million cultivators, and represents a capital investment of about Rs. 33 crores.

recently issued in 1945 licenses for importation of 6 plants for sugar manufacture, the estimated value of the machinery being about Rs. 15 crores

INDIAN TOBACCO.

History.—The Portuguese are credited with having conveyed the tobacco plant and the knowledge of its properties to India about the year 1508. Though there are many species in the genus *Nicotiana*, the tobacco of commerce comes only from the two species *Nicotiana tabacum* and *Nicotina rustica*. Of the two, the former is more common and commercially important.

Importance.—India is one of the principal tobacco producing countries of the world, being second only to the United States of America.

In 1944-45 the area under tobacco was 1,089,000 acres. The production during the same period was 923 million lbs. The Chief Tobacco growing provinces are Madras (328,000 acres), Bengal (300,000 acres), Bombay (143,000 acres), and Bihar (121,000 acres).

Research.—A great deal of research work has been done in India during the last 30 years both by the Government and by private agencies.

A sum of Rupees Ten lakhs is now being annually set apart for research and development work on this commodity, out of the receipts of excise duty which was levied on tobacco from April 1943.

The Government of India have set up an Indian Central Tobacco Committee on the lines of the Indian Central Sugarcane Committee and other such Committees already functioning. This Committee is fully representative of all interests relating to tobacco from the grower to the consumer, including research workers. This Committee came into being in Novr. '45, and the annual grant of Rs. 10 lakhs set aside for the improvement of production and marketing of tobacco has been placed at the disposal of this Committee. The Committee has plans for establishing a Central Tobacco Research Station in Guntur and Experimental Research Stations for the main types in particular parts of the country such as Rajahumundry for Cigarrette tobacco, Rangpur for Cigar and Cheroot tobacco, Anand for Bidi tobacco and some suitable place in Bihar, for Hookah and Chewing tobacco. Apart from these stations there will be a number of sub-stations in various parts of the country. The Committee has also arranged to carry out exploratory work in different parts of the country with a view to find out which localities were capable of growing Virginia Cigarette tobacco of good quality and high yield. The Committees Headquarters are in Bombay.

The Imperial Agricultural Research Institute Pusa, (now at New Delhi) isolated Pusa T. 28 and T. 63 among *N. tabacum* varieties and Pusa T. 18 among *N. rustica* for chewing and *hooka* purposes respectively. Details of the methods of flue-curing of Virginia tobacco were worked out in 1928.

On the Tobacco Research Station at Nadiad, the Bombay Department of Agriculture, isolated Ganpiu 6, Piliu 45, Pilliu 28 and Keliu 49, heavy yielding bidi and chewing tobacco strains. Attempts are also being made to improve the Nipani tobacco on the Tobacco Research Station, Nipani.

In Bengal, trials are being carried out on the Government Agricultural Farm at Burirhat (Rangpur), to find out the possibility of growing superior varieties of cigar tobacco from Sumatra, Havana, Manila and Pennsylvania.

The Madras Department of Agriculture on the Agricultural Research Station at Guntur isolated the high yielding strain T. 20 in *Natu* or country tobacco for cheroot and pipe purposes and early maturing strain (H. S. 9) of Harrison special, the cigarette tobacco variety popular in India.

The Imperial Council of Agricultural Research, New Delhi, started in 1936 a Tobacco Research sub-station at Guntur for the improvement of the quality of cigarette tobacco. It was found that jowar (*Andropogon Sorghum*) as a preceding crop to tobacco helped to improve the quality of cigarette tobacco better than Maize and Variga (*Panicum Miliaceum*).

A strain of Cigarette tobacco called Amarelo 5 which is reported to be superior to HS 9 in its curing properties and yield of top-grade leaves has also been evolved recently at the station.

The India Leaf Tobacco Development Company, the largest buyers of tobacco in India, have been experimenting since 1920, chiefly in the Guntur area (Madras) and also in Saharanpur (United Provinces) and Whitefield (Mysore State), on the commercial possibilities of Virginia tobacco production and have helped to build up the Virginia tobacco industry to the position it now occupies.

The cultivation of Virginia tobacco in the Mysore State has increased appreciably during recent years due to the impetus given by the Mysore Tobacco Company.

Improvement in Marketing.—The marketing survey of tobacco conducted by the Agricultural Marketing Adviser to the Government of India revealed the urgent need for standardising the methods of grading and preparing tobacco before putting it on the market. With a view to assisting the trade in this direction, the Indian Tobacco Association, which consists of representatives of growers, dealers and manufacturers, was formed at Guntur. Since then, another association known as the East India Tobacco Federation, has come into being with the same object in view. Under the Agricultural Produce (Grading and Marking) Act, rules were framed in 1937, laying down grade designations, definitions of quality, methods of marking and packing for unmanufactured flue-cured and sun-cured Virginia and sun-cured *Natu* (country) tobacco. Grade specifications for *Jutty* and *Motihari* types of tobacco are under notification, and those for *Jati* and *Jati Bishpath* have been drawn up for notification.

With a view to controlling the quality of tobacco exported from India, the Government of India have banned under the Sea Customs Act of 1878 the export of unmanufactured tobacco of flue-cured and sun-cured Virginia, sun-cured *Natu* (country) and *Motihari* varieties unless such tobacco conformed to Agmark standards and was certified as such. An Inspectorate staff was appointed in 1945 consisting of a Chief Inspector and several Inspectors for examining the quality of tobacco and for supervising its grading on the basis of specifications laid down for Agmark grades. The staff was considerably augmented in the beginning of 1946. A panel of members from the trade has also been set up to settle disputes between the Inspectorate and the authorised packers in respect of the quality of tobacco. During the period May to December 1945, 4,236,880 lbs. of the above varieties of tobacco worth Rs. 22,67,021 were graded.

Another important aspect of marketing improvement is the regulation of markets. Attempts at regulating the market charges for tobacco have been made only in Madras so far, where the provisions of the Madras Commercial Crops Markets Act were applied to tobacco in Guntur District and Bezwada taluq of Kistna District in 1939. In this connection, the Guntur Tobacco Market Committee was set up in the same year, and this Committee took up the regulation of market practices regarding weighment, trade allowances and methods of sale. Market yards have been opened by the Committee where the growers and dealers are given facilities for transacting their business in tobacco. This Committee is also attending to the dissemination of market news and propaganda for improving the cultivation of tobacco. The progress achieved so far is not however appreciable and there seems to be clear need for reorganising the organisation in Guntur.

Production.—More than half the Indian production is concentrated in 5 clearly defined zones, *viz* :—

(1) THE NORTH BENGAL AREA comprises the districts of Rangpur, Jalpaiguri and Dinajpur of Bengal including the Cooch Behar State. About three-fourths of the crop in this area is under *N. tabacum* which includes the varieties locally known as *Jati*, *Bhengi*, *Naokhol* and *Hingli*. The remaining one-fourth is under *N. rustica* which includes the local *Vilaiti* and *Motihari* varieties. *N. tabacum* varieties are mainly used for cigar and cheroot making and *N. rustica* varieties for *hooka* and chewing purposes.

The soils are grey ashy coloured loams rich in potash. Tobacco is sown in the nurseries from August to September and transplanting of seedlings is done from October to December. The crop is irrigated from temporary wells and is harvested from January to March. The leaf is cured by air-curing and sun-curing methods. The produce is marketed from March to October. The finer qualities of *Bhengi* are shipped to Burma, while the poorer qualities are sold in India for cigarette manufacture. *Hingli* and part of *Motihari* are sold for making snuff.

(2) THE GUNTUR AREA comprises the districts of Guntur, Kistna and adjoining portions of Hyderabad State. Varieties of *N. tabacum* are exclusively grown in this area. Prior to the introduction of flue-curing of Virginia tobacco in 1928, all the tobacco was sun-cured. The tobacco produced in this area is grouped into (*i*) Virginia :—(*a*), Flue-cured (*b*), Sun-cured, (*ii*) Country or *Natu* tobacco, invariably sun-cured. In the firs group, Harrison Special and in the second group *Thoka Aku*, *Kara Aku* varieties are important. Flue-cured tobacco is being used in India and is also exported to the United Kingdom and Egypt for manufacture of cigarette and pipe tobacco. The sun-cured Virginia, and *Natu* tobaccos are used for making cheaper cigarettes, etc. The soils are deep, heavy black cotton soils and rich in lime. Tobacco seed is sown in August and seedlings are transplanted from October to November. The crop is grown invariably without the help of irrigation and is harvested from January to March. The flue-cured Virginia tobacco is marketed from January to April while the sun-cured Country and Virginia tobaccos are marketed from March to June. There are nearly 6,000 flue-curing barns and the Virginia tobacco is cured by means of artificial heat radiated from hot iron pipes arranged on the floor of the barn. The sun-curing is done by stringing the leaf to jute twine and curing them on racks pitched on the open field for drying in sun. To the Indian Leaf Tobacco Development Company Ltd. goes the credit for establishing the industry of Virginia tobacco production and for assisting the growers in seed and seedling distribution, research and propaganda in manurial require-

ments, proper methods of curing and ensuring a market for the tobacco by buying the major portion of the production.

(3) THE NORTH BIHAR AREA comprises the districts of Muzaffarpur, Darbhanga and Purnea. In this area both the *N. tabacum* and *N. rustica* varieties are grown in the proportion of two-thirds to one-third. A major portion of the production of *N. tabacum* is utilised for chewing, while a fairly large quantity is bought by the Cigarette manufacturers in India. The production from *N. rustica* is utilised for *hooka* purposes.

The soils are light, ash-coloured, deep, and of Gangetic alluvium, rich in lime generally and in potash in isolated areas. The raising of seedlings is commenced in August and transplanting in October-November. The crop is generally not irrigated. Harvesting begins in February-March and the produce is ground-cured. It is marketed from April to middle of June.

(4) THE CHAROTAR (GUJERAT) AREA comprises Anand, Borsad and Nadiad talukas of Kaira district and Petlad and Bhadran talukas of Baroda State. This area is grown wholly with varieties of *N. tabacum*, chief among which are (i) *Gandiu*, (ii) *Piliu*, (iii) *Keliu*, (iv) *Kaliu*, (v) *Saijpuri*. Of late, attempts are being made to grow a few acres under *Calcuttia* variety of *N. rustica*. The first three varieties of *N. tabacum* provide the *bidi* tobacco, while *Kaliu*, being irrigated with well water rich in salts (Nitrates), is eminently suited for *hooka* and snuff purposes. *Saijpuri* is used extensively for chewing. Besides, the Bombay Department of Agriculture and the Baroda State have been doing work for the introduction of Virginia tobacco cultivation in the area. The Virginia tobacco was successfully cultivated and cured over about 100 acres and serious attempts are being made to extend the area under this type.

The soils are light sandy loams to dark coloured heavy clays. Sowing is done in July and planting of seedlings in August. *Piliu* and *Keliu* are grown without irrigation, while *Gandiu* is grown dry or irrigated. *Kaliu* and *Saijpuri* are irrigated. The crop is harvested in December-January. The leaf is either air or ground-cured. The tobacco is sold from the latter half of December to end of June with the peak period in March and April.

(5) THE NIPANI AREA includes Belgaum and Satara districts of Bombay along with Kolhapur, Sangli and Miraj States. In this area varieties of *N. tabacum*, viz. *Mirji*, *Sangli*, *Nipani*, *Jawari*, *Kare Baglani* and *Surti* are mainly grown. Of the varieties of *N. rustica*, *Pandharipuri* is very largely grown. Except the tobacco produced on the riverine soil, which is used as *Hathpan* for chewing, all the tobacco is converted into *Jarda* for *bidis*. The *Pandharipuri* tobacco is very strong, while the *Nipani* tobacco is very mild and sweet.

The soils are of trap and alluvial slate origin, black and deep heavy clays, though tobacco is grown on a small area on the red loams. The nurseries are sown in the middle of June and planting is done in the first week of August. The crop is harvested in January and is ground-cured. Supply of tobacco to the market is greatest in February and March and drops by June.

Most of the tobacco exported from India to Aden and Dependencies is from the Charotar and Nipani areas. Apart from these five important areas, each province and State grows a fairly large quantity of tobacco mostly consumed in the respective areas themselves, and attempts are in progress, through *ad-hoc* committees established for the development of tobacco, to grow the several types, *e.g.*, cigarette, *bidi*, *hooka*, chewing and snuff tobaccos upto the limit of their requirements in the first instance. The Imperial Council of Agricultural Research, New Delhi, and now the Indian Central Tobacco Committee, has been rendering great help in this direction.

Manufactured Products.—Tobacco is manufactured into many different forms for different purposes. The importance of the manufactured products can be gauged by the ex-factory value of the various products mentioned below. The figures in brackets show the value of the product in Crores of rupees.

(i) *Hooka* (9·60), (ii) Cheroots (9·20), (iii) *Bidis* (7·52), (iv) Cigarettes (5·86), (v) Chewing (3·02), (vi) Snuff (1·53), (vii) Cigars (0·15) (Total = 36·88).

Apart from cigarettes, the other tobacco products are prepared with little of standard machinery, leaving room for mushroom manufacturers and thus leading to a great variation in the quality of products, standardisation of which is engaging attention.
